WEDNESDAY, MARCH 11, 1987.

DEPARTMENT OF JUSTICE

ATTORNEY GENERAL

WITNESSES

EDWIN MEESE III, ATTORNEY GENERAL
HARRY H. FLICKINGER, ACTING ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION
ROBERT N. FORD, COMPTROLLER
MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

INTRODUCTION

Mr. SMITH. This morning we will begin testimony on the fiscal year 1988 budget request of the Department of Justice.

We are pleased to welcome back the Attorney General of the United States, the Honorable Edwin Meese III. At this time, I will yield to Mr. Whitten, Chairman of the Committee.

COORDINATION OF DRUG WAR

Mr. WHITTEN. Thank you, Mr. Chairman.

Mr. Attorney General, in the Continuing Resolution we required the following:

"Pending the enactment of the Omnibus Drug Supplemental Appropriation Act of 1987, contained as Title II of the Fiscal Year 1987 Continuing Appropriations Act of 1987 (H.J. Res. 738), the President or his designee shall, out of the $1,200,000,000 made available for drug abuse prevention programs by House Joint Resolution 738, and continued by this Resolution and in the regular appropriation bill for Fiscal 1987, with the cooperation of those presently engaged in the effort in the executive departments, Members of Congress and others experienced in the field of law enforcement, use $100,000 to develop an overall drug abuse prevention plan that coordinates the government's efforts in combatting the widespread use of illegal drugs."

That was money you already have. In my opinion, this provision ties down those funds for that purpose. I have, in the last few months, been over much of the United States. Everywhere you go people are wanting money for uniforms and for offices, and in most places, they are not getting their share of the drug money. Now,

the point is, if we do not have a plan, we can waste billions of dollars. In dealing with this thing on our Committee, we gave some thought to having a drug Czar. I think we are all probably going to have to give some thought to that because the magnitude of the program is unbelievable.

I wrote your office on this issue sometime ago and I just want to call your attention to it, and want your assurance that you will go ahead with the plan. The money to establish a plan is there. It was provided in the Continuing Resolution, but I have heard of no action in that direction.

I raise it with you and would like to be reassured that the plan will be set in operation. Otherwise, we can just throw the money to the winds and get very little in the way of results.

Do you have any comment to make?

Attorney General MEESE. Yes, Mr. Chairman.

We have completed the portion of that plan that relates to drug law enforcement. The national strategy for international and national drug law enforcement was completed about a month ago, and I will see that you get a copy of it.

We feel that there is no need for a Czar, that we have that structure already in effect with the National Drug Policy Board, which the President created by his direction within the last, I believe, four or five weeks, and which is being promulgated by an Executive Order, to bring all of the agencies that are involved in either drug abuse prevention or drug law enforcement together into a single entity. So I will be happy to provide you with those documents.

Mr. WHITTEN. Do that and, if it is agreeable with the Chairman, I would like for you to include a copy of the plan in the hearings. I wrote your office about a month ago and I have not had any response. I am not saying we need a drug Czar, but I am saying that the magnitude of the program gets greater and greater.

Mr. Chairman, I would like this to be put in the appropriate place in your hearing.

Mr. SMITH. We will do that.

Mr. WHITTEN. Thank you very much.

Attorney General MEESE. We will be happy to send that to you.

[The information requested follows:]

PLAN FOR COMBATING NATIONAL DRUG PROBLEM

The Executive summary of the "National and International Drug Law Enforcement Strategy" follows. A copy of the complete strategy has been provided to the committee. In addition, Chairman Whitten's letter to the Attorney General of February 10, 1987, and the response received from the Assistant Attorney General for Legislative Affairs, John R. Bolton, follow:

EXECUTIVE SUMMARY

NATIONAL DRUG ENFORCEMENT POLICY BOARD

NATIONAL AND INTERNATIONAL DRUG LAW ENFORCEMENT STRATEGY

January 20, 1987

Submitted to the Congress by the National Drug Enforcement Policy Board pursuant to Section 1304(a)(1) and Section 1305 of the National Narcotics Act of 1984 (21 U.S.C. §§1201-1204).

EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

Within the past few years, there has been a heightened sense of public awareness and activism concerning the international problems of drug trafficking and abuse. In the United States, as in many other countries, the fight against drugs has acquired new political significance, improved laws and prosecutorial tools, and additional resources. The President and Mrs. Reagan's personal attention, the President's Commission on Organized Crime report, "America's Habit: Drug Abuse, Drug Trafficking, and Organized Crime," Administration and Congressional concern reflected in the passage of the Anti-Drug Abuse Act of 1986, and expanded media coverage all attest to a firm commitment to the continuing struggle against drug trafficking and abuse. Federal, State, and local governments, the United Nations, private and non-profit organizations, and individuals have all joined the effort to prevent, treat, and research drug abuse, and to educate our citizens about the dangers of using illegal drugs.

Drug law enforcement is an integral part of this national battle. The commitment to toughen drug law enforcement reflects a change in attitude about the serious nature of drug abuse and trafficking. Americans now recognize that drug abuse is neither a private matter nor a victimless crime, and that all Americans pay the economic, health, and social costs that drug abuse and trafficking bring to their communities.

The years 1981 through 1986 have witnessed the largest increases in drug law enforcement funding and manpower in the nation's history. To coordinate the efficient application of these new resources, the National Drug Enforcement Policy Board was created. In its first full year of operation in 1986, the Policy Board became involved in a number of successful interagency law enforcement activities, and established itself as the focal point for coordinating the policy, strategy, and resources necessary to wage a successful battle against drug

trafficking. Furthermore, a recent expansion of the Policy Board to include the Secretaries of Education and Housing and Urban Development, coupled with the statutory presence on the Board of representatives from the Department of Health and Human Services and the White House Drug Abuse Policy Office, have placed the Policy Board in a unique position to coordinate more closely the supply and demand elements of the Federal government's extensive anti-drug program. The Policy Board recognizes that a coordinated program of supply reduction through law enforcement, and demand reduction through education and prevention, is the key to long-term success in the fight against drug abuse and trafficking.

The ultimate goal of both supply and demand reduction efforts is the elimination of drug abuse and trafficking. Drug law enforcement supports this national goal by attacking the supply of drugs all along the distribution chain from field or laboratory to consumer. This National and International Drug Law Enforcement Strategy contains five major components: intelligence; international drug control; interdiction and border control; investigation and prosecution; and diversion and controlled substance analogue regulation. These components are highly interactive and mutually supportive, and they must be applied in a balanced manner in the national fight against drug trafficking. Additional chapters include a description of the National Drug Enforcement Policy Board's structure and activities, a threat assessment, a discussion of drug law enforcement's role in reducing the demand for drugs, and a special focus chapter on drug strategy concerning Mexico and the Southwest border.

Threat Assessment

Drug trafficking and abuse pose serious threats to the health, welfare, and national security of the United States.

Millions of Americans abuse drugs, which are smuggled into the United States from foreign sources, produced domestically, and diverted from legitimate distribution networks for illicit use. Drug trafficking trends demonstrate the heightened sophistication of trafficking organizations and their increased reliance on violence and corruption.

Cocaine Threat

- Increases in cocaine consumption, cocaine-related hospital emergencies and deaths, and the use of a potent new form of cocaine known as "crack" indicate that this drug poses the most serious drug threat to the United States.
- Most cocaine seized in the United States is produced from coca cultivated in South America, particularly in Peru and Bolivia.
- Colombia continues to be the predominant location for final-stage processing of cocaine, providing approximately 75 percent of the cocaine hydrochloride available in the United States in 1985.
- Most of the cocaine entering the U.S. is still transported aboard aircraft; however, there has been increasing use of private and commercial vessels. While the heaviest trafficking activity remains in the Caribbean, Bahamas, and Southeastern U.S., cocaine smuggling is becoming more dispersed, with increased activity in the Gulf Coast and Southwestern states.

Opiate Threat

- Heroin consumption in the United States appears to have increased in 1985. Heroin-related emergencies increased due, in part, to the recent introduction of a potent form of heroin known as "black tar" and the continuing use of heroin in combination with other drugs.
- The three primary illicit opium production areas are Southwest Asia, Mexico, and Southeast Asia.
- 42 percent of the heroin available for consumption in the United States is produced in the Southwest Asian countries of Afghanistan, Iran, and Pakistan. Turkey remains a major transshipment and staging area for opium, morphine

base, and heroin from this region. There is increased heroin trafficking through India, from both Pakistan and Burma.

- Mexico is an increasingly significant source of heroin consumed in the United States, accounting for more than one-third of all heroin consumed nationwide.

- In Southeast Asia, the major opium cultivators and heroin producers operate in Burma, Thailand, and Laos. Most Southeast Asia heroin, like that of Southwest Asia, travels to world markets in the luggage of commercial air passengers and, to a lesser extent, by international mail and vessel traffic.

Cannabis Threat

- Marijuana is the most widely used illicit drug in the United States, with approximately 18.2 million current marijuana users in 1985.

- An estimated 81 percent of the marijuana available in the United States in 1985 was produced abroad and 19 percent was produced domestically. Most of the marijuana smuggled into the United States from foreign sources came from Mexico (40 percent) and Colombia (38 percent).

- Marijuana grown in Mexico accounted for 40 percent of the marijuana available in the United States in 1985, up from 6 percent in 1982. Expanded cultivation and reduced eradication and seizures were, in part, responsible for this increase. Marijuana from Mexico is normally trafficked by overland methods and in relatively small quantities.

- Principally as a result of Colombia's aerial eradication program and intensified interdiction operations in the region, the market share of marijuana from Colombia dropped from 48 percent in 1984 to 38 percent in 1985. Colombian traffickers rely heavily upon non-commercial vessels to transport marijuana.

- Most hashish smuggled into the United States is produced in Lebanon, Pakistan, and Afghanistan. This hashish is normally smuggled in commercial vessels.

Dangerous Drug Threat

- The term "dangerous drugs" refers to all drugs except heroin and opium, cannabis products, and cocaine.

Estimates are that total illicit consumption of dangerous drugs was 2.8 billion dosage units in 1985, a decrease from the 1984 estimate of 3 billion dosage units.

- Most of the dangerous drugs abused in the United States are produced in domestic clandestine laboratories; most of the 1985 laboratory seizures involved methamphetamine, amphetamine, P2P, and PCP.
- A wide variety of groups, including several outlaw motorcycle gangs, have been identified as being involved with the production and distribution of dangerous drugs and controlled substance analogues.

Intelligence

The effectiveness of the overall Federal drug law enforcement effort depends on strong intelligence support. In view of the limited resources available to drug law enforcement, improved intelligence capabilities may offer the best hope for better enforcement success. Reliable and timely intelligence allows law enforcement resources to be applied more effectively and efficiently.

The Strategy

- Three types of intelligence contribute to Federal drug enforcement efforts: strategic, tactical, and operational. For maximum effectiveness, each type must be fully employed in a balanced fashion.
- An accurate threat assessment is key to the enforcement effort. Intelligence organizations will focus on producing accurate, timely estimates of drug cultivation, production, consumption, exportation, and seizures both inside and outside source countries. Threat assessments will also more thoroughly and accurately describe traffickers and their organizations, practices, and affiliations. The organizations collecting intelligence will standardize their methodologies of testing the accuracy of their drug data.
- The intelligence strategy includes: coordination of intelligence activities of the law enforcement and intelligence communities; development of accurate

indicators of patterns, trends, and degrees of smuggling activities; assessment of capabilities and constraints of foreign military and law enforcement units to respond to drug threats; and analyses of the structure of trafficking organizations and the identification of their weaknesses.

- The Strategy also calls for effective and efficient use of all enforcement agencies, including those of foreign source and transshipment countries.

International Drug Control

Most of the illicit drugs consumed in the United States are cultivated and processed in foreign countries. America's international drug control program seeks to break the chain that links farmers in those drug producing countries to users in the United States by stopping the flow of drugs as close to the source as possible. The United States continues to place the highest diplomatic priority on enlisting international support for drug control efforts. The international program also seeks to reduce the supply of drugs through assistance to foreign governments in crop eradication, interdiction close to production sources and along trafficking routes, the arrest and prosecution of major traffickers, and the seizure of drug-related assets. Many governments have joined the United States in a more vigorous international program and have assigned higher foreign policy and enforcement priorities to the drug problem.

The Strategy

- The international strategy involves both diplomatic and programmatic initiatives.
- The objective of the diplomatic strategy is to internationalize the response to the drug problem thereby encouraging other governments to engage in unilateral, bilateral, and multilateral drug control efforts.
- Crucial components of the diplomatic strategy include: sharing information with the international community about the dangers of drug trafficking and abuse; conveying

United States' policies and attitudes with respect to these problems through embassies and other personnel abroad; and supporting and actively participating in regional and international efforts to address drug trafficking and abuse.

- The objective of the programmatic strategy is to destabilize trafficking operations as close to the source as possible. Components of this strategy are: eradication; development and economic assistance; interdiction; and investigation and prosecution.

- Eradication priorities include: revitalizing the opium poppy and marijuana eradication campaigns in Mexico; sustaining the new aerial herbicidal opium eradication programs in Burma; working with Pakistan to extend the ban on opium poppy production into additional areas; launching more comprehensive coca eradication programs in Andes.

- Development and economic assistance programs in source and transshipment countries will give priority to countering the economic advantages of cultivating drug crops and providing incentives to meet certain drug control objectives.

- Elements of the international interdiction program include: expanding DEA's program to identify and interdict the chemicals and conversion equipment used to process illicit drugs; working with foreign governments to locate and destroy clandestine laboratories and airstrips; and continuing to mount special interdiction operations in cooperation with foreign governments.

- Elements of the international investigation and prosecution program include: negotiating mutual legal assistance treaties (MLATs) with foreign governments in order to improve the exchange of information in criminal cases; encouraging foreign governments to adopt asset forfeiture laws based on the U.S. model; and seeking a number of new or enhanced extradition treaties with foreign countries.

Interdiction and Border Control

The primary objective of the drug interdiction strategy is to reduce the amount of illegal drugs entering the United States. Interdiction focuses on the detection, identification, and interception of shipments of illegal drugs as they move from departure points in source countries, along smuggling routes

to our land, sea, and air borders. Successful interdiction programs deter potential traffickers from entering the drug trade, disrupt the flow of drugs into the United States, and force traffickers to develop more expensive methods to avoid detection and use longer, more difficult smuggling routes.

The Strategy

- The objective of the interdiction strategy is to reduce the amount of drugs entering the United States by targetting the transportation link between drug supply and demand.
- Interdiction program emphasis has turned, in recent years, to multi-agency offensive operations against particular targets when and where the threat is determined to be the greatest.
- Interdiction strategy components include: detection; interdiction in transit; border interdiction; flexibility and unpredictability; regional strategies; research and development; and expanding roles.
- Detection priorities include: better use of intelligence products; increased emphasis on predicting shifts in trafficking operations; better coordination of intelligence and operations through establishment of C^3I centers; and increased deployment of fixed and mobile detection assets from both the law enforcement agencies and the Department of Defense.
- Transit zone interdiction elements include: additional resources ranging from high performance boats and aircraft to large ships and long-range planes; further integration of detection and intercept capabilities; emphasis on multiagency, multinational offensive operations; and additional international cooperative interdiction ventures.
- Border interdiction elements include: increased port-of-entry inspections of pedestrians, passengers, cargoes, and vehicles, including rail cars and aircraft arriving at small border airports; expanded use of radars and sensors, establishment of mobile response teams, and increased use of the military services and DOD in border areas between ports of entry; and expanded coordinated efforts with State and local authorities.

- Interdiction efforts and assets will remain flexible and unpredictable. Regional strategies will be developed when necessary to respond to the drug trafficking threat in particular regions.

- Research and development of new technologies to help in the detection and interception of drug traffickers will be shared among agencies and monitored by the National Drug Enforcement Policy Board.

- Full advantage will be taken of all agencies' resources and capabilities by expanding certain agency roles and granting additional law enforcement authority where appropriate.

Investigation and Prosecution

The objective of the investigation and prosecution strategy is to immobilize drug trafficking organizations by incarcerating their members, seizing their drugs, obtaining drug-related asset forfeitures, and deporting aliens who are organization principals. Successful investigation and prosecution decrease and delay the supply and distribution of illegal drugs, and deter other groups from entering the drug market.

The Strategy

- The components of the investigation and prosecution strategy include: multi-agency approaches; financial investigation and asset forfeiture; State and local cooperative efforts; targeted and selective deployment of Federal resources; enforcement directed against domestic illicit drug production; and the development and use of international extradition and mutual legal assistance treaties.

- Special multi-agency investigative programs and task forces often offer the most effective and appropriate method of operation when attacking complex trafficking organizations. Therefore, the Organized Crime Drug Enforcement Task Force Program and other cooperative efforts will be used whenever feasible and appropriate.

- Financial investigations concentrate on the disruption of money laundering operations, the seizure and forfeiture of

drug-related funds and assets, and incarceration of traffickers. The Strategy calls for specialized units to be created or expanded to improve the Federal government's ability to conduct financial investigations.

- Federal investigative and prosecutorial resources will be devoted primarily to disrupting and destroying major drug organizations and will give emphasis to cases involving: international criminal connections; financial evidence; and currently active organizations in geographic areas with the largest concentration of high-level violators, the greatest concentration of controlled substances, and the largest amount of drug-related currency.

- Federal, State, and local cooperative efforts will be encouraged through the use of Law Enforcement Coordinating Committees. When appropriate, State and local officers will be deputized as agents and State prosecutors will be cross-designated allowing them to prosecute in Federal court.

- Drug, program, and organization specific approaches will be developed, as appropriate, to tailor investigative and prosecutorial responses to fit specific problem areas.

- The Federal government will continue its nationwide effort of coordinating the use of Federal, State, and local resources against the major financiers, cultivators, and distributors of domestic cannabis and other drugs; such efforts not only reduce the scope of this country's drug problem, but also demonstrate U.S. resolve to attack the problem at home as well as in other drug producing countries.

- To improve the investigation and prosecution of drug traffickers with international connections, the United States will continue to negotiate and revise extradition and mutual legal assistance treaties.

- Finally, the Strategy supports career incentive programs for Federal law enforcement investigators and prosecutors to improve the government's performance in increasingly complex cases.

Diversion Control and Controlled Substance Analogues

Millions of dosage units of legitimate pharmaceutical drugs are diverted from normal U.S. distribution channels into the illicit market each year. Similarly, many widely used industrial

chemicals, most of which are not controlled substances by law, are diverted from the legitimate distribution system to be used by traffickers to synthesize a variety of drugs of abuse. Controlled substance analogues, chemical variants of controlled substances, are typically very potent and have a high abuse potential.

The Strategy

- The objectives of the diversion control and analogue strategy are to: control the diversion of licit drugs from legitimate distribution networks; control the diversion of chemicals used in the clandestine production of drugs; and identify and schedule controlled substance analogues.

- The components of the diversion control and analogue strategy include: domestic diversion investigative activity; State and local initiatives; international diversion; chemical monitoring and tracking; and regulation of controlled substance analogues.

- The domestic diversion control program will continue to rely on preregistration, cyclic, and targeted investigations to assure that the authority to handle controlled substances is granted only to those whose registration would be in the public interest. Law enforcement agencies will also expand their use of the Public Interest Revocation (PIR) authority to immobilize diversion law violators, and will accelerate diversion investigations and prosecutions through the use of improved computer technology and better personnel guidance and training.

- State and local authorities, which bear primary responsibility for the licensing, regulation, and investigation of practitioner registrants, may receive additional Federal support through the Bureau of Justice Assistance State and Local Assistance for Narcotics Control Grant Program (authorized by the Anti-Drug Abuse Act of 1986), and a variety of Federal, State, and local diversion control conferences and workshops.

- International diversion control efforts will include: continuing a number of joint cooperative efforts initiated by the U.S. to combat international diversion; addressing the diversion issue and appropriate international legislation at the United Nations Commission on Narcotic

Drugs; and strengthening diversion control at U.S. Ports of Entry by using the Drug and Chemical Watch Manual and broadening the Automated Commercial System (ACS) to include additional information about diverted drugs.

- To combat chemical diversion, DEA will develop legislation and supplement existing resources in an effort to create a system of controls over certain precursor and essential chemicals, and will encourage other chemical source and transit nations to follow suit in developing appropriate legislation.

- To control the spread of controlled substance analogues, law enforcement agencies will continue to use the emergency scheduling procedures provided by the Diversion Control Amendments of 1984 and actively and effectively implement the Controlled Substance Analogue Act of 1986, making the production, distribution, and consumption of these substances illegal.

Drug Law Enforcement's Role in Reducing the Demand for Drugs

Law enforcement officials play an important role in reducing the demand for drugs through the deterrent effect of their enforcement efforts and through their participation and leadership in drug abuse education and prevention projects. Law enforcement officials use their unique knowledge of drug trafficking and abuse and their credibility to educate both adults and youth to help prevent drug abuse and reduce related social costs. These officials join businessmen, civic groups, drug abuse prevention professionals, media, parents, religious groups, and schools in presenting the clear message that drug abuse is unacceptable.

The Strategy

- In contributing to the national drug abuse awareness and and prevention effort, the Strategy calls on law enforcement officials to participate in a number of important activities.

- Law enforcement authorities must enforce laws concerning both drug trafficking and abuse in order to provide a credible deterrent to drug abuse and to reinforce the

growing consensus that drug abuse is not acceptable behavior.

- State and local jurisdictions should adopt appropriate legislation regarding drug possession and sale of drug paraphernalia, and develop drug testing programs.
- These authorities must also inform themselves and others about the consequences of drug trafficking and abuse in an effort to elevate public awareness about drug trafficking and its global effects.
- Drug law enforcement authorities, working closely with the National Institute on Drug Abuse and the Office of Substance Abuse Prevention, will continue to support current Federal, State, and local demand reduction efforts.
- To foster cooperation and reduce the level of competition that sometimes exists among groups involved in reducing the demand for drugs, drug law enforcement authorities will facilitate communication among these groups whenever coordination is desirable.
- Lastly, drug law enforcement authorities should initiate drug abuse education and prevention activities where communities lack sufficient projects. This includes encouraging the formation of appropriate parent and other groups, and referring these groups to the national organizations that will help them get started.

Mexico and the Southwest Border

Drug traffickers in Mexico have increased their production of heroin and marijuana and are transshipping more South American cocaine destined for the United States. A variety of factors have contributed to this expansion, including the proximity to American markets that are located beyond the long and vulnerable Southwest border of the United States and a break in the effectiveness of Mexican eradication efforts. In response to these problems, the United States has increased the number of high-level exchanges with the government of Mexico concerning drugs. In light of these events, the nature and extent of the

drug problem in Mexico and efforts by both nations to address it, deserve special attention in the Strategy.

The Strategy

- The Strategy calls for a continuation and expansion of the cooperative atmosphere that has been established at the highest levels of government and throughout the law enforcement communities of both the United States and Mexico.

- The Strategy recognizes that in order for cooperation to lead to true progress in drug enforcement, cooperative agreements must be followed by firm actions. Greater progress is essential to meet Congressional certification provisions. The Anti-Drug Abuse Act of 1986 urges the President to impose sanctions against Mexico if cooperative agreements are not realized.

- The United States will press for ratification of the proposed MLAT between the U.S. and Mexico and encourage the use of the extradition treaty that is currently in force between the two countries.

- The Strategy also calls for the revitalization of Mexico's opium poppy and cannabis eradication campaign. The Department of State and DEA will continue to assist Mexico in its eradication programs by training pilots in eradication techniques, improving aerial reconnaissance and verification, and assisting in special operations.

- The Strategy supports continued assistance in the development of public education and drug awareness programs in Mexico.

- The Drug Enforcement Administration will provide additional personnel and equipment to support ongoing and proposed intelligence collection initiatives with respect to the drug problem in Mexico.

- Operation Alliance, a unified, multi-faceted enforcement effort to confront drugs, weapons, and other smuggling along both sides of the border in cooperation with the Mexican government, will continue and expand.

In conclusion, this National and International Drug Law Enforcement Strategy signals massive commitment and dedication by the Federal government and the American people. The battle

against drug abuse and drug trafficking will be a prolonged one, but progress will continue toward the ultimate goal of eliminating drug abuse.

U.S. Department of Justice

Office of Legislative and Intergovernmental Affairs

Office of the Assistant Attorney General

Washington, D.C. 20530

MAR 18 1987

Honorable Jamie L. Whitten
Chairman
Committee on Appropriations
House of Representatives
Washington, D.C. 20515

Dear Mr. Chairman:

The Attorney General has asked that I respond to your letter of February 10, 1987, in which you addressed the earmarking of $100,000 in 1987 for the development of an overall drug abuse prevention plan that coordinates the Federal Government's efforts in combatting the widespread use of illegal drugs. The Congress provided that this funding shall be available from the Continuing Resolution and regular appropriation bills supporting drug abuse prevention programs for 1987.

As you are aware, the President plans to issue an Executive Order placing the responsibility for all Federal anti-drug programs into one Cabinet-level board. The Executive Order will centralize oversight for all law enforcement programs and all programs for drug prevention, education, treatment, and rehabilitation into a new National Drug Policy Board -- thus expanding the functions and responsibilities of the current National Drug Enforcement Policy Board. In announcing the planned establishment of the new Board on February 3, 1987, the Attorney General noted that this is an important step in providing policy coordination for government-wide efforts to substantially cut the demand for drugs while maintaining and strengthening the long-range drive to reduce the supply of drugs.

In addition to the Drug Enforcement Coordinating Group which exists under the current National Drug Enforcement Policy Board, a newly-designated Drug Prevention and Health Coordinating Group of the new Board will be chaired by Dr. Donald I. Macdonald who has recently been appointed as Director of the White House Office of Drug Abuse Policy. Members of this Coordinating Group will include heads of agencies specifically involved in the drug prevention and education area. This new Coordinating Group's functions and issues of immediate concern are presently being formulated. It is my understanding that the Drug Prevention and Health Coordinating Group will focus, as part of its agenda, on which agency will take the lead in the development of an overall drug abuse prevention plan as well as the $100,000 funding issue

cited above. The development and coordination of such an important drug abuse prevention plan hits at the very heart of why the President plans to place the responsibility for all Federal anti-drug programs into this new Cabinet-level board.

A White House Conference for a Drug Free America will convene this summer to address many issues in the drug prevention and education area. This Conference will bring together representatives of the Executive departments, Members of Congress, law enforcement officials and others experienced in the health, prevention and education areas. In sum, this Conference will significantly contribute to the development of Federal Government-wide drug prevention plans for the future.

On behalf of the Attorney General, I concur with you that we must have a coordinated plan to address this national crisis. The new National Drug Policy Board is the appropriate forum to coordinate this plan. If you would like to discuss this matter further, please give me a call.

Sincerely,

John R. Bolton
Assistant Attorney General

OPENING STATEMENT

Mr. SMITH. Mr. Attorney General, you may proceed with your statement.

Attorney General MEESE. Thank you, Mr. Chairman.

I have presented to the Committee a formal statement.

Mr. SMITH. We will put it in the record.

Attorney General MEESE. It involves some 28 pages and, if I may, I will summarize that statement briefly so that I can respond to the questions of the Committee.

Basically, Mr. Chairman, the Fiscal Year 1988 Budget Request of the Department of Justice, which has been very carefully worked out with the Office of Management and Budget and with the President contains substantial increases for several of our components. These components are involved in the core functions of Government, particularly in the area of law enforcement and in certain special types of litigation.

As this Committee has understood in the past, our workload is really not governed by matters within the power or control of the Department of Justice inasmuch as it reflects activities of law breakers and the activities of law enforcement in apprehending and prosecuting them, and the activities of those who are convicted of Federal crimes and therefore sentenced to the Federal Prison System. It involves the priorities of the President and of the Congress in terms of such things as the Immigration Reform and Control Act, and the Anti-Drug Abuse Act of 1986, as well as the Comprehensive Crime Control Act of 1984, all of which have had substantial impact on the budget of our Department.

We think that the budget that is before you has been very carefully worked out to provide for a system-wide approach, particularly in regard to criminal justice. Over the past six years, we have had virtually a doubling of the law enforcement officers. As a matter of fact, if you go back to 1981, we have had virtually a tripling of the resources devoted to drug law enforcement efforts. What we are doing, therefore, is increasing the number of people who are processed through the court system. This requires additional Assistant U.S. Attorneys; it requires additional prison space; it requires additional Deputy U.S. Marshals. So we have constructed our budget on a system-wide approach.

In addition to that, let me point out particularly the acute need that we have for prison space. We have a budget that for the last several years has included a substantial increase in the building program of our prison system. And, yet, the number of prisoners being sentenced to the Federal prisons is increasing every year.

We thought, in 1986, that we could anticipate something like 39,000 prisoners for Fiscal Year 1987. Our number today is in excess of 42,000. So we are even ahead of the number that had been projected just two years ago.

I mentioned this because it is critical that we have a prison construction program where we can plan ahead. We are in the process, as you know, of a five-year building plan, which we have discussed, I believe, with Members of the Committee in the past and will continue to be available to discuss with you. The important thing I

think is that we have this funding on a consistent basis and not have ups and downs, so that we will have adequate prison capacity.

I might say on the litigation side, again, our workload is to some extent dictated by the number of people that sue the Federal Government. But we also have found that when we are able, with the limited resources we have, to pursue affirmative litigation on behalf of the Government, the return in terms of dollars to the U.S. Treasury is many times the amount of dollars that are invested in our litigators. We have programs, such as the Debt Collection program and others of a similar nature.

So we present to you this budget, Mr. Chairman, and I would be happy to answer any specific questions. The statement submitted to the subcommittee and the budget justifications go into much greater detail about the individual portions of our budget.

[The Budget Summary submitted in support of this request and the written statement of the Attorney General will be included at this point in the record:]

DEPARTMENT OF JUSTICE

Explanation of Proposed Program Supplementals and Rescission
(Dollars in thousands)

Immigration Reform: Funds are requested to implement the Immigration Reform and Control Act of 1986. Increased resources of 4,559 positions and $145,961,000 are necessary to meet increased workload and to establish a special counsel for discrimination.

	Pos.	FTE	Amount
General Administration	200	42	$5,823
General Legal Activities	43	16	2,295
Immigration and Naturalization Service	4,316	1,628	137,843
TOTAL	4,559	1,686	145,961

A rescission of 557 positions and $24,598,000 is proposed as these resources will now be provided from the Immigration User Fee Account.

Immigration and Naturalization Svc. Rescission.	-557	-437	-24,598

U.S. Trustees Nationwide Expansion: To implement the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986, 377 positions and $16,993,000 are requested. This request represents the initial costs to expand the Trustee system nationwide. Once expansion of the system is completed, it is expected to be self-sustaining.

General Administration	16	21	557
U.S. Trustees System Fund	361	102	16,436
TOTAL	377	123	16,993

Legal Responsibilities: This increase is requested to implement newly enacted legislation, including private counsel for debt collection and amendments to civil fraud statutes.

General Administration	22	11	2,234
General Legal Activities	21	5	2,640
TOTAL	43	16	4,874

National Security: Increases are requested to fund Presidential security initiatives including administrative support for these initiatives and to develop legal documentation needed to perform essential functions during a national security emergency.

General Administration	12	6	550
General Legal Activities	4	1	120
TOTAL	16	7	670

Bond Building Supplemental: To fund the costs associated with relocation to the Bond Building.

General Administration	...	...	762
General Legal Activities	...	...	2,287
Antitrust Division	...	...	215
TOTAL	...	...	3,264

Federal Telecommunications System: To fund higher than budgeted telecommunications tariff rates, the following increases are necessary:

	Pos.	FTE	Amount
General Administration	...	...	$106
General Legal Activities	...	...	444
U.S. Attorneys	...	...	887
Antitrust Division	...	...	84
U.S. Marshals Service	...	...	405
Community Relations Service	...	...	41
Federal Bureau of Investigation	...	...	1,989
Drug Enforcement Administration	...	...	776
Immigration and Naturalization Service	...	...	950
Federal Prison Systems:			
Salaries and Expenses	...	...	548
National Institute of Corrections	...	...	15
TOTAL, Federal Prison System	...	...	563
Office of Justice Programs	...	...	27
TOTAL	...	...	6,272

General Services Administration Rent: Additional costs associated with General Services Administration (GSA) rental increases.

General Administration	...	...	1,180
Federal Bureau of Investigation	...	...	2,000
TOTAL	...	...	3,180

Support of U.S. Prisoners: The proposed supplemental would fund additional unsentenced inmate days in contract facilities. This request is a result of the implementation of the bail reform provision of the Comprehensive Crime Control Act of 1984. An increase of $9,630,000 is requested.

Federal Bureau of Investigation: Funds of $5,686,000 are proposed for reappropriation. This request will provide that funds for a classified project remain available until expended.

Immigration and Naturalization Service: To fund the contract detention of certain Mariel Cuban criminals, an additional $9,000,000 is required.

Language Changes

General Legal Activities: The proposed appropriation language provides that $2,000,000 requested for independent counsel expenses remain available until expended. In addition, $299,000 of the request is for activities of the Antitrust Division, which are shown as part of this appropriation based on the proposal to merge these two accounts in 1988.

U.S. Marshals Service: Proposed language specifies the amount collected for the service of civil process which may be credited to this appropriation to meet salaries and other expenses, as authorized in P.L. 99-646.

Community Relations Service: The proposed change in appropriation language would allocate the proper amount to the earmarking for reception, processing and care of Cubans and Haitians.

Drug Enforcement Administration (DEA) and Immigration and Naturalization Service (INS): Language is proposed to change the number of vehicles which may be acquired from 575 to 1,030 for DEA and from 490 to 2,230 of which 490 are for replacement for INS.

APPROPRIATION LANGUAGE CHANGES

General Administration. Language is deleted limiting employment in the Departmental leadership offices.

General Legal Activities. The request would allow up to $6,000,000 to remain available for litigation support contracts until September 30, 1989. Two-year availability of this amount has been included in the last three appropriation acts.

The 1987 budget requested that $10,000,000 be made available for office automation systems for the legal divisions traditionally included in the appropriation, as well as the U.S. Attorneys and the Antitrust Division. The requested language was approved, but the amount reduced to $1,537,000. The 1988 request for office automation systems is $24,718,000 and the language is broadened to include offices funded through the General Administration appropriation. Amounts would remain available until expended.

Language allowing $1,000,000 to be transferred from other appropriations to support Independent Counsel is retained except that portion specifically requiring approval of the Committees on Appropriation is deleted.

Consistent with the proposal to merge the appropriations "Salaries and expenses, Antitrust Division" and "Salaries and expenses, United States Attorneys" with this appropriation, a provision has been added allowing obligated funds of the three appropriations to be merged.

Language is added allowing the Chief, U.S. National Central Bureau, INTERPOL to establish and collect fees for background investigations and credit up to $150,000 to this appropriation for services provided.

U.S. Marshals Service. A ceiling of $1,350,000 is set for providing protected witness safesites. This request would be applicable to the "Fees and expenses of witnesses" appropriation if the proposed transfer of the Protection of Witnesses program is not approved.

New language is proposed that would allow the Director of the Marshals Service to collect fees for the service of civil process, as authorized in P.L. 99-646, and credit not to exceed $1,000,000 to this appropriation to cover expenses incurred.

Support of U.S. Prisoners. Language is proposed making the entire appropriation available until expended instead of just the Cooperative Agreement Program.

Language is deleted which restored prior year balances to cover anticipated deficiencies in 1986.

Fees and Expenses of Witnesses. Witness safesite language is deleted in favor of similar language for the Marshals Service. If the transfer of the Protected Witness program is not approved, the language proposed for deletion from this appropriation should be restored.

United States Trustee System Fund. The appropriation "Salaries and expenses, oversight of bankruptcy cases" is replaced by the "United States Trustee System Fund" established by the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (P.L. 99-554). Although this Fund is intended to be self supporting from fees, appropriations are requested in 1987 and 1988 to establish a nationwide system.

Federal Bureau of Investigation. The number of passenger motor vehicles that can be purchased for police-type use without regard to the general purchase price limitation is increased from 1,579 to 2,000 and the number of replacement vehicles is increased from 1,450 to 1,650.

The 1987 appropriation act allowed up to $10,000,000 for automated data processing (ADP) and telecommunications and $1,000,000 for undercover operations to remain available for two fiscal years. A similar provision is repeated in the 1988 request which specifies that the funds should remain available until September 30, 1989.

New language is requested that would permit $13,000,000 to construct an Engineering Research Facility to remain available until expended.

New language is requested that would permit $11,358,000 requested for a language translation and recording system in the New York field office to remain available until expended.

Language relating to the collection and use of fingerprint fees is modified and the limitation on the crediting of receipts to the FBI is increased from $15,500,0000 to $17,500,000.

The proposed language would lift the authorization for official reception and representation expenses from $45,000 to $70,000.

The 1987 provision allowing $13,800,000 for the expansion and renovation of the New York field office to remain available until expended is deleted.

Drug Enforcement Administration. The number of passenger motor vehicles that can be purchased for police-type use without regard to the general purchase price limitation is decreased from 575 to 525. The number of replacement vehicles is held at 489.

New language is added that not to exceed $4,000,000 for contracting for ADP and telecommunications and not to exceed $2,000,000 for technical equipment shall remain available until September 30, 1989.

Language directing the establishment of a new office in Hilo, Hawaii is deleted because the office is already operational.

Language relating to the expenses of the training of State and local law enforcement officers at the FBI Academy, Quantico, Virginia is deleted as superfluous to the appropriation bill.

The language related to the "Construction" appropriation is deleted. No proposals relating to the construction of an "all source intelligence center" are contained in the 1988 request.

Immigration and Naturalization Service. The number of passenger motor vehicles that can be purchased for police-type use without regard to the general purchase price limitation is increased from 490 to 1,670. The number of motor vehicles for replacement is 490, the same as in 1987.

Language related to the purchase of uniforms is deleted because the pending authorization bill proposes a comprehensive change in uniform allowances.

Language prohibiting the closing of the Northern Regional Office at Fort Snelling is proposed for deletion.

Language is deleted that permitted funds earmarked for construction to be used to cover 1986 operating fund deficiencies.

Federal Prison System - Salaries and Expenses. The number of law enforcement and passenger motor vehicles that can be purchased is increased from 40 to 142. The number of motor vehicles which can be purchased for replacement is increased from 30 to 106.

Language related to the purchase of uniforms is deleted because the pending authorization bill proposes a comprehensive change in uniform allowances.

Office of Justice Programs - Justice Assistance. The 1988 request proposes the termination of the Juvenile Justice and the Mariel Cubans programs. Language associated with these programs is deleted.

Language limiting obligations from the victim compensation and assistance programs is deleted from the Justice Assistance appropriation and moved to the Crime Victims Fund.

Language included in the Omnibus Drug Supplemental Appropriations Act of 1987 for drug law enforcement grants and a pilot prison capacity study is proposed for deletion.

Office of Justice Programs - Crime Victims Fund. Language is included limiting obligations for victims compensation and assistance programs to $35,000,000.

72-165 O—87——2

1988 AUTHORIZATION BILL

The Department of Justice submitted its 1988 Authorization Bill to Congress on January 27, 1987. Title I of the bill authorizes the fifteen separate appropriations for the Department of Justice and contains specific authorizations for multiyear funding for certain activities as well as authority to pay for items such as uniform allowances and representation expenses. Title II of the bill contains permanent authorizing legislation for the Department. Title III of the bill contains additional permanent authorization and substantive legislation. Title IV of the bill contains provisions that will reduce funding for or eliminate certain programs administered by the Office of Justice Programs. Title V of the bill contains various provisions that would be enacted to conform the numbering of those statutes that would be affected by enactment of Title II and Title III of the bill.

The most significant items in the bill are contained in Title II. Foremost among these is permanent undercover authority for the Federal Bureau of Investigation, the Drug Enforcement Administration, the Immigration and Naturalization Service, and the Marshals Service. This authority allows the Department to ensure that undercover investigations conducted by these agencies do not violate otherwise applicable banking, appropriations, procurement, and government corporation laws.

Title II of the bill also contains the first systematic codification of the various financial authorities applicable to the Department as a whole or applicable to one or more of the Department's law enforcement bureaus. Most of these authorities were contained in the Department's 1980 annual authorization act and have been continued in effect by subsequent appropriations acts. In addition, Title II would provide the Department with gift acceptance authority, with authority to retain user fees to the extent specified in annual appropriations acts, and with authority to conduct law enforcement training overseas.

Title III of the bill contains additional permanent legislation, much of which pertains to the United States Marshals Service. This part of the bill contains provisions that were previously submitted to Congress as part of the proposed Marshals Service Act. In addition, Title III contains a provision granting general arrest authority to agents of the Immigration and Naturalization Service. It also contains a provision amending several criminal statutes so as to permit certain actions, e.g., seeking an immunity order, to be authorized by the Associate Attorney General.

Title IV of the bill repeals certain authorizing provisions relating to programs administered by the Office of Justice Programs. These provisions are submitted pursuant to the Administration's proposed budget and are consistent with the priorities established by the budget.

[1]The program supplemental requested includes 200 positions and $5,823,000 for workload associated with the Immigration Reform and Control Act of 1986, 16 positions and $557,000 for support of the U.S. Trustees Nationwide expansion, 22 positions and $2,234,000 for Private Counsel to implement debt collection policy, 12 positions and $550,000 for security initiatives for the National Security Emergency Preparedness Program, the Crisis Management Facility and enhancement of security in the main building, $762,000 for relocation costs associated with the forced move of Justice Employees to the Bond Building, and $106,000 and $1,180,000 for increased costs for the Federal Telecommunications System (FTS) and GSA rent costs, respectively.

GENERAL ADMINISTRATION, SALARIES AND EXPENSES
(Dollars in thousands)

Program changes	Perm. Pos.	Amount
Department Leadership..... Program changes of 4 positions and $741,000 are requested for the Department Leadership program to: provide adequate policy and program guidance, oversight and control to the organizations which implement the more than 150 Department of Justice Programs; and to implement a uniform office automation system.	4	$741
Executive Support..... The Administration recognizes that there is a structural deficit within the General Administration appropriation and it has authorized the Department to seek the necessary resources to fund current on-board personnel in this program. Therefore, the budget reflects program changes of 21 positions and $1,900,000 for programs within the Executive Support program: 14 positions and $625,000, and 7 positions and $575,000 are requested for the Offices of Public Affairs and Legislative Affairs, respectively. In addition, $700,000 is requested for the Executive Support offices' participation in the Department's uniform office automation system.	21	1,900
Intelligence Policy and Professional Responsibility..... A program change of 2 positions and $106,000 is included to meet increased foreign intelligence and counterintelligence related workload in the Office of Intelligence Policy and Review. Additionally, resources of $200,000 are included to support the uniform office automation system for offices in this program.	2	306
Justice Management Division..... A program increase of 6 positions and $300,000 is requested for increased Department security, $813,000 is requested for building maintenance and repair, and $1,629,000 is requested to support a uniform office automation system in the Justice Management Division. Additionally, increases of 7 positions and $500,000 and 12 positions and $700,000 are requested to provide direct resources to support the Task Force Administrative Unit of the Organized Crime Drug Enforcement Program and the Office of Attorney Personnel Management, respectively.	25	3,942
Administrative Review and Appeals..... A program increase of 13 positions and $999,000 is included to provide the Executive Office for Immigration Review with resources to continue implementing the Automated Nationwide System for Immigration Review, and to address the Board of Immigration Appeals workload and case backlog.	13	999
Total program changes, General Administration.....	65	7,888

1. Working Capital Fund	...	...	...	$4,000	...	$4,000

Program Changes	Perm. Pos.	Amount
Working Capital Fund	...	$4,000

The Working Capital Fund is requesting an appropriation (a capital appropriation) of $4,000,000 to relocate the Washington, D.C. Data Center and to consolidate separate data communications networks into a single network. Additional capitalization of the Fund is necessary because current assets are inadequate. The relocation would provide increased physical security and data processing capacity and the near total facility reliability for the continued growth of the litigation, investigative, law enforcement, and immigration user systems. The communications' funding would allow the Department to begin the consolidation of the Department's five major telecommunications networks into a single National Telecommunications Network that will be monitored by a centralized management network control facility.

This National Justice Telecommunications Network will reduce the costly duplication of communications facilities for autonomous and application-specific networks; minimize exposure to increasing tariffs; and improve operational efficiency.

Program changes	Perm. Pos.	Amount
U.S. Parole Commission	...	$600

For 1988, an increase of $600,000 for three program initiatives is requested. The increase will provide funding for six reimbursable examiner/analyst positions ($200,000), the relocation of professional staff in the field and central offices ($300,000) and provide for additional funding requirements for contract typists ($100,000). These increases will enable the Commission to continue to meet statutory requirements of providing hearings to all federal prisoners.

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program changes	Perm. Pos.	Amount
Conduct of Supreme Court proceedings and review of appellate matters.....	...	$158
The Office of Solicitor General is requesting an increase of $158,000 to buy-out existing computer equipment and expand the existing case-tracking system. This will allow the Office to ultimately link or network the entire office and do away with a partially manual case-tracking system.		
General tax matters.....	70	$10,977
In 1988, the Tax Division is requesting increases of 10 positions and $2,151,000 as a result of the Tax Reform Act of 1986, which represents the first major transformation of the U.S. tax system in thirty years. Sixty positions and $8,826,000 are requested as a result of recent legislation that substantially expands the Internal Revenue Service's resources. The areas of increase requested for the Tax Division are: refund and appellate litigation as a result of the Internal Revenue Service (IRS) initiative to reduce backlogs; collection related activity to support the IRS and organized crime and drug enforcement-type litigation to support efforts of additional IRS Special agents. Under the new provisions related to "personal interest" of the Tax Reform Act of 1986, the Tax Division anticipates a large increase in refund claims by taxpayers who prepay their deficiencies and interest in order to receive the deduction and then file for a refund in the U.S. Court of Claims or the U.S. District Court. Civil trial and appellate litigation will increase as a result of this legislation.		
Criminal matters.....	45	4,469
The Criminal Division is requesting a program increase of 45 positions, 33 full-time equivalent (FTE) workyears and $4,469,000 to combat organized crime, terrorism and procurement fraud. More specifically, 24 positions, 18 FTE workyears, and $2,391,000 will be devoted to increasing organized crime prosecutions and addressing the recommendations of the President's Commission on Organized Crime. In addition, 15 positions, 11 FTE workyears and		

Program changes	Perm. Pos.	Amount
$986,000 are being requested in the terrorism area to provide legal advice to representatives and policy-makers responsible for responding to international terrorist incidents. Enhancements totaling six positions, four FTE workyears and $684,000 are also being requested to address the increased workload in the Department of Defense procurement fraud area. Damages paid to the U.S. Government have already totaled millions of dollars. Additional resources totaling $408,000 are also requested for the public integrity, narcotics and internal security program areas.		
Claims, customs and general civil matters.....	114	13,579
The Civil Division is requesting a program increase of 114 positions, 72 FTE workyears, and $13,579,000 to handle enormous increases in workload in its defensive and affirmative litigation programs and to enable it to cope with the additional litigation which is expected as a result of passage of the Immigration Reform and Control Act of 1986 and the civil anti-fraud legislation enacted by the 99th Congress. The increases requested include 34 positions and $2,331,000 for cumulative workload increases in the Federal Appellate program over several years; 20 positions and $3,953,000 to defend adequately against the unprecedented number of suits against the United States in the Torts program; 29 positions and $4,492,000 to allow the Commercial Litigation program to recover monies owed to the Government; 20 positions and $1,413,000 to enable the Federal Programs branch to effectively defend against challenges to efficient operation of federal agencies; and 11 positions and $1,390,000 for the Immigration Litigation program to handle the influx of new cases anticipated because of the Immigration Reform and Control Act of 1986.		
Land, Natural Resources and Indian matters.....	26	$6,499
For 1988, the Land and Natural Resources Division is requesting an increase of 26 positions and $6,499,000. For the Environmental Protection program, 14 positions and $4,779,000 are requested to fund an expected growth in caseload of approximately 400 cases that will result from new		

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program changes	Perm. Pos.	Amount
programs under the Resource Conservation and Recovery Act, the Safe Drinking Water Act and the Clean Air and Water Acts. Also, 12 positions and $1,720,000 are requested for the General Litigation program to fund increased activity due to the initiation of new activities which include programs under the National Forest Management Act; Federal Water Rights Litigations in several western states and the Navy Port Dispersal Plan for major new construction at ten nationwide sites.		
Office of Legal Counsel.....	...	42
This requested increase will provide resources to allow for the production and publication of Presidential Emergency Action Documents (PEAD's).		
Civil Rights matters.....	...	800
For 1988, the Civil Rights Division is requesting an increase of $800,000 to allow the Division to hire outside consultants to conduct specialized analyses and to develop complex data bases. The additional resources will be spread across three program areas: Special Litigation ($120,000), Voting ($280,000) and Employment Litigation ($400,000).		
INTERPOL-USNCB.....	12	540
For 1988, the Department is requesting 12 positions, 9 FTE and $540,000 to enable the USNCB to fully implement a 24-hour per day operation. The additional resources will speed the processing of investigative information between international and domestic law enforcement agencies.		
Legal activities office automation.....	...	$23,181
An increase of $23,181,000 is requested to fund office automation projects for the Department's litigating components. Under this proposal, automation requirements are centrally coordinated, developed and funded on a priority basis. In 1988, a major investment will be made for a joint systems procurement involving the U.S. Attorneys and the Tax and Criminal Divisions. This system involves an initial installation of 5,000 terminals with		

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program changes	Perm. Pos.	Amount
eventual expansion to 12,000 terminals in a nation-wide communications network. Implementation of a joint office automation acquisition program will end proliferation of incompatible systems which now preclude the rapid and efficient transfer of information, documents, and work products among thelitigating components. This increase allows the Department to proceed with enhancements to office automation systems supported by already completed system analyses and studies.		
Enforcement of antitrust and kindred laws.....	-100	-2,109
As the result of the enhanced use of automation for case tracking and management, the Antitrust Division is requesting a program decrease of 100 positions and $2,109,000 in 1988. The program decrease of 100 positions and $2.109 million for the Antitrust Division will be achieved through efficiencies and curtailment of lower priority program efforts. Specifically, the Antitrust Division will continue to reap efficiencies in 1988 from its investments in office automation and the use of automated data processing technology in its economic anlyses. The lower priority program--which can be curtailed without affecting merger related responsibilities or criminal grand jury activities related to major price-fixing cases--includes: competition advocacy (advocacy before federal regulatory agencies), policy analyses, legislation related activities and training.		
U.S. Attorneys.....	542	28,124
The U.S. Attorneys are requesting a program increase of 542 positions and $28,124,000 in 1988 for white collar crimes (28 positions and $1,561,000) and narcotics and dangerous drug prosecutions, (373 positions and $18,562,000) affirmative civil litigation (80 positions and $3,970,000), Organized Crime Drug Enforcement (OCDE) activity (44 positions and $2,557,000), legal education ($452,000), Law Enforcement Coordinating Committee/Victim Witness program (17 positions and $522,000) and enhanced security for the U.S. Attorney and OCDE offices ($500,000).		

SALARIES AND EXPENSES, GENERAL LEGAL ACTIVITIES

Program changes	Perm. Pos.	Amount
SpecialCounsel.....	30	$2,315
For 1988, the Department is requesting an increase of 30 positions, 23 FTE and $2,315,000 to continue the efforts initiated in 1987 as set forth in P.L. 99-603, the Immigration Reform and Control Act of 1986.

SALARIES AND EXPENSES, UNITED STATES MARSHALS SERVICE

Program Changes

	Perm. Pos.	Amount
Witness Security	36	$1,141
A program increase of 36 positions and $1,141,000 is needed to ensure the continued safety of the increasing number of protected witnesses and their family members, and to fully staff the Washington, D.C. area assessment center.		
Fugitive investigations and court orders	...	300
A program increase of $300,000 is necessary to ensure adequate resources are available to meet the increasing number of international extraditions, as well as the overall cost of performing such extraditions.		
Judicial Security	160	8,126
This program request represents an increase of 118 positions and $5,863,000 for enhanced protection of members of the federal judiciary and court facilities. An additional program increase of 42 positions and $2,263,000 is necessary to provide security resulting from the increased drug war workload.		
ADP and telecommunications	4	1,341
This program increase of 3 positions and $934,000 is for an ADP threat analysis system and similar improvements. Also, a program increase of 1 position and $407,000 is necessary to improve the National Prisoner Transportation System (NPTS).		
Handling of Federal prisoners	18	5,153
An increase of 10 positions and $4,047,000 is necessary to implement management improvements and to provide continued efficiencies in the NPTS. An additional 8 positions and $1,106,000 is necessary for the establishment of the new D.C. Superior Court facility.

SALARIES AND EXPENSES, U.S. TRUSTEE SYSTEM FUND

Program changes	Perm. Pos.	Amount
U.S. Trustees		
Bankruptcy Matters	339	$14,182

The 1988 request for the United States Trustees will provide for expansion of the U.S. Trustees program to 21 regions encompassing 88 of the total 94 judicial districts. This request represents the second year of expansion pursuant to the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (P.L. 99-554). This Act, signed on October 27, 1986, established a U.S. Trustee System Fund in the U.S. Treasury and provided for the collection and deposit of filing fees and maintenance charges into the Fund to finance program operations. The system of fees and charges is intended to produce sufficient revenue to cover program costs once the program is operational nationwide.

Supplemental resources of 361 positions and $16,436,000 are requested for 1987 to finance the first year of program expansion under P.L. 99-554. Due to the tight schedule in the statute for certifying additional regions in 1987, it is essential that this funding be provided as quickly as possible. An extraordinary delay in the availability of this supplemental appropriation will create impossible conditions for successful completion of the first phase of the nationwide expansion.

The Department is seeking direct appropriations into the Fund to finance the program expansion in 1987 and 1988. The program expansion will be completed in 1989. If program revenues are allowed to accumulate in the Fund during 1987 and 1988, sufficient revenues should be collected to allow future requests to be met from Fund balances as intended by Congress.

The total and incremental amounts shown above reflect the most recent obligation estimates available for 1988. Amendments within the Anti-Drug Abuse Act of 1986 expanded the purposes of the Fund for which agencies could be reimbursed. This broadened area of coverage includes such expenses as the purchase or lease of ADP equipment directly related to seizure or forfeiture recordkeeping, retrofitting a conveyance for drug enforcement purposes, purchase of drug evidence and other selected categories. Obligations in these areas will increase in 1988.

The requested enhancements are directed to high priority field investigative programs. These enhancements will ensure that identified investigative targets are pursued and recently achieved program momentum is maintained.		
Organized crime	245	13,588
An additional 106 Special Agents and 139 general and special support personnel are requested to support an increasing level of effort focusing on organized crime's infiltration and domination of major national and international labor unions and to combat Sicilian, Mexican and Colombian drug cartels. Nonpersonnel enhancements are requested to expand the FBI's air program, provide sufficient resources for informant payments and pre-entry Witness Security program costs, and to fund investigative travel adequately.		
White-collar crime	80	2,003
An enhancement of 42 Special Agents and 38 general and special support personnel is requested to meet an expanding workload related to Department of Defense procurement fraud and bank fraud and embezzlement investigations.		

Federal Bureau of Investigation

Program Changes	Perm Pos.	Amount
Organized crime drug enforcement	12	$1,956
Twelve additional Special Agents are requested to support Organized Crime Drug Enforcement Task Force investigations. Nonpersonnel enhancements will be used to meet increasing informant payments.		
Training	...	2,500
The FBI's new 250-student dormitory and classroom building will be completed in 1988. To be fully operational, student rooms, lounges, common areas and classrooms must be furnished; an enhancement of $2.5 million is requested for this purpose.		
Technical field support and equipment	50	24,153
Fifty technical support personnel and $11.2 million are requested to support the development, implementation and maintenance of the Department's integrated digital voice privacy radio system. When fully implemented this system will meet the tactical radio requirements of the FBI, Drug Enforcement Administration and United States Marshals Service. An additional $13.0 million is requested for the construction of an integrated FBI-DEA Engineering Research Facility. When fully operational, this facility will produce operational economies and enhance coordination of technical equipment, procurement, research, development and production.		
Administrative services	39	4,150
Enhancements totaling 39 positions and $4.2 million are requested to ensure that administrative matters and activities are performed expeditiously. The FBI's administrative areas have not kept pace with recent investigative program enhancements.

Program Supplemental Request

The major portion of the 1987 supplemental appropriation request for INS includes 4,316 positions and $137,843,000 to implement the Immigration Reform and Control Act of 1986. Highlights of the supplemental appropriations request for the Immigration Reform and Control Act of 1986 include:

	Positions	Amount
Construction of a new detention center	...	$15,000
Border Patrol construction	...	16,000
Modification of topographic features	...	4,000
Improving control of borders	2,261	35,479
Employer sanctions	1,237	33,669

	Positions	Amount
Expeditious Deportation of Criminal Aliens (McKay Amendment)	616	$16,781
Systematic Alien Verification for Employment Program	85	1,958
Implementing Agricultural Worker Program	117	14,956
TOTAL	4,316	137,843

Also included in the requested 1987 program supplemental is $9,000,000 to fund non-Service detention of Mariel Cuban criminals who are placed in Federal custody after serving sentences in State and local prisons and jails and $950,000 to fund increased Federal Telecommunications System cost increases.

Rescission Proposal

The 1987 Continuing Resolution (P.L. 99-500) provided for the establishment of an Immigration User Fee account. This will allow INS to charge a fee for the inspection of certain passengers arriving in the United States aboard commercial aircraft or vessels. The proposed rescission reflects those resources currently included in INS' 1987 appropriation that fund items which will be funded through the user fee account, effective December 1, 1986. Because the legislation merely switches the source of funding for certain functions, there will be no adverse impact on INS as a result of this rescission.

IMMIGRATION LEGALIZATION
(Dollars in thousands)

	Perm. Pos.	Amount
1987 estimate of obligations	...	$148,540
1988 base	...	148,540
Program changes	...	32,152
1988 estimate	...	180,692

The Immigration Reform and Control Act of 1986, P.L. 99-603, provides for the establishment of a Legalization program. Under this program aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, who resided in the U.S. since then and who are not excludable may apply for temporary resident status. The law allows those granted temporary resident status to apply for permanent resident status after 18 months upon showing general admissability and citizenship skills. Consistent with the Act, this program is to be funded through application fees, which shall be available without fiscal year limitation to cover administrative and other expenses in connection with the review of legalization applications.

Program Changes:

The 1988 estimate reflects increased resources required to process additional applications expected to be submitted to INS in 1988.

IMMIGRATION USER FEE
(Dollars in thousands)

	Perm. Pos.	Amount
1987 estimate of obligations	...	$70,389
Anticipated additional amount for full-year operations	...	3,611
1988 base	...	74,000
Program changes	...	...
1988 estimate	...	74,000

The Department of Justice 1987 Appropriation Act (P.L. 99-500) provided for the establishment of a $5 per individual user fee for certain passengers travelling into the United States. These fees will be used to fund costs associated with immigration inspection and preinspection for passengers on certain commercial aircraft and vessels; overtime immigration inspection services, administrative debt recovery, including the operation of a national collections office; expansion, operation and maintenance of information systems for non-immigrant control and debt collection; detection of fraudulent documents used by passengers travelling to the United States, and detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

In 1988, $74,000,000 is estimated to cover INS' full-year costs. In 1987, the user fee provision did not go into effect until December 1, 1986; thus only partial year resources were required.

Program Changes	Perm Pos.	Amount
Research, evaluation and demonstration programs	...	$2,700
This increase is requested for initiatives to control the supply and demand for illegal drugs. Funds will be used to implement a drug use "early warning" system ($1,350,000), conduct research on local drug dealer crack downs ($600,000), and public service announcements ($750,000).		
Criminal justice statistical programs	...	750
This increase will enable the Bureau of Justice Statistics to initiate a major, multi-faceted statistical series on white collar/economic crime. The data will facilitate long-term cost savings by permitting evaluation of alternative crime control strategies, will provide empirical data to support legislative, budget and conceptional strategies at the Federal and State levels, and will permit the development of a more comprehensive outline of criminal activity in the Nation.		
State and Local Assistance	...	-44,400
This reduction will terminate funding for this program. In view of the Balanced Budget and Emergency Deficit Control Act of 1985, many difficult decisions had to be made. One of these decisions resulted in an Administration policy that the States		

Program Changes	Perm Pos.	Amount
which receive program benefits should pay for them. The three years of funding which have been provided by this program have given the States and localities ample opportunity to find out if the projects they have funded with Federal funds have resulted in increased efficiency and/or reduced costs. If they have, then the States and localities should be willing to fund these projects.		
Emergency Assistance	...	$52
This program provides financial and technical support to assist States in responding adequately to law enforcement emergencies. In 1987, funding for this program was provided from available unobligated balances carried over from 1986. An increase of $52,000 is requested for 1988 to maintain this program at an adequate level of funding.		
Juvenile Justice Programs	...	-67,600
The Administration believes that the major goals of this program have already been accomplished and that further funding for this program should be provided at the State and local level. A program reduction of $67,600,000 is requested to terminate this program at the Federal level.		
Public Safety Officers' Benefits program	...	-650
A program reduction of $650,000 is requested due to a reduction in the number of claims filed and paid in recent years.		
Mariel Cubans	...	-5,000
No funding is requested for this program in 1988. This program benefits less than one half of the States. In the current period of scarce Federal funds, this program is no longer of sufficient priority to command a share of the limited funds available. The Department of Justice must first use any available funds to meet its Federal justice responsibilities.		
Regional Information Sharing System	...	-12,000
This program is designed to aid State and local law enforcement agencies in the exchange of information. The original RISS projects were funded on a demonstration basis with the expectation that financial support for these information networks would in time be assumed by the State and local law enforcement agencies which they serve. In light of scarce Federal resources, the Administration believes that the agencies which benefit from the services should now pay for those services. The 1988 program reduction of $12,000,000 will eliminate funding for this program.		

Office of Justice Programs

Program Changes	Perm Pos.	Amount
Anti-Drug Abuse Program	...	-$225,000
A program reduction of $225,000,000 is requested to terminate this program in 1988. The Administration believes that the funds made available to State and local governments in 1987 will permit these units of government to expand their efforts to enforce State and local drug laws. Since Federal funds are limited, the Administration must first utilize available funds to meet the requirements of the Federal justice system including increase direct drug initiatives.		
Management and Administration	-32	-972
This reduction in staffing is associated with the termination of the Juvenile Justice and State and Local Assistance Programs in 1988.		
Total program changes, Office of Justice Programs	-32	-352,120

OFFICE OF JUSTICE PROGRAMS, CRIME VICTIMS FUND
(Dollars in thousands)

	Perm. Pos.	Amount
1986 obligations	...	$64,898

1988 estimated obligations	...	35,000

Proposed obligation limitation

The Administration has proposed an obligation limitation of $35,000,000 in 1988. This proposal provides sufficient funds to encourage development of additional crime victims programs at the state and local level.

DEPARTMENT OF JUSTICE
STATEMENT OF THE ATTORNEY GENERAL
EDWIN MEESE III
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Committee:

Thank you for giving me the opportunity to discuss with you our 1988 budget request.

Those who choose to study our budget proposal carefully will discover that it is a carefully-designed blueprint for accomplishing all of the Justice Department's many critical functions.

We all agree on the fact that the Department of Justice performs core functions of government -- functions that indisputably belong to the federal government, and that are fundamental in nature. Inevitably, of course, we work closely with state and local law enforcement agencies, but we are always careful to make these cooperative ventures. Through such devices as our Law Enforcement Coordinating Committees and Organized Crime Drug Enforcement Task Forces, we work together in ways that maximize our ability to fight crime, while never trying to impose a federal imprint in places we don't belong.

This determination to cooperate with local law enforcement agencies is reflected in the way we prepare our budget. An important example is the Asset Forfeiture Program, under which we have been able to make available large sums of money to local law enforcement agencies without hitting up the federal taxpayer for the funds. When we work together on a case, and are able to seize ill-gotten gains from a criminal after he has been

convicted, we share those gains with states and localities, who can then use the proceeds for both drug law enforcement and drug education and prevention.

Our attitude toward relations with state and local agencies is also reflected in the way in which we manage our grant programs. Since the inception of these programs, they have been intended to "get the ball rolling" in states and localities -- to provide seed money, start-up money for programs that will be evaluated and, if local officials decide to do so, continued with local funding later. Our grant programs were never intended to be sources of permanent, ongoing funding for local programs, nor should they be. We've taken some criticism already this year for proposing to drop certain grant programs in the drug area next year, even though it should be clear to all that our role must be that of encouraging the development of, rather than sustaining, locally based programs to deal with drug abuse. Moreover, we must not overlook the fact that not all of the monies allocated in 1987 for these grant programs will be spent in 1987. Much of that money will continue to go out to the states and localities in 1988 and 1989. I'll have more to say about this later in my testimony.

I'd like to make one other general statement about our budget: it represents a careful balancing of resources. I cannot stress this enough. We have been hampered from time to time in recent years by what I might call "front-end loading" of the Justice Department -- putting plenty of money "up front" in

investigating crimes, but too little money farther "down the pipeline." The system becomes unbalanced when we do not have enough money to prosecute when cases come to court, or to incarcerate when convictions are obtained.

Clearly, with more investigators bringing in more cases for evaluation and prosecution, the United States Attorneys will require enhanced resources. Similarly, the Marshals Service must have concomitant enhancements to handle the resultant increased activity in the areas of trial-related prisoner transportation and housing, witness protection, and courtroom security. Finally, the greater investigative and prosecutive efforts will inevitably place more pressure on our already overcrowded Federal Prison System to find the means to house greater numbers of convicted defendants sentenced to prison terms. Accordingly, this budget strikes the needed balance between the "front-end" activities and the administrative support, the investigative and prosecutorial efforts, and the prison construction and operation that form a complete criminal justice system. It also includes resources for civil litigation that can return many times the modest investment in debt collection and defending claims against the government which threaten the Treasury of the United States with enormous potential liability.

This budget also includes significant new resources to meet increased responsibilities as a result of a variety of legislation passed over the last year. Let me spend a moment high-

lighting several significant aspects of this recent legislation, and then I'll discuss our budget request.

IMMIGRATION REFORM AND CONTROL ACT

Enactment of the Immigration Reform and Control Act at the end of the 99th Congress imposes significant new responsibilities on the Immigration and Naturalization Service and other components of the Department. This legislation represents the most comprehensive reform of our immigration law since 1952. It takes a major step toward controlling illegal immigration while preserving the nation's proud heritage of legal immigration. The Act contains three key provisions -- employer sanctions, increased enforcement authority, and legalization.

The Department is well along in drafting regulations that will implement this landmark legislation, and as you know, we have shared preliminary drafts of these regulations with those of you in the Congress and other interested parties. In fact, we've taken the unusual step of making these public long before our formal publication of proposed rules for comment due to take place late this month. We've done this to ensure that we receive the widest possible comment from all concerned, and we welcome any thoughts or suggestions for change that you may have.

The legalization provisions of the legislation will go far to improve the lives of millions of people who have until now lived in the shadows of our society. The legalization program

will enable these men and women to step into the sunlight and ultimately, if they choose, to become citizens. The program will be financed through a special fund financed from fees collected from persons applying for temporary residence status. Because this program will provide direct and significant benefits to a select group of individuals, namely illegal aliens, we believe and the law requires that the beneficiaries of this program should pay the costs, not the general taxpayer.

We have already launched significant efforts to ensure that all the provisions of the Act are effective. We are in need of the considerable additional resources requested in the President's budget request, in both 1987 and 1988, if we are to meet our new obligations.

ANTI-DRUG ABUSE ACT OF 1986

The Congress and the Reagan Administration share a determination to wage a war on drugs that represents our very best effort to rid American society of a terrible scourge. The Anti-Drug Abuse Act of 1986 and the companion Omnibus Drug Supplemental Appropriation Act, passed with bipartisan support, testify to this commitment. We are proposing increased resources to meet our very substantial responsibilities under these laws, as well as under the Comprehensive Crime Control Act of 1984.

The Anti-Drug Abuse Act of 1986 was truly a landmark measure that dramatically strengthens our ability to attack the national drug problem from both the supply and demand sides. In the

enforcement area, the 1986 Act included important Administration proposals to create substantial penalties for money laundering and the manufacture and distribution of controlled substance analogues or "designer drugs." The Act also incorporates our proposals for mandatory minimum sentences for large-scale drug trafficking and strengthens drug penalties across the board. Many other important drug enforcement initiatives were also enacted in the comprehensive anti-drug legislation, including measures strengthening the "schoolyard law," which makes it a federal offense to sell drugs within 1,000 feet of a school, toughening and improving federal asset forfeiture laws, and attacking other manifestations of the drug problem.

As I mentioned, the drug penalty enhancements enacted last year generally track our own proposals in the area and reflect our view that prison is precisely where drug traffickers belong and we want their stay there to be a lengthy one. At the same time, this does have very obvious and significant budgetary implications for the Department of Justice and particularly our Bureau of Prisons.

On the demand side, the 1986 drug law includes what we believe will be an effective deterrent to use of controlled substances -- a minimum fine for simple possession of drugs and a minimum jail term for a second conviction of simple possession. This will bring home to drug users that we view drug use as a serious matter. This provision, we believe, is consistent with the greatly enhanced drug education and drug treatment programs

provided for in the 1986 Act. In this area as others, however, follow-up with the enhanced resources requested in the budget for the United States Attorneys, Drug Enforcement Administration, Federal Bureau of Investigation, U.S. Marshals Service and Bureau of Prisons is essential.

In short, the 1986 Anti-Drug Abuse Act represents a true watershed in terms of drug control efforts and accounts for much of the increase in funding which we are seeking for 1988.

OTHER LEGISLATION

Additionally, late in the 99th Congress, the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986 was enacted. This legislation expanded the role of the United States Trustees to a nationwide status. All of the studies of the pilot version of this program, run under the auspices of the Department for the last seven years, have concluded that it has been successful, and should be extended throughout the country. The studies found that: the program significantly improved the speed and efficiency of the bankruptcy system, increased the likelihood of successfully rehabilitating debtors, and enhanced the possibility of increasing the returns to creditors. Our budget request seeks the additional resources necessary, until the Act's self-funding mechanism is completely in place. We anticipate that the program will be totally self-funded from its receipts by the beginning of 1989.

Aside from prison construction, very little of the Department's core budget goes to anything except "people" costs.

Nearly everything we do, from investigating crimes to prosecuting cases in court, from guarding the border to running prisons, is "personnel-intensive." As a result, the recently enacted Federal Employees' Retirement System Act of 1986 has had a very substantial impact on the Department's need for funding. As the Act's provisions go into effect, we must seek supplemental funding for 1987 and additional amounts in 1988. The impact is disproportionately high for the Department because of the large number of our employees who qualify for special benefits because of their law enforcement status.

This year's request also reflects the growing emphasis on self-financing that derives from recent legislation. Last year, for example, the Assets Forfeiture Fund proved so productive that Congress removed many of its limitations. Similarly, the Continuing Resolution established an Immigration User Fee Account that will fund significant segments of inspection-related services in the Immigration and Naturalization Service. As I noted earlier, our budget request also includes a self-financing provision for the legalization of aliens. It also continues the Crime Victims Fund financed by criminal fines and looks toward the previously noted self-financing of the U.S. Trustee program by 1989.

IMPACT ON DEPARTMENT RESOURCES

The net result of these initiatives, of course, is reflected in our budget request. A year ago I presented a budget on behalf

of the Administration that asked for about $4.2 billion. When Congress completed action on 1987 funding, this had grown to $4.6 billion, largely because of the funding added to implement the Anti-Drug Abuse Act. If our pending request for supplemental appropriations is approved, another $300 million would be added for 1987. Our total request for 1988 appropriations is just over $5.2 billion. If we include the activities that are self-financed, the total for the Department exceeds $5.6 billion.

In terms of positions, the growth is also significant. A year ago we proposed that 64,415 permanent positions be supported from appropriated funds. The 1988 estimate is 72,798, an increase of 13 percent. As I indicated earlier, it is largely the Administration's aggressive plan to implement the new legislation that drives this budget. Since much of this legislation becomes effective in 1987, the supplemental requests for 1987 are closely linked to the 1988 requests. I urge the Congress to appropriate swiftly the funds requested for 1987, to enable us to implement these important initiatives.

We are proposing increases in the Department's 1988 budget in the most vital areas. Let me briefly describe some of the key requested increases.

Immigration Reform and Control Act Implementation.

We are asking for $216.5 million in 1988 to support 4,602 positions for the Immigration and Naturalization Service and

other organizations involved in immigration reform. If we are to meet our responsibilities, we will need supplemental appropriations of $146 million in 1987 to fund 4,559 positions. These resources would allow us to enforce employer sanctions, launch the agricultural worker program, and strengthen the Border Patrol.

INS's 1988 budget includes a $29 million increase over the 1987 appropriations for the Border Patrol. The 1988 increase is on top of an 1987 supplemental increase request of $26 million for the border patrol. We are proposing to add almost 1,850 new positions to the border patrol to carry out the enforcement aspects of the Immigration Reform and Control Act. Most of these new positions will be added to the southern border. There should be some ancillary benefit to our drug interdiction efforts on the southern border as these border patrol personnel join the force already stationed there.

As you know, the Immigration Reform and Control Act of 1986, with certain specified exemptions, makes it an "unfair immigration-related employment practice" to discriminate against an individual (other than an unauthorized alien) "with respect to the hiring, or recruitment or referral for a fee, of the individual for employment or the discharging of the individual from employment" on the basis of the individual's national origin or citizenship status. The Special Counsel for Immigration-Related Unfair Employment Practices was created in the Department to enforce these provisions. For the Special Counsel we have

submitted an 1987 supplemental request for 30 positions and $1,395,000 and an 1988 request for an additional 30 positions and a program increase of $2,315,000.

Further, the 1988 budget request for the Executive Office for Immigration Review includes 126 positions and $9,290,000 for the implementation of the Immigration Reform and Control Act of 1986. These resources will be used to address workload associated with the expedited adjudication of criminal aliens in Federal and State prisons, and increased deportation caseload resulting from increased border enforcement, denials for legalization, denials of lawful residence to special agricultural workers, and employer sanctions enforcement.

Funding the War Against Drugs

As we respond to recent legislative initiatives, we must also continue to improve our fundamental mission in law enforcement. Last year both the President and the Congress continued to make clear that illegal drug trafficking is a serious threat to the nation's internal safety and stability and that radical responses are necessary. The level of resources devoted to the drug war continues to increase dramatically. Our 1988 request identifies a number of specific enhancements for the Drug Enforcement Administration, the Federal Bureau of Investigation, the U.S. Attorneys, several legal divisions, and the Office of Justice Programs. Beyond that, the process of identifying funds used in the drug war gets more difficult because we must consider the cost of annualizing the large

program increases included in the 1987 budget, blocking out certain non-recurring costs, and determining the proper amount to allocate to the war on drugs for the Federal Prison System, the Marshals Service, and the Support of U.S. Prisoners accounts where the cost data are not oriented to crime classification. If we simply ask how much more we will be spending to fight the drug menace in 1988 than in 1987, I believe that we can demonstrate conclusively that our core programs will apply significantly more in almost every organization.

For the Drug Enforcement Administration, we are requesting program increases that total $24.6 million and 108 new positions. These increases focus on increased security for ADP operations and office automation activities, establishment of asset removal teams at various locations throughout the country, and for technical and support operations. Complementing the DEA initiatives, the FBI is asking for $4.4 million to support 97 positions for Organized Crime Drug Enforcement Task Forces and related drug enforcement activities.

In the litigative areas, the U.S. Attorneys will receive more cases due to narcotics referrals from investigative areas. To handle cases we are requesting $21.4 million to fund 417 new positions, including 44 positions and more than $2.5 million dedicated to the Organized Crime Drug Enforcement Task Forces. In addition, the request includes almost $700,000 to fund 6 positions for the Tax Division to accelerate litigation on drug cases and about $141,000 more for narcotics prosecution by the

Criminal Division. We have also identified three program areas where the National Institute of Justice will apply another $2.7 million.

These new initiatives, totaling almost $54 million, do not include the additional $11.2 million that it will cost to provide full year funding for the 785 new DEA positions provided by the Congress in 1987 or the cost of annualizing other new initiatives approved in 1987. If we add these costs, and the expected $8 million for increased obligations of the Assets Forfeiture Fund, the net increase in resources from 1987 to 1988 for investigations, prosecution, and criminal justice research is almost $89 million.

As I indicated earlier, drug-related costs associated with the Federal Prison System, the Marshals Service, and other Department components are difficult to classify. For the Federal Prison System, currently, 37 percent of the prisoners are incarcerated for drug-related crimes. When determining drug-related costs, this amount is applied to total resources for the Prison System. Similarly, 35 to 40 percent of the resources for the U.S. Marshals can be associated with drug-related costs. Applying these factors to the resource levels from 1987 to 1988 results in a net increase of $62 million for these particular Department components.

In total, over $151 million more - $89 million for investigations and prosecutions and $62 million for the Marshals

and the Bureau of Prisons - will be available for core programs in the Department of Justice to combat drugs.

Other Criminal Investigations and Prosecutions

The 1988 budget request for the FBI contains the fifth year of the Administration's initiative to strengthen the FBI counterintelligence program. The FBI is also increasing resources devoted to terrorism, including domestic terrorism.

We plan to devote 80 more positions, 42 special agents and 38 support personnel, to Department of Defense procurement fraud and bank fraud and embezzlement investigations. This will raise the FBI's level of personnel investigating white collar crime to more than 3,100. These people focus on federal government fraud, such as bribery or conflict of interest, on public corruption by federal, state, and local executive and management-level public officials, and financial crimes, such as bank embezzlement and fraud.

One of my top priorities has been to prosecute those responsible for Department of Defense procurement fraud. Through the investigative and prosecutorial efforts of the Department of Defense, the FBI and the Criminal Division, we are helping to restore integrity to the defense procurement process. The cases are very labor-intensive and time-consuming. But they are very rewarding. For example, on July 24, 1986, Litton Systems, Incorporated, was sentenced, following a plea of guilty, to 320 counts of false claims and mail fraud. This case, which involved mischarging material cost on contracts to the Army, Navy and Air

Force, resulted in $15.7 million being paid back to the U.S. Government.

We have also been successful in prosecuting the top echelon of organized crime in this country. However, we cannot rest until we cripple the entire organized crime structure. It is estimated that organized crime reduces the GNP by $18 billion. The threat that organized crime groups present to our society strongly justifies not only our existing level of resources, but also an 1988 increase of 160 positions and $11 million for the FBI and 24 positions and $2 million for the Criminal Division. These new resources will primarily focus on organized crime's infiltration and domination of major national and international labor unions. Through control of these unions, La Cosa Nostra gains political and economic power and a vast source of funds from which they can finance other illegal activities. We must return control of the unions to those honest workers whom these unions represent.

United States Attorneys

In addition to the drug enforcement increases I mentioned earlier, the United States Attorneys will need new resources of $1.6 million for 28 positions to prosecute white collar criminals identified by the FBI and other agencies. We are also requesting an increase of 17 positions and $522,000 for the Law Enforcement Coordinating Committee (LECC) Victim Witness program. Our LECC/Victim witness coordinators serve as the focal point in

implementing several critical programs related to coordination of federal, state and local law enforcement efforts and client services to victims and witnesses in the federal criminal justice system. Finally, to cope effectively with the threat of reprisal or intimidation attacks by criminal elements and to protect employees and increasingly sensitive or classified material, an increase of $500,000 is requested for enhanced physical and personal security measures. In a moment, I will discuss additional proposed increases for the U.S. Attorneys in connection with our debt collection efforts.

As the Department's primary front line prosecutors and litigators throughout the country, the United States Attorneys will, of course, continue a myriad of other vital functions at a current services level. These functions cover the entire spectrum of litigative activities, including prosecutions of civil rights violations, public corruption, organized crime, and a host of other violations of federal criminal statutes, as well as litigation of tax cases, enforcement of environmental laws, and defending the United States Treasury against a variety of claims.

Federal Prison System

As increased resources are provided to the Department to investigate and prosecute violations of Federal law, and to the courts to conduct trials, the inevitable result is an increased Federal prison population. Despite new prison construction

during the past six years, we have been unable to keep pace with the growth of our inmate population. Since January 1981, the Federal inmate population has increased nearly 75 percent - from 23,800 to 41,500 today. We project a continuation of this growth and our 1988 appropriations request is based on a projection that the population will reach at least 55,200 by 1993.

I want to point out, however, that this projection excludes the potential impact of the enhanced drug penalties provided in the Anti-Drug Abuse Act of 1986 and the sentencing guidelines to be submitted to the Congress later this year by the U.S. Sentencing Commission. We anticipate that these two factors will further increase the Federal inmate population above current projections.

We are succeeding at a task that has been our first priority for the past six years: putting dangerous criminals behind bars, and putting them there for long sentences consistent with the seriousness of their crimes and the threat they pose to society. This is especially true of those guilty of drug-related crimes, who now form a very significant proportion of our prison population. But our success at this task must be met by a willingness to construct new prison facilities, to staff them, and to keep up needed modernization and repair activities at the many prisons we now run.

The Federal Prison System already has most of the funds to complete construction of a Los Angeles Metropolitan Detention Center and Federal Correctional Institutions at Fairton, New

Jersey and Marianna, Florida. We also have most of the funds needed to complete construction at Bradford, Pennsylvania; Sheridan, Oregon; Jesup, Georgia and a site not yet selected in the Northeast. We are now completing work on the Cuban detention unit at Oakdale, Louisiana and are moving ahead on lower security satellite camps and housing units.

To complete these projects and begin new ones, we are requesting new resources of $195.4 million in 1988. Out of this amount we will use $126.5 million to construct two Federal Correctional Institutions in the Northeast and Southeast and complete one facility in Oregon that was only partially funded in 1987. Another $33.7 million will be used to add six satellite camps or housing units at existing institutions in Kentucky, Tennessee, Alabama, Georgia, West Virginia, and Wisconsin and a new detention facility. The remaining $35.2 million will be used for modernization and repair of existing facilities.

As new facilities are completed and we move prisoners into them, we need activation funds. The 1988 request includes $34.5 million for the Federal Prison System Salaries and Expenses Appropriation to open up 2,328 new beds. With these and other additional resources, care and custody costs of housing Federal prisoners will reach almost $761 million and require over 12,000 positions.

United States Trustees

We share the Congress' enthusiasm for the nationwide expansion of the United States Trustees. However, this expansion requires us to seek supplemental funding in 1987 if we are to accomplish our shared intent to implement the program promptly and effectively. While Congress established a United States Trustee System Fund so that oversight of bankruptcy cases would be fully funded, over the short term, receipts will simply be inadequate to launch the program. In 1987, a $16.4 million supplemental is requested to build up to an 1988 program that can provide nationwide coverage. This will require an 1988 appropriation of $53.5 million to support 893 positions. Beginning in 1989, we expect the program to be self-funded from its accumulated and current receipts.

Other Department Responsibilities

Another area that requires substantial investment is our technological capability. Among these investments is a request to spend $24.7 million to install office automation systems in the Department's major litigation and management offices. As a result of joint planning and procurement efforts, the Department is prepared to make significant gains in 1988 in the replacement of obsolete equipment and the introduction of innovative office automation capabilities. In addition, we need further investment of $11.2 million in the FBI coordinated system to provide digital voice privacy radio communications among the FBI, Drug

Enforcement Administration, and the Marshals Service. Also, the Department is requesting $13 million for the construction of an FBI-DEA Engineering Research facility at Quantico, Virginia.

Another area of significance is debt collection. The Federal Government must vigorously pursue judgments of the courts and other amounts owed to the Government. In 1986, U.S. Attorneys collected $236 million in cash from civil and criminal debts. In 1987 and 1988, we expect this to grow to $248 million and $270 million, respectively. The 1988 budget requests 80 positions and $4 million for the United States Attorneys to identify potential recoveries for fraud, abuse of Government benefits, and defaults. We are optimistic that, after a full year of operation, this small additional investment may return up to $60 million in estimated recoveries. We also intend to implement recent legislation authorizing the Department to retain private counsel for debt collection in certain pilot districts beginning in 1987. A supplemental appropriation of $2.2 million is needed to launch this program. In 1988, the request would grow to $2.8 million. We estimate that this investment may yield up to $91 million in addition to amounts collected by the United States Attorneys.

For the Civil Division we are seeking 34 positions and about $2.3 million to meet its increased litigation responsibilities in the Courts of Appeals and the Supreme Court. In addition, the Civil Division request includes 69 positions and $9.9 million to

meet increasing workload in the torts, commercial litigation and federal programs areas. These resources will be used almost entirely for the defense of the Government in litigation and the concomitant avoidance of a significant drain on the U.S. Treasury. Our Department's litigators are currently protecting the Treasury of the United States against more than $125 billion in potential liability.

There is also a need to provide the necessary resources for Independent Counsel activities. The Continuing Resolution gave us authority to transfer $1,000,000 from other appropriations for this purpose. We have notified the Appropriations Committees of a $600,000 transfer and we are in the process of identifying a source for the remaining $400,000. To augment these resources, the Department requests a supplemental appropriation of $2 million in 1987. We have not yet determined the 1988 request, aside from continuing the authority to transfer up to $1 million from other appropriations, but will keep Congress informed of developing requirements.

RESOURCES ADEQUATE TO THE TASK

Now I would like to address criticisms that have already been leveled at certain aspects of the President's budget request.

Immigration Reform

Some have criticized the Department because we have not requested the full $422 million authorized by the Immigration

Reform and Control act for 1987 implementation and the $419 million authorized for 1988. However, we feel strongly that our budget proposals in this area fully reflect our shared commitment with the Congress to see to it that the vital purposes of the Act are accomplished. The combination of our requested appropriations and anticipated fees from the legalization program should equal $294.5 million in 1987 and $397.1 million in 1988. Given the fact that the legalization program will not begin until May 5, 1987, at which point more than half the fiscal year has passed, we believe that our proposed funding is set at a realistic level. I urge that you bear in mind that an implementation effort on this scale requires time, planning, and skill in order to put the resources on stream in an orderly manner. To spend more money than we have proposed would be to waste it.

War on Drugs

There have also been claims that the Administration's budget priorities do not reflect a true commitment to the war on drugs. This is simply not the case. Ours is not a rhetorical war on drugs. It is a real war with real people fighting -- and dying.

Earlier this year, we buried two of our own: DEA agent Raymond Statsney was laid to rest in Atlanta, where he had been shot and killed while working to put a major drug trafficker behind bars. Agent William Ramos was shot and killed while working on a case in Pharr, Texas. Another DEA agent, A. D. Wright, was shot and seriously wounded in a similar incident in Florida. Let no one say that our war on drugs is a war of words.

This Administration has worked hard for the past half dozen years to put our commitment and our resources where they can do the most good -- in the field, on the front lines of this war. I could cite statistics for hours that bear this out, but a few examples will make my point:

- Federal resources devoted to drug law enforcement, prevention, and treatment have tripled during this Administration. Most of the law enforcement prevention, treatment and research efforts begun in the 1987 drug abuse initiative are continued in the 1988 budget. For example, $100 million and $137 million respectively, are earmarked for prevention and education in the Departments of Education and Health and Human Services. The Department of Defense and the Veterans Administration also have resources devoted to this.
- During this Administration, in the Department of Justice alone, drug-related funding has more than tripled, growing from $365.5 million in 1981 to an anticipated $1.237 billion in 1988. At the same time, personnel workyears attributed to drug enforcement will have more than doubled from 7,332 to 14,738.
- From its start in 1983, the Organized Crime Drug Enforcement Task Force program has grown from 1,630 positions and $112.7 million to a requested level of

2,759 positions and $199.3 million in 1988 -- this represents an increase of 1,129 positions (69%) and $86.6 million (77%).

These figures demonstrate six years of sensible continuing and incremental increases and program enhancements for the war against drugs.

It's interesting that, in light of the huge increases in funding for the drug war under the Reagan Administration I've just mentioned, some are trying to suggest that we are somehow lacking in a commitment to the war on drugs. Remember that when President Reagan took office in 1981, total federal spending on fighting drugs stood at just $1 billion. In 1987, it will be nearly $4 billion.

Our critics charge that a drop in funding in certain areas between 1987 and 1988 somehow changes all that. But upon closer examination, a different story emerges. Some $350 million of the 1987 resources represent one-time, major capital purchases, and these obviously require no new resources in 1988. In addition, many of the 1987 dollars represent one-time start-up programs, and $225 million in 1987 money represents seed grants for states and localities that need not be repeated in 1988. Other monies are appropriated in 1987, but intended to be spent over a two-year period. In short, the truth is that the federal role in combatting drugs has received continually increasing support over the past six years, and when it comes to the core federal drug enforcement, responsibilities of the Department of Justice, the

1988 budget contains more than $151 million over the amount provided in 1987.

Before we leave the discussion of our drug efforts, I would like to note that our heavy emphasis on drug investigation and prosecution is complemented by heavy manpower commitments by other organizations. In 1988, the Bureau of Prisons will devote over 4,400 workyears and $362 million of its resources to operate and construct institutions required to house drug offenders. Finally, I would like to point out that INS' 4,000 border patrol agents can now be cross-designated for drug-related cases.

STATE AND LOCAL ASSISTANCE

As in past years, we are asking for funds where we believe a core function is served. The 1988 request for the Office of Justice Programs is for $78.3 million, a marginally higher amount than our 1987 request. This will provide more resources for the National Institute of Justice and the Bureau of Justice Statistics, and provide for the maintenance of the Missing Children and Public Safety Officers' Benefits programs. Administrative support would be provided to these programs and to those scheduled for phase-out. We propose to continue full funding for travel, lodging, meals, and training expenses for state and local law enforcement officials attending programs at the FBI's National Academy and the National Institute of Corrections. As we have done in past years, we are proposing to terminate new funding in 1988 for the $67.6 million Juvenile Justice program,

the $44.4 million State and local assistance program, the $12 million Regional Information Sharing System, and the $5 million grant program that reimburses states for housing sentenced Mariel-Cubans. The new issue in this area is the $225 million grant program that Congress initiated at the end of the 99th Congress, when it added this money to the Continuing Resolution as part of the Omnibus Drug Supplemental Appropriation Act. In response to this congressional initiative, the Office of Justice Programs has developed programs that may be useful in that this grant program will yield permanent benefits. Since the full $225 million remains available until expended, I suggest that we look for positive results before we add more.

We must also remember that the Department administers a major program that significantly assists the states financially -- the Asset Forfeiture Program. The equitable sharing of assets seized from drug dealers and others and forfeited by them is a better way for the Federal Government to assist the states and localities. When the President's 1988 drug budget was prepared, this form of help for states and localities was taken into account. It was important to structure the budget so that scarce federal dollars should be spent where they count the most. We want to see sharing of forfeited assets take the place of continued out-and-out grants. Sharing of responsibility and sharing of benefits is an important, cost-free way that the Federal Government has been helping the states in the drug war.

During 1985, the Justice Department approved the transfer of more than $2.5 million to state and local agencies under the Asset Forfeiture Program. In 1986, this sharing accelerated to $24.4 million. Sharing for 1987 is estimated at $28 million, with an 1988 projection for equitable sharing to top $30 million. It represents the sort of approach we should pursue with states and localities.

AUTHORIZATION BILL

Finally, at the end of January, the Department submitted its proposed 1988 authorization legislation. The last separate authorization bill was for 1980. Copies of the Administration's proposal have been made available to the Appropriations Committees. However, we are working with the House and Senate Judiciary Committees to facilitate their consideration of this legislation and are hopeful that a bill can be enacted for 1988. Prompt enactment of an authorization bill would enable the Appropriations Committees to move forward on appropriation matters with clear direction on related authorization issues and to eliminate certain provisions from the Appropriations Act which might be more appropriately placed in an authorization bill.

Both the appropriations and authorization processes require a balancing of the many interests that compete for Federal resources. The Administration's proposal candidly favors programs reflecting an aggressive and effective enforcement of Federal law. We are proposing to continue to put resources --

the dollars and the manpower -- on the frontlines, in the field where they are most needed. And this is true government-wide. It is a carefully considered systematic strategy which had its beginning in 1981 and which involves rationally planned growth -- growth which recognizes the various developmental stages of the anti-drug battle and targets resources to make the best use of taxpayer dollars. Thus, our proposed budget seeks to fund all core efforts, investigation, prosecution, imprisonment, and litigation. If our commitment is true, resources in one area must be paralleled in other areas.

I would like to thank the Committee for this opportunity to present the views of the Department of Justice.

IMMIGRATION REFORM COSTS

Mr. SMITH. Well, as you have indicated, Mr. Attorney General, we have had some major legislation in the last few years. The largest Crime Bill in the history of the country, a 600-page Crime Bill was enacted as part of our Appropriations Bill.

Then we have had the Immigration Reform Bill, which really creates budget problems. We are going to try to do the best we can with it, but we need to explore where we are going and to develop some kind of a plan. We must try to figure out how we can get money that is not within the baseline, when we have Gramm-Rudman to deal with. We will just have to try to do it. We want to try to work together with you on that proposition.

Tell me a little bit more about Immigration Reform, which we just passed late last year. We had a supplemental which we marked up yesterday. Where are we going? How fast are we going? What kind of costs are we talking about? And are there any offsetting savings?

Attorney General MEESE. Mr. Chairman, first of all, let me thank you and Mr. Rogers and the other Members of the Committee for your assistance on the supplemental yesterday. That is a very important part, particularly the Immigration Reform Act implementation which, of course, is the largest part of that supplemental.

Commissioner Nelson will be appearing before your Subcommittee in the near future to go into more detail on this, but, basically, the amounts of money that we have proposed in the supplemental indicate a 60 percent increase over the amounts that were in the enacted Continuing Resolution for Fiscal Year 1987. And the proposal that we have in the budget before you represents an 84 percent increase over that base, the enacted appropriation. We think that this amount, while not as much as was included in the authorization legislation, is the amount that we can profitably use for the implementation and the minimum amount that is necessary.

Our plan is to implement this law by the scheduled milestone dates, some of which will be coming up in the course of the next three months, including the first of June, which is a very critical date for the employer sanctions provisions which trigger a number of other provisions of the bill.

I think that the implementation plan has been going very well in the sense that the regulations for implementation have been put out for general public comment so that we can get the reactions and can gauge not only the operations but expenditures on the basis of those comments.

Our plan is, of course, to have the Immigration Reform and Control Act fully in place during this fiscal year, Fiscal Year 1987. Some of the costs will increase remarkably during Fiscal Year 1988, because that will be the first full year in which the Act is implemented. And we do have offsetting funds coming in through the legalization program which it is our desire to make virtually self-supporting as the Congressional Report that accompanied the legislation indicated. As a matter of fact, the fees that will be required for legalization will be such that they will be roughly comparable to the fees now charged to persons seeking entry into the

United States by lawful means, and will also carry out the Congressional request that we make the program self-supporting.

LEGALIZATION FEES

Mr. SMITH. When will we know exactly what those fees will be?

Attorney General MEESE. It is my understanding that they will be set and presented for comment as part of the regulations within the next 30 days.

Mr. SMITH. We have some controversy here in the Congress now, some wanting to put a cap on those fees; some wanting them to be higher; and some wanting them to be lower. The amount of $175.00 per applicant has been passed around. I do not know if it is a legitimate number or not. Are you telling me that nobody knows at this point?

Attorney General MEESE. The estimates are being made, and the area of $175.00 to $195.00 is roughly the region in which they are working at the present time. I believe when Commissioner Nelson is here, he can probably give you a more precise figure. That is certainly in the range which they are considering, and they are also looking at the possibility of a maximum fee for a family as a whole.

REDUCTION IN APPREHENSIONS

Mr. SMITH. In addition to fees and income that will come in to offset some of this cost, there is some indication that there are not as many apprehensions. Will there be some savings?

Attorney General MEESE. I do not think there will be any savings because we have to maintain the effort on the border. Now, you might say that the detention costs and that sort of thing could possibly be down. That is something we will have to see. First of all, whether the decreased apprehensions continue, however, we are already over what had been anticipated in the past as far as detention costs because of the record number of people apprehended during the past year. So I cannot promise that there will be any savings as far as detention costs. I do know that our operational costs on the border have slightly increased because we have devoted more resources. And we think that this is one of the reasons why fewer people are coming across. Obviously, by deterring illegal aliens from coming into the country, we cut down on costs overall in the long run.

Mr. SMITH. Some of the reductions in apprehensions, I suppose, could be because some of them are staying in the country, instead of going home on weekends.

Attorney General MEESE. Well, this is possible. And, of course, this will be easier to find out once we have the legalization program in effect. I am very hopeful, and I think this was the intent of the Act, that there would be a much more definite dividing line between those who are lawfully in the country and those who are here illegally once that legalization or rationalization of status can be achieved.

Mr. SMITH. I was down on the border one weekend, as I told the Committee yesterday, and as you fly in one of those helicopters and look down, you spot four or five aliens and a van pulling up. It is a

friendly deal. They just get in the van and go in and get a good meal and then they take them back across the border. Then, about 2:00 o'clock in the morning, there was not anyplace open to eat, so I went into an oil station to have a candy bar. Four or five individuals, obviously illegals, came in and got a package of cigarettes. I said to the fellow operating it, "They seem to know where they are going and know their way around." "Oh, yes," he says, "they come in here about every weekend." They go home on the weekends, you see. You wonder how much of that figures into our apprehension. Maybe they will never get caught, I do not know. Maybe they know a certain place to get across. It is just impossible to close that border completely.

Attorney General MEESE. It is impossible, Mr. Chairman, to close it completely, but we think that with the additional resources, with the total impact of the new law, and with a variety of improved activities on the border, including better cooperation between the agencies, with the Customs Service as well as INS working together, we can do a much better job than has been done in the past.

DEALING WITH THE DRUG PROBLEM

Mr. SMITH. Now, I know the Chairman of the Full Committee asked you some questions about drugs, and the plan for handling this problem. Do you have any new proposals with regard to legislation, or anything else to tell us about drugs?

Attorney General MEESE. Mr. Chairman, we have now as I mentioned, by Executive Order, a Government-wide coordination program. We are in the process of looking to see whether it might be desirable to have this program put into legislation. And that is something we will be discussing with you and the Members of the Committee during the course of the next month or so. There is a requirement that, in April, we provide to the Congress a report on suggested legislation. And we will be having a meeting of our National Drug Policy Board later this month to consider what might be reported to the Congress, and it will be discussed with you and the Committee.

Mr. SMITH. Do you see any reduction in the need for considering this drug problem to be a major problem in this country? Is there any overcoming any of the problem?

Attorney General MEESE. Mr. Chairman, reports that have just recently been put out show that we are starting to make some progress. For example, in the recent high school survey, and this was something that I discussed as recently as this morning with Dr. Macdonald, the new White House Drug Advisor, it appears that marijuana use in this country has levelled off and has slightly decreased. It appears that heroin use is remaining stable, and also, if anything, slightly decreasing rather than increasing. But cocaine use is still a problem. The initial data would indicate that we do not have more people using cocaine than before, but that those who are using cocaine are using heavier doses of it. As a result, we are having more people die from cocaine use, or being admitted to emergency rooms for treatments than we have in the past.

So I would say that with the amount of cocaine coming into the country, we will still have to continue the level of effort that we

have at the present time. But I think there is no question that our law enforcement activities, as indicated by seizures of drugs, by seizures of assets of drug dealers, and by the arrest of major traffickers, is continuing. We think that if, for the next three years, we continue our efforts on both the enforcement side and on the prevention, education and health side, as the Anti-Drug Abuse Act of 1986 suggests we have a good opportunity to make some real strides, not only in decreasing the amount of narcotics coming into the country, but also in terms of decreasing the market for those drugs.

Mr. SMITH. Decreasing the market is a big thing. You know, about the only time we ever had any substantial reduction in the use of marijuana was during a period of time when there was a scare because we were using certain kinds of herbicides. There was a scare that it might have contained a cancer causing agent, and that scared them for a while. So then what do we do? The Congress outlaws the use of that herbicide. I really believe we need something innovative. Some people laugh about it, but I do not think it is really that bad. We could infiltrate the drug trade and put in some kind of a chemical that would nauseate some people once in a while. They would not know whether or not what they were buying was going to nauseate them. I think it would have some effect. We need something like that. We have got to cut down on use, or we will never be able to overcome this problem.

Attorney General MEESE. I agree, Mr. Chairman. One of the things that we are trying to get across now is the health hazard of this use so that people do not even have to become nauseated, that they will understand. There is a lot of medical research that has taken place in the last two or three years on cocaine. And all of that research has increasingly shown that the health hazards are greater than ever anticipated and, also, the empirical data show that the potential for addiction is greater than ever suspected. Most people ten years ago had the feeling that cocaine was somehow a harmless, some even called it a recreational drug. But most people today, those who are informed about it, realize that it is the most addicting of all the drugs because of the impact on the pleasure centers of the brain.

Mr. SMITH. I do not think it was even 10 years ago that the people out at NIH would appear before another Subcommittee and I would ask them questions like "What evidence is there that cocaine is addictive? What harm does it do?" They would answer, "Well, we don't have evidence that it does any harm." They did not have evidence that it did not do any harm either. But they always seemed to emphasize that they did not have evidence that it did any harm, which is misleading. At least, the public is being made aware of the problems now.

Attorney General MEESE. Mr. Chairman, let me just say, if I might, there is plenty of evidence today. The recent deaths of people in excellent health, such as Lennie Bias, the basketball star, and Don Rogers, the football star, indicate that if people in peak physical condition cannot tolerate this kind of drug, it is very likely that most human beings in worse physical condition will have similar ill effects.

Mr. SMITH. Well, after sitting there and listening to NIH for 25 years, the best experts we have, I am convinced that any drug, legal or illegal, has some side effects. Everybody must decide whether they prefer the side effects, whatever they may be, compared to taking the drug. When they understand the risks, then people will quit looking for these safe drugs that give them some recreational benefits.

Mr. Rogers?

DRUG ENFORCEMENT REQUEST

Mr. ROGERS. Thank you, Mr. Chairman.

Attorney General, it is good to see you again.

Let me continue a moment on the drug issue. You are requesting in your 1988 proposal an increase for the Drug Enforcement Administration, of around $40 million.

Attorney General MEESE. Yes.

Mr. ROGERS. That is a rather hefty increase. How can you justify that kind of an increase?

Attorney General MEESE. Mr. Rogers, we justify it on several grounds. For one thing, we consider this a very excellent investment in improving overall law enforcement resources. Our DEA agents are working with local police increasingly in every section of the country. Just recently, within the last month, we finally achieved the goal of having a Drug Enforcement Administration agent in every one of the 93 judicial districts throughout the country. We had not even had that before.

A lot of people do not realize that DEA only has about 2,500 agents, which, as you scatter them across the country and in foreign countries, is not very many. So, it is a matter of increasing our agent strength within the United States on a priority basis, to make sure that we can not only handle the DEA cases, but, also, use this as a catalytic effect to get more law enforcement resources generally through the coordination of State and local law enforcement agencies.

The other major area where we need assistance is in overseas activities. We have DEA agents in some 43 foreign countries, because our emphasis has been getting the drugs at the source, before they come into the United States. The DEA agents work with the police in those countries to improve their capabilities through training, through leadership, through operational instruction, as well as providing an excellent intelligence resource on drug trafficking, which is useful, not only in those countries and between foreign countries, but, also, of course, in the United States.

Most of the major successes we have had in arresting traffickers and seizing drugs coming into this country have been the result of intelligence gained overseas.

Mr. ROGERS. Well, you are requesting for the DEA alone for next year $522 million, which is, obviously, slightly over half a billion, just for that one agency. In addition, you are requesting increases for the FBI, the U.S. Attorneys, the Federal Prison System, the U.S. Marshals, the Legal Divisions, much of which or all of which is drug-related enforcement, is it not?

Attorney General MEESE. Yes, it is.

Mr. ROGERS. I wonder if you have any figures that can give us an idea of how our drug spending, drug enforcement spending has increased over the years?

Attorney General MEESE. I would be happy to do that. I can give you a rough order of magnitude, and that is, since 1981, in the Department of Justice, we have at least tripled the amount of money that went into drug law enforcement. Throughout the Government itself, I think we would find a similar increase. At the same time, I think we have to recognize that the problem itself has vastly increased. It has increased both in terms of the total amount of narcotics coming into the country, and, as I have indicated earlier, the total number of users. We have had some levelling off now, but the total amount of drug use and drug users has increased remarkably during the period from the seventies to the eighties.

In addition to that, we are still, with some of these expenditures, making up for the tremendous cuts that took place in DEA and the FBI during the latter part of the 1970's. From a high in about 1972 or 1973, in terms of both FBI and DEA. they went down to a low point in the budget in 1979, 1980 and 1981, in that period. So part of the increase we have had is to recoup and part of it has been building up to meet the increasing threat.

As far as the prisons and the U.S. Attorneys and the Marshals, these are areas which, in the early years of the eighties, we did not have the kinds of increases that we had in law enforcement. And that is why it is important now to keep pace as the increase in persons being indicted and prosecuted and ultimately convicted is getting into those portions of the system.

Mr. ROGERS. Well, it is ironic that it seems like the more big seizures you make, the more people think the drug business is getting bigger. So it is an ironic thir g that, in spite of these huge seizures you have had in the last few months, even yesterday, that the perception is, whether or not it is real, that the drug traffic is increasing. I suspect it is, in fact, real. In spite of these increased resources that you have placed in the drug war, supply remains high.

In March, 1984, the huge raid that took place at the Tranquilandia cocaine processing facility in Colombia, yielded 10 tons of cocaine seizure. There was no observable change in the street prices after that seizure, a clear sign of abundant supplies.

So I want to congratulate you and the agencies on an excellent effort at getting at the traffic coming into the country. It is a sea that you are fighting, we understand, but there have been some remarkable efforts going on in seizing the drugs coming in.

SYNTHETIC DRUGS

Mr. ROGERS. I wonder if you could tell us what impact, if any, the development of synthetic drugs have on our enforcement efforts?

Attorney General MEESE. We had, for a period of time, a considerable industry starting to grow in the dangerous drug analogues area, substances which approximate the effect and the chemical qualities of illegal drugs. With the Anti-Drug Abuse Act of 1986, and other legislation, we now have a better means of acting against these dangerous drug analogues. So I think that problem is being

addressed. It is not totally eliminated, but it is certainly being addressed more effectively because chemists no longer feel that they can manufacture these new analogues with impunity and, actually, without violating the law.

LEGALIZATION FEES

Mr. ROGERS. Let me switch quickly, with what little time I have left in this round, to the immigration question.

The Chairman discussed with you briefly the proposed fees for processing an illegal alien who makes a claim for citizenship. And, I believe you said, the fee was being discussed in the range of $175 to $195, is that accurate?

Attorney General MEESE. That is my understanding of what the INS is doing, yes.

Mr. ROGERS. My understanding is that the fee for a person who has waited 10 years to come into this country and abided by all of the laws of the land, and showed respect for the system and for us and our laws, that their processing fee is $185 per person. I think the American people would be offended if the fee for an illegal alien, who shows no respect for American laws or customs or civilization, who breaks down the doors to come into the country, if they are charged less than that legal person who has abided by the laws. I wonder what your thoughts might be about that.

Attorney General MEESE. I can understand that point of view, Mr. Rogers, and, to some extent, share it. I think it is important, and I understand that the fees will certainly not be less than that for the kind of person you described who has abided by the law throughout his or her entire period of entrance into the United States. I think the INS is kind of caught in a bind, as the Chairman suggested, between those who feel as you do and others who feel that the fees ought to be much less because of the relative poverty of some of the people applying.

I think that what the INS has tried to do is to satisfy two criteria. One, that the fees be roughly comparable, certainly not any less than those charged people who have abided by all the laws; and, secondly, that they do serve to reimburse the Government fully for the costs of processing the individuals, as the legislative history behind the Act indicated.

So, in trying to steer a course between the two different points of view from the Congress, I think the INS has pretty much taken the right path.

Mr. ROGERS. Well, I just wanted to make a point also that for those who say these are all poor people who cannot afford this fee, I would hasten to point out that many of them have paid thousands of dollars sometimes to get into the United States by hook or crook, and will also stand to gain a lifetime of happiness and freedom and high wages in the United States. And $175 is peanuts, frankly, compared to the benefits that will come with American citizenship. And, for all of those who cannot afford to pay that fee, there are many others who can. So I would hope that the fee is kept substantial, and certainly the very minimum, at a level that will recompense the Government for the investigations that go on

and also not be less than, certainly, the fee for the immigrants who entered legally.

Attorney General MEESE. We certainly agree on that point.

FUNDING FOR IMMIGRATION REFORM

Mr. ROGERS. Further, some question has arisen on whether or not you are asking for enough money for 1988 for enforcement of the new law. You have requested increases for the INS from $732 million to $839 million, which is an increase of $107 or so million. Do you think that is adequate?

We were told last week by Deputy Attorney General Burns and Commissioner Nelson of INS that at least a half million illegal aliens are succeeding in getting into the United States each year from our Southern border, and whoever wants to get in, eventually can, and will get in.

Are you asking for enough money for enforcement, border agents and such personnel?

Attorney General MEESE. We believe we are, Mr. Rogers. We think that the amounts that we have requested are sufficient. We recognize the concerns of the Committee on the baseline and how much above, in addition to the baseline, we can get in any one year. I think we are asking for all the enforcement resources that the Immigration & Naturalization Service feels they can assimilate in a given year.

I think it is interesting to note that if we are given the border patrol agent staffing that has been requested in the 1988 proposal, we will have literally doubled the number of border patrol agents from 1984 to 1988. We will have doubled the size of the border patrol.

Mr. ROGERS. How many will that be at the end of 1988?

Attorney General MEESE. That will be 4,850 agents.

Mr. ROGERS. And four years ago it was 2,400, roughly?

Attorney General MEESE. It was 2,354 in 1984. And I might point out, if we go back in history again to the low point, back to about 1979 when we had about 1,900 agents.

Mr. ROGERS. Do you believe that the sanction provisions of the Immigration Bill, without the added resources you are requesting for border patrol activities, will be adequate to control the problem?

Attorney General MEESE. No, sir, I do not believe they would be without the additional resources for the border patrol.

The whole process has to be a combined, comprehensive approach to the problem, that is, increased enforcement at the border along with the employer sanctions.

Mr. ROGERS Thank you, Mr. Attorney General. Thank you, Mr. Chairman.

SUBCOMMITTEE BUSINESS

Mr. SMITH. Let me interrupt at this point, because we are going to have hearings in the near future with the FBI, The U.S. Marshals Service, the Secretary of State, the State Department's Foreign Buildings Account and Department Security and Communications programs. Parts of those hearings need to be closed for securi-

ty reasons and, also, in some instances, there may be some unmitigated cases. Under our Rules a motion is needed to permit the Chairman to close all or parts of those hearings.

Mr. Early?

Mr. EARLY. Mr. Chairman, I move that the Chairman of the Subcommittee be authorized to close the Fiscal Year 1988 hearings, or portions thereof, of the Federal Bureau of Investigation, U.S. Marshals Service, Secretary of State, the Classified Security and Communications items of the State Department's Salaries and Expenses appropriation, and the classified security items of the Department's Foreign Buildings Appropriations.

Mr. SMITH. Under the Rules, we will have a roll call.

The CLERK. Mr. Smith.

Mr. SMITH. Aye.

The CLERK. Mr. Alexander.

[No response.]

The CLERK. Mr. Early.

Mr. EARLY. Aye.

The CLERK. Mr. Dwyer.

Mr. DWYER. Aye.

The CLERK. Mr. Carr.

Mr. CARR. Aye.

The CLERK. Mr. Mollohan.

[No response.]

The CLERK. Mr. Whitten.

Mr. WHITTEN. Aye.

The CLERK. Mr. Rogers.

Mr. ROGERS. Aye.

The CLERK. Mr. Regula.

[No response.]

The CLERK. Mr. Kolbe.

Mr. KOLBE. Aye.

The CLERK. Mr. Conte.

[No response.]

Mr. SMITH. The motion carries by the sufficient number.

Mr. Early?

ADMINISTRATIVELY UNCONTROLLABLE OVERTIME

Mr. EARLY. Thank you, Mr. Chairman.

I want to welcome the Attorney General.

Mr. Attorney General, I would like to be very narrow with my line of questioning. So I will specifically ask you a couple of questions.

Almost fourteen years on this Committee, and the FBI, DEA and the INS agents are still underpaid. We give them automatic overtime and call it uncontrollable overtime. The account is $87 million. Why can't the Justice Department recommend that we increase the base pay of those three particular agencies to an adequate salary. I think it would provide for honest and better accounting. Has the Department considered raising their pay since they are available 24 hours a day.

Attorney General MEESE. Mr. Early, I think there is some value to what you say. On the other hand, I think the way it is set out

now as uncontrollable overtime, it does make it clear to the agents and to the administrative structure of those agencies that it is for that purpose. For one thing, agents who do not participate in activities that require overtime do not get it.

Mr. EARLY. No, you are wrong, Mr. Attorney General. I think that when you hire someone you say, "Your salary is going to be $20,000 plus $5,000 overtime."

Attorney General MEESE. Because we know that in virtually all of the agent categories, overtime is required as part of their job.

Mr. EARLY. There is not one exception.

Attorney General MEESE. But if we created additional functions that did not require overtime, this would be a clearly stated exception.

The other thing is, they are required—it is, in fact, part of their job—that they do put in additional overtime whereas, if it was merely declared a part of salary, there could be some resentment on the part of the agents when they are asked for overtime.

Mr. EARLY. Mr. Attorney General, everyone, Judge Webster, everyone with the FBI, every Attorney General we have ever had, the authorizing Committee, and Members of this Committee that have discussed it before, all agree we should change it. If we increased their pay to what their actual salary should be, particularly because they are available all the time and no law enforcement agent works eight hour days—I really think it would be a constructive thing to do. We call it uncontrollable overtime, but it is the most controlled overtime I have ever seen.

Attorney General MEESE. Mr. Early, I would be happy to. As I said before, I think there is considerable justification for it, as long as it does not result later on in an unfortunate capping of salaries because people either at OMB or the Congress see the salaries as being higher than they think they should be. If there is an understanding that this would not result in a net reduction of salaries, I think there might be some value to it.

Mr. EARLY. I think if you set it up and say we are going to adequately increase their pay and that there is no overtime and they are available all the time—I think it would fly through. We just need to point the finger at who is stopping it.

Attorney General MEESE. I will be happy to either request that or give you the substantial reasons against it in the minds of the people administering the agent population in those bureaus.

Mr. EARLY. Will you provide for the record why you do not want to do it? I think if you will check with your staff, everyone will want to do it.

[The information for the record follows:]

ADMINISTRATIVELY UNCONTROLLABLE OVERTIME REVIEW

The Department is in the process of reviewing the current administratively uncontrollable overtime process in order to evaluate its management, cost, equity and effect on morale. After completion of this review, the Department will discuss its findings and recommendations with Mr. Early.

EFFECT OF SENTENCING GUIDELINES ON THE JUDICIARY

Mr. EARLY. This Committee has listened to the Judiciary be very critical of us this year, saying we are putting more responsibility

on them and we are not giving them the personnel or funds. But we cannot keep adding personnel to their budget. The Sentencing Commission Guidelines will soon go into effect. I would want to know who will be responsible for probation and the parole of those currently incarcerated. Now, is it going to be judges who are ultimately responsible? And, if so won't this be a tremendous amount of additional work for the judges? They suggest they are overworked now, and they want us to provide an impact statement with every piece of legislation this Congress passes.

You know, we should address some of these problems with the Sentencing Commission, particularly before we abolish the Parole Commission.

Attorney General MEESE. Obviously, there will not be much impact for a while because the sentencing guidelines will not go into effect until some period of six months or so after they are promulgated to the Congress, which I believe takes place in April. So, for all practical purposes, it will be Calendar Year 1988 before they take effect.

When they do, the people who are now in prison serving their sentences will still be under parole jurisdiction. When the sentencing guidelines go into effect, then there will be no parole, and the judges will set the sentences, but they will not have the responsibility for supervising parole, because parole will be stopped. There will instead be the fact that the person is sentenced to prison for a determinate period of time. Where we are going to have problems will be in the need for additional prison capacity because, by and large, the sentences will tend to be longer than they are at the present time.

Mr. EARLY. But, Mr. Attorney General, when they are released, they will be released under supervision of a Probation Office for X number of years, which is a function that is now performed jointly by the Parole Commision and Probation Office. Won't this increase the responsibility of the probation officers and the Judiciary? Shouldn't we look into the consequences of this more thoroughly before it happens.

Attorney General MEESE. Mr. Early, it is my understanding the judges will have no responsibility for them after they are released from prison. They will then be released from everything.

Mr. EARLY. I do not think that is it, but I will double check and get back to you.

PRISON POPULATION

Another thing Mr. Attorney General, in your statement on prison population, where you project it will reach 44,878 in 1988—do these numbers reflect the expected increase in population due to the passage of the Anti-Drug Abuse Act?

Attorney General MEESE. Yes, they do.

[The following information was submitted for the record, subsequent to the hearing:]

PRISON POPULATION PROJECTION

The prison population projection of 44,878 in 1988 includes the impact of increased drug enforcement over the last several years, however, it does not include

the effects of the Anti-Drug Abuse Act of 1986. This projection was developed before the Anti-Drug Abuse Act was enacted, and is in accordance with the earlier projection of 55,200 inmates in 1993. Revised population estimates are being developed to account for the impact of the Anti-Drug Abuse Act.

Mr. EARLY. But your estimates, Mr. Attorney General, suggest that in 1993, which is only six years away, you are going to have 55,200. The estimates I saw are 67,000. I don't have to tell you that we just cannot keep building prisons. We do not have the finances to do it. We have to make some changes. I saw that the State of Florida, passed a law mandating early release in certain circumstances. I know it is not popular, but the Federal Government is going to have to consider this. We have got to let the least dangerous, whose sentences are almost up, out.

Attorney General MEESE. Mr. Early——

[CLERK'S NOTE.—The following note should be inserted into the record at this point:]

A portion of the actual transcription of the hearing is missing as the sound system was out for a brief period. The following information is provided from notes taken during the hearing:

Attorney General Meese stated his belief that it is less expensive to keep convicted felons in prisons than to release them, based on the costs of the crimes such felons commit when released and the recycling through the criminal justice system. Mr. Meese also stated that he felt that prisons are a very good investment.

Mr. EARLY. We are coming in with numbers that in theory sound good, but you and I both know we are not going to be able to house this many inmates. Last year on the Floor of the House, Mr. Smith faced a 5 percent across the board cut in prisons, in parole, and in judiciary, in this Committee's bill, and it passed in the House.

Attorney General MEESE. I agree, and it caused us a great problem, and continues to cause us a problem, as the Chairman and I discussed just before the meeting here. But I think in terms of cutting back on prisons, this would be the most unwise decision that could be made. I think if we really look at it, we are suffering now from the fact that prison building, prison construction did not keep pace with crime or the number of criminals during the prior 25-year period, and we are paying for it now in having to construct these prisons to keep up. But we are, to follow up on one of your comments, Mr. Early, looking at a number of things that might substitute for actual incarceration for certain types of prisoners.

Mr. EARLY. My suggestion, Mr. Attorney General, is that we have got to do something different, whether electronic surveillance, wrist bands or whatever, because we simply cannot keep going the way we are with the population expanding the way it is.

Attorney General MEESE. I think one of the things you mentioned, States are turning prisoners loose. We feel that there is a correlation between prisoners being turned loose in some of the States and the slight upturn in crime that we have experienced in 1986, after crime had gone down for the preceding three years as a result of increased incarceration.

AIDS IN PRISONS

Mr. EARLY. Mr. Attorney General, have you considered a prison hospital just for prisoners with AIDS. I read that the State of New York is going to let the prison inmates that have AIDS released. I

read in the Massachusetts paper that they are considering doing the same. I cannot think of anything more irresponsible. It sounds very compassionate, but, in my opinion, it is not. They are still carrying and could be transmitting the disease. What is the Justice Department doing with respect to this problem?

Attorney General MEESE. I agree with you about the lack of wisdom in a policy that simply releases prisoners because they have AIDS. In the Federal Prison System, this has been a matter which the Director has been watching to see whether we have a real problem. His latest report to me is that this is under control at the present time, but it is something we are watching very carefully.

ALTERNATIVES TO PRISON CONSTRUCTION

Mr. EARLY. Mr. Attorney General, you and I are both in the same business. Everyone says everything is under control, and nothing is under control. The Justice Department is going crazy. You have prison overcrowding, and more and more prisoners and some estimate that we are going to have up to 67,000 inmates by 1993. We have just got to make adjustments and changes in the system—some that are not popular. Everything we do on your side and our side, is the popular decision. But not necessarily the right decision because those are often unpopular.

Attorney General MEESE. Well, as far as we are concerned, we think we are trying to make the wise decisions, whether they are popular or unpopular. And one of the wisest decisions we can make is to have enough prison space to accommodate the criminals that ought to be in prison.

Mr. EARLY. Mr. Attorney General, I think the Federal Prison System is probably the finest run Federal agency we have. What I am concerned about is these numbers you are suggesting—with estimates up to 55,000. We also hear the Justice Department's theory that no prison facility should be over 500 beds. The 55,000 estimate, which is conservative at best, would be an increase of about 10,000, which would mean building 20 new prisons. You and I both know this is almost an impossibility.

I want to be that big tough guy too and say, "We are putting everyone in jail". But, my goodness, we cannot keep doing that. We do not have a practical solution to this growing problem. I do not think we can continue this trend. There is no way Mr. Smith can get the money or sites for this many new prisons. So, if you do not get the money, what are you going to do?

Attorney General MEESE. We will have to do as we have done in the past, which means overcrowded facilities, which means increased dangers to both the inmates and, more particularly, the people who work in the prisons.

I agree with you, our prisons are very well run, and it is a result of this careful management and good handling of the prison population that has prevented uprisings and disturbances at the prisons. But, again, I think it is a decision that society has to make; you either have adequate prisons for the number of prisoners or you don't. I think you reach a point where it will level off. I do not think we are going to go on building prisons forever, but I think,

again, as I mentioned, we are suffering from a lack of building for a number of years. Also as Congress makes new matters crimes, Federal crimes, we have to have someplace to put the prisoners.

Mr. EARLY. I have one final question. Florida's program of early release that I mentioned earlier—with their State parole system, they are going to let everyone out 30 days or 60 days early. Would you consider something like that?

Attorney General MEESE. Yes, we can, and we have considered that. We have been adjusting release dates to accommodate overcrowding, without increasing hazards to public safety, we have considered this and will consider it again.

Mr. EARLY. Thank you, Mr. Chairman.

DIRECTOR FOR JUVENILE JUSTICE OFFICE

Mr. SMITH. Mr. Carr?

Mr. CARR. Thank you, Mr. Chairman.

General, since June 6, 1986, there has been an Acting Director at the Office of Juvenile Justice and Delinquency Prevention. Do you plan to make that a permanent appointment?

Attorney General MEESE. Yes, a permanent appointment has been made and I believe that is pending, either at the White House or before the Senate Judiciary Committee at the present time. A permanent appointment has been made.

[The following information was submitted for the record, subsequent to the hearing:]

NOMINATION OF VERNE L. SPEIRS

On March 11, 1987, the Senate received the nomination of Verne L. Speirs to be Administrator of the Office of Juvenile Justice and Delinquency Prevention.

STATE AND LOCAL DRUG GRANTS

Mr. CARR. Now, you have proposed the termination of the State and local drug grant program, about $225 million, passed by the Congress last year, and signed into law by the President. In my State of Michigan, they are now developing an anti-drug program based on that money that was provided in the law. And six months ago, during the election, this Administration could not get close enough to the microphone to complain about the drug problem, and it could not wait to embrace the drug fighting programs that we enacted in the Congress. You have handed out this money to the States, and now, after one year of wonderful rhetoric, you propose to revoke it, leaving the States holding the bag.

I understand from your statement that you stated a belief that now it is time for the States to take over. We might have a philosophical disagreement on that, but I think most people would agree one year is not enough to dangle that carrot out there, get them off and running, and then tell every State Governor and State legislator that they have got to raise taxes to pay for a continuation of all these wonderful things we got started under this Administration's prodding.

Would you not agree that maybe one year is just too short when you hand out this kind of money?

Attorney General MEESE. Mr. Carr, I think all of us would like to continue this for the full three years for which it was authorized. But, in a sense, I guess the Members of the Committee ought to get together and decide what we ought to do. Because you have already heard what a difficult time we have with the total expenditures, which are increasing considerably above the baseline that we had to start with. You have heard Mr. Early say we cannot afford the money for the prisons.

I think we have to decide on our priorities. Quite frankly, if we have to decide with limited fiscal resources, between putting money out to the Federal Government or to the States, which have a much lower percentage of their law enforcement resources devoted to narcotics enforcement than does the Federal Government, I think we have to put our resources in support of the Federal program to keep the narcotics from coming into the country in the first place, rather than giving it to State governments.

Now, if every State and local government would have 10 to 15 percent of their law enforcement resources devoted to narcotics, as does the Federal law enforcement community, then we would have probably somewhere between four and five times as much activity going on at the local level without the $225 million.

Mr. CARR. Well, I appreciate that, General. We just probably have a difference in priority. You have to put together a budget and then we have to act on it. I think our Appropriations Committee though is likely, as we have in the past, to stick with the priorities that Congress has spoken about in our Authorization Bill, and I know that what Mr. Early says is true and across the board, but I also see this Administration proposing a lot for things like SDI and other programs that I think are of dubious priority relative to the drug fight.

After all, the President himself has led us in this, and I think that is wonderful. And I think the fight on drugs is something that every American feels in their community, and they feel it in their homes and their schools. I think it is one of the great things that we have been able to do to get this ball rolling; that the Congress came together and put aside all of our little turf battles and put this law together, and now it seems we are going to, in George Aiken style, declare victory and walk away from it; and I do not think we can do that.

Attorney General MEESE. Well, we certainly are not. As you and the Chairman and Mr. Rogers have already noted, we have a considerable increase in the funding for the Federal role in narcotics included in our budget proposal. Indeed, this Administration, particularly compared to the last Administration, has done a phenomenal job of making narcotics enforcement a major priority, as I mentioned earlier. We have virtually tripled the amount of law enforcement resources that are going into narcotics enforcement in the course of the past five or six years.

So there is no lack of priority here. It is just that there are other priorities in Defense.

I guess you could make the statement that if we gave up on SDI, we would reach a point in the near future sometime when we would not have to worry about narcotics at all because our national problems would be of a considerably different nature. But I

think that we have tried to assess for you and for this Committee the proper allocation of priorities so that we can maximize the Federal role, to prevent the narcotics from coming into this country, and to investigate and prosecute the major traffickers. I think that is the appropriate Federal role.

Mr. CARR. Well, you came out of local law enforcement and so did I. I guess we just have a different notion about what the Federal-State relationship in this regard is, and I hope the Committee would continue this money.

Attorney General MEESE. I came out of local law enforcement at a time when there were no Federal programs, and I think that was a preferable way of operating. You did not have to wait from year to year, based on the vagaries of what the Federal Government might do.

INS AUTOMATION

Mr. CARR. Last year, the computer upgrade project, known as Hardware Acquisition II, was a subject of concern to this Committee.

Could you comment on the status of progress in computerizing the INS?

Attorney General MEESE. Yes. Mr. Carr, the INS has been working, I believe in close consultation with the staff of this and the other Congressional Committees, because there is a considerable amount of Congressional interest in this, to do a fairly complete study of the entire automation program within INS, and they are moving forward on that.

I think the Commissioner can give you more details when he appears before the Committee. But I do know that as a result of that study, they have come into compliance with what GAO recommended, and are going forward with new contractors based on the results of that study.

Mr. CARR. Now, I understand in your testimony before the Senate Judiciary Committee on February 4 of this year, you indicated that you were proposing 1,800 new positions in INS for the border patrol to carry out the enforcement aspects of the Immigration Bill. I understand that a portion of the increase of the Hardware Acquisition II contract was also for border sensor monitoring equipment. Can you give us an explanation of, to what extent the proposed equipment has been put in place, and has it been in any way effective in reducing your personnel request? How do these two relate?

Attorney General MEESE. The two relate on the basis that the personnel request contemplates the availability, in the long run—a lot of this equipment is in the process of being acquired and is not in place yet—of both the requested number of personnel which is in the budget proposal, and their augmentation by the sensor equipment and other automated equipment that is being used.

If we did not have the automated equipment and the other technological backup, we would probably need more officers, or else would have a decreased level of enforcement.

INDEPENDENT COUNSEL

Mr. CARR. We have all heard a little discussion now on the constitutionality of the Special Prosecutor. Can you give the Committee any indication of whether there is a cost differential between the Special Prosecutor being court-appointed or being an employee of the Justice Department?

Attorney General MEESE. There would be no cost differential whatsoever.

Mr. CARR. It would not have any effect.

EQUITABLE SHARING

Attorney General MEESE. I would mention also, if I might, one other thing in regard to local law enforcement. One thing we have tried to do is to increase considerably the amount of funds that go to local law enforcement which do not constitute a burden on the taxpayer, and that is the forfeited assets which we seize from the drug dealers. Under the laws which you and the rest of Congress passed, we are able to share these with local law enforcement. We found this is a very important way in which we can augment local law enforcement, because it has to be used for law enforcement. We find that it is being used directly for drug enforcement, and not dissipated among the general fund or among law enforcement generally.

IRAN/CONTRA INVESTIGATION

Mr. CARR. Thank you for that comment.

I understand that Brad Reynolds, the Assistant Attorney General for Civil Rights, may be working on the Iran investigation. Is that true and, if so, what is he doing?

Attorney General MEESE. No, he is not working on the Iran investigation.

Mr. CARR. All right.

Attorney General MEESE. As a matter of fact, the only people in the Department who are working on that are those who have been requested by the Independent Counsel; specifically, lawyers in our Office of International Affairs, and perhaps some other lawyers in the Criminal Division, and representatives of the FBI.

JUDGESHIP NOMINATION

Mr. CARR. Okay. I have three questions for the record, Mr. Chairman, and I just went to close by commending you for yesterday. I understand you sent to the White House sometime ago but the White House sent it up to the Senate yesterday, the nomination of Judge Rob Bell, a Circuit Court Judge, a dyed-in-the-wool Republican, but, nonetheless, a person who has got tremendous integrity and is a very popular judge in Michigan. I think the Justice Department and your office ought to be commended, and I will do anything I can to help you on the other side of the aisle in the Senate.

Attorney General MEESE. Thank you very much.

Mr. CARR. Thank you very much.

Mr. SMITH. Mr. Regula.

Mr. REGULA. Thank you, Mr. Chairman. It is nice to see you, Mr. Attorney General.

The area that I would be interested in is Antitrust. I think you have probably exhausted drugs pretty well this morning. But I am concerned about what I see happening in Antitrust. Perhaps it is a reaction to the trade balance deficit that we have experienced, but perhaps an over-reaction, in saying, well, all of our production has to be merged into giant companies in order to compete.

I would be interested in how you feel prospectively about the role of the Justice Department in determining whether mergers do create somewhat of a monopolistic situation in contravention of what has historically been the desire as a policy in the United States to maintain a highly competitive environment. I did note in the news the other day that there was, I think, a new person appointed in Antitrust, and the article indicated that maybe there would be a tougher line. So I would like your comments on that whole area.

Attorney General MEESE. Mr. Regula, actually, this Department has continued diligently and with a great deal of vigilance its activities against any practices that are anti-competitive, or which promote a monopoly situation.

I think perhaps what you are referring to is the general recognition by economists of almost every persuasion that in judging competition today, we cannot limit ourselves to competition strictly within the United States, but have to look at global competition, because in the modern world, that is the area of competition. But this has not been in any way a relaxation of either our activities against anti-competitive or monopolistic practices or the kinds of harm that results from a monopoly situation, such as price-fixing, bid-rigging, market allocation, or the other things. As a matter of fact, if anything, our enforcement activities have been stepped up in these areas.

Mr. REGULA. I gather from your response that you feel that present antitrust policy is adequate; that it has been and prospectively will continue at about the same level. Would that be a fair summary?

Attorney General MEESE. That would be correct. Both the level of activity and the level of resources requested will be adequate to ensure a competitive marketplace, and to make sure that the antitrust violations, such as those that I mentioned, are not being committed.

Mr. REGULA. Do you see the Justice Department with any role in unfriendly takeovers. I know that, basically, is probably outside of your jurisdiction, but, on the other hand, it does have some impact on this matter of competition.

Attorney General MEESE. We have looked at it very carefully. SEC, of course, has the major role, but we have looked at it from the standpoint of whether takeover practices fall into any of several categories. One would be where it would decrease competition. Of course, we apply the same standards to that as we would any other type of business combination.

Secondly, we have been looking at those situations in which there might be some sort of fraud involved. And we have been vigilant in that regard.

The third area is the financing. We have been looking to see whether there might be illegal activities in regard to the relationship between those seeking a takeover and financial institutions, because bank fraud and fraudulent loans have been a very large area of our economic crime emphasis. So I think, from the Justice Department's standpoint, we are being very careful in looking at that.

On the other hand, I think it is important to note that as recently as the past week, a number of economic analyses have indicated, without specifying any particular takeover proposal, that perhaps the business community generally has derived a certain amount of benefit from some of the takeover activity.

But, as far as anything that might border on illegal activity, we have been very careful to watch that.

Mr. REGULA. So you are saying your role is to ensure that there is not any fraud or illegal activity and not so much whether there is any competitiveness.

Attorney General MEESE. That is right.

CRIMINAL STATUTES ENFORCEMENT

Mr. REGULA. I do want to commend you on the tough stance that the Department is taking on criminal activity and with some substantial success, I note, in New York City, for example. I think that this is very important because organized crime, obviously, spills over into the public sector in the sense that it has a potential for the corruption of public officials. And it appears that you are having a lot of success in that field. I do not know if you would like to comment on that or not.

Attorney General MEESE. I appreciate that, Mr. Regula. Actually, both organized crime and public corruption, along with narcotics and economic crime, are among the top priorities that our Department is going after. And I think one of the things we have done in the last two years has been to identify specific priorities so that we can target our resources towards those priorities. This has helped us to utilize in the best way possible, the resources we have received through the Appropriations.

Mr. REGULA. I understand that the RICO statutes have been a big help.

Attorney General MEESE. The Racketeer Influenced Corrupt Organizations statute, as it is fully known, has been a tremendous vehicle for law enforcement agencies to use. There are still some areas in civil RICO which need some reform, as I think you are aware, and we are also working on that side of the house.

Mr. REGULA. And you will be proposing, through your Department, some changes?

Attorney General MEESE. Right.

Mr. REGULA. Thank you, Mr. Chairman.

PRISON POPULATION PROJECTIONS

Mr. SMITH. Mr. Mollohan.

Mr. MOLLOHAN. Thank you, Mr. Chairman, General.

General, you talked in your written testimony a bit about the necessity for constructing additional confinement facilities, prison confinement facilities. What do you project is the trend line for the future prison population? To what extent do you project it to increase, and when, and if, do you expect it to level off, and at what level?

Attorney General MEESE. I wish I could give you some assurance that it will level off and at what level.

Mr. MOLLOHAN. Do you have any projections?

Attorney General MEESE. We projected through 1993, and we see a continuing increase at the rate of about 2,000 prison spaces per year needed up to a number of 55,000 in 1993. Those are our projections at the present time.

Mr. MOLLOHAN. That trend line is up all the way?

Attorney General MEESE. The trend line is up during that period of time.

Mr. MOLLOHAN. And you stopped projecting in 1990?

Attorney General MEESE. 1993.

Mr. MOLLOHAN. 1993, and the trend line continues to go up. So you do not have any projection of when this trend might level off?

Attorney General MEESE. The only thing I can say is that I think we will reach a point where it will level off because the increases in crime that we saw during the seventies are not continuing. Crime, while still increasing and still too high, has increased slightly in the past year, and projections are similar for this year. We did have a levelling off in 1982 and 1983 and 1984. So I would think there is going to be a point where it will level off.

What has happened here reflects changes in the character of the Federal approach to crime. We have had much greater emphasis in the Federal Government on drug offenses, and we now have something like 37 percent of the inmate population in Federal prisons for drug offenses. If you add the drug-related offenses, that percent would be even higher, well over half.

So that is one of the reasons we have this continual increase in the Federal Prison System.

Mr. MOLLOHAN. Is that where most of the increase is coming from?

Attorney General MEESE. Yes.

Mr. MOLLOHAN. Increased drug enforcement?

Attorney General MEESE. It is.

Mr. MOLLOHAN. To what extent do you plan to handle this increased population by the construction of additional facilities, which Mr. Early was exploring with you; and to what extent, if any, do you plan to handle this increase by contracting out, if you will, with State or local governments?

Attorney General MEESE. Right now, there is no real ability to contract out with State and local governments for sentenced prisoners, because their facilities are filled to capacity throughout the country as well.

We do contract out with State and local prison facilities, or jail facilities, for unsentenced prisoners, prisoners awaiting trial, whenever we can. And that has worked out very satisfactorily. Al-

though, even that is being reduced because of the overcrowding that they are experiencing in those jurisdictions.

In terms of our own Federal system, we have a building program which continues. What has happened over the last three years is an extensive building and renovation program, an increased housing program in existing facilities and in the building of new facilities. We think that if this building program continues, as it has for the last three years, for the next five to seven years, that this will keep up with the trends that I mentioned earlier.

Mr. MOLLOHAN. The building program request that is contained in your budget assumes this population increase to 1993.

Attorney General MEESE. Yes.

Mr. MOLLOHAN. And is designed to accommodate that increase; is that correct?

Attorney General MEESE. That is correct. It will accommodate it to the extent that we would hope that by 1993, by the mid-1990's, we would reduce the level of overcrowding to about 20 percent. So we would still be 20 percent overcrowded, but that is a tolerable figure.

Mr. MOLLOHAN. That is certainly an unpleasant prospect.

Attorney General MEESE. Well, it is an unpleasant prospect, but I think it is realistic, and also I suspect it may, in one sense, be a pleasant prospect in the sense that putting a person in prison is a known crime-prevention method.

USE OF STATE AND LOCAL PRISON FACILITIES

Mr. MOLLOHAN. Have you explored to your satisfaction and exhausted the possibility of contracting out or sharing prison facilities with State and local governments?

Attorney General MEESE. What we have done is, wherever possible, to share facilities, as I mentioned, particularly for unsentenced prisoners. If there is excess capacity any place, we are quick to seize on that and to utilize it. We have also done some things such as sharing with State and locals available prison facilities that are unused in the military. This has worked out very satisfactorily and we continue to seek opportunities to do that.

Mr. MOLLOHAN. Has your contracting with the State and local governments, has that proven to be satisfactory?

Attorney General MEESE. Yes, it has. The Marshals Service program of contracting for the housing of unsentenced prisoners has worked out extremely well and, also, the CAP program, the Cooperative Agreement Program, in which we share in the building of local facilities. In return, we are able to house Federal prisoners in them. It has worked out very well.

Mr. MOLLOHAN. Is that cost-effective relative to the custodial responsibilities being fully assumed by the Federal Government?

Attorney General MEESE. It is extremely cost-effective because in many places, in many districts, it would be uneconomical for the Federal Government to build an entire detention center because you would not need that for the number of prisoners we have awaiting sentence. But, if we can share with a county jail, for example, or a State institution, then we are able to have our bed

spaces in what then becomes, for both the county and the Federal Government, a very economical arrangement.

Mr. MOLLOHAN. Has there been any program to include sentenced prisoners, any contracting out program?

Attorney General MEESE. Actually, we have not had any surplus capacity for sentenced prisoners. They are different types of facilities, generally, that you utilize. So there has not been any excess capacity.

Mr. MOLLOHAN. So when you have a sentenced prisoner, that prisoner goes to a Federal facility?

Attorney General MEESE. For the most part, yes.

Mr. MOLLOHAN. There are no sentenced Federal prisoners housed in State facilities or local facilities?

Attorney General MEESE. Not that I know of, unless it would be a temporary housing pending transportation to a Federal facility.

[The following information for the record was submitted subsequent to the hearing:]

CLARIFICATION OF HOUSING FOR SENTENCED PRISONERS

There are certain categories of prisoners who are confined in State, local and private facilities. These include those committed under the Federal Juvenile Justice and Delinquency Prevention Act who must be separated from adult offenders as well as being placed in community-based facilities near their residences whenever possible, adult offenders whose lives may be endangered in Federal facilities, and offenders with short sentences, generally 180 days or less. In 1987, the Federal Prison System estimates an average juvenile population of 90. Adult offenders placed outside the Federal Prison system for protection will average 110 and short-term offenders will have an average daily population of 1,500.

COST EFFECTIVENESS OF CAP

Mr. MOLLOHAN. I am just wondering if that program has proved cost-effective for a pre-sentence prisoner. How about the CAP program?

Attorney General MEESE. Well, the CAP program, you see, is for pre-sentence prisoners who have to be in close proximity to the courthouse. But we find it is much more cost-effective for sentenced prisoners to have them in our existing or contemplated Federal facilities.

Mr. MOLLOHAN. Thank you, Mr. Chairman.

Mr. SMITH. Mr. Kolbe?

CUBAN REPATRIATION PROGRAM

Mr. KOLBE. Thank you, Mr. Chairman.

General Meese, it is a pleasure to have you. I want to concentrate my questions for the most part on the new immigration legislation. But, first, I would like to ask you one question.

Are we having any success, or can you tell us what the progress is, with regard to negotiations or efforts with Cuba to return the Marielito boat people?

Attorney General MEESE. I wish I could give you a more optimistic assessment of that, but right now we are not having any success. As you know, we did have success for a short period of time, a little over a year ago.

Mr. KOLBE. We did not return any, actually, did we?

Attorney General MEESE. Yes, we returned, I think, 200 or so, and then the thing was shut down. We are continuing our efforts to try to achieve that because that is the only long-term solution for about 6,000 or more Mariel boat people who are in this country, many of whom are in custodial institutions, and who exacerbate the prison population problem we just discussed.

Mr. KOLBE. You do have authority under the ruling of the courts now that you can hold them in Bureau of Prisons, is that correct?

Attorney General MEESE. I believe that is correct, and we have some of them there.

Mr. KOLBE. Yes, I know you do. You also, of course, have a lot of them in detention centers, and one of them right in the middle of a very large trailer park in my District. And when problems occur and they go over the fence, they are running all through the trailer park there. But, despite these problems, I want to compliment you. We have had an extremely good working relationship with your people on that in solving some of the problems, providing better lighting, better fencing, and so forth. But the problem seems to be one that does not seem to have any end to it.

Attorney General MEESE. There will not be any end to it until we can somehow get these people back to Cuba where they belong. And, as I say, we are continuing our efforts but, in the course of the past year, they have not been very fruitful, unfortunately.

Mr. KOLBE. What should I tell my folks who say, "Just put them on a boat and push the boat off the shore?"

Attorney General MEESE. Well, I have got to be candid with you. We did consider that at one time, but we were worried. There were some rather elaborate plans to head the boat in the direction of Cuba and just let it beach itself there. Unfortunately, that did not turn out to be practical.

IMMIGRATION LEGALIZATION PROGRAM

Mr. KOLBE. It has some kind of simplistic appeal, however, to it.

General Meese, on the immigration legislation, do you people have a better handle, at this point, on how many amnesty applications you think you are going to be processing, and how fast they are going to be coming in, how many the first year, and so on?

Attorney General MEESE. We do not have any way to assess that at the present time. The Immigration Service is now trying to get some estimates by talking with local officials. I think when Commissioner Nelson appears before you, he would have a more up-to-date picture of that. But part of it, of course, was sending out the regulations and setting up the administrative structure so we would know how these are to be handled, which will have some impact on the volume. But this is something that we are going to have to learn in the course of the six months after the middle of May.

We hope that the plans that have been made will be able to accommodate the numbers, but it is something we will have to adjust with this Committee if our plans are not borne out by the actual numbers. But we have rough approximations which the Commissioner can acquaint you with, based on his discussions with local officials.

Mr. KOLBE. Perhaps you are right, some of my more specific questions should be retained for him, and I will do that. But let me ask a couple of other questions.

At the present time, when some individual is picked up and is going to be deported and he says, "Wait a minute, I am going to qualify for amnesty", what are you doing with that person?

Attorney General MEESE. The Service is trying to use a considerable amount of compassion and give attention to the same kind of evidence or documentation which will ultimately have to be to see if, in fact, this is correct, that the person really does have residence in this country prior to 1982.

Mr. KOLBE. Do you do a kind of pre-amnesty investigation?

Attorney General MEESE. The policy of the INS at the present time is that if a person would qualify under the Immigration Reform Act for legal residence in this country, they are not deporting them at the present time.

Mr. KOLBE. But truly, you cannot make a full-scale kind of investigation that will be required before the person will be given temporary residence?

Attorney General MEESE. They are using rule of thumb and trying to make some accommodation as best they can.

Mr. KOLBE. Under what kind of circumstances are they being kept? Are they being given a temporary status, or custodial?

Attorney General MEESE. They are just not being deported at the present time.

Mr. KOLBE. They are not being kept in a custodial facility?

Attorney General MEESE. No. Again, it is a matter of the person giving prima facie evidence. For example, if they produced a driver's license issued in 1981, that is the kind of thing that would be helpful to indicate that there is at least a prima facie case that they would qualify under the provisions of the Act.

LEGALIZATION FEES

Mr. KOLBE. I think you made some mention in your opening remarks and earlier questioning that I missed, and I apologize. You talked about the range of the fees for processing would be somewhere between, you think, $175 and $195, I believe?

Attorney General MEESE. That is the estimate that I have been given, as I mentioned earlier in answering questions by other Members of the Committee. The two basic conditions for those fees are, first of all, that they be roughly equivalent to the fees charged for people who are coming in legally and, secondly, that they be adequate to provide full reimbursement for the cost of the processing of these people, as the Congress has directed.

Mr. KOLBE. Your view is that the direction for reimbursement is full reimbursement, meaning overhead, all costs, everything?

Attorney General MEESE. It is for the costs. I am not sure what goes into it and how much of the overhead. The Congressional act that provided for this says that the understanding of the conferees is that the fee level be sufficient to cover the costs of processing applications and, again, should be comparable to those charged aliens seeking entry as immigrants.

I am not sure whether it includes, or whether they have tried to load into that number, all of the overhead costs, including, for example, headquarters salaries and that. But I think there is no question it will comply with the Congressional directive, and that is that it cover the cost of processing the applicants.

Mr. KOLBE. Do you think this fee, if it is in the $175 range, will have a significant impact on the numbers that will be applying for amnesty? Is it the view of the Department that it will?

Attorney General MEESE. I do not think it will be a limiting factor, as was pointed out, I believe, by Mr. Rogers earlier. Many of these people have paid much more than that to get into the country illegally, and with the potential for earning power in the country, what they are earning at the present time, should be able to support that. We do not think it will be a limiting factor.

EMPLOYER SANCTIONS

Mr. KOLBE. Turning for just a second to the question of employer sanctions. Do you anticipate a very significant cost in enforcement of the employer sanctions, civil and criminal penalties? I realize you have a figure in there for that. Are you anticipating a large number of proceedings, criminal, civil proceedings?

Attorney General MEESE. We put in a figure which is our estimate of what is going to be required. I would hope it will not be a large number. But I think we have to be prepared and our experience during the first full year, which is Fiscal Year 1988, will give us a much better ability to project costs for the following fiscal years.

I think we are going to have a very high level of compliance by employers with the law. And, certainly, the concern about employer sanctions I think has been one of the factors that has led to less illegal immigration into the country during the past month or two.

Mr. KOLBE. One of the greatest concerns I think that I hear expressed is the question of verification of status.

You know, there has been talk that everybody will eventually have some kind of ID card that everybody carries in order to work in this country? Would you comment on that?

Attorney General MEESE. Yes. I think both in the development of the law itself and, certainly, in its implementation, and that includes the regulations going out for comment early, the pre-comment period and the formal comment period, we want to be sure that we do not get into a situation where the handling of this problem creates a lot of other problems that interfere with people going about their business normally.

The verification program is really designed to allow an employer to rely on the kinds of identification that people would carry anyway, Social Security cards, driver's licenses, other indicia of legitimate residence in this country. I have looked at the form and I have made some suggestions on simplification of forms that are used. The whole thrust of the Department's review, and this is something that reaches up into the top management of the Department, as well as in INS, is to not have a complicated process or something that will impose an unreasonable burden upon individ-

uals and will not be an unreasonable burden even on the person who is here from another country.

BORDER INSPECTIONS OPERATIONS

Mr. KOLBE. Thank you. One final question: Customs and Justice and Immigration Service share responsibility for all of our border-crossing stations where they have responsibility for processing people who come across the border, whether it is their goods or their persons. Who has the ultimate responsibility between those three organizations for deciding how long, what hours a crossing is open? Obviously, one has an impact on the other. If it is decided to keep it open 24 hours a day, it has got to be staffed by both agencies.

Attorney General MEESE. My understanding is this is worked out between the agencies, but that, by and large, there has not been a problem as to this in terms of differences of opinion between the agencies. What they have worked out is Memorandums of Understanding so that a particular Service has the lead at a particular point. I think, generally, Customs has the lead at several of these ports of entry and for certain purposes INS has the lead in patrolling in between. They seem to work this out.

I visited several ports of entry myself, and they seem to be working pretty harmoniously together.

Mr. KOLBE. It is your understanding that a Memorandum of Understanding would exist to cover each of those cases?

Attorney General MEESE. Either a Memorandum of Understanding or an unwritten agreement between the agencies. But I have not heard of any problems between the agencies as to difficulties in terms of different viewpoints as to how long the crossings ought to be open which would then produce personnel problems.

Mr. KOLBE. Thank you, Mr. Chairman.

ANTITRUST QUESTIONS

Mr. SMITH. Mr. Attorney General, Mr. Regula mentioned acquisitions and mergers. There was a big one announced yesterday, Chrysler acquiring American Motors. Did your Department give a green light to that ahead of time?

Attorney General MEESE. I do not know, Mr. Smith.

My impression is that that has not yet been completed and, undoubtedly, that is one thing that will be looked into by the Department if this falls within the range where they have to view these things in the Antitrust Division. I think that one of the things that has to be recognized in that merger is that it appears, at least, that a good portion of the ownership of American Motors, which has been in overseas hands, will be coming back into American hands. So that may be one of the factors that would weigh in the judgment.

Mr. SMITH. I noticed with interest that you are proposing to fold the Antitrust Division into General Legal Activities in the Department. What is the reason for that?

Attorney General MEESE. This is only for budget purposes. It makes no organizational change and this is so we can have more flexibility, so that if, as I mentioned in answer to Mr. Regula's

question, we do need more resources at sometime during the year for antitrust enforcement, which is something that cannot be predicted, we would have the flexibility. It, along with the U.S. Attorneys, is the only litigation activity that is now outside of the General Legal Activities account. And this is to give us that kind of flexibility.

Mr. SMITH. For as long as I can remember, it has been a separate line item. Do you know the history of this?

Attorney General MEESE. I do not, Mr. Smith. It antedates my coming into the Department. We have done a complete review of our budget process within the Department. I have created a Departmental Resources Board so that we can have much higher level management attention to the budget. I think that has produced a better budget during the past two years. And, as a result of it, one of the recommendations of that board was that we have this kind of flexibility, so that all litigation activities are handled in the same way.

Mr. SMITH. Well, frankly, I am reluctant to do that. We might make some arrangements though, so that if the Subcommittee goes along with it, it may be reprogramable during the year, but I think we ought to identify the two separately, surely.

DRUG ABUSE EDUCATION AND PREVENTION

One more question on the drug issue. You mentioned the amount of money that has been spent to reduce the supply of drugs and certainly our figures show $1.3 billion. Also, they show that $237 million is requested by Education, Health and Human Services for prevention education. It is about a six to one ratio. That is a large amount to be spent trying to control a supply, compared to education and prevention. In your drug plan that you are talking about, are you proposing to do anything with regard to education?

Attorney General MEESE. Yes, we are, Mr. Smith. One of the things that you will see in our drug strategy is that the law enforcement agencies themselves have taken a much greater role in drug education and prevention activities. As a matter of fact, some of that money that is listed as enforcement because it is going to enforcement agencies will actually be used for drug prevention and education.

Each of our United States Attorneys is charged with organizing a major prevention education activity in their judicial districts, utilizing both law enforcement and non-law enforcement agencies. We have had great success with this. In addition, DEA and FBI have a sports drug awareness program in which they have used very effectively famous athletes who have participated in programs with young people to discourage the use of narcotics by them.

I might also point out that one of the reasons for the apparently disproportionate amount going to enforcement at the Federal level versus education prevention is the fact that most of that does occur at the local level. And this is why we feel that the Federal funds should go into interdiction, interstate investigation and international activities against drugs to keep drugs from coming into the country, whereas, since our schools and health departments are lo-

cated at the local level, that is where their share of the budget is generally larger.

Mr. SMITH. Well, I cannot let this go by without taking an opportunity of making a plug for a little $2 million program called Law-Related Education, which no Administration has ever asked for any money for. It is under another Subcommittee's jurisdiction and I keep getting Members to go along with a couple million dollars to encourage the development of programs so that local schools will have a course in what we used to call "Civics". The schools will invite law enforcement and other types of officials to come to the classroom and talk to these young people about what they do in their jobs.

We have students graduating from high school today that have not the slightest idea what the difference is between our Government and the French Government, for example, let alone the Russian Government. They have no idea what public officials do in their particular jobs. Here is an opportunity to do just what you are talking about if we had a better program in law-related education.

Attorney General MEESE. I agree with you, Mr. Smith. As a matter of fact, to show both points that you have made that our kids do not know enough, and that there are those programs, I participate in some of them. This one happened to be in the lower grades, and the teacher asked the class, "Do you know what the Attorney General does"? And one fellow put up his hand and said, "Yes, he is the one who puts those notices on cigarette packages that say smoking is hazardous to your health."

Mr. SMITH. Well, I have to follow that up and say what I would want you to do is participate on the decision—how much money should go for law-related education.

Any other questions?

Mr. ROGERS. Mr. Attorney General, we do not think those warnings need to go on cigarette packs.

Mr. SMITH. If there are no other questions at this time, we will have a few questions for the record.

Attorney General MEESE. Thank you very much, Mr. Chairman.

Mr. SMITH. Thank you very much.

Attorney General MEESE. Thanks to you and your Committee for your kindness this morning and your courtesies.

Mr. SMITH. Thank you.

[The questions for the record and the answers submitted thereto follow:]

QUESTIONS FROM MR. NEAL SMITH

ATTORNEY GENERAL

Immigration Reform

Question:

If this trend of fewer illegal alien apprehensions continues, do you believe the Border Patrol will still require a 50 percent increase in agents?

Answer:

We are taking a very cautious position before acknowledging a trend of fewer illegal alien apprehensions. The numbers of apprehensions have declined. While we hope the Immigration Reform and Control Act of 1986 is causing the decline, it is too early to tell. Some people may be sitting and waiting; others who usually exit the country on weekends may be remaining in the United States until they can apply for temporary residence.

INS advises the following: While there has been a decline, apprehensions remain high. If things continue as they are, the Border will have the second highest apprehension rate in its history. Even a 30 percent drop in apprehensions for the remainder of 1987 would put this year's number substantially above the 1935 record setting rate of 1.2 million apprehensions. Whether or not the recent decline in apprehensions is a short-term phenomenon or a long-term shift in illegal immigration trends on the Southern Border, incidents of illegal entry remain at near-peak levels. Analysts at INS have examined the available data and believe that high water levels in the Rio Grande have caused part of the decline.

It is also important to consider the role the Border Patrol has been given in the country's effort to interdict the traffic in narcotics and dangerous drugs. In the first six months of participation in Operation Alliance the Patrol seized 50,600 pounds of marijuana, 3,392 pounds of cocaine and 40,000 units of dangerous drugs. In February of this year in one instance, Patrol agents seized 600 pounds of cocaine at a traffic checkpoint in Big Bend National Park, Texas. The Patrol is literally the Nation's only permanent enforcement presence between established ports of entry on the borders. In this capacity, existing personnel must be augmented through Operation Alliance on the Southern Border to counter efforts of drug smugglers. We believe that the Congress recognized this in adopting Congressman Moorhead's amendment to Section III of the Immigration Reform and Control Act of 1986, which is directed at expanding the Patrol to reduce illegal immigration and stem narcotics traffic by bringing the border under control.

Economic problems in Mexico, Central and South America and other parts of the world, as well as political unrest, are factors that will continue to drive people to this country. There is no question

that we need continued strength at the border as well as in the interior. Our border, which is 2,000 miles long on the Mexican side and 4,000 miles long on the Canadian side requires sufficient resources to provide an effective enforcement posture. Our budget request allows an increase of resources to a point where we can do a more effective job. We hope that increased border staffing, combined with sanctions and other provisions of the Immigration Reform and Control Act of 1986, will allow INS to perform a more composite job in addressing all aspects of the immigration problem.

Question:

There is also some concern about the Department's ability to implement the legalization program adequately. Are you confident that the Immigration and Naturalization Service will be able to collect sufficient application fees to fund your legalization requirements fully?

Answer:

INS advises that its best estimate is that it will collect sufficient fees to fund our 1987 requirements. However, because no one is sure exactly how large the illegal alien population eligible to apply for legalization really is or what percentage of this population actually will apply to legalize their status, these estimates may still require future correction.

War on Drugs

Question:

Mr. Meese, as Chairman of the new National Drug Policy Board, will you have authority to establish budgets, develop priorities, and direct resources for agencies and organizations outside of the Department of Justice (e.g., activities designed to reduce the demand for illegal drugs)?

Answer:

Yes, the National Drug Policy Board will oversee all Federal efforts to reduce the supply of and demand for illegal drugs. Under the Executive Order, the Board will have the authority to review, evaluate, and develop Federal drug policy, strategy, and resources. This will include the authority to develop priorities, including budgetary priorities, for all Federal agencies and organizations involved in drug control efforts, and act as an advisor to the President on drug law enforcement programs and policies. In carrying out its budget responsibilities the Board will work closely with the Office of Management and Budget in providing the necessary guidance to ensure resources alloted to the war on drugs are sufficient and are utilized effectively.

Question:

How much do you believe you will obligate for the drug grant program in 1987?

Answer:

Although all of the State and local drug law enforcement assistance funds, including the Prison Capacity Program, are committed to the States, it is possible that not all States will have their State strategies completed and applications submitted by September 30, 1987. It is too early in the process to determine exactly how many States will receive their awards in 1987, but we expect that the majority of the funds will be awarded this year.

State and Local Assistance

Question:

In your statement you point out that the request for State and local assistance in 1988 of $78.3 million is "a marginally higher amount than our fiscal year 1987 request". This statement is slightly misleading, don't you think, when compared to 1987 appropriations. This comparison shows your 1988 request to be a large decrease of over $337 million, due to the Administration's decision to again terminate new funding for most of the State and local assistance grants. Can you provide the Committee any new information that would persuade us to change our position of the past several years to restore funding to these assistance programs that the Administration has deleted?

Answer:

Obviously, I do not believe that my statement regarding the 1988 request for the Office of Justice Programs was misleading. As indicated in my opening statement which was furnished in writing to the Committee, I was discussing a budget for those Federal programs "where we believe a core function is served." With regard to the State and local assistance grants, the question continues to be whether or not we can afford to continue these programs in light of limited Federal resources. It is a matter of priorities and a matter of what is the Federal role.

One important point that I would like to add to the justification material contained in the budget is that there are numerous other programs in operation within the Department of Justice which provide valuable assistance to the State and local criminal justice community albeit not in the form of direct financial assistance. These programs perform functions and provide services to State and local criminal justice agencies at all stages of the process, including such areas as: training and technical assistance, jail construction and detention, State and local drug and terrorism task forces, investigative support, asset forfeiture sharing, and others such as conciliation and mediation services, antitrust prosecutions, forensic

laboratory services and fingerprint identification processing. The Department of Justice plans to continue to strengthen these forms of State and local assistance and work toward enhancing the cooperative ties which have been established as a result of these efforts.

Question:

You mention that the States will receive funds from other sources to offset the loss of these grants, namely their share of assets seized from and forfeited by drug dealers. Why do you believe that substituting an estimated $30 million in asset forfeitures is a better way for the Federal Government to assist the States and localities, than the $337 million appropriated in FY 1987?

Answer:

Obviously, there are more factors to be considered in this matter than the question suggests. We have long held the belief that governmental grant-making programs are but one approach to the many available for addressing problems. Certainly in the area of drug abuse and narcotics trafficking, we believe that unique weapons are in place which permit us to pursue a promising and effective battle, including broader uses of the new Assets Forfeiture Fund as provided in the Anti-Drug Abuse Act of 1986.

Further, drug law enforcement is a joint responsibility between Federal law enforcement agencies and State and local jurisdictions and the program of equitably sharing the drug-related seized and forfeited assets demonstrates how cooperative Federal/State/local ties can be fostered and fruitful efforts rewarded. Through the first four months of this fiscal year, over $12 million has already been disbursed under this arrangement; at this rate, it appears that our 1987 estimate of $27 million may be understated. The Assets Forfeiture Fund represents but one important means by which we are seeking to assist States and localities in the drug war.

In addition, other programs within the Department provide other, non-grant assistance to the State and local law enforcement community. These include such services as: training and technical assistance, jail construction and detention, State and local drug and terrorism task forces, investigative support, and others such as conciliation and mediation services, antitrust prosecutions, forensic laboratory services and fingerprint identification processing.

Federal Prison System

Question:

Is the Justice Department studying any innovative alternatives to institutional confinement of prisoners?

Answer:

The Federal Judiciary and the Federal Criminal Justice Community have traditionally made extensive use of alternatives to confinement. In 1986, two-thirds of the 115,000 Federal offenders were under supervision in the community. The principal alternative to incarceration continues to be probation. The Bureau of Prisons has also sought alternatives to institutional confinement of prisoners. During the past five years, the Bureau has increased the Community Treatment Center population from 948 to approximately 3,050 inmates. This 222 percent increase has reduced significantly the institution-based population. In addition, the Bureau of Prisons has implemented a Special Curfew Parole program where eligible inmates are released up to two months earlier than their original parole date on the condition that they remain at their residence during special curfew hours. A U.S. Probation officer supervises the parolees during this special period. The Bureau of Prisons is also considering the limited use of electronic monitoring, popularly referred to as house arrest, for those offenders who do not present a threat to society. In the future, we will continue to explore other alternatives to incarceration consistent with public safety. However, since the Federal inmate population is increasingly becoming more criminally sophisticated, we believe finding additional alternatives to institutional confinement will become more difficult.

General Legal Activities

Question:

Do you have any idea why these accounts were originally provided separate appropriations? If necessary, please research this question and provide an answer for the record.

Answer:

The legislative history of litigative components in the Department has varied little throughout the last hundred years. As the Nation grew and the legal complexities of our society increased, funds were appropriated to form what are now the legal divisions. Until 1950, the salaries and expenses of these forerunners were appropriated separately. The 1951 budget presented to Congress grouped the divisions under one appropriation for the first time with the exception of the Antitrust Division and offices of the United States Attorneys. At the same time, the Miscellaneous Salaries and Expenses, Field, Department of Justice and the District Attorneys, Etc. appropriations were combined to form the United States Attorneys and Marshals appropriation. This action combined what were considered field activities under one title and appropriation.

The Antitrust Division's predecessor was formed in the early 1900's. That appropriation structure is no longer germane or applicable to the management of the Department today. It now makes more sense to combine more similar operations under one roof as a more efficient use of resources.

As noted at the time of the hearing, consolidation of these three appropriations will give the Department maximum flexibility in trying to contain costs. Congress has already agreed to allow the Department to use resources from the GLA appropriation to fund office automation systems in, not only the legal divisions, but also the Antitrust and the U.S. Attorneys. The Congress has understood the similarities that exist among these appropriations and the efficiencies that can be achieved if we approach the problem in a more unified and comprehensive manner.

While there may have been some distinction between field and headquarters activities in the past, today's law enforcement and justice activities require more innovative, coordinated and aggressive management. We believe that consolidating the three appropriations is the best approach to containing costs and providing the quality of legal services demanded by our citizens.

Litigating Component's Office Automation

Question:

What is the status of the Department's current effort under the Uniform Office Automation Case Management (UOACM) Project?

Answer:

The Department is continuing to focus on the following UOACM project tasks.

- Support for the consolidated office automation procurement for the Criminal and Tax Divisions and the United States Attorneys' Offices (USAOs). Currently, representatives of these organizations and the Justice Management Division (JMD) are in the process of reviewing vendor proposals.
- Evaluations of AMICUS II prototypes in the Civil Rights and Land and Natural Resources Divisions have been completed and installation of AMICUS II is proceeding in both divisions.
- A Department case management system prototype has been completed. A production system has been designed and developed and is currently being installed.

Question:

What coordination has taken place between JMD and the Department's litigating divisions in relation to this effort?

Answer:

The six litigating divisions and the USAOs are continuing to participate in the project under the direction of the Deputy Attorney General (DAG) who serves as Chairman of the UOACM Project Steering

Committee. The Assistant Attorney General for Administration also serves on the Steering Committee. In addition, the Deputy Assistant Attorney General, Office of Information Technology, coordinates and monitors the on-going tasks that are being performed by various project working groups and calls meetings of the User Subcommittee to address on-going project tasks and issues.

Question:

What is AMICUS II and how does it differ from AMICUS I?

Answer:

AMICUS II is a fully integrated, office automation system linking a variety of specialized workstations and other system components through a dual, local-area network. It is comprised of shared minicomputers with multi-workstation clusters. The standard workstation provides access to word processing, high-speed printing, litigation support, legal research and case management data bases. The network includes portable and personal computers which can operate as independent units or, when connected to the system through phone lines, can duplicate all of the functions of the standard workstations in the office.

AMICUS II provides attorneys and other workers with a single law office automation system far superior to the capabilities and applications of the first generation of AMICUS. AMICUS II takes advantage of new improved technology to meet the Division's office automation requirements. Workers access all the features of this integrated system through single terminals located at each employee's workstation.

The advantages of AMICUS II over AMICUS I are:

- o A wider array of technically advanced data entry and processing, data communications and printing;
- o Increased storage and processing capacity, and easier programming;
- o The availability of three types of workstations --the legal support workstation, the stand-alone intelligent workstation and the portable workstation;
- o An electronic spread sheet package integrated with word processing and fully capable of providing data for queries, reports and graphs for purposes of litigation support, case management, and legal administration;
- o A highly flexible communications capability compatible with a wide range of external systems; and
- o A technical flexibility to incorporate new features as they become available.

Question:

Why is the Civil Division expanding its AMICUS system and how does this fit into the Uniform Office Automation Case Management Project (UOACM)?

Answer:

The Civil Division is not expanding AMICUS. In 1986, the Division completed the replacement of the AMICUS I equipment with more technologically current AMICUS II equipment. AMICUS II now serves the entire Division, including its field offices.

One of the recommendations of the UOACM Project called for the continuation of the AMICUS II system in the Civil Division and for a test of the system in the Civil Rights and Land and Natural Resources Divisions and the Department's Senior Management offices. Evaluations were subsequently conducted on the Division prototypes, reflecting improvement in productivity, and the decision was then made to install the AMICUS II system throughout these organizations. In addition, the consolidated procurement for the Criminal, Tax and U.S. Attorneys system requires the successful bidder to provide an office automation system that will be compatible with AMICUS II.

Question:

What has the Department done to deal with the long-standing problems of incompatible definitions for case management terms, incomplete data, and inconsistent reporting among the litigating components?

Answer:

A successful Department Case Management System prototype was tested and, based on the results of the prototype, a Department Case Management System has been designed and developed. The Department is in the process of implementing the Case Management System based on the standard definitions approved by the six litigating components and the Executive Office for United States Attorneys.

Question:

How much of the $24 million the Department is requesting under Legal Activities Office Automation will be used for coordination purposes and how much for procuring terminals for the Tax and Criminal Divisions?

Answer:

None of the $24 million being requested for 1988 will be used for UOACM Project coordination purposes. Project management and coordination to the UOACM Project is provided by using existing resources. The Department is committed to moving towards compatibility in the office automation area and will be utilizing the Legal Activities Office Automation funding in support of systems (hardware and software) acquisitions and related services and

support. Of the $24 million requested in 1988, all of the money will go to support procuring terminals and related systems support (site preparation, installation, hardware, software, training, maintenance, and technical assistance) for the Tax and Criminal Divisions and the other litigating components, including the Antitrust Division and the U.S. Attorneys.

Department Leadership

Question:

In June 1985, the Department Resources Board (DRB) was established to initiate the development of an integrated management system for the Department of Justice with a long-range policy focus. Has the DRB developed a set of long-range goals for the Department? How are these Department goals reflected in the plans of the Department's offices, boards, divisions, and bureaus? Will you please set forth the Departmentwide program and administrative management priorities for this Committee to consider in analyzing the Department's budget request?

Answer

Long-range goals have been set for the Department. Each Department component has developed management plans to reflect the goals and objectives as they are applicable. The plans rank the goals and objectives based on importance, feasibility, capability of accomplishment, timeliness and availability of resources. Following are the Policy Goals and Management Objectives (many of which are well underway) for the Department of Justice.

Policy Goals

A. Prevention and Control of Crime

1. Narcotics Enforcement and Prevention
2. Organized Crime
3. Terrorism
4. Economic Crime
5. Missing and Exploited Children
6. Public Corruption
7. Obscenity

B. Improvement of Criminal Justice System

1. Victims of Crime
2. Prison and Jail Improvement
3. Coordination of Law Enforcement Activity
4. Sentencing
5. Improved National Crime Data
6. Expanded International Crime Control Cooperation
7. Promote Truth in the Court Room

C. National Security

1. Counterintelligence
2. Safeguarding of Classified Information
3. Immigration Enforcement and Reform

D. Protection of Civil Rights

1. Strong Enforcement of Civil Rights Laws
2. Total Non-Discrimination Policy
3. Protection Against Racial and Religious Persecution

E. Promotion of Sustained Economic Growth

1. Antitrust Law Reform
2. Regulatory Reform

F. Legal System Improvement

1. Tort Liability Reform
2. Legal Fee Equity
3. Reducing Burden on Federal Courts

G. Government Financial Integrity

1. Fraud Against Government
2. Debt Collection

H. Preservation of Constitutional Values

1. Federalism
2. Separation of Powers
3. Religious Liberty
4. Constitutional Limitations on Government

Management Objectives

1. Improve DOJ Headquarters cooperating with and support of U.S. Attorneys Offices.
2. Reorganize and improve personnel and training functions.
3. Achieve effective, working information systems.
4. Review and establish controls for publications.
5. Establish and implement a strategic planning process.
6. Improve budgeting and resource allocation.
7. Implement management improvement and productivity program.
8. Establish DOJ master calendar system.
9. Improve facilities and logistics.
10. Increase building security.

QUESTIONS FROM MR. ALEXANDER

ATTORNEY GENERAL

Juvenile Justice

Question:

In your budget justifications, you state that the reason the Administration is not asking for funding for the State and Local Assistance juvenile justice grants program is because:

"The states should be willing to pick up their costs from the increased revenues they will be receiving in 1987 and beyond as a result of the Tax Reform Act of 1986."

Is it your view that the interest in juvenile justice programs is all State and local -- that there is no national interest -- in juvenile justice and, therefore, the Federal Government should not be investing in such programs?

Answer:

The Federal Government has had an interest in, and has been a strong supporter of juvenile justice programs. Over the past 13 years, the Federal Government has made approximately one billion dollars available for juvenile justice programs. The Federal Government will continue to work with the State and local governments to evaluate their needs and aid them in implementing programs as they see fit. However, limited Federal resources require greater emphasis on strictly Federal activities.

Question:

Is it your view that although the Presidential Administration, of which you are a part, campaigned for Federal tax reform for nearly six years, States should not be considering reforming their own tax structures to reduce tax burden?

Answer:

The Department has no view concerning the tax structures of States.

Question:

In preparing this juvenile justice budget proposal, were you aware that in a substantial number of States -- particularly in Middle America--the economy is so bad that States, like Arkansas, are repeatedly cutting back on programs during their fiscal years due to revenue shortfalls?

Answer:

We are aware that some States are having fiscal difficulties. We are also aware that Federal resources are not limitless and must be prioritized so that they are available to fund Federal law enforcement and justice activities adequately. To do otherwise could result in gaps in Federal law enforcement areas which would place a much greater burden on the States.

Question:

In your justifications you state that the reason the Administration is requesting no funding for the Juvenile Justice Program is that "much has been accomplished" -- particularly in the deinstitutionalization of status offenders and the separation of juvenile and adult offenders. When these justifications were written, was the Administration aware that a substantial number of States are having great difficulty in reaching the 75 percent jail removal requirement by the December 1985, deadline?

Answer:

The deadline for States to be in substantial compliance (75 percent) with the Congressional jail removal mandate was December 1985. States must be in full compliance (100 percent) with regard to jail removal by December 1988. The 1986 compliance reports, which are currently under review, were due in December 1986. Therefore, we were not aware that a substantial number of States were having great difficulty in reaching the substantial compliance requirement with jail removal at the time the budget justifications were written. This is the first time that the States have been required to submit compliance figures regarding jail removal.

QUESTIONS FROM MR. EARLY

ATTORNEY GENERAL

Sentencing Commission

Question:

As you know, the Sentencing Commission will issue official guidelines in April of this year at which time Congress will have six months to act or "disapprove" of these guidelines.

Mr. Attorney General, what is your view of the Commission's January revised draft? How do you think promulgation of these guidelines will affect prison population and caseload and responsibilities of the courts?

I also understand that the Justice Department is advocating and suggesting that the Commission include standards for reimposing the federal death penalty in its guidelines? How do you view this proposal and how do you believe the Congress will view it?

Answer:

We generally believe the January draft of the Sentencing Commission responded appropriately to the mandate given to it by Congress. Since that time, there have been numerous revisions which are under review by the Department of Justice. We believe the latest draft, to the extent we are familiar with its contents, to be an improvement over current practices.

Although any estimates will necessarily be speculative, we will be happy to provide our best estimates of the possible effect of the guidelines on the prison population and the caseload of the courts once our review is completed.

With regard to the Commission's inclusion of standards in its guidelines for imposing the death penalty in cases for which the Congress has prescribed it, we received a request as to whether such an inclusion was lawful. The Department informed the Commission that it believed such an inclusion to be lawful, but the Commission, by majority vote, concluded that it would not include such standards in the guidelines being submitted to Congress.

Juvenile Justice

Question:

Again this year the Department is proposing to abolish Juvenile Justice programs, which Congress in its wisdom has restored year after year.

Assuming this will be the case this year, what future plans does the Department have for the Office of Juvenile Justice — for this year, next year, and in the long term? I understand that there has been an Acting Administrator at Juvenile Justice for the past nine months. When can we expect that a permanent Administrator will be appointed?

Answer:

In 1987, $70,282,000 was appropriated for Juvenile Justice Programs and to administer the Office of Juvenile Justice and Delinquency Prevention. Those funds are being obligated in the normal fashion. To date, approximately twenty-one 1987 formula grants have been awarded to States. The 1987 program plan for discretionary funds was announced in the Federal Register March 11, 1987.

The Department's 1988 budget request proposes no funding for this program. Because formula grants are awarded for a project period of up to three years, it may take some 42 months to close down after the last year of funding. Consistent with the 1988 budget, on January 27, 1987, the Department transmitted to the House of Representatives a legislative proposal to repeal authority to make grants for Juvenile Justice programs.

The nomination of Verne L. Speirs to be Administrator of the Office of Juvenile Justice and Delinquency Prevention was forwarded to the Senate on March 10, 1987. Mr. Speirs has been the Acting Administrator.

Illegal Aliens Fleeing to Canada

Question:

Has the Canadian Government or Canadian Immigration Office complained about the high influx of illegal aliens fleeing from the U.S. to Canada in an effort to escape the new immigration laws?

Answer:

According to INS, we are not aware of complaints from either the Canadian Government or the Canadian Immigration Office. The Canadians did, however, recently revise their immigration policy with respect to refugee claimants. As of February 20, 1987, Canada's automatic admission and issuance of Minister's Permits to refugee claimants ended. Claimants are now required to wait on the U.S. side for a hearing date. This new policy has significantly reduced the flow of aliens from the U.S. to Canada.

Community Relations Service

Question:

Was or is the Community Relations Service (CRS) involved in the Howard Beach incident in New York?

Answer:

The Community Relations Service has been involved in providing technical and other assistance to the South Queens community as follows:

1. Demonstration Monitoring and General Conciliation. CRS has monitored all marches and demonstrations in the area since the Howard Beach incident. In addition, the agency has consulted regularly with officials at the highest levels of City and State Government and with key civic leaders. CRS has stressed the importance of rumor control to help avoid further difficulties.

2. Assistance to Biracial Community Coalition. The major ad hoc community group to form in the wake of the Howard Beach incident is the Concerned Citizens of South Queens (CCSQ). CRS has supplied examples of community activities CCSQ might want to undertake, helped identify needed resources, and advised on a community newsletter initiated by CCSQ. CRS has also helped arrange desired meetings with top public officials such as Mayor Ed Koch.

3. Assistance to John Adams High School Officials. This school has been the focus of much attention because it is attended by most white Howard Beach youngsters, as well as blacks and Hispanics from adjoining areas. CRS has focused on it to break down intolerance among students and to involve their parents in the overall effort to improve race relations.

   As part of its assistance, CRS conducted a one-day workshop for 200 teachers and staff on January 29 on recognizing potential racial/ethnic conflict. The agency is consulting with John Adams' principal on implementing the resulting recommendations for training and other follow-up activities.

4. Assistance to Police Department's Police/Community Relations Effort. CRS is providing technical assistance to the Police Department's 106th precinct in building "positive community dialogue" which Police Department headquarters has required.

5. Cooperation With City and State Human Rights Agencies. In response to the Howard Beach incident, Governor Mario Cuomo established the Task Force on Bias-Related Violence and instructed it to "begin ... developing specific solutions to the kind of racial violence that erupted in Queens."

   At the local level, the New York City Government has also created a special unit, attached to the City's human rights agency, to respond to bias incidents. CRS is providing technical assistance to both the State and City human rights commissioners on program development for these new units.

NIJ Studies on Hate Violence

Question:

Increasingly, the issue of anti-gay violence has become a pressing policy concern as the incidence of such violence has become more common — particularly as a result of irrational fears and hatred associated with the AIDS epidemic. With this record of activity and inactivity in the criminal justice arena, what has the National Institute of Justice (NIJ) done to study or remedy this pressing problem, and the problem of hate violence in general? Does your research agenda include plans to look at the nature or extent of anti-gay violence?

Answer:

Although we have not addressed the issue of anti-gay violence per se, the National Institute of Justice advises that three projects are related to both hate violence and the problem of AIDS. The study of the way the police handle hate violence, conducted by the National Organization of Black Law Enforcement Executives (NOBLE), included a nationwide survey of the extent of hate violence reported to the police, site visits to six jurisdictions with special programs to handle these kinds of incidents, and a sample of State level legislative reforms that address this problem. The project resulted in a handbook of standard protocols, published by NOBLE in early 1986, that can be adopted by law enforcement agencies to address the problem of hate violence.

NIJ has also sponsored several projects relative to AIDS. A major report and several articles addressing the problem of AIDS in the nation's prisons and jails provide current medical information regarding the disease, its victims, and the range of options available to correctional officials in dealing with AIDS-related issues. A second publication currently under development focuses on how law enforcement agencies handle cases involving AIDS.

72-165 O—87——6

QUESTIONS FROM MR. CARR

ATTORNEY GENERAL

Consent Decree

Question:

When the government finds a State in noncompliance or questionable compliance and/or there is a complaint filed against a State or a consent decree (under the Institutionalized Persons Act) what are the Federal Government's obligations for assistance to the State? What is the specific responsibility of the Justice Department toward ensuring resources for States with DOJ complaints and/or consent decrees?

Answer:

Civil Rights Division personnel make an effort to inform States if there is a known available source of funding (e.g., from the Department of Health and Human Services for mental health facilities) to assist in the correction of substandard conditions. The Division advises the States of the proper office to contact for such support.

Question:

What is the responsibility of the Department of Justice to ensure a State's consent decree and/or compliance does not adversely affect the services provided to the population not covered by the consent decree?

Answer:

The Department has an overriding responsibility to ensure to all individuals the full protections accorded under the Civil Rights of Institutionalized Persons Act (CRIPA) and other federal laws. We are always careful in fashioning consent decrees with States, and in monitoring compliance, that those protections remain in place for those not covered by the decree as well as for covered individuals.

THURSDAY, MARCH 12, 1987.

GENERAL ADMINISTRATION/WORKING CAPITAL FUND, FEES AND EXPENSES OF WITNESSES

WITNESSES

HARRY H. FLICKINGER, ACTING ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION

ROBERT N. FORD, COMPTROLLER

MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

JOHN J. LANE, DEPUTY ASSISTANT ATTORNEY GENERAL, OFFICE OF INFORMATION AND TECHNOLOGY

ADRIAN CURTIS, CHIEF OF OPERATIONS FOR BUDGET

GENERAL ADMINISTRATION JUSTIFICATION

Mr. SMITH. Continuing with our review of the Department of Justice, we now hear testimony on the General Administration appropriation. We have Mr. Harry H. Flickinger, the Acting Assistant Attorney General for Administration.

[The justification follows:]

U.S. DEPARTMENT OF JUSTICE

General Administration

Salaries and Expenses

Summary Statement

Fiscal Year 1988

The General Administration appropriation is requesting, for 1988, a total of $103,513,000, 1,314 permanent positions, and 1,358 workyears. This request represents an increase of $23,948,000, 53 positions, and 198 workyears from the 1987 appropriation anticipated.

The primary mission of the General Administration is to support the Attorney General and the senior policy level officials of the Department in the development of policy objectives and the management of the Department. In addition, selective administrative support is provided to the legal divisions and the smaller offices and boards within the Department. This appropriation also supports two organizations responsible for the administrative review and appeal of decisions relating to individuals: Executive Office for Immigration Review and the Office of the Pardon Attorney.

The mission of the General Administration appropriation is accomplished through the programs contained in two budget activities: Program Direction and Policy Coordination and Administrative Review and Appeals. Included in the Program Direction and Policy Coordination activity are the following programs: Department Leadership, Executive Support, Intelligence Policy and Planning and the Justice Management Division. The major initiatives and resource requests for these activities and programs are summarized below.

Program Direction and Policy Coordination

This budget activity includes resources for the primary missions of the Offices supported by the following programs: Department Leadership, Executive Support, Intelligence Policy and Planning, and the Justice Management Division. These programs consist of the following:

The Department Leadership program consists of the Offices of the Attorney General, the Deputy Attorney General and the Associate Attorney General. These Offices are responsible for developing appropriate policies regarding the administration of justice in the United States; effectively representing the United States in justice-related matters; and providing advice and opinions on legal matters to the President, members of the Congress and heads of Executive departments and agencies. A program increase of 4 positions and $241,000 has been requested for programs within this decision unit in order to enable adequate policy and program guidance, oversight and control from this program to the organizations which implement the Department's programs. Additionally, an increase of $500,000 is requested for the Department Leadership offices' participation in a uniform office automation system project within the Department.

The Executive Support program consists of the Offices of Legal Policy, Public Affairs, Legislative Affairs and Liaison Services. The primary missions of this program are to study the issues central to the Department's policy

agenda and to provide the thorough legal and policy analysis necessary to undergrid new Department initiatives for legal reform in a wide variety of areas; to ensure that the Department operates most effectively with the Congress and the Office of Management and Budget (OMB) to advance its legislative goals; to inform the Department personnel, the media and the public of Department activities expeditiously and accurately; to counsel the Attorney General and other Department officials in their dealings with the media and Congress; and to coordinate and facilitate the flow of information applicable to Federal, state, county and local governments, related interest groups, special interest groups, and other private entities. Program increases of 21 positions and $1,900,000 have been requested for programs within this decision unit of which: 14 positions and $625,000, and 7 positions and $575,000 are requested to address current workload demands in the Office of Public Affairs and the Office of Legislative Affairs, respectively. In addition, resources of $700,000 are requested for the Executive Support offices participation in a uniform office automation system project within the Department.

The Intelligence Policy and Planning program consists of the Office of Intelligence Policy and Review (OIPR) and the Office of Professional Responsibility. This program is responsible for the coordination, development and implementation of Departmental policy on intelligence and national security matters. This program also is responsible for strengthening the integrity of and maintaining public confidence in the Department of Justice, and in fostering and further developing among all Department employees a commitment to professional responsibility. A program increase of 2 positions and $106,000 is included to meet increasing workload in OIPR. Additionally, resources of $200,000 are included to support the uniform office automation system in these offices.

The Justice Management Division (JMD) is responsible for ensuring that the management initiatives of the President, the Attorney General, and the Congress are implemented soundly and that administrative support services are delivered efficiently and effectively. The JMD consists of the Immediate Office of the Assistant Attorney General for Administration, the Offices of the Comptroller, Personnel and Administration, and Information Technology. Also included in JMD is the Departmental Audit Staff. Program increases of 25 positions and $3,942,000 have been requested for JMD. Of this increase, 7 positions and $500,000 would provide direct funding for the Task Force Administrative Unit which supports the Organized Crime Drug Enforcement Program. Resources of 12 positions and $700,000 are requested for support services necessary for Departmental Attorney Personnel Management. In addition, in order to achieve the Administration's management and productivity improvement initiatives and the necessity for increased departmental security, an increase of 6 positions and $2,742,000 is requested. Partially offsetting the program increase is a management and productivity decrease of 4 positions and $241,000.

Administrative Review and Appeals

This program includes the Office of the Pardon Attorney and the Executive Office for Immigration Review. The Office of the Pardon Attorney is the focal point for the receipt, investigation and consideration of petitions for all forms of Executive clemency and serves as the principal liaison with the general public in clemency matters. The major staffs of the Executive Office for Immigration Review are: the Office of the Chief Immigration Judge where immigration judges hold hearings to determine the status of an alien; and the Board of Immigration Appeals (BIA) which hears appeals from certain decisions of the Immigration and Naturalization Service and immigration judges. An increase of 13 positions and $999,000 is included to provide EOIR with resources to continue implementing the Automated Nationwide System for Immigration Review, and to address the BIA workload and case backlog.

General Administration

Salaries and Expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses necessary for the administration of the Department of Justice, [$79,565,000] $103,513,000

(8 U.S.C. 1103(A); 28 U.S.C. 501, 503, 504, 507-509, 1929; Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, Section 101(b); additional authorizing legislation to be proposed.

Explanation of changes

No substantive changes proposed.

Congressional Appropriation Actions

The Congress did not restore any of the reduction for the Balanced Budget and Emergency Deficit Control Act of 1985. In addition, Congress approved only $1,000,000 of the $3,994,000 request for the Financial and Administrative Management Information System (FAMIS) and did not approve an increase in resources for a Departmental Case Management System ($500,000).

Supplementals Requested

1. The pay request includes $575,000 to meet increased pay requirements pursuant to P.L. 99-500.
2. The supplemental request for retirement contributions includes $778,000 to meet federal employment retirement contributions pursuant to P.L. 99-335.
3. The supplemental request provides for 200 positions and $5,823,000 for workload associated with the Immigration Reform and Control Act of 1986, 16 positions and $357,000 for support of the U.S. Trustees Nationwide expansion, 12 positions and $1,234,000 for Private Counsel to implement debt collection policy, 12 positions and $550,000 for security initiatives for the National Security Emergency Preparedness Program, the Crisis Management Facility and enhancement of security in the main building,$762,000 for relocation costs associated with the forced move of Justice Employees to the Bond Building, and $106,000 and $1,180,000 for increased costs for the Federal Telecommunications System (FTS) and GSA rent costs, respectively.

Transfer of Financial and Administrative Systems Support Group to the Working Capital Fund:	-8	-8	-587

This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.

Uncontrollable increases:

1. Annualization of 1987 pay increase	...	...	881

This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 68 paid days (October 1, 1986 through January 5, 1987) were not included in the pay raise amount of $1,013,000. Additionally, $438,000 of the 1987 pay requirement was absorbed. Total annualization required is $881,000.

2. Annualization of Federal Employees' Retirement System Costs	...	...	2,132

This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Total annualization required is $2,132,000.

	Perm. Pos.	Work-years	Amount
3. Annualization of additional positions approved in 1987.....	...	147	$10,864

This provides for the annualization of 250 additional positions approved in 1987.

	Approved 1987 Increases	Annualization Required
Annual salary rate of 250 approved positions.....	$6,905,000	
Less lapse (72%).....	-4,704,000	$4,704,000
Net compensation.....	2,201,000	
Associated employee benefits.	265,000	543,000
Systems Development and non-personnel costs.....	6,698,000	5,617,000
Total costs subject to annualization.....	9,164,000	10,864,000

Systems Development and non-personnel costs include costs associated with implementing the Automated Nationwide System for Immigration Review (ANSIR), as well as travel, SLUC charges, printing, and supply and furniture purchases associated with the new positions.

4. One additional compensable day.....	...	...	161

The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $36,920,000 -: 260 = $142,000, plus $19,000 for benefits.)

5. Within-grade increase.....	...	...	368

This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $324,000 and benefits $44,000 = $368,000.)

	Perm. Pos.	Work-years	Amount
6. Locality based per diem	...	...	$195

Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $195,000 is required to meet the expected 10.6 percent increase to total travel funds.

7. GSA Rent	...	...	1,658

In 1987 the Rent System replaces the Standard Level User Charge (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $1,658,000 is required to meet our commitment to GSA.

8. GSA recurring reimbursable services	...	...	14

Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $14,000 over 1987 charges of $333,000.

9. Federal Telecommunication System	...	...	52

Federal Telecommunication System (FTS). The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $52,000 over the 1987 base of $1,094,000 is requested.

10. Telephone service	...	...	55

On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services.

	Perm. Pos.	Work-years	Amount
The FSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000. An increase of $55,000 over the 1987 base of $300,000 is requested to pay these charges.			
11. Employee Data and Payroll Services	...	...	$50
Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.			
An additional increase of $50,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.			
12. Audio Visual and Media Services	...	...	21
This increase reflects proposed rate increases for various types of audiovisual services that range from seven to 240 percent higher than present rates. An estimated 16.5 percent overall increase will be assigned to each affected organization for 1988. This equates to an increase of $21,000 over the 1987 base of $127,000.			
13. General pricing level adjustment	...	...	612
This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.			
Total, uncontrollable increase	...	147	17,063

	Perm. Pos.	Work-years	Amount
Decreases (Automatic non-policy)			
1. Reduction for change in hourly rate	...	...	-$102
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates to be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
2. Reduction in per page cost of Federal Register and Code of Federal Regulations	...	...	-2
The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to Require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.			
3. Reduction in Health Benefits	...	...	-71
The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 9 percent due primarily to reduced carrier rates. The requested decrease includes $71,000 for decreased rates over the 1987 budgeted base of $757,000.

Long Range Goal. To develop appropriate policies regarding the administration of justice in the United States; to represent the United States effectively in justice-related matters; and to provide advice and opinions on legal matters to the President, and heads of Executive departments and agencies.

Major Objectives.

. To formulate and implement major departmental policies and programs.

. To provide overall supervision and direction to the organizational units of the Department of Justice.

. To investigate, process and make recommendations to the President on all prospective candidates for judicial and Justice Department Presidential appointments.

. To coordinate criminal justice matters with federal, state and local law enforcement and criminal justice agencies.

. To maintain and supervise the Attorney General's Honor Law Graduate and Attorney Employment Programs.

. To establish and implement a standardized system to collect information on task force cases.

. To prepare and disseminate an Annual Report to the Congress and the public regarding the current status of efforts against organized crime drug enforcement.

Base Program Description. The Attorney General is primarily responsible for developing and implementing the policy objectives of the Department and for managing the Department's programs and resources. He is supported by staff members who coordinate various program activities to ensure consistency with current Department guidelines and policies. Staff members also serve as liaison between Department organizations and the Attorney General when matters of importance require his direct involvement. The Attorney General keeps the public informed of Department activities by appearing before a wide range of citizens' groups and professional associations. He also meets regularly with the President and members of the White House staff, other Federal agency officials, and members of the Congress on department policy and program matters.

In supporting the policies of the Attorney General, the Deputy Attorney General provides testimony before Congressional committees on legislation affecting the Department and acts as the Department's liaison with the White House staff and the Executive Office of the President. In addition, the Deputy Attorney General exercises the power and authority invested in the Attorney General, to take final action in matters pertaining to: employment, separation and general administration of personnel in the Senior Executive Service, and of attorneys. The Deputy Attorney General oversees the Attorney General's Employment Program for Honor Law Graduates and Judicial Law Clerks. In the Attorney General's absence, the Deputy Attorney General serves as the acting official for the Department.

The Associate Attorney General assists the Attorney General and the Deputy Attorney General in formulating and implementing Departmental policies and programs pertaining to civil matters and provides overall guidance and direction on antitrust, civil rights, foreign claims, environmental, tax and bankruptcy issues.

The President has mandated the Attorney General to report to the American people regarding the status of law enforcement efforts directed at organized crime. The annual report will be prepared by the Department of Justice staff utilizing statistical data collected on Task Force cases.

Program Changes. A total increase of 4 positions and $741,000 is requested for the Department Leadership program to provide resources to support additional attorney personnel and to implement a uniform office automation system.

During the previous Administration, the three Offices that comprise the Department Leadership program (the Offices of the Attorney General, Deputy Attorney General and Associate Attorney General) had an authorized personnel strength of 80 full-time permanent positions supported by directly appropriated funds. This Administration, in its revision of the previous Administration's FY 1982 budget, reduced the size of the Department Leadership program from 80 to 56 directly funded permanent positions. Restoration of four positions, four workyears, and $241,000 is now requested for the Department Leadership program.

With strong bi-partisan Congressional support, the Department's budget has grown from $2.35 billion in FY 1981 to a request level of $5.65 billion in FY 1988 (including the special fund appropriations created by the Congress). This 140 percent funding growth is unprecedented in the Department's history. Likewise, the Department's staffing level has increased from about 55,000 full-time equivalents in FY 1981 to a planned level of almost 77,000 in FY 1988 — a growth of 40 percent.

On the substantive program side, the Congress has enacted many new statutory responsibilities for the Department's leadership to execute on behalf of the American people -- such as -- the Organized Crime Drug Enforcement initiative, the Comprehensive Crime Control Act of 1984, the Anti-Drug Abuse Act of 1986, the Immigration Reform and Control Act of 1986, etc.

Given the growth described above, it is critical that Congress adopt, as has the Administration, the proposed staffing level for the Department Leadership program. There must be adequate policy and program guidance, oversight and control from the Department's leadership to the organizations which implement the more than 150 Department of Justice programs. For example, additional staff is requested to assist in the expanding workload encountered in the international aspects of the Department's responsibilities. These include increased international nature of crime, especially drug trafficking, the responsibilities and involvement of the Department in international matters, including terrorism and foreign intelligence and counterintelligence.

Likewise, the Deputy Attorney General has broadened oversight and control responsibilities for implementation of major legislative initiatives generated by the 98th and 99th Congresses.

The requested four positions -- for a new total of 60 positions -- would leave the Department Leadership program still 25 percent lower in full-time permanent positions than this program had during the previous Administration. Congressional support for this increase is urgently needed.

The program increase requested for the Department Leadership program includes $500,000 for the implementation of a uniform office automation system in the Offices of the Attorney General, Deputy Attorney General, and Associate Attorney General which is consistent with the Department's overall plans for office automation. The office automation project is devoted to four specific objectives: to ensure increased coordination and consolidation of systems development and implementation efforts in support of Departmental management areas; realize cost savings and indirect human resources through consolidation of duplicating and overlapping automated systems; reduce the economic and technological obsolescence of ADP and word processing equipment; and reduce data communication costs through the use of technological advancements.

The Department, in a planned and coordinated manner, is proceeding to implement compatible office automation systems in the litigating organizations and management offices and in developing a summary case reporting system which aggregates case data from the litigating components. Specific automation functions to be performed include word processing, inter- and intra-office communication, document transfer, management and office support activities, electronic mail, and case management. Access will also be provided to a variety of information system applications and facilities, including legal research, litigation support, attorney timekeeping, and personnel and financial management systems.

Failure to fund this initiative will result in the continued lack of inter-operability between office automation systems and the continued use of outdated and obsolete equipment. In addition, projected productivity improvements in the components and improved departmental management objectives will not be met. This project, in addition to

meeting Department concerns regarding cost effective litigation, will also address the same concerns raised by the Office of Management and Budget, the General Accounting Office and the Congress.

Resources are requested in all other programs of the Program Direction and Policy Coordination activity in order to implement the uniform office automation system in their respective offices.

Long Range Goal: To initiate, develop and coordinate major policy initiatives of high priority to the Department and to the Administration in the areas of civil and criminal justice; to ensure that the Department operates most effectively with the Congress and the Office of Management and Budget to advance its legislative goals; to improve coordination with State and local governments on regulatory and legislative issues of importance to the Department and to inform Department personnel, the media and the public of Department activities expeditiously, and accurately counsel the Attorney General and other Department officials in their dealings with the media.

Major Objectives.

- To develop a more coherent process for determining legislative policy.
- To coordinate joint Department efforts to secure enactment of legislation and other policy proposals of special interest to the Department and the Administration on selected issues.
- To utilize effectively the appropriate Departmental personnel in developing and advocating legislative policy for Congress.
- To coordinate policy development and encourage consistent implementation of the Freedom of Information Act responsibility within the Executive Branch, and to oversee and supervise the disposition of appeals to denials of information requested from the Department under the Freedom of Information and Privacy Acts.
- To advise and assist the Attorney General and Deputy Attorney General regarding the selection and appointment of Federal judges.
- To process and certify requests for special U.S. Marshal deputations.
- To process and authorize reimbursable agreements for state and local law enforcement overtime and travel arrangements.

- To represent the Department on the Administrative Conference of the United States, and where appropriate, to represent the Department on regulatory reform matters.
- To inform the Attorney General, Department officials, and rank and file personnel of the Department regarding statements about the Department in daily and periodical press and broadcasting.
- To assist the Attorney General and other department officials in responding to reporters and editors effectively through interviews, news conferences and other forums.
- To promote staff support for the Attorney General on matters under consideration by the Cabinet and National Security Council.
- To advise the Attorney General on requests (from U.S. Attorneys) to issue subpoenas to news reporters and news organizations and to counsel U.S. Attorneys on how and when to use subpoena power.
- To coordinate appropriate public policy announcements with the White House and other Federal Departments and Agencies.
- To coordinate and facilitate the flow of information relating to DOJ policies applicable to Departmental intergovernmental relations.
- To maintain a steady flow of information between State and local governments and the Department.
- To provide public affairs services, as appropriate, for domestic and international travel, public appearances, and Departmental ceremonies for the Attorney General and other senior officials.
- To coordinate with Federal, State, and local officials on law enforcement and legal issues relating to program, regulatory, and legislative reform.

Base Program Description. Executive Support consists of the Offices of Legal Policy, Public Affairs, Legislative Affairs, and Liaison Services.

The Office of Legal Policy (OLP) serves as the central point for the Department-wide coordination and review of policy initiatives of special concern to the Attorney General and the Administration. OLP is responsible for supporting the Attorney General in his role as permanent chairman of the Federal Legal Council, for advising the Attorney General on the appointment of Federal Judges, and for the administration of the Federal Justice Research Program. OLP provides staff support for matters coming before the Cabinet and the National Security Council; represents the Department on inter-departmental committees and working groups; and gives policy advice on a wide variety of issues, including, for example, regulatory reform, and criminal justice programs.

The Office of Public Affairs (PAO) is the principal point of contact for the Department of Justice with the public and the news media. Its mission is twofold: (1) to inform the public about Department of Justice activities and developments, and (2) to provide similar information internally to Department personnel. The staff coordinates the public affairs effort of all Department organizations and maintains close liaison with their top executives as well as media representatives. The Office of Public Affairs disseminates information about the Department of Justice through the news media and by personal contact with the public. It serves reporters by responding to queries, issuing press releases and statements, arranging interviews, and conducting conferences and mailings. The Office provides assistance to members of the general public by answering telephone and mail requests, receiving visiting groups, and by scheduling speakers upon request. The Office also prepares concise reports of sensitive issues for out-of-town trips by the Attorney General and his top associates. Briefing sessions on topics likely to be covered are prepared for major meetings of the Attorney General with the news media. The Office prepares drafts of the Attorney General's speeches, as well as those of other top Department officials on request. The office also reviews

draft testimony. A compilation of newspaper and magazine clippings for principal Department executives is prepared and distributed twice daily. The Office reviews policy content of all publications for release outside the Department, writes all news releases for headquarters, and edits those of the components averaging more than 600 per year. In addition, PAO edits the Department's Organization and Functions brochure.

The Office of Legislative Affairs (OLA), is responsibile for developing and articulating the Department's official policies with respect to legislation initiated inside the Department, by other parts of the Executive Branch, or by members of Congress. In addition, the Office explains and advocates these policies with maximum effectiveness within the Executive Branch and Congress. The Office must prepare legislative reports on bills each year for submission to the Office of Management and Budget or to Congressional committees. Each submission requires that the relevant offices, boards, divisions or bureaus be consulted, their views collated, and a synthesize report on Departmental policy with respect to that bill be prepared. It may also require meetings with the Office of Management and Budget representatives to work out interagency differences which will present a unified Administration position to Congress. Finally, the Office must analyze enrolled bills which are sent to the Department for review prior to submission to the President for his signature or veto. These reports must generally be delivered within a 24 to 48 hour time frame.

The Office of Liaison Services is responsible for maintaining liaison on intergovernmental issues with the White House Office of Intergovernmental Affairs, the Office of Management and Budget, and with state and local government officials and public interest groups. In addition, this office coordinates and facilitates the flow of information relating to DOJ policies applicable to Department intergovernmental relations. This office seeks to promote the efficient interchange within the Department of information pertaining to the Nation's State, county, and local officials regarding departmental policies and priorities. This will assist in coordinating the Department's efforts with State and local governments by maintaining a steady flow of information between them and the Federal Government.

Accomplishments and Workload. Accomplishments of the Office of Legal Policy during 1986 include:

1. OLP produced concrete strategies for legal reform in a wide variety of areas. With respect to constitutional law, OLP developed and recommended litigating principles to be followed by federal government litigators when various constitutional issues arise at trial.

2. OLP analyzed religious liberty in light of the text and history of the Free Exercise Clause of the First Amendment, and proposed an analytical framework for the resolution of contemporary religious liberty issues.

3. OLP prepared a sourcebook to be used to educate the public regarding interpretation of the Constitution according to its original meaning, and produced an analysis of the protection of economic liberties under the original meaning of various constitutional provisions.

4. OLP worked with Department and White House officials to identify and select qualified judicial candidates who share the President's views on constitutional interpretation. OLP was instrumental in filling all but seven of the 85 new judgeships created by the Bankruptcy Amendments and Federal Judgeship Act of 1984, and 50 vacancies in

72-165 O—87——7

existing judgeships (including two Supreme Court vacancies). OLP also aided many nominees in the confirmation process. OLP published a paper entitled "Myths and Realities--Reagan Administration Judicial Selection" to help the public better understand this Administration's judicial selection process.

5. OLP completed several projects relating to criminal law reform. Its "Truth in Criminal Justice Project" identified features of contemporary criminal procedure that unduly hinder the search for truth. This project provided in-depth analysis of the law of pre-trial interrogation, the exclusionary rule, the right of counsel, and the admission of criminal histories at trial. Other criminal projects include the preparation of testimony on white collar crime law enforcement; an analysis of an academic study purporting to identify miscarriages of justice in capital cases; and a study of state laws and procedures affecting the control of organized crime and drug trafficking. Some of these projects were done through the Federal Justice Research Program, administered by OLP.

6. OLP provided staff support to senior Department officials regarding reform of the civil damages provisions of the Racketeer Influenced and Corrupt Organizations Act.

7. OLP worked closely with other Department components with respect to legal issues arising from immigration practices, efforts that contributed to the passage of the immigration reform bill by the 99th Congress.

8. After years of effort by OLP and senior Department officials, Congress passed major Freedom of Information Act reform legislation that contains all of the modifications to the FOIA's law enforcement exemption that had been sought by the Department.

9. Through its Office of Information and Privacy, OLP adjudicated all administrative appeals filed under the FOIA and Privacy Act.

10. In its Prison Liability Project, OLP examined the case law relating to the liability of prison officials, and offered recommendations for legal reform to address existing problems in this area.

Accomplishments of the Office of Legislative Affairs are reflected in the following table:

Item	98th Congress	99th Congress	(Estimated) 100th Congress
Legislative requests disposed of:			
by report to Congressional committees	500	550	700
by report to OMB	800	800	1,100
by report to other sources	150	150	225
by deferral, Congressional action, referral, etc.	800	900	950
Testimony:			
Hearings monitored and transcripts processed	350	400	450
Hearing statements presented	350	400	400
Supplemental material provided	175	200	250
Inquiries processed:			
Congressional Mail	8,500	8,500	10,000
Telephone	9,000	9,000	9,600
Technical assistance provided	780	850	1,000
Department legislative program:			
Enacted into Law	9	9	9
Approved by House/Senate	6	6	12
Approved by Committee	3	3	20

Accomplishments of the Office of Public Affairs include:

- Arranged more than 250 press interviews with key Department officials at Justice headquarters.
- Arranged print or broadcast/telecast interviews with senior Department officials on business trips in over 100 cities.
- Screened more than 1,300 requests for personal appearances by the Attorney General.
- Coordinated trips and numerous public appearances by the Attorney General including his visit to several nations to confer on narcotics, refugee resettlement and international terrorism.
- Prepared monthly and annual reports of the Department's activities and accomplishments for the White House.
- Performed all staff work for the Young American Medals program including screening of nominations, travel arrangement for recipients and families, and special assistance to the President in his presentation of the awards.
- Provided start-up help and continuing support to the President's Organized Crime Commission, enabling it to focus public attention on its public hearings nationwide.
- Answered approximately 30,000 telephone and 1,000 mail requests for information.
- Provided editors of papers throughout the nation with detailed information packets on complex legal issues of bail reform, drug enforcement, civil rights and immigration.

Program Changes. During the past years, the Office of Public Affairs and the Office of Legislative Affairs have experienced deficits which have required reprogrammings of resources from other organizations of the General Administration appropriation. Congress has not interposed objections to these reprogrammings in the past. The Administration has recognized this structural deficit situation within the General Administration Appropriation. It has authorized the Department to seek the necessary resources in the 1988 budget to correct the situation. Due to the nature of the functions performed in these two program areas, there has been a direct relationship between workload increases in the Department (e.g., War on Drugs, Immigration Reform, etc.) and the demands placed on these programs. The workload of these staffs will require that current staff levels be maintained in 1988. Therefore, we request funding to support current personnel levels.

Of the increased resources requested, 14 positions, 14 workyears and $625,000 will provide support for the Office of Public Affairs so that current personnel levels can be funded. The Office of Public Affairs performs a number of functions. Most importantly, there is a steady increase in media interest in the Department. This is not entirely controllable, in a budget sense, since it is fed by the major news stories in which the Department plays a major role.

In addition, an increase of 7 positions, 7 workyears and $575,000 is requested for the Office of Legislative Affairs to provide resources to support this staff's current personnel level. The additional staff was required to address an increase in the number and difficulty of oversight hearings in such areas as civil rights, drug enforcement, white collar crime, antitrust enforcement, Freedom of Information Act implementation, and Immigration Reform and Control Act implementation. This Department seeks to provide timely replies to an increasing volume of Congressional correspondence. The current staffing level has enabled OLA to prepare more responses to this correspondence, as opposed to the more time-consuming process of forwarding the incoming letters to the various organizations within the Department for the preparation of proposed responses. Further, the Office of Legislative Affairs will continue to maintain, if not enhance, the Department's responsiveness to Congressional inquiries.

Additional resources of $700,000 are also requested to implement the uniform office automation system in the Office of Legal Policy, Public Affairs, Legislative Affairs and Liaison Services.

Long Range Goal. To assist the Attorney General in strengthening the integrity of and maintaining public confidence in the Department of Justice, and in fostering and further developing among all Department employees a commitment to the highest professional standards. Also, to assist in the development of national security related policies and maintain confidence in the lawfulness of United States intelligence activities, consistent with the need of the United States to obtain, produce, and disseminate foreign intelligence information, and the need for effective counterintelligence.

Major Objectives.

To provide legal advice concerning intelligence and national security matters to the Attorney General and to the Executive Branch of the government.

To participate in the development of legal aspects of national security and intelligence policy.

To prepare FBI and other applications for intelligence searches and surveillances and approve other counterintelligence investigative activities.

To represent intelligence agencies as legal counsel before the United States Foreign Intelligence Surveillance Court.

To participate in pre-trial litigation involving the Foreign Intelligence Surveillance Act in criminal prosecutions for espionage and international terrorism.

To monitor, as appropriate, intelligence and counterintelligence activities to ensure conformance with statutory Executive Order and other guidelines.

To participate in the drafting of procedural guidelines and new legislation for the conduct of intelligence activities.

To maintain liaison with the Senate Select Committee on Intelligence and the House Permanent Select Committee on Intelligence to ensure they are apprised of Departmental views on national security and intelligence policy, and are appropriately informed regarding operational intelligence and counterintelligence activities.

To improve and refine the Department-wide reporting system in which misconduct and criminal allegations are made against Department employees.

To establish a comprehensive, efficient and effective internal inspection system throughout the Department by periodically evaluating organizations and programs involved with employee integrity.

To oversee and coordinate all internal investigations of serious allegations concerning the conduct of Department employees that may be in violation of law, Department regulations or orders, or applicable standards of conduct.

To ensure the effective operation of a program which facilitates the reporting of allegations of fraud, mismanagement and waste of funds.

Base Program Description. The Office of Intelligence Policy and Review (OIPR) participates directly in the interpretation and application of national intelligence law and national security policy as the Department's representative to the National Intelligence Council. It also participates through regular consultation with senior staff of the National Security Council in considering significant operational aspects of intelligence and counterintelligence activities and through participation in ad hoc resolution of intelligence and national security questions. Federal Bureau of Investigation (FBI) and other agency requests that the Attorney General approve applications for electronic surveillance and other intelligence and counterintelligence activities are also reviewed by OIPR. Based on the findings of legal sufficiency and compliance with applicable guidelines and directives, recommendations are made to the Attorney General to approve or disapprove these requests.

Guided by the Office of Professional Responsibility (OPR), the Attorney General issues an annual statement to all employees of the Department reminding them of their responsibility to report misconduct encountered in the course of their duties. Efforts are also taken to ensure that all employees are reminded of the "whistle-blower" protections contained in the Civil Service Reform Act and Departmental regulations. Individual Professional Responsibility attorneys frequently conduct investigations involving attorneys or senior Department officials against whom allegations of misconduct have been made. In addition, the Office's attorneys serve as direct Office liaison with internal inspection units in the Department to oversee and coordinate all internal investigations of serious allegations concerning the conduct of Department employees. The Office also ensures the effective operation of a program which facilitates the reporting of allegations of fraud, mismanagement and waste of funds.

Accomplishments. The principal accomplishments of the Office of Intelligence Policy and Review (OIPR) in the policy area during the past year have included continued development of a proposed Executive Order governing clearance of government personnel and contractor employees for access to classified information. In addition, the Office continues to work with law enforcement and intelligence agencies to protect intelligence information in the context of criminal prosecution of narcotics traffickers. In addition, the Office participated in efforts to enhance the

Government's capabilities to protect against foreign intelligence collection in the United States, international terrorism, illegal technology transfer and international narcotics activities. The office continues to represent the Department on the Senior Interagency Group/Intelligence and its Counterintelligence and Countermeasures subgroups as well as other intelligence community bodies. The Office chairs the Department Review Committee setting policy on classification and declassification of documents. It has issued legal and policy advice to a number of departments and agencies on national security topics both in broad-range and on specific intelligence operations.

The principal accomplishments of OIPR in its operational responsibilities relate to administration of the Foreign Intelligence Surveillance Act (FSIA) of 1978. Since the act was passed the office has handled a steadily increasing workload with little or no increase in staff. That is:

Calendar Year	FISA Orders
1984	632
1985	587
1986	616
1987	647
1988	679

Moreover OIPR has been given responsibility by the Attorney General to coordinate all litigation involving those aspects of criminal prosecutions in which the FISA is at issue. Since 1983 OIPR has prepared motion papers and briefs in more than twenty-seven criminal prosecutions or criminal appeals, all of which have resulted in favorable decisions in upholding the constitutionality of FISA, its use in particular cases or the actual conduct of the surveillance.

Concomitant with electronic surveillance matters, OIPR has handled a proportional increase in other operational intelligence activities which require staff and field review on behalf of the Attorney General. This includes counterintelligence investigations, undercover activities and other highly sensitive matters. Similarly, a program has been instituted to monitor FBI implementation of Domestic Security investigations under new guidelines promulgated by former Attorney General William French Smith.

In 1984, 500 complaints or other requests for investigation of Departmental employees were received and reviewed. Also monitored were approximately 1,600 additional investigations being conducted by the internal inspection units of the components. A comprehensive audit by the Office of Professional Responsibility of the I&NS was also conducted. Guided by the Office of Professional Responsibility (OPR), the Attorney General issues an annual statement to all employees of the Department reminding them of their responsibility to report misconduct encountered in the course of their duties. Efforts are also taken to ensure that all employees are reminded of the "whistle-blower" protections contained in the Civil Service Reform Act and Departmental regulations. Individual Professional Responsibility attorneys frequently conduct investigations involving Attorneys or senior Department officials against whom allegations of misconduct have been made. In addition, the Office's attorneys serve as direct Office liaison with internal inspection units in the Department to oversee and coordinate all internal investigations of serious allegations concerning the conduct of Department employees. In addition, OPR continued its program which facilitates the reporting and resolution of allegations of fraud, mismanagement, and waste of funds.

Program Changes. The Office of Intelligence Policy and Responsibility (OIPR) is requesting 2 positions, 2 workyears and $106,000 to fund two attorney positions. The resources are necessary to support the increased workload which has resulted due to the Department's expanded involvement in counterintelligence and intelligence matters. In particular, the FBI's increased counterintelligence and counterterrorism activities have added to this workload.

In addition, $200,000 is requested for OIPR and OPR to fund t implementation of the uniform office automation system within these offices.

Long Range Goal. This decision unit is ultimately responsible for ensuring that the management initiatives of the President, the Attorney General and the Congress are implemented soundly and responsibly and that the administrative support services are delivered efficiently and effectively. This decision unit also includes the Departmental Audit function which allows the Attorney General to support the Administration's efforts against waste, fraud and abuse.

Major Objectives.

- To ensure that Department management activities are provided central direction and control.
- To ensure that administrative support services are delivered efficiently and effectively.
- To provide legal support and legislative advice in administrative/management areas.
- To provide for the security, safety and health of Departmental personnel, and safeguard property and information; ensure a high degree of responsiveness to the continuity of government during peacetime and wartime national emergencies.
- To provide Department-wide direction and staff leadership for the development and implementation of EEO policy and improved methods and procedures.
- To assure that the Attorney General is able to exercise control and policy administration in the areas of personnel, property management and procurement.

- Complete the implementation of a computerized postage system within the Office, Boards and Divisions to change the rate basis used to determine annual postage cost reimbursement to the U.S. Postal Service and provide mail management information to monitor postage costs, budget performance and variances in mail volumes.

- To design, develop, and implement an accounting system for the Department of Justice that complies with the principles and standards promulgated by the Department, the General Accounting Office, the Office of Management and Budget, the Treasury Department, and other Government control agencies.

- To develop and maintain the automated Financial Management Information System (FMIS) to facilitate budget formulation and execution, management control, and fiscal performance reporting within the Department and as a basis for OMB and Congressional submissions.

- To coordinate the President's Management Improvement Program, including "Reform '88," to effect improvements in the management and administrative systems of the Department.

- To develop a responsive case management system to assist in the effective management of the Department's litigation responsibilities.

- To increase the effectiveness and efficiency of the Department's program delivery through improved program and financial management, budgeting, program evaluations, and management assistance studies.

- To effect major improvements in the Department's automated information and communications management activities, including the provision of a comprehensive information retrieval network and the development and implementation of systems for automated legal research, litigation notice, and compatible case management and tracking.

- To provide balanced audit coverage of Department functions, programs, organizations, and activities. This includes the effective performance of ADP audits by all Audit Staff regional offices.

- To implement audit requirements established by Federal legislation and regulations, Department policy and executive initiatives.

Base Program Description. The Assistant Attorney General for Administration (AAG/A) provides direct supervision for unusually sensitive areas of management responsibility within the Justice Management Division (JMD). These areas include legal counsel, equal employment opportunity, and security programs of the Department. In addition, each of the three main organizational components of the Division is supervised by a Deputy Assistant Attorney General. This structure facilitates the administration of the Division by providing for accountability and delegation of responsibility.

The Office of Personnel and Administration, under the direction of a Deputy Assistant Attorney General, ensures that departmental orders and directives which set forth policy and program requirements for personnel, procurement and property management are developed. Personnel and procurement actions are processed ensuring adherence to all rules and regulations disseminated by Office of Personnel Management, Office of Federal Procurement Policy, General Services Administration, and other regulatory agencies. Direct management or oversight of all Departmental buildings

and space assignments, including property transfers, renovations and mail management is performed by this office. Depending upon the nature and significance of the activity, methods and procedures may vary for accomplishing the tasks at hand.

The Office of the Comptroller, under the direction of a Deputy Assistant Attorney General, ensures that the Department's management and budget responsibilities are carried out through comprehensive analyses of organization's program plans, budget estimates, appropriation and authorization requests and that these activities meet Congressional, Presidential and Departmental policy initiatives. Studies and evaluations are performed in response to concerns of Congress, OMB or Departmental management. Financial and accounting systems are operated and continuously reviewed to ensure adherence to all appropriate statutory and administrative regulations.

The activities, managed by the Deputy Assistant Attorney General for the Office of Information Technology, provide professional systems analyses, and a knowledge of the legal, regulatory and policy framework governing information processing. Additional duties performed within this program include identification and validation of department-wide information and communications requirements and reviewing Departmental data processing budget forecasts.

The Justice Management Division provides legal and legislative advice on all administrative and management matters and reviews proposed responses to legislation, rules and regulations affecting the Department. The Division also develops, administers, and evaluates implementation of Department regulations and procedures for the processing of requests under the FOIA/PA and Ethics in Government Act.

The objectives of the Department's security programs are accomplished by security specialists who determine priorities, timeframes, etc. for the completion of projects. Work conforms to overall policies and directives of the Department, Executive Orders, and other agency directives and contacts are maintained with top level agency officials on problems of unusual complexity or sensitivity. JMD represents the Department on various interagency groups and task forces that develop national level security and emergency preparedness policies.

The EEO objectives are implemented through a network of affirmative action managers, EEO counselors, investigators, special emphasis program managers, volunteer representatives, and EEO officers who are assigned full and part-time throughout the Department both at headquarters and in the field.

The Policy and Planning Office develops Departmentwide policies, plans and procedures for management and productivity improvement and serves as the central DOJ and JMD contact point for all matters related to the President's Program for Management Improvement (Reform '88), the President's Productivity Improvement Program, the President's Private Sector Survey on Cost Control (the Grace Commission), OMB Circular A-76 (Performance of Commercial Activities), and other initiatives or requirements related to management and productivity improvement.

Accomplishments and Workload:

Item	Actual 1985	Actual 1986	Estimates 1987	Estimates 1988
Internal audits	38	37	45	45
Operating plans reviewed and prepared	199	252	200	200
Small purchase actions	6,027	5,200	5,200	5,200
Vouchers processed	174,679	180,200	180,200	192,200
Personnel actions processed	25,451	21,000	26,000	26,000
Background investigations reviewed	3,700	2,628	3,000	3,000
Obligation documents processed	108,131	110,000	111,000	123,000
Mail delivered and picked up	4,430,000	4,231,000	4,431,000	4,564,000

Accomplishments.

Constructed and began operation of an all-source intelligence/information crisis management facility (Justice Command Center (JCC)) to support law enforcement and national security operational programs in both routine and emergency situations. During domestic or national security emergencies, the JCC provides the staff, physical facilities, telecommunications, and information systems to gather, collate, analyze, disseminate, record, display, file, store, and retrieve the information needed to make timely and effective decisions. The JCC provides for centralized management of information and serves as a central clearinghouse for the Department of Justice bureaus, boards, divisions, and offices to the Attorney General, so that he can make timely decisions and/or provide recommendations to the executive branch during a crisis situation.

Obtained major blocks of space in three buildings and improved the Department's housing situation in Washington, D.C. (affected organizations include the legal divisions and the U.S. Attorney for the District of Columbia). Provided design, planning, and logistical support services that will be ongoing through occupancy of the new space.

Provided the Miami U.S. Attorney's Office with significant security enhancements (obtained through efforts with GSA's Central and Regional Offices). Obtained a commitment from GSA to relocate the U.S. Attorney's Office to a new Federal law enforcement facility to be built in Miami.

Reduced energy consumption by DOJ in owned buildings on a per square foot basis by 14.1 percent from previous year level.

Served on the task force chaired by OMB and GSA for the development of a generic Governmentwide Real Property Management Information System. Focused on adopting the general design of GSA's Public Buildings Service Real Property Information System (STRIDE) to facilitate agency planning and management functions.

Developed a management information system for DOJ owned or leased real property. Expanded the system to include information for reporting the current two-year projections for increases or decreases in work space and for tracking improvements in utilization rates for the Department's annual work space management plan.

Implemented a Computer Assisted Design and Drafting System which greatly facilitates the space planning and architectural design of the Department.

Established a computerized warehouse system for the identification of undelivered orders, levels at which replenishment stock should be ordered, recording of receipts and the assignments of warehouse locations for items.

Implemented a barcode inventory system which will reduce OBD and USMS personnel time and resources needed to perform annual property inventories.

Developed and issued Departmental policy on the Performance Management and Recognition System (PMRS) and provided comprehensive training to GM 13, 14, and 15 PMRS employees and their supervisors in the operation of the system. Coordinated the payment of merit increases and performance awards under the PMRS.

Initiated an on-line personnel/pay data system (PERSPAY) which is available to all Personnel and Executive Offices. Continued development of PERSPAY applications, e.g., standard report programs, use in the PMRS incentive pay process, and personnel management evaluation activities.

Requested and received early optional retirement authority for JMD; prepared annuity estimates for 160 employees, provided counseling, and assisted employees in making application.

Recruited and provided assistance for the establishment of the DOJ International Criminal Investigative Training Program.

Coordinated the Department's response to the OMB requirements associated with Reform 88 and the President's Management Improvement Program (MIP), including preparation for the FY 1987 OMB Management Review and development of the DOJ FY 1987 Management and Productivity Improvement Plan.

Established the DOJ Competition Advocacy Program, to include the designation of a Competition Advocate for the Department and for each Bureau procuring activity, integration of the advance procurement planning process with the budget process, and revision of the Department's advance procurement planning directive to incorporate the requirements of the Competition in Contracting Act.

Assisted the U.S. Marshals Service (USMS) in the development and implementation of an accounting reporting system for the 94 USMS district offices.

Planned and implemented numerous system enhancements to improve internal control in cash management activities, including legal process debt collection.

Planned and implemented modifications to the accounting system necessary to establish an Assets Forfeiture Fund and Seized Asset Deposit Fund.

Planned, organized and initiated a project to establish the mechanism to deposit and account for fees collected on behalf of U.S. Trustees.

Significantly improved access to library materials by fully implementing the online catalog in the Main and Branch libraries. The online catalog provides extremely rapid, accurate responses to search queries via a user-friendly menu-driven interface. Enhanced processing capability reduced the time required to enter data into the online catalog from five weeks to one day.

Provided extensive technical support to the Uniform Office Automation and Case Management Project, the purpose of which is to analyze and guide the design, selection, and acquisition of inter-operable office systems for the litigating organizations. Developed a strategy/policy directive concerning the acquisition of office systems throughout the Department. This effort was conducted under the auspices of the Department of Justice Management and Productivity Improvement Program.

Developed a prototype Case Management System based on the one developed by the FBI. A functional system was completed and preparation were made for the detailed system design and the development and implementation to occur in FY 87. The new Case Management System will enable top management to adequately and accurately respond to inquiries from Congress, GAO, and OMB about the Department's cases and workload.

Program Changes. An increase of 25 positions, 26 workyears and $3,942,000 is requested to support management and productivity improvement initiatives, the necessity for increased Departmental security, provide direct resources to support administrative functions for the Organized Crime Drug Enforcement (OCDE) Task Force and to support the Office of Attorney Personnel Management.

Of the increase requested, $1,629,000 will support the implementation of a uniform office automation system in JMD. In past years various elements of the JMD have satisfied many of their own office automation needs by addressing these needs independently. This approach led to the implementation of different automated and manual systems that were not designed to share information between and among the various Division elements.

This initiative is designed to achieve Divisionwide management efficiency and productivity gains through a more coordinated and unified approach in the area of office automation and access to common databases. The new approach would build on existing accomplishments within the Division, as well as, the experience gained in the successful Uniform Office Automation and Case Management Systems Project in the Department's litigating organizations. The end result will be to achieve the desired commonality of systems in the Division. This new approach would involve conducting a comprehensive and comparative analysis of existing requirements, and review the design of systems that have been substantially implemented elsewhere in the Department (e.g. AMICUS II, the Tax/Criminal Division model, the Antitrust Division model and potentially, a U.S. Attorneys model). On the basis of these analyses, examine prototype systems and ultimately implement a single office automation software and hardware capability that not only meets

Division needs but is compatible with the system(s) selected by the litigating organizations and other major components of the Department.

The initiative will result in a uniform office automation system for the Division which will increase efficiency, strengthen management control and improve productivity. It is expected--based on preliminary needs assessments--that the Uniform System will include but not be limited to: standardized word processing; database access; inter-office and intra-office exchange/communication of documents in an editable format; financial and personnel management capabilities; office activity and management support services; and electronic mail.

Failure to fund this initiative will result in declining management control and lower productivity at a time when Central Management Agencies and the Administration and Congress are demanding increases in both these areas. Further, essential support of enforcement/litigation missions will deteriorate, causing missions essential functions to be less effective than society demands.

An increase of 6 positions, 4 workyears and $300,000 is included to comply with regulations set forth in the Classified Information Procedures Act. This law was enacted by Congress in 1980, "to provide certain pretrial, trial and appellate procedures for criminal cases involving classified information." (S 1482 96th Congress, 2nd Session.) Section 9 of the Act directed to the Attorney General, the Director of Central Intelligence Agency and the Secretary of Defense to develop security procedures. These procedures were drafted by an inter-agency committee and endorsed by the Chief Justice of the United States on February 12, 1981. The procedures require the courts to designate a Court Security Officer in criminal proceedings involving classified information, based on a recommendation by the Attorney General or Department of Justice Security Officer.

In the past, JMD has had to absorb the necessary resources required to fund this program which resulted in robbing other important security programs. Recent reports from Congressional and Executive Branch committees have demanded improvements in all areas of security. Therefore, the requested resources are imperative to meet the criteria established for the Department.

Of the total increase requested, 7 positions, 7 workyears, and $500,000 will provide resources to directly fund the Task Force Administrative staff of the OCDE program. The Administrative staff was originally created to provide central coordination, policy guidance and administrative support to the twelve regional Drug Task Forces. The staff performs as the support and monitoring body between the individual Task Force coordinating groups and the Office of the Deputy Attorney General. The staff tracks and monitors Task Force cases, performs program analysis and evaluation, prepares testimony and information for the Attorney General, the Deputy Attorney General, the Congress, the media, and others concerning the Task Force issues, performs legal research for Task Force support, and manages the State and local Law Enforcement Overtime Fund. Funding for this staff is currently provided on a reimbursable basis from the Drug Enforcement Administration, Federal Bureau of Investigation and the Executive Office for U.S. Attorneys. In light of the current budget situation, and as these agencies become hard-pressed to meet other resource requirements, the Department is requesting separate funding for the Task Force Administrative staff so that the OCDE initiative will not be jeopardized by funding constraints of the agencies that support this unit.

In addition, an increase of 12 positions, 15 workyears and $700,000 is requested to provide resources to support the Office of Attorney Personnal Management (OAPM). The OAPM was established in the Department in 1978 and funded with existing available resources.

The Deputy and Associate Attorneys General have authority over all aspects of attorney personnel management. They have delegated this responsibility to the Director of OAPM for all attorneys GS-15 and below, Assistant U.S. Attorneys, Assistant U.S. Trustees, and law students. The OAPM has substantive responsibility in the areas of recruitment, hiring, background investigations, performance appraisals, proposed actions for promotions, discipline and terminations, and maintenance of official personnel files, for almost all Department attorneys and law students. In addition, OAPM is responsible for the Attorney General's Honor Program for graduating law students and Judicial Law Clerks.

OAPM has contributed to funding shortages due to the original absorption of funds at the time the office was established, and the increasing demands placed on this office which have warranted its increase in size over the past years. Since FY 1984, OAPM has received reimbursement from several Department components for the Honors Graduate Program. However, these reimbursements have been minimal in relation to the cost of operating this office. Therefore, the Department is requesting a program increase to fully fund the OAPM.

Additionally, resources of $813,000 are requested for maintenance and upgrading of fixed plant equipment within the Main Justice Building. The resources will fund three major projects: (1) upgrade of the Air Handler Unit (AHU), $298,000; (2) upgrade of elevators, $330,000; (3) and ventilation of the elevator penthouse, $185,000.

The Main Justice Building has nine central AHUs and several ancillary units that provide heating, ventilation, and air conditioning (HVAC) to the building. The nine central AHU's are original building equipment and over fifty years old. Because of the age and physical deterioration of the air handlers, they have become less efficient requiring additional energy to run the HVAC for the building. The renovations plan replacement of most of the internal parts to include dampers, larger capacity chilled water coils, preheat dampers, condensate pans, controls, valves, and the removal of asbestos on eight AHU's (note: one AHU will be upgrade during FY 1987). The benefits of this project include reduced energy consumption, better working conditions for employees, and the choice of using fresh outside air to ventilate the building and increase the air distribution to the offices thereby pressurizing the building and providing free cooling when the outside temperature is suitable.

The Department has initiated a program to upgrade the elevators that are over 30 years old. Currently, the elevators are electro-mechnical and were acquired from four companies--Otis, Armor, General Electric, and Warfield and Sanford. The proposed funds would be used to convert 2 banks (8 elevators) from electro-mechanical to electronic circuit boards. The elevator upgrade will enable the Department to standardize the elevator parts, reduce maintenance and to bring the elevators up to current National and Federal codes.

The thirteen elevator penthouse areas located in the attic of the building are currently cooled by thirteen separate air conditioning units. These units are in use 365 days per year to provide cooling to the electro-mechanical elevator contacts, generators, and motors. Design specifications have been prepared for a system to provide 100 per cent outside air exchange capability utilizing supply and exhaust fans, dampers, louvers and associated controls

(separate from the existing system), and to provide temperature and humidity controls that are interfaced with existing equipment. This configuration will allow the penthouse areas to be cooled utilizing outside air during the spring, fall, and winter of the year thereby providing a savings on the high electrical usage of the existing cooling system.

Long Range Goal. To provide a uniform interpretation and application of immigration law, and to provide the President with the necessary advice to enable the informed exercise of his pardoning authority.

Major Objectives.

To expedite all immigration cases, for which EOIR is responsible, including those received pursuant to the provisions of the 1986 Immigration Reform and Control Act while ensuring fair treatment for all parties involved.

To evaluate, manage and expedite the processing of the steadily increasing caseload receipts and reduce the existing backlog.

To automate, wherever feasible, the functions of EOIR, particularly in the areas of case processing, collection of workload statistics, and performing legal research.

To increase productivity by streamlining procedures and implementing management improvements.

To receive, process and investigate all clemency applications.

To prepare the Deputy Attorney General's recommendations of clemency to the President.

Base Program Description. The Executive Office for Immigration Review (EOIR) was created January 1, 1983, through an internal Department of Justice reorganization which combined the Immigration Judge function previously performed by the employees of the Immigration and Naturalization Service (INS) with the Board of Immigration Appeals (BIA). As a result of the reorganization, EOIR is comprised of three major entities: the Office of the Director, the Immigration Judges, and the Board of Immigration Appeals.

The following provides more detailed information on the responsibilities of each of these entities:

1. Office of the Director - EOIR is headed by a Director who is responsible for the general supervision of the BIA and the Office of the Chief Immigration Judge in the execution of their duties in accordance with 8 CFR Part 3. The Director exercises the authority delegated by the Attorney General and represents the position and policies of the EOIR to the Attorney General, the Deputy Attorney General, members of Congress and other governmental bodies, the press, the bar and private groups interested in immigration matters. The Administrative Services Unit supports the Director by providing necessary procurement, facilities, personnel, budget and related administrative matters for the BIA and the Office of the Chief Immigration Judge. The direction, supervision and final action in these matters, along with the operation and management of the EOIR rests with the Director.

2. Office of the Chief Immigration Judge - It is the responsibility of the Chief Immigration Judge to provide overall program direction, articulate policy and establish priorities for the 66 Immigration Judges located in 20 field offices throughout the United States. Generally, Immigration Judges hold hearings to determine the status of an alien. Exclusion hearings are held when aliens are believed by the examining inspector at the port of entry to be inadmissible to the United States. The Immigration Judges's order may admit or exclude the alien, or permit withdrawal of the application for admission. Deportation hearings are held in cases where an alien's status is challenged after entry into the United States. The Immigration Judge may order the alien deported; grant relief from deportation such as voluntary departure, suspension of deportation, registry, adjustment of status, political asylum or waiver of deportability; or, if the Immigration Judge decides that deportability has not been established, terminate the proceedings. Bond redetermination hearings are held when an alien in custody seeks release on his/her own recognizance or a reduction in the amount of the bond.

3. Board of Immigration Appeals - Under the Direction of the Chairman, the Board hears appeals from decisions of Immigration Judges and certain decisions of INS officers in a wide variety of proceedings in which the Government of the United States is one party and the other party is either an alien, or a citizen or a business firm. The Board is directed to exercise its independent judgment in hearing appeals for the Attorney General and provides a nationally uniform application of the immigration laws, both in terms of the interpretation of the law and the exercise of the significant discretion vested in the Attorney General. The majority of cases before the Board involve appeals from orders of Immigration Judges entered in deportation and exclusion proceedings. The appeals from decisions of INS officers reviewed by the Board principally involve appeals from familial visa petition denials and decisions involving administrative fines. The Board also renders decisions on applications by organizations that have requested permission to practice before the Board, the Immigration Judges, and the Service, and renders decisions on individual applications by employees of such organizations. The statutory authority for the program is contained in Section 103 of the Immigration and Nationality Act of 1952 (8 U.S.C. 1103). The Attorney General had delegated certain of his powers to the Board in 8 CFR 3.1.

Office of the Pardon Attorney - The President exercises the pardon power, conferred on him by Article II, Section 2, Clause 1 of the Constitution, upon formal application and the recommendation of the Deputy Attorney General, who has been delegated this function by the Attorney General. The Office of the Pardon Attorney (OPA) assists the Deputy Attorney General in providing whatever information is deemed necessary and desirable to make a fair and informed decision in each case. OPA is the focal point for the receipt, investigation and consideration of petitions for all forms of Executive clemency and serves as the principal liaison with the general public in clemency matters.

There are two major forms of Executive clemency, pardon after completion of sentence and commutation of sentence. Remission of fine and reprieve are less common forms of clemency. The pardon process commences with the submission of a formal petition addressed to the President, together with a personal oath and three character affidavits, requesting a pardon. A comprehensive financial statement also is required of those petitioners seeking a remission of fine. Upon receipt, the petition is docketed, subject to a preliminary review for completeness and compliance with existing rules, and an acknowledgement and/or request for further information is sent to the petitioner or his attorney. Pardon applications customarily are referred to the Federal Bureau of Investigation (FBI) to conduct a background investigation, the scope and duration of which may vary in each case. Review of petitions seeking a commutation of sentence initially is limited to relevant Bureau of Prisons and presentence reports. Following the receipt of the FBI investigative reports or, in commutation cases, the relevant inmate files, the Pardon Attorney reviews the reports to determine whether favorable consideration may be warranted. If further consideration is deemed appropriate, memoranda are prepared soliciting comments and recommendations from the sentencing judge and United States Attorney. These officials are generally given 60 days within which to reply. Other concerned Government agencies may be consulted depending on the nature of the case (e.g., Internal Revenue Service in tax evasion cases, Department of Defense in military cases, Criminal Division, or the appropriate Strike Force Chief in cases involving suspected organized crime figures or former Department of Justice attorneys, and the Drug Enforcement Administration in narcotics law violation cases). In addition, the views of the Director, Bureau of Prisons, customarily are obtained before the commutation of an inmate's sentence is recommended.

Accomplishments and Workload:

PARDON ATTORNEY

	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate
Cases:				
Grants of pardon	32	55	55	55
Grants of commutation	3	0	5	5

EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

	1986 Actual	1987 Estimate	1988 Estimate
Appeals, motions, hearings and petitions pending, beginning of year	86,946	66,115	62,213
Received	123,186	181,127	271,277
Terminated	144,017	185,029	237,013
Pending, end of year	66,115	62,213	96,477

Accomplishments. For 1985, the Board received 4,911 cases and entered orders in 3,870 cases. Annual receipts for 1986 were 8,608 cases and 5,471 decisions rendered leaving a pending backlog of 4,918 cases at the beginning of 1987.

Since 1983 and continuing through 1987, EOIR has proceeded with the implementation of several management initiatives and improvements. These improvements, designed to ensure the fair treatment of parties to immigration court hearings, expedite case processing, standardize field office operations, streamline the hearing process and facilitate management control, include the following: the implementation of a manual information system which standardizes procedures involving the collection and reporting of workload data; the design and implementation of a uniform docket system which defines office and case processing procedures and enables EOIR to control hearing calendars; the drafting and preparation for final publication in the Federal Register of Rules of Procedure which will codify the procedures to be followed by the participants in immigration court hearings; the development of a nationwide contract for transcription services; the acquisition of automated Western Union services to expedite the sending of notices to affected parties; the development of a nationwide contract for interpreter services; the completion of an Immigration Judge benchbook; and the design of EOIR's nationwide ADP system, which began implementation during the third quarter of 1985. In addition to the three cities EOIR brought on-line in 1985 (Miami, El Paso and Washington, D.C.), ANSIR was implemented in San Francisco, Chicago, New York and Newark during 1986.

In recognition of the importance of continuation education for Immigration Judges, EOIR has conducted annually since 1983, three highly successful Immigration Judges Conferences. This annual event assembles the entire corp of Immigration Judges for training in developing immigration law, innovative methods and procedures which increase productivity, the review of EOIR's Uniform Docketing System, and the Automated Data System as well as other management initiatives. In addition to the important exchange of ideas, and information, judges attended sessions conducted by representatives of EOIR management, the State Department, INS, judicial caseload management experts, and the private bar designed to inform them on current trends and developments affecting their judicial function. Further, in 1983, EOIR established and conducted, in conjunction with the Attorney General's Advocacy Institute, a one-week training course for new Immigration Judges. This concentrated training effort was continued during fiscal years 1984 through 1986 and has become a permanent fixture of EOIR's overall program. Planning for these conferences required considerable staff time and close coordination with participants outside EOIR to ensure success.

In furtherance of its organizational goals, EOIR has continued to meet regularly with top level INS representatives, members of the private bar and volunteer organizations. The liaison with INS is of particular importance to coordinate program direction, planning and resource allocation.

The Office of the Director completed hiring actions for 1986 totalling 89, bringing the number on-board employees to 266 at the end of 1986. Of these new hires, five were Immigration Judges, most of whom were hired from outside the Department and whose experience include judgeships at the state and local level.

Beginning in 1985 and continuing throughout 1987, EOIR has utilized a private sector vendor to provide interpreters at Immigration Judge hearings where such services are required. Effective mid-1984 and continuing through 1985, EOIR has used outside contractors to transcribe tapes of Immigration Judge proceedings. Beginning in 1985, EOIR contracted with one major transcription firm to process its hearing tapes. EOIR continued in 1986 with this contractor to perform this service. Both the interpreter and transcription contract continue to require extensive EOIR staff time and close coordination within EOIR and JMD.

The Office of the Pardon Attorney (OPA) processes a very large caseload and a growing correspondence workload with a relatively small staff of attorneys and administrative support personnel. During 1985, OPA processed 32 grants of pardon, three grants of commutation and handled 279 petitions which, after careful consideration, necessitated denial or no further action. OPA sent out 14,868 items of correspondence, reports and memoranda, a significant amount of which (1,057 pieces) was addressed to the White House or Congress. During 1986, 55 pardons and no commutations have been granted; 290 petitions were either denied or closed without further action in accordance with clemency procedures; and 16,077 pieces of correspondence, reports and memoranda were answered (1,234 of which were White House or Congressional referrals).

In support of the President's goal of improving the criminal justice system, the Pardon Attorney, relying principally upon the improved information base provided by more detailed application forms used by pardon applicants, has reduced the number of costly background investigations which customarily are conducted by the FBI in pardon cases. In addition, the Pardon Attorney, in consultation with the Deputy Attorney General, has taken a more exacting approach in determining the worthiness of applicants for clemency than generally prevailed in the past. This has entailed a more careful screening of applicants and more thorough background investigations, as well as the application of stricter standards for granting clemency.

Program Changes. EOIR is requesting 12 positions, 9 FTE, and $379,000 for the Board of Immigration Appeals (BIA) to address the increase in its pending caseload. Since FY 1984, BIA's increase in case receipts has risen by over 197 percent, i.e., from 2,898 in 1984 to 8,608 cases for 1986. This dramatic growth is directly attributable to the increased productivity by EOIR's Immigration Judges and the improved processing of backlogged transcripts by EOIR's contract vendor. During this same time frame, the Board has experienced a significant increase in productivity from 3,339 completed cases in 1984 to 5,471 in 1986 (over 64 percent) with only a 15 percent increase in staffing resources. Even with the improved completion rate, EOIR's backlog at the Board has risen over 565 percent, from 740 cases at the end of September 1984 to 4,918 at the close of FY 1986. EOIR anticipates that case receipts will remain stabilized at 8,608 for 1987. For 1988, BIA anticipates an additional 2,150 cases as a result of the criminal alien provisions of the 1986 Immigration Reform and Control Act. EOIR is further projecting for 1987 that the Board will be able to maintain its increased completion rate at 5,471 cases. Assuming that receipt and completion rates outlined in the accomplishments section, the pending cases will grow from 4,918 in 1986 to 11,113 by the end of 1988 or almost 126 percent. EOIR is requesting staffing resources necessary to complete approximately 75 percent of its case receipts for 1988 thus slowing the growth of the backlog. Absent these resources, BIA's pending cases will have grown by over 1,402 percent since 1984.

In addition, an increase of 1 position, 1 workyear and $620,000 has been requested for EOIR to allow for full implementation of its highly successful Automated Nationwide System for Immigration Review (ANSIR) and for systems enhancements covered under the existing contract. The ANSIR System meets all of the case management and information needs of EOIR, including: aggregate and case-specific management information; case tracking; automation of numerous clerical case processing functions; word processing; electronic mail capabilities; and access to the JURIS legal research data base.

These additional funds will be used for the acquisition of equipment to provide ready access to ANSIR for all EOIR personnel. The equipment will be focused in three areas. First, terminals will be added in all courtrooms optimizing the use of the automatic calendar sub-system. In addition, portable professional computers will be acquired to provide access to ANSIR for all judges on detail at various hearing locations. Finally, terminals will be added to the Office of the Director and the Board of Immigration Apppeals to augment the system installed in 1987 thereby completing full implementation of ANSIR.

Working Capital Fund

Summary Statement

Fiscal Year 1988

The Working Capital Fund (WCF) is requesting, for 1988, an appropriation of $4,000,000 to relocate the Washington, D.C. Data Center and to consolidate separate data communications networks into a single network. Additional capitalization of the Fund is necessary because current assets are inadequate.

General Administration

Working Capital Fund

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Working Capital Fund

For additional capital for the Working Capital Fund, $4,000,000, to remain available until expended.

(28 U.S.C. 527)

Explanation of changes:

The change will permit the Department to relocate the Washington, D.C. Data Center and to consolidate the Department's separate data communications networks into a single network.

Long Range Goal: To provide increased physical security and data processing capacity and the near total facility reliability for the continued growth of the litigation, investigative, law enforcement, and immigration user systems.

Major Objectives:

To relocate the Justice Data Center - Washington, D.C.

To begin consolidation of the Department's various telecommunications networks into a single, integrated network.

Base Program Description: The Computer Technology and Telecommunications Staff (CTTS) operates two data centers in support of the information processing requirements of its users. The CTTS is responsible for providing facilities, equipment, and ADP services in support of the litigation, law enforcement, custody, immigration, and management/administrative missions of the Offices, Boards, Divisions and Bureaus. The data center in Washington contains 24,400 square feet of conditioned space. This facility, which was first constructed in 1974 and expanded to its present size in 1979, is beset with severe air conditioning, physical security, electrical problems, and space constraints. The building architecture is designed for office space and places severe restrictions upon the height of the raised floor and the floor-to-ceiling height within the data center. In order to enable the expansion of the data center to accommodate expanding user requirements, by 1988, it will be necessary that a new, larger facility be acquired. State-of-the-art process type air conditioning, conditioned electrical power, and an Uninterruptible Power Supply System are required. The present building is not architecturally suitable to enable construction of a physically secure state-of-the-art, 45,000 square feet data center.

A proposed Rockville location for the Justice Computer Service (JCS) currently houses a high quality state-of-the-art commercial data center, which will bring to the Department significant improvements over the inadequate existing facility. However, there will be a number of essential enhancements required to provide critical reliability in support of the life and property systems of the Department of Justice.

The Department's law enforcement mission requires a data center with supporting telecommunication services that operate 24 hours a day, 7 days a week. The Rockville location has an uninterruptible power supply system in the form of batteries; however, they will only provide electricity to allow time for an immediate, orderly shutdown of the data center. In order to assure maximum data center availability, it is necessary to obtain and install diesel powered generators to provide electricity for the central processing units and their peripheral equipment, teleprocessing equipment, air conditioning, lighting and other environmental support facilities. The necessary electrical switch gear, diesel fuel storage tanks, an enclosure to house the equipment, and other requirements to operate this backup source of electrical power will have to be procured, tested, and installed.

The existing height of the raised floor is only 18 inches above the concrete floor of the building. This space is not sufficient to house the necessary cables (power, data and telephone), water lines for air conditioning, and other conduit and connectors which are required to operate a facility of this size and complexity. This space also serves as the air conditioning duct that supplies cold air to all of the equipment. The optimum space required for this purpose is 30 inches. This requires raising the floor another 12 inches, necessitating new floor supports, the modification of entrances to the area and moving electrical, telephone and other utility items that may be on pillars and walls.

With regard to telecommunications support, additional hardware, software, parallel communications support, and network control facilities are the major necessary components for a successful transition. A significantly enhanced network control environment consisting of hardware, software, maintenance and training is required to support existing and future national and international data communications networking. This function's primary purposes are to monitor and control data traffic, analyze and resolve communications disruptions, and extract key management information for such activities as billing and network optimization. Additional front-end data communications hardware and software will also be required to support additional Department users as current resources are saturated. Finally, in order to assure continuity of service during the transition period, parallel communications links must be employed.

In addition to the above, there are always modifications a new tenant requires in a building. Among expected modifications are: the physical security system, the environmental sensors, alarms and controls, and other changes that are discovered only after a closer evaluation by the technical staff of what is actually available.

Program Changes. An appropriation of $4,000,000 is requested to provide the various leasehold improvements and equipment purchases described above.

OPENING STATEMENT

Mr. SMITH. Mr. Flickinger, you may proceed with your statement.

Mr. FLICKINGER. Yes, sir. If it is agreeable, I will just submit that for the record.

Mr. SMITH. All right. We will insert it in the record at this point.

[The prepared statement and biography of Mr. Flickinger follows:]

GENERAL ADMINISTRATION APPROPRIATION

STATEMENT OF THE ACTING ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION, HARRY H. FLICKINGER BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I appreciate the opportunity to appear before you in support of the General Administration appropriation request. The Department is requesting for the General Administration appropriation $103,513,000 to fund 1,314 positions and 1,358 workyears. This request represents an increase of 53 positions, 198 workyears, and $23,948,000 over the 1987 appropriation anticipated.

The anticipated 1987 appropriation provides for requested supplementals totalling $12,565,000 to fund 250 positions and 71 workyears. These supplementals include resources for newly enacted legislation (i.e., Private Counsel for Debt Collection, Immigration Reform and U.S. Trustees Expansion), national security, and uncontrollable costs associated with relocation, pay, retirement, telecommunications, and space rent.

Private Counsel for Debt Collection

The Attorney General was authorized to retain private counsel in five districts for collection of debts. We requested $2,234,000 in the 1987 supplemental request to get this program started. In 1988, the Department is proposing a program of 22 positions and $2.8 million under the same appropriation. It is expected that almost $91 million will be collected for this small amount of Federal resources spent.

Immigration Reform

The 1987 appropriation anticipated includes a supplemental increase of $5,823,000 to fund 200 positions and 42 workyears for the Executive Oifice for Immigration Review's anticipated workload associated with the implementation of the Immigration Reform and Control Act of 1986. The 1988 request includes uncontrollable increases of $9,290,000 to partially annualize the 200 positions requested in 1987.

The requested resources include funds to expand the implementation of EOIR's automated system to four additional offices by the end of 1987, and to address anticipated workload associated with deportable criminal aliens, convicted annually, in the State and Federal court systems.

U.S. Trustees Expansion

The 1987 supplemental request includes 16 positions and $557,000 to support administrative responsibilities resulting from the U.S. Trustees expansion project.

The 1988 request also includes program increases to fund additional workload, current staffing levels, and the implementation of a uniform office automation system.

Department Leadership

The Department's budget has grown over 140 percent since FY 1981. During this same time period, the Department's staffing level has increased almost 40 percent. Much of this growth is because the Congress has enacted many new statutory responsibilities for the Department's leadership to execute on behalf of the American people--such as--the Organized Crime Drug

Enforcement initiative, the Comprehensive Crime Control Act of 1984, the Anti-Drug Abuse Act of 1986, and the Immigration Reform and Control Act of 1986.

However, despite the increase in Department leadership responsibilities, the staffing has been reduced approximately 30 percent compared to levels authorized during the previous Administration. Given the growth previously described, an increase in attorney personnel has been requested for the Department leadership program so that it can aid the Department's policy officials in providing adequate policy and program guidance, oversight and control to the organizations which implement the more than 150 Department of Justice programs.

Public and Legislative Affairs

Also in line with the cited growth, the Offices of Public Affairs and Legislative Affairs have experienced deficits over the years, which have required reprogramming of resources. The Administration has recognized this structural deficit situation within the General Administration appropriation and has authorized the Department to seek the necessary resources in the 1988 budget to correct the situation. Due to the nature of the functions performed in these two program areas, there has been a direct relationship between workload increases in the Department (e.g., War on Drugs, Immigration Reform, etc.) and the demands placed on these programs. The workload of these staffs will require that current staff levels be maintained in 1988.

In addition, resources are requested to provide direct funding for the Task Force Administrative Unit of the Organized

Crime Drug Enforcement Program. This unit was originally created to provide central coordination, policy guidance and administrative support to the regional Drug Task Forces. Resources are also requested for the Justice Management Division to support Departmental Attorney Personnel Management. Specifically, this would provide support for attorney recruitment, hiring, background investigations, performance appraisals, proposed action for promotions, discipline and terminations, and maintenance of official personnel files.

Intelligence Policy and Review

Additionally, personnel resources are requested for the Office of Intelligence Policy and Review and the Justice Management Division to address increased workload which has resulted due to the Department's expanded involvement in national security and foreign counterintelligence matters.

Office Automation

The Department is proceeding with the implementation of a uniform office automation system in the litigating organizations and management offices. The objectives of this project are to bring about increased coordination, consolidation, cost savings, productivity, and the reduction of economic and technological obsolescence of ADP and word processing equipment. Therefore, the 1988 request includes $3,029,000 to implement a uniform office automation system for offices in the General Administration appropriation.

Executive Office for Immigration Review

The 1988 estimate also includes program increases of 13 positions and $999,000 to provide the Executive Office for Immigration Review with resources to fully implement the Automated Nationwide System for Immigration Review. This system meets all of the Case Management and Information needs of this office. Additionally, resources are requested to address the Board of Immigration Appeal's workload and case backlog. Since FY 1984, the increase in case receipts has risen by over 197 percent.

That is a brief summary of our request. I will be happy to entertain any questions you or the other members of the Subcommittee may have regarding this request.

BIOGRAPHY—HARRY H. FLICKINGER

Harry H. Flickinger was appointed the Acting Assistant Attorney General for Administration in October 1986. In this capacity, he serves as a principal management counselor to the Attorney General and manages the full range of administrative support activities of the Department of Justice. Prior to this appointment, he served as the Associate Assistant Attorney General for Administration, and as the Deputy Assistant Attorney General for Administration for the Department's Office of Personnel and Administration.

Harry H. Flickinger received a Bachelor of Science degree in Psychology from the University of Maryland. He was a member of Psych Chi, the National Honor Society in Psychology. He also attended the U.S. Air Force Intelligence Officers School at Sheppard Air Force Base.

In addition, to the above-mentioned positions, Harry H. Flickinger has served as the Director of Personnel or Assistant Director of Personnel at the following Federal agencies: Department of Justice, Office of Management and Budget, Atomic Energy Commission, and the Department of Energy.

STATEMENT SUMMARY

Mr. FLICKINGER. First of all, Mr. Chairman, I appreciate the opportunity to appear before the committee, and I would like to thank the committee at the outset for your action on the supplemental request. We are most appreciative of that.

The request for the General Administration appropriation for 1988 in total is $103,513,000 to fund 1,314 positions. This represents an increase of 53 positions and $23,948,000 over the 1987 anticipated appropriation.

The major components of the increase—that is, the $23,948,000—break out roughly along the following lines. I won't go into detail, but let me just hit the major components. First of all, we are requesting some $10,864,000 for annualization of our program supplemental costs. These basically consist of 200 positions, $9.3 million for the Executive Office for Immigration Review for the expanded deportation case handling there; and another 22 positions, and $.5 million in annualization for a total of $2.8 million for the new debt collection activity that we are establishing.

We also have $2,132,000 in our request for annualization of the Federal Employees Retirement System, another $881,000 for annualization of the 1987 pay increase. We also have a GSA rent uncontrollable increase of $1,658,000.

In terms of program changes, the totals there are 65 positions and $7,888,000.

Again, let me just touch on the major items and then we will get to the questions if you wish.

We are looking at positions and funds to cover onboard personnel in our Public Affairs Office, 14 positions specifically; and in the Office of Legislative Affairs, another 7 positions. We are requesting staff increases to support the Classified Information Procedures Act, 6 positions, $300,000. We are asking for direct resources for the Task Force Administrative Unit that supports the Organized-Crime Drug Enforcement Program, seven positions, $500,000. We are requesting direct resources for our Office of Attorney Personnel Management, some 12 positions, $700,000. We are also requesting attorney and support personnel to address increased workload in the Board of Immigration Appeals, 12 positions, $379,000.

Also, we are requesting $620,000 for the full implementation of the Automated Nationwide System for Immigration Review activities in the Executive Office for Immigration Review.

We also have additional requests: $1.4 million for office automation for the senior policy offices and another $1.6 million for office automation activities in the Justice Management Division.

I think I will hold the summary at that point, Mr. Chairman. I do have additional requests that you may want to discuss in some detail.

STAFFING LEVELS

Mr. SMITH. You're talking about a lot of new positions. Why can't you take care of some of these by internal shifts, or are you proposing to shift some people to take care of some of these needs?

Mr. FLICKINGER. One of our problems currently is some of these requests are frankly situations where we have been carrying people on board and have had to shift and make reprogrammings just to maintain the current levels; specifically the Public Affairs Office and the Legislative Affairs Offices. We have been carrying those staffs for some time now, and it is not a question in that case of being able to pull from elsewhere. We have had to do that to accommodate overages up until this point. We are basically trying to make ourselves whole in some of these areas.

Mr. SMITH. How many handle legislative affairs?

Mr. FLICKINGER. The total staff?

Mr. SMITH. Yes.

Mr. FLICKINGER. Twenty-seven total are currently on board.

Mr. SMITH. Why do you need 27 in legislative affairs?

Mr. FLICKINGER. Well, in part, it reflects that the growth of the Department of Justice—and it may be unique in this respect—has been substantial over the last seven, eight years. This year you can appreciate, with the additional legislation, it is only going to get heavier. The activity in the Office of Legislative Affairs has been very, very heavy, particularly with the increased legislative activities.

DISTINCTION BETWEEN PUBLIC AND LEGISLATIVE AFFAIRS

Mr. SMITH. Well, what's the difference between legislative affairs and public affairs?

Mr. FLICKINGER. Public affairs basically is the media interface. That is strictly the press, radio, TV coverage.

Mr. SMITH. And how many are in that?

Mr. FLICKINGER. And some speechmaking.

Mr. SMITH. How many?

Mr. FLICKINGER. Total in public affairs is?

Mr. ROPER. Well, there are currently 13 positions. There are about 27 to 28 people involved.

Mr. SMITH. So you would double the amount there?

Mr. ROPER. Well, the people are there today.

Mr. FLICKINGER. They are in place.

Mr. ROPER. The Administration's budget request—basically recognized that we have a structural deficit in the General Administration appropriation, and the Administration has supported us in asking for the positions and the funding to correct the problem.

Mr. SMITH. How did you finance those additional 14?

Mr. ROPER. The answer, sir, in the last several years we have proposed reprogrammings, mainly out of the Justice Management Division, which means that we had deferred——

Mr. SMITH. Each year?

Mr. ROPER. For at least the last two years, I believe, we have submitted reprogrammings to this Committee, and we have had to defer automation projects basically to do that.

STAFFING FOR LEGISLATIVE AFFAIRS

Mr. SMITH. You have one legislative affairs in your division. Do others have one?

Mr. FLICKINGER. Yes, sir. We have—what I am talking about is the Department's Office of Legislative Affairs. The major bureaus also have some limited staff.

Mr. SMITH. How many are there already altogether in legislative affairs in the Department?

Mr. ROPER. I could venture a guess.

Mr. FLICKINGER. Yes. It would be a wild guess, probably at least double what we have in the Department.

Mr. ROPER. Correct.

Mr. SMITH. You mean all the rest together would have about the same as you have in your one?

Mr. FLICKINGER. That may be an outrageous guess, but that's——

Mr. SMITH. Why don't you put in the record what they are and where they are?

Mr. FLICKINGER. Yes, sir.

[The information follows:]

LEGISLATIVE AFFAIRS

In addition to the Department's Office of Legislative Affairs, the following chart reflects personnel in other Department organizations that support the Department's legislative affairs function.

Organization	Authorized positions	On-board
General Administration	22	[1] 29
Federal Bureau of Investigation	16	[2] 16
Drug Enforcement Administration	9	9
Bureau of Prisons	0	[3] 3
Immigration and Naturalization Service	22	[4] 22
Office of Justice Programs	4	4
Tax Division	4	3
Criminal Division	7	[5] 7
Land and Natural Resources Division	3	[6] 3
Civil Rights Division	1	1
INTERPOL–USNCB	0	[7] 1
U.S. Attorneys	0	[8] 5
U.S. Marshal's Service	2	2
Antitrust Division	0	4
U.S. Parole Commission	1	1
Total	91	110

[1] The authorized positions and on-board count for General Administration reflects 20 authorized positions and 27 on-board for the Department's Office of Legislative Affairs. In addition, 2 authorized positions and 2 on-board reflected for personnel in the Justice Management Division who support this function on a part-time basis. The 2 on-board, however, only utilize approximately 1.5 FTE workyears.

[2] The on-board count for the Federal Bureau of Investigation represent the level authorized.

[3] The on-board count for the Bureau of Prisons represents the utilization of 3 workyears. The staff members in the Bureau of Prisons who perform Congressional affairs functions also support other functions unrelated to Congressional and Legislative affairs.

[4] The on-board count for the Immigration and Naturalization Service includes 20 employees at the headquarters office and 2 positions in the field.

[5] The Criminal Division has 6 permanent employees on-board and 1 part-time employee on-board. Therefore, the workyears utilized for this function are approximately 6.4.

[6] The Land and Natural Resources Division assigns legislative, congressional and public affairs functions to the same people. Discrete data on hours worked in each function are unavailable. Since legislative affairs represents the major portion of their work, the three positions are reflected under that heading.

[7] The INTERPOL-USNCB has one person on-board for this function; however, only .5 workyear is utilized.

[8] The on-board count for the U.S. Attorneys represents the utilization of 4.7 workyears. These individuals who perform legislative affairs functions also support other functions unrelated to Congressional and legislative affairs.

STAFFING FOR PUBLIC AFFAIRS

Mr. SMITH. Also, in public affairs, the breakdown.
Mr. FLICKINGER. All right, sir.
[The information follows:]

PUBLIC AFFAIRS

In addition to the Department's Office of Public Affairs, the following chart reflects personnel in other Department organizations that supoprt the Department's public affairs function.

Organization	Authorized positions	Onboard
General Administration	13	[1] 27
Federal Bureau of Investigation	52	[2] 52
Drug Enforcement Administration	14	[3] 18
Bureau of Prisons	2	[4] 2
Immigration and Naturalization Service	15	[5] 15
Office of Justice Programs	4	4
INTERPOL–USNCB	1	1
U.S. Marshals	3	[6] 3
Total	104	122

[1] The on board count for General Administration reflects the Department's Office of Public Affairs.
[2] The on board count for the Federal Bureau of Investigation represents the level authorized.
[3] The Drug Enforcement Administration has 10 permanent employees on board at its headquarters office and 4 permanent employees and 4 other-than-permanent employees on board at its field offices to support the Public Affairs function.
[4] The staff members in the Bureau of Prisons assigned to Public Affairs also support other functions unrelated to public affairs.
[5] The on board count for the Immigration and Naturalization Service includes 4 employees at the headquarters office and 11 in the field.
[6] The U.S. Marshals Service has 3 permanent employees on board, of which one handles external public affairs matters and two handle internal public affairs.

IMMIGRATION REFORM

Mr. SMITH. Now, on Administrative Review and Appeals, 200 positions in the 1987 supplemental were for Immigration Reform, and then you want another 13 in 1988; is that right?
Mr. FLICKINGER. Yes, sir.
Mr. SMITH. Now, when will these 200 be on board?
Mr. FLICKINGER. They are in the process of hiring those people as quickly as possible. It reflects just the expanded deportation proceedings that would flow from the immigration reform.
Mr. SMITH. How fast can you hire people like that?
Mr. FLICKINGER. Well, as fast as the system permits. We do have the problem of security clearances. There is a delay in that. Our estimate is we can have 42 of these on board, I would say, by the end of the current year. I think that's what we're asking for.
Mr. SMITH. So the 200 in the supplemental, then will not all be on board in 1987?
Mr. FLICKINGER. That's correct. I think the request for the supplemental is 42 FTE.
Mr. ROPER. Yes, sir.
Mr. FLICKINGER. With the balance in 1988.
Mr. ROPER. The intent, sir, is to have the 200 people on duty by the end of the fiscal year, but we would only consume about 42 workyears.
Mr. SMITH. Do you think you will have them on the job, though, by the end of the fiscal year?

Mr. FLICKINGER. Yes, sir.

Mr. ROPER. We have proposed to the Office of Management and Budget a deficiency apportionment for that piece of the General Administration appropriation so that we can advance-fund in anticipation of the Immigration Reform supplemental so that they can begin hiring.

Mr. SMITH. Are you already getting applications? Where are you in the process? You haven't even started yet, have you?

Mr. FLICKINGER. Well, they have, I am certain, started the recruitment effort. This was anticipated for some time. I am sure they don't have many bodies on board yet, but they are actively recruiting.

Mr. SMITH. Now, you started this budgetary process many, many months ago before the Immigration Reform bill passed.

Mr. FLICKINGER. Yes, sir.

Mr. SMITH. And before some of these additional needs were known or you were given legislative responsibility. How did you know when you started that this was the number needed, or have you adjusted your numbers?

Mr. FLICKINGER. Well, we are basically extrapolating from what we recognize as the workload that is out there. It's a question of looking at the ongoing activity in case of deportation activity.

Mr. SMITH. Well, after immigration passed, for example, did you change your proposal for 1988 as to numbers and dollars? It was already in the mill, was it not?

Mr. ROPER. Sir, if I can answer, in essence, the Department had two major budgets submitted within the executive branch this year. We had a normal budget request that went to the Office of Management and Budget on September 2. That was before all of the activity of the month of October, when the 99th Congress passed significant pieces of legislation. On December 2, the Attorney General submitted what amounted to a second budget request to the Office of Management and Budget. In that request were the resources for implementation of Immigration Reform, the U.S. Trustees Program, and a number of other initiatives that were passed by the 99th Congress, mainly in September and October, well after the initial budget request.

Mr. SMITH. So this is an updated version of what you originally started with?

Mr. ROPER. Yes, sir. And in the immigration case, we had gone through in the Department and across many organizations several iterations of developing estimates as the various bills had moved through both the Senate and House, and once the final bill was passed, I believe in October, there was an update to that and that update generated the overall Department request to OMB for Immigration Reform implementation. That was done again on December 2.

Mr. SMITH. And this is based upon the assumption that all the bodies that you requested in the supplemental will be on board before the first of October?

Mr. FLICKINGER. Yes, sir. We expect to have, of those deportation——

Mr. SMITH. Did you expect that to happen now?

Mr. FLICKINGER. That should happen, yes, sir.

[The questions for the record and the answers submitted thereto follow:]

QUESTION FROM MR. NEAL SMITH

GENERAL ADMINISTRATION

Department Leadership

Question:

You request an increase of four permanent positions and $741,000 for Departmental Leadership in 1988. This program has remained relatively stable for the last several years, why are you now requesting program increases?

Answer:

Congress has enacted many new statutory responsibilities for the Department's leadership to execute on behalf of the American people, such as, the Organized Crime Drug Enforcement initiative, the Comprehensive Crime Control Act of 1984, the Anti-Drug Abuse Act of 1986, and the Immigration Reform and Control Act of 1986.

However, despite the increase in Department leadership responsibilities, the staffing of the Department Leadership program has been reduced approximately 30 percent compared to its staffing during the previous Administration. Given the growth previously described, an increase in attorney personnel has been requested for the Department leadership program so that it can provide adequate policy and program guidance, oversight and control to the organizations which implement more than 150 Department of Justice programs.

Question:

Why can't the Department shift personnel out of lower priority organizations in order to focus on policymaking in higher priority organizations? Why is it necessary to add to the bureaucracy at Justice?

Answer:

In previous years, the Department funded additional personnel and priority initiatives through productivity savings resulting from automation as well as induced savings resulting from funding restrictions placed on lower priority programs. However, due to current budget constraints, all resources are necessary to maintain full operation of essential functions.

Question:

You request four additional workyears for those four additional positions. Why are you not assuming the standard 50 percent lapse rate for new positions?

Answer:

A lapse rate was not included since these positions are so urgently needed. If this request is approved, the Department could fill the positions in October 1987.

Executive Support

Question:

You request an increase of 21 positions and $1,900,000 in 1988 for Executive Support. The positions and $1,200,000 of the increase are for public affairs and legislative affairs. Why do you believe you require an increase of almost 65 percent over current levels for these programs?

Answer:

The authorized staffing level for the Office of Public Affairs is 13 positions, and the staffing level for the Office of Legislative Affairs is 20 positions. However, both of these staffs have required additional personnel due to the direct relationship between workload increases in the Department (i.e., War on Drugs, Immigration Reform, etc.) and the demands placed on these programs. In accordance with this increase in workload, the current staffing level of the Office of Public Affairs is 27 and the current staff level in the Office of Legislative Affairs is 29. The workload of these programs will require that current staff levels be maintained in 1988. Therefore, the request for additional positions in 1988 for these programs does not represent an increase to the existing staff, but rather an increase in positions to support the current staff of these programs.

Question:

What would be the impact if these personnel increases are denied?

Answer:

During the past years, the Office of Public Affairs, and the Office of Legislative Affairs have experienced deficits which have required reprogramming of resources from other organizations of the General Administration appropriation. The Administration has recognized this structural deficit within the appropriation. Resources have been provided from the deferral of automation projects and the implementation of cost restrictions in other organizations. Due to the current and future resource requirements, these resources may not be available, as they were during past years. Additionally, a reduction of on-board personnel in these programs does not seem feasible due to the scope and volume of their workload. This workload is not entirely controllable, in a budget sense, since it is fed by media interest and new legislation in which the Department plays a major role.

Question:

Why did you also request full workyears for these positions and not consider the standard 50 percent lapse rate?

Answer:

Because this request represents resources for current on-board staffing levels of these programs, a 50 percent lapse rate should not be considered.

Justice Management Division

Question:

You request an increase of 25 positions and $3,942,000 in 1988 for the Justice Management Division. Seven positions and $500,000 are requested for drug enforcement. How many positions were provided for this purpose in 1987 and why do you need an additional increase in 1988?

Answer:

The 1988 request includes seven positions and $500,000 to support the Task Force Administrative Unit of the Organized Crime Drug Enforcement program. This Unit provides central coordination, policy guidance and administrative support to the thirteen regional Drug Task Forces. The Unit performs as the support and monitoring body between the individual Task Force coordinating groups and the Office of the Deputy Attorney General. The Unit tracks and monitors Task Force cases, performs program analysis and evaluation, prepares testimony and information for the Attorney General, the Associate Attorney General, the Congress, the media, and others concerning Task Force issues, performs legal research for Task Force support, and provides oversight on Drug Enforcement Administration manages the State and local Law Enforcement Overtime fund administered by the Drug Enforcement Administration.

The Administrative Unit originally was created to monitor and coordinate the 13 regional Task Forces but no new budget authority was provided. In 1983 and 1984, the costs incurred by the Administrative Unit were absorbed by the Prosecution activity of the prior Organized Crime Drug Enforcement Appropriation. No direct resources have been provided to the General Administration appropriation for this Unit. The Unit's personnel salary costs are paid by the U.S. Attorney's field Organized Crime Drug Enforcement Program. Thus, the U.S. Attorney's are having to draw down from its field prosecutive program to support this initiative.

Question:

Why do you require 12 additional personnel management positions?

Answer:

The 1988 resource request includes an increase of 12 positions and $700,000 to support the Office of Attorney Personnel Management (OAPM). The Deputy and Associate Attorneys General have authority over all aspects of attorney personnel management. They have delegated this responsibility to the Director of OAPM for all attorneys GS-15 and below, Assistant U.S. Attorneys, Assistant U.S. Trustees, and law students. The OAPM has substantive responsibility in the areas of recruitment, hiring, background investigations, performance appraisals, proposed actions for promotions, discipline and terminations, and maintenance of official personnel files, for almost all Department attorneys and law students. In addition, OAPM is responsible for the Attorney General's Honor Program for graduating law students and Judicial Law Clerks.

The OAPM was established in the Department in 1978 and funded with existing available resources. OAPM has contributed to funding shortages due to the original absorption of funds at the time the office was established, and the increasing demands on this office which have warranted its increase in size over the past years. In addition, it is difficult to absorb the costs of unfunded programs due to current budget constraints. Therefore, the Department is requesting a program increase to fully fund the OAPM.

Question:

On page 11 of your justification, you show no growth in personnel management positions in 1988. Please explain the difference between your statement and this table.

Answer:

The requested increase for OAPM does not include any additional personnel management positions, but four attorneys and eight general administrative positions. Because funding is requested for the current staff of OAPM, the request reflects these types of positions.

Question:

You request an additional six positions and $2,742,000 to achieve management and productivity improvements. Please describe these improvements and what you will purchase with these funds.

Answer:

The 1988 request for the Justice Management Division (JMD) includes program increases of six positions and $300,000 to support the Classified Information Procedures Act (CIPA), $1,629,000 for the implementation of a uniform office automation system in JMD, and $813,000 for maintenance and upgrading of fixed-plant equipment within the Main Justice Building.

The six positions and $300,000 are requested to provide for resources necessary to comply with regulations and procedures set forth in CIPA (P.L. 96-456, 94 Stat. 2025). In the past because no directly appropriated funds have been provided to implement our role in CIPA cases, JMD has had to absorb the necessary resources required to fund this program.

Resources of $1,629,000 have been requested for a uniform office automation system. This initiative is designed to achieve Divisionwide management efficiency and productivity gains through a more coordinated and unified approach in the area of office automation and access to common data bases. The resources will be used to complete site preparation and acquire/distribute initial system components.

Resources of $813,000 are requested to fund three major projects to upgrade the Main Justice Building. Specifically, $298,000 is necessary to upgrade the air handler unit that provides heating, ventilation, and air conditioning to the building; $330,000 is necessary to upgrade the elevators; and $185,000 is necessary to improve ventilation of the elevator penthouses. The latter are areas at the top of the elevator S/B shafts where electrical motors and mechanical equipment are located.

Question:

Again why do you not assume standard 50 percent lapse rates in estimating the 26 workyear increase associated with the growth of 25 positions?

Answer:

Unless other factors intervened, the Department lapsed new positions in the budget year at 25 percent--not 50 percent. The request for six positions for CIPA has been lapsed by 33 percent. The requests for seven positions and 12 positions for the Task Force Administrative Unit and the OAPM, respectively, have not been lapsed due to the fact that the staff for these programs are currently on-board. Additionally, three other-than-permanent workyears are included for the OAPM. As noted earlier, the Administration's 1988 budget request for the General Administration appropriation attempts to correct the structural deficit problem built into certain General Administration programs.

Administrative Review and Appeals

Question:

You requested an increase of 200 positions in the 1987 supplemental for Immigration Reform. Why are you requesting an additional 13 positions in 1988?

Answer:

Of the 13 positions requested in the 1988 President's Budget, 12 will be used to address the increased backlog at the Executive Office for Immigration Review's (EOIR) Board of Immigration Appeals. The remaining position is to support ANSIR, EOIR's automated information system. These 13 positions are justified based on EOIR's existing and projected normal workload excluding any work EOIR may receive as a result of the immigration reform legislation. The 200 immigration reform positions are requested solely to meet the estimated workload generated by the immigration reform legislation and do not include resources for the Board of Immigration Appeals or staffing for ANSIR. Therefore, EOIR's need for additional staffing for the Board and ANSIR still exists.

Question:

What would be the impact if these additional positions are denied?

Answer:

Without the additional positions, EOIR's Board of Immigration Appeals backlog would reach an estimated 8,055 cases by the end of 1988, an increase of 64 percent over 1986. This increase in backlog does not take into consideration additional work the Board will have as a result of the Immigration Reform legislation. Absent the requested position increase, the Board will begin 1988 critically understaffed and in a much more difficult position to begin to address the further workload increases it will receive as a result of immigration reform. Additionally, without the requested position for ANSIR, EOIR's implementation of this vital function will have to be delayed. The implementation of ANSIR is a critical component of EOIR's program response to the Immigration Reform and Control Act, providing the case management and tracking capabilities required to coordinate hearings of convicted aliens in Federal and State prisons beginning in 1987 and to prepare for anticipated workload increases in 1988. Currently, EOIR has only two positions assigned to this task. Without additional help in this area, implementation cannot be completed as quickly as needed.

Financial Management Systems

Question:

The Department acknowledges that its accounting systems are inadequate. You developed a plan in September 1985 to guide financial management improvement efforts. What systems improvement/development priorities has the Department developed through the planning process?

Answer:

In our annual certification required by Section 4 of the Federal Managers' Financial Integrity Act (FMFIA), we reported that our

accounting systems, taken as a whole, are in conformance with the Comptroller General's principles, standards, and related requirements. This change is due to system improvements and application of the latest Office of Management and Budget criteria for reporting nonconformance.

In the Department's annual submission of its Financial Management Systems (FMS) Plan required under OMB Circular A-127, and in a separate submission to OMB of the Department's 1987 FMS Operating Plan, we identified our improvement/development priorities. Copies of those documents have been provided to the Committee.

Question:

Do the systems upgrades in the 1988 budget request correspond with the priorities identified through the planning process?

Answer:

The Department has requested no enhancements for its financial management system in the 1988 budget request.

Question:

In the course of implementing the Department's financial plan, can you point to instances in which costs have been avoided or efficiencies achieved through developing or utilizing shared systems?

Answer:

The JMD Financial Management Information System (FMIS), based upon modern data base management system technology, is the DOJ Financial Management System (FMS) pilot system through which sharing and cross-servicing are being effected. In addition to the accomplishments discussed beginning on page 7 of the DOJ FMS Plan, examples of other initiatives in developing or utilizing shared systems resources include:

INS Accounting using the DOJ FMS.
INS Automated Personnel/Payroll using the DOJ FMS.
Expansion of BOP PC-based Automated Time and Attendance Reporting for Departmental use.
Departmental Federal Procurement Data System used by all DOJ components.
OJP Travel Processed and supported by the DOJ FMS.

Question:

What is the revised timetable for having an accounting system in complete compliance with the Comptroller General's standards?

Answer:

As stated above, our accounting systems, taken as a whole, are in conformance with the Comptroller General's Standards. In our FMFIA certification, the only material nonconformance was the lack of recording of the Department's legal process debts to the general ledger. In order to remedy this, complete accounting requirements were issued to organizations maintaining subsidiary accounts. Most of the reporting offices have implemented these requirements. However, until all unliquidated claims are reported and all aging reports are received, full general ledger control will not be accomplished. Reporting elements should complete these last phases during the present fiscal year.

Working Capital Fund

Question:

You also request an additional $4,000,000 for the Working Capital Fund in order to relocate the Washington, D.C. Data Center and consolidate communications networks. Please explain why you need to relocate the Data Center and what the total relocation cost will be, broken out by type of expense, by fiscal year?

Answer:

The Computer Technology and Telecommunications Staff (CTTS), provides various telecommunications, computer, and computer-related services to elements of the Department, as well as to other Government agencies on a 24 hour-a-day, 7 day-a-week basis. The CTTS (which operates exclusively from a working capital fund and charges for all services provided) operates two data processing centers, one in Washington, D.C., and the other in Dallas, Texas to support the information processing and telecommunications requirements for the Offices, Boards, Divisions and Bureaus of the Department (except the FBI) in support of their critical law enforcement and litigation missions.

In Washington, D.C., CTTS has experienced a dramatic increase in workload, which has necessitated the acquisition and installation of several additional large computer systems. In addition, the Department has completed a procurement which will result in a 750 percent increase in the number of disk storage devices by January 1991. This disk acquisition is essential to satisfying the expanding user processing requirements. As a result of the increasing user workload requirements, the Department of Justice is faced with the need to increase the size and capability of its Justice Data Center-Washington (JDC-W), computer facility significantly.

Of primary concern is the limited timeframe before the current facility will not have the capability to meet the expanding needs of the user community. If the data center relocation is not completed before February 1988, the current facility will not be able to house

the additional equipment needed to process the expanding user requirements.

In light of the multiple problems, addressed by an architectural and engineering study, that beset the existing JDC-W including insufficient computer room space, severe air-conditioning and electrical problems, and the disadvantageous architectural design of the Chester Arthur Building (CAB), the Department has determined that the JDC-W should be relocated to a larger and more modern facility. A new Data Center could provide the expanded floor space and enhanced environmental systems reliability (including process-type air-conditioning units, upgraded electrical capacity and an uniterruptable power supply should normal electrical service be disrupted), which are critical to the Department's central data processing capability.

In May 1986, the Department submitted a formal request to the General Services Administration (GSA), requesting that they find a replacement site for the JDC-W. In September 1986, we were informed that the Control Data Corporation's (CDC) data center in Rockville, Maryland was available for a leasing period of up to 18 years. The Department and GSA toured the site and concurred that it was a larger, high-quality data center which offered significant improvements over the existing JDC-W site. Since the CDC facility met the Department's basic requirements, we requested GSA to initiate the required actions to lease the facility.

If the CDC facility is leased for the Department, we estimate that 1987 operating expenses to perform the actual move will cost approximately $2,000,000. Additionally, we have estimated that site enhancements needed to improve and upgrade the environmental reliability of the CDC site will cost approximately $3,000,000 in 1988 out of the capital expenses budget of the Working Capital Fund.

Additional background information supporting the Department's decision to relocate the data center to a new site has been provided to the Committee.

Question:

What benefits are to be gained by consolidating the Department's communications networks into a single network? What will be the total cost of this consolidation by fiscal year and type of expenses?

Answer:

The benefits of consolidation are as follows:

- Eliminate the unnecessary redundancies and overlap of independent networks and achieve Department-wide management efficiencies and productivity gains in telecommunications systems and operation;
- Accommodate future growth through modular architecture;
- Minimize the impact of tariff increases;
- Provide consolidated communications for Departmental sensitive but unclassified data traffic;

- Strengthen the Attorney General's Command and Control capabilities in carrying out his mission responsibilities;
- Utilize standard communications protocols rather than proprietary solutions.

	FY 1988	FY 1989	FY 1990
Start-up	6,140,000[1]	...	...
Operation	3,085,000[2]	9,255,000[3]	10,608,000[4]
Total	9,225,000	9,255,000	10,608,000

Question:

Why was the Working Capital Fund not able to absorb this cost?

Answer:

The Working Capital Fund is a revolving fund which operates on the basis of costs. The Fund is authorized to be reimbursed for supplies, materials and services at rates which will recover the expenses of operations including accrual of annual leave and depreciation of plant and equipment of the Fund. Any net income in excess of operating expenses must be returned to the Treasury unless the Congress enacts legislation allowing the Fund to retain earnings.

The requested funding for the data center relocation and the consolidation of communications networks represents a capital expense, i.e., for the purchase of capitalized equipment rather than consumable supplies and materials. As such, the planned capital purchases associated with the relocation and network consolidation must be made from available depreciation reserves or from appropriations expressly provided for capital purchases.

Because the Fund's depreciation reserves are limited and provide only for the replacement of equipment inventories on hand, capital is not available to fund the requested initiative and thus the Administration has sought a capital appropriation for the Working Capital Fund in 1988.

---

[1]Includes costs for items such as site preparation, installation, etc.

[2]The Justice Telecommunications Network (JTN) cost was estimated to be 67.05% of the current systems costs (JUST, JURIS, INS/MIRAC, SENTRY). This percentage was obtained from a comparison chart, comparing existing systems costs with JTN, which was forwarded to OMB in November 1984. The percentage was applied to the 1988 costs (INS base + Enhancements + Immigration Reform Act (IRA)) supplied in November 1986. Assumes four months of operation in 1988.

[3]Assumes a full year of operation.

[4]Assumes 15% cost increase over 1989.

The attached materials provide further information on Mr. Smith's questions on the Department's Financial Management System and the Working Capitol Fund's proposed relocation of the data center.

Review of Internal Control Systems for Fiscal Year ending September 30, 1986. This letter from the Attorney General to the President reports the results of his review and provides assurance that the internal control systems were in accordance with the requirements established by the Federal Managers Financial Integrity Act (Integrity Act). This review was performed in accordance with the guidelines issued by the Director of the Office of Management and Budget (OMB), in consultation with the Comptroller General, as required by the Integrity Act. The Department reported on new and continuing material weaknesses.

Enclosure A provides information on how the review was conducted, the Department's accomplishments in improving the internal control process, and how the Department is incorporating internal control into its overall management activities.

Enclosure B contains a more detailed explanation of each of these material weaknesses along with the proposed corrective actions.

Enclosure C provides additional information regarding the accounting system review and the results.

Enclosure D provides a statistical summary of the status of the Department's internal control systems.

Enclosure E is the latest semiannual report on the audit followup process for conformance with OMB Circular A-50.

Operating Plans for Financial Management System Improvements (March 1 - September 30, 1987).
The paper provides a consolidated listing of the Department's management system improvements and gives the benefits that will be obtained from them. Each improvement gives a brief description and provides a timetable of the major events that will occur during the project.

1986 Financial Management System Plan (FMS). The FMS Directive prescribed the policy for establishing and managing a single integrated financial management system which implements the objectives of OMB Circular A-127 and the other circulars and bulletins governing management of Federal information resources. The FMS program is designed to minimize duplication and maximize utilization of systems development resources.

Working Capital Fund Relocation. The material described below provides additional information supporting the Department's decision to relocate the data center.

1. Letter from the Department to GSA, requesting the Control Data Corporation (CDC) site.
2. Graph reflecting February 1988 JDC-W space saturation.
3. Chart showing data center space requirements by 1991.
4. Facility problems rendering CAB expansion unrealistic.
5. Estimate of 1987 operating expenses during the JDC-W move.
6. Estimate for 1988 capital expenses to upgrade the CDC site.
7. Justification for CDC site enhancements.

Office of the Attorney General
Washington, D. C. 20530

31 December 1986

The President
The White House
Washington, D.C. 20500

Dear Mr. President:

The Department of Justice (DOJ) has completed a review of its internal control systems in accordance with the requirements of the Federal Managers Financial Integrity Act (Integrity Act). This letter reports the results of this review and provides the appropriate assurance and certification statements required by the Integrity Act.

Our review of the system of internal accounting and administrative control was conducted for the fiscal year ending September 30, 1986. It was performed in accordance with the guidelines issued by the Director of the Office of Management and Budget (OMB), in consultation with the Comptroller General, as required by the Integrity Act. The review included an analysis of whether the system of internal accounting and administrative control within DOJ was in compliance with the principles and standards prescribed by the Comptroller General. Enclosure A provides information on how the review was conducted, the Department's accomplishments in improving the internal control process, and how the Department is incorporating internal control into its overall management activities.

The objectives of the system of internal accounting and administrative control within DOJ are to provide reasonable assurance that:

-- Obligations and costs are in compliance with applicable law;

-- Funds, property, and other assets are safeguarded against waste, loss, unauthorized use, or misappropriation; and

-- Revenues and expenditures applicable to agency operations are properly recorded and accounted for to permit the preparation of accounts and reliable financial and statistical reports and to maintain accountability over the assets.

The concept of reasonable assurance recognizes that the cost of internal control should not exceed the benefits expected to be derived from internal control and that the benefits reduce the risks of failing to achieve the stated objectives. Estimates and judgments are required to assess the expected benefits and related costs of the control procedures. Furthermore, errors or irregularities may occur and not be detected because of inherent limitations in any system of internal accounting and administrative control, including those limitations resulting from resource constraints, congressional restrictions and other factors. Finally, projection of any evaluation of the system to future periods is subject to the risk that procedures may be inadequate because of changes in conditions or that the degree of compliance with the procedures may deteriorate.

The results of the review described in the second paragraph, in addition to the assurances and supplemental information given by the appropriate DOJ officials, indicate that the system of internal accounting and administrative control for the Department in effect during the fiscal year which ended September 30, 1986, taken as a whole, complies with the requirement to provide reasonable assurance that the above-mentioned objectives were achieved within the limits described in the preceding paragraph, except for weaknesses in the asset seizure and forfeiture program, funds control in the Executive Office for United States Trustees (EOUST), certain risks to program delivery because of acute demands placed on the United States Marshals Service (USMS), and previously reported, but not yet fully resolved, weaknesses in the areas of inmate overcrowding in the Federal Prison System, the Department's financial management system, and the accounting for legal process debts.

The Department reports the following new and continuing material weaknesses.

AREA OF MATERIAL WEAKNESS	DESCRIPTION
Asset Seizure and Forfeiture (New)	Management and internal control improvements are required in the areas of processing forfeiture actions, record keeping and the maintenance and disposal of seized property in the non-drug seized assets portion of the program. For example, the Drug Enforcement Administration's ability to process seizure actions has not been commensurate with its seizure activity, resulting in a backlog in recording and disposing of the assets. Some

	of the consequences of the delays are additional storage costs, erosion of asset values, and deprivation of sharing revenue with state and local agencies. Also, improvements are necessary in the management of seized cash. Corrective actions are now being taken and a substantial portion of the weakness will be resolved by the end of FY 1987.
Funds control in the Executive Office for United States Trustees (New)	The Department's requirements for funds control were not fully implemented or consistently applied which resulted in several funding control issues for EOUST in FY 1985 and FY 1986. Several practices which contributed to the funds control problem have been corrected while others remain to be corrected.
Acute demands placed on the United States Marshals Service attributable to the Comprehensive Crime Control Act of 1984 (New)	Increased levels of activity generated by the Comprehensive Crime Control Act of 1984 have put considerable workload pressure on the USMS, especially in the areas of the protection of the Judiciary and Federal property, the handling of Federal detainees, and witness security. There is a potential that, if unattended, the workload could impair the fulfillment of significant portions of the USMS' mission.
Overcrowding in the Federal Prison System is unacceptably high. (Previously Reported)	Overcrowding in the Federal Prison System is 49% over rated capacity as of November 1986. The Department's objective is to provide

. . .	adequate prison capacity which keeps pace with the ever increasing Federal inmate population and significantly reduces the current overcrowding level. Additional capacity will be obtained through the expansion of existing facilities, the acquisition and conversion of existing properties to minimum security correctional facilities, and the construction of new Federal Correctional Institutions. Implementation of our plan will provide more manageable overcrowding levels.
Financial Management (Previously Reported)	The Department's accounting systems, while in conformance with General Accounting Office principles and standards, are experiencing a series of programmatic problems which require attention. I have directed the implementation of a fully operational, integrated financial management system. Such a system will assist us in addressing these problems.
Legal Process Debt Collection (Previously Reported)	Legal process debts are not fully controlled through the accounting system. The Departmentwide system reflecting legal process debt management for DOJ and legal process debts referred to the Department for litigation by other agencies has not been fully implemented. Our goal is to account for all debts both unliquidated and in collection status. By the end of FY 1997, we expect to have a complete reporting and debt aging system for all legal process debts.

A more detailed explanation of each of these material weaknesses, along with the proposed corrective actions can be found in Enclosure B to this report. I am especially interested in resolving the problem of prison overcrowding as soon as possible. My goal is to reduce prison overcrowding from the current 49% over the rated capacity to a more manageable level of 20% of the rated capacity by FY 1993. A failure to implement an orderly expansion program could have a significant adverse impact on the Federal criminal justice system and will impede law enforcement. Furthermore, severe overcrowding threatens the life and safety of prison staff, the inmate population, and the public at large.

In addition to the material weaknesses, I wish to identify several other areas which are of significant concern to the Department. Among these areas are the handling and storage of seized drugs, the security of automated data processing systems, and the effect of certain provisions of the Federal Employees Retirement System Act of 1986 on the Career Development Program for law enforcement agents such as the special agents within the Federal Bureau of Investigation. The impact of the new retirement system is critical because it may have serious consequences on management as well as agent morale. We will seek a solution to this problem. My concerns are more fully explained in Enclosure B to this report.

A review of the Department's accounting system was conducted pursuant to Section 4 of the Integrity Act and the guidance published by OMB. The results of this review indicated that the Department's accounting systems comply with the Comptroller General's principles and standards except for a continuing material nonconformance in the accounting for legal process debts. Enclosure C provides additional information regarding the accounting system review and the results.

The Director and Deputy Director, OMB, requested that we emphasize specific areas in this year's review. In response, the Department highlighted the protection of confidential information from unauthorized disclosure in its internal control guidance to its organizations. The organizations provided assurance that there were no material weaknesses related specifically to this subject. The Department's performance under the Prompt Pay Act was reviewed and no significant problems were noted. Also, the Department reviewed its audit followup process for conformance with OMB Circular A-50. Enclosure E is the latest semiannual report provided me on that subject. Please note that the report indicates that there are no unresolved audit reports more than six months old. Finally, we are providing a statistical summary of the status of the Department's internal control systems in Enclosure D.

During the course of the next year, the Department will continue its efforts to improve the implementation of its internal control systems to meet the requirements of the Integrity Act and OMB's guidelines. I expect that additional benefits will result from these efforts, thus increasing the efficiency and effectiveness with which we carry out the mission of the Department.

Respectfully,

Edwin Meese III

EDWIN MEESE III
Attorney General

Enclosures

Enclosure A

DEPARTMENT OF JUSTICE
1986 FEDERAL MANAGERS FINANCIAL INTEGRITY ACT REPORT
EVALUATION OF INTERNAL CONTROL SYSTEMS

During FY 1986, the Department focused its efforts on streamlining the internal control process, integrating the process into the Department's other management processes and implementing the revised requirements of the Office of Management and Budget (OMB) Circular A-123. In particular, the Department's organizations were encouraged to use alternative sources of information in conducting risk assessments and internal control reviews. The Department encouraged the use of information resulting from audits, management reviews, evaluations, and inspection reports in determining areas of internal control weakness and corrective action necessary to resolve weaknesses. Our emphasis was to reduce the workload associated with implementing the process but ensure that the integrity of the process was maintained.

Responsibility. The Attorney General delegated the authority to provide the direction, oversight and monitoring of the Department's internal control process to the Assistant Attorney General for Administration. The day-to-day activities associated with this delegation are carried out by the Operations Support Staff within the Office of the Comptroller, Justice Management Division.

Segmentation. The Department's organizations were encouraged to use their budget decision unit structure as the basis for segmenting their activities. In April 1986, the Attorney General communicated to the heads of all the Department's organizations that he is determined to link the internal control process with the Department's budget and resource expenditure process where it is appropriate. Alternative segmentation strategies were permitted where they would provide better coverage of an organization's functions and activities, including the field activities of the organization.

Inventory of Assessable Units. The Department's 32 organizations identified 414 assessable units in FY 1986. This is a reduction of 35 assessable units from the 449 units reported during the FY 1985 cycle and a reduction of 113 assessable units since the inception of the process in FY 1983. Much of the streamlining is due to the linkage between the assessable unit structure and the budget decision unit structure.

Risk Assessments. The Department's components were given two options for conducting risk assessments: (1) conduct assessments of all assessable units this year and conduct internal control reviews where required during 1987, or (2) conduct risk assessments

and, where appropriate, internal control reviews of at least 50% of the assessable units during 1986 and the remaining 50% during 1987. The organizations were requested to target areas of high risk during the assessment cycle consistent with the evaluation methodology articulated by OMB. This approach allowed the components to select the review method which best suited their needs and facilitated the linkage of the internal control process to other management processes such as budget review, audit, and inspection.

The Department's components conducted 270 risk assessments this year. Approximately 65% of all the Department's assessable units were reviewed.

Monitoring and Oversight. The Department has a quality assurance program to ensure the proper implementation and improvement of the internal control process. Ultimately, this activity verifies for the Attorney General that he can provide "reasonable assurance" that the Department has complied with the Integrity Act and OMB's directives in the year-end internal control report to the President and the Congress.

The Department has a two-tiered assurance process. The head of each organization has a monitoring and review responsibility within his or her organization and the Assistant Attorney General for Administration has a Departmentwide monitoring and review responsibility. Together these monitoring activities provide effective oversight and ensure the prudent implementation of internal control.

Each organization conducts a limited compliance review of its internal control process prior to submitting its year-end report to the Attorney General. Also, detailed quality assurance reviews were conducted by several organizations. For example, the Drug Enforcement Administration selected eight of its assessable units for separate quality assurance reviews. This was in addition to two levels of supervisory review and concurrence by senior officials on each risk assessment.

At the departmental level, four quality assurance reviews initiated in FY 1985 were completed in FY 1986, i.e., reviews were conducted of the Drug Enforcement Administration, the Immigration and Naturalization Service, the Antitrust Division, and the Executive Office for United States Attorneys. In addition, an internal control oversight review was conducted of the Executive Office for United States Trustees to ensure that effective internal controls were in place especially in view of the new expansion of the Trustee System. In addition, all the components' internal control submissions provided to the Department were reviewed for consistency with Department guidelines and the internal control directives issued by senior policy officials.

Field Involvement. All organizations with field offices were required to review the activities of these offices in their internal control assessments. Each organization used the approach best suited for reviewing their field activities consistent with Department guidelines.

Planning and Tracking Systems. The Attorney General's policy goals for 1987 identified Government financial integrity and the prevention of fraud, waste, mismanagement, and misappropriation as one of the Department's major goals. The internal control process is a major initiative designed to achieve this goal. As referenced above, this year the internal control process was also linked to the Department's resource setting process. An automated internal control tracking system is also available. The system is being modified to increase its utility and make it available for use by the Department's components. The Bureau of Prisons and the Drug Enforcement Administration were the first organizations to adopt portions of the the Department's tracking system. The use of a common tracking system is intended to reduce the cost of the process.

Special Reviews. The Department reviewed several areas emphasized by OMB. The following paragraphs briefly describe the results of these reviews:

- Legal Process Debt Collection. Although significant progress has been made in legal process debt collection, several corrective actions remain. The Executive Office for United States Attorneys and the Legal Divisions have decreased the processing time of debts and judgments, and increased pressure on debtors to make timely payments. Accounting for legal process debts has been improved but is not completed. Once the accounting system and automated reporting are completely linked, the Department should be able to identify readily the number and value of its outstanding debts, the amounts collected, and the potential collectibility of these debts. We expect to complete this task in 1987.

  Several actions have occurred this year which will have an effect on debt collection. Legislation was passed which allows the appointment of civilian counsel to litigate and collect debts. Procedures to implement the law are currently under preparation. It is difficult to anticipate the impact this law will have on the debt collection process. We do not know if the net return to the Treasury on debts placed with civil counsel will be cost-effective. In addition, it will be necessary to centralize departmental activities to effectively monitor contract performance by the civilian counsels.

The Internal Revenue Service (IRS) tax return offset program was initiated this year. The Department provided IRS with data on criminal debtors. It is too early to know the full extent of the results of this program.

We reviewed the administrative costs associated with the collection of debts and the report included a proposal to pass certain administrative costs on to the debtor. The additional fees charged would be deposited in the Treasury and are intended to defray the costs to the American taxpayer for collecting delinquent debts.

In March 1984, the Department instituted a direct deposit (lock box) system whereby all cash collected by our collection offices is sent to a bank and immediately deposited to the credit of the Treasury. Over a 30-month period, $663 million have been deposited through this system resulting in a savings of approximately $3 million in imputed interest to the Treasury.

- Automated Data Processing (ADP) Security. Our efforts in this area have focused on two aspects of the security of our common user facilities, i.e., security of information and physical security of the data centers. Significant steps were taken in both areas to identify problems and develop strategies to address those problems. A more detailed discussion of the results of our efforts in the ADP Security area can be found in Enclosure B.

- Payment Systems. A discussion of the Department's reviews of its payment system can be found in Enclosure C.

Accomplishments. The Department has made considerable progress in merging the internal control process into its basic program, planning, and management activities. Some of the highlights of the efforts are described below:

- The Department's Management and Productivity Improvement Program identified the prevention of waste, fraud, mismanagement, and misappropriation in several of its objectives. The internal control process assists in meeting these objectives. It is designed to provide program managers with an increased capability to anticipate problems and fix weaknesses prior to their developing serious difficulties.

- The internal control process has been linked to the budget setting processes within the Department. Savings realized or expected to be realized from management initiatives, including internal control improvements,

are to be defined in the Spring Planning Call. The internal control process has also been linked to OMB Circular A-127, Financial Management Systems. The Attorney General issued an order on April 21, 1986 supporting the establishment of a single integrated financial management system within the Department. Guidance was issued to all organizations for implementing the OMB Circular A-127 and the Attorney General's order.

- The Procurement Executive completed a procurement management review of each of the bureaus' procurement functions. The findings and recommendations contained in these reports provide a basis for future procurement directives and compliance reviews. In addition, a new order was issued establishing criteria for evaluating and certifying the Department's procurement systems. A recently issued Department of Justice (DOJ) order on Advance Procurement Planning will also aid in increasing competitive procurements and may assist in reducing spending. These efforts are important control tools for procurement management.

- On April 18, 1986, DOJ Order 1273.1D was revised to assign responsibility and establish minimum requirements for personnel planning and evaluation within the Department. This order is an integral step in applying the internal control process within the personnel area.

- Audit reports issued during FY 1987 by the Department's Audit Staff will include a statement on the adequacy of internal controls within the scope of each audit. In addition, the Bureau of Prisons examined its existing management audit system to determine the most efficient and effective method of integrating the internal control process into the system.

- A revised Departmentwide directive on controlling funds under apportionment was published on April 9, 1986. This is the primary control directive for the Department's funds control process.

Enclosure B

DEPARTMENT OF JUSTICE
1986 FEDERAL MANAGERS FINANCIAL INTEGRITY ACT REPORT
AREAS OF MATERIAL WEAKNESS AND SIGNIFICANT CONCERN

MATERIAL WEAKNESSES

Material Weakness: The Asset Seizure and Forfeiture Program (Non-Drug Seized Assets) (New)
Category of Weakness: Program Management
Year Reported: 1986

Description of Weakness: Critical aspects of the Asset Seizure and Forfeiture Program have previously been reported as a Departmentwide material weakness. Numerous corrective actions were implemented which substantially resolved the weakness and it was considered corrected in 1985. This year new problems developed which, coupled with the existing lack of a complete accounting system for seized and forfeited assets require that this area again be reported as a material weakness.

The Drug Enforcement Administration (DEA) is now processing an average of 1,000 new seizure actions a month under the enhanced asset seizure and forfeiture authority of the Comprehensive Crime Control Act of 1984. DEA's ability to process these actions has not kept pace with the seizure activity. This has resulted in a significant backlog in the recording and disposing of seized assets. The disproportion of staff to workload prevents DEA from promptly contributing to the Department of Justice (DOJ) Asset Forfeiture Fund. This contribution could have been as much as $21 million through May 1986 had there been sufficient staff resources to process final actions.

The United States Marshals Services (USMS) is handling the real estate, aircraft, and monies seized by DEA and a workable timetable needs to be established for the USMS to process other properties such as automobiles, vessels, weapons, art, and collectibles. The USMS also reports that it is concerned about the extensive manpower resources being consumed by the program. Present indications are that the program will exceed all expectations and will prove to be one of the major benefits from the Comprehensive Crime Control Act. The program will generate approximately $50 million for the United States Treasury by the end of 1986. Approximately $17 million has been shared with state and local jurisdictions. Currently, there are 3,851 properties under seizure with a total value of $327 million. This level of activity at times forces USMS to divert local field office resources from other critical program areas to accommodate the workload. USMS further reports the lack of an effective program to complete regular audits of its seized asset activities.

Although the USMS maintains an automated management system of the seized property, proper accountability for seized and forfeited assets has not been fully established within the Department's accounting system. This is an essential element of the weakness and needs correction.

Corrective Action: DEA recently received some additional resources as part of the new anti-drug initiative to create asset removal teams in key locations around the nation. Once these teams are fully operational the backlogs should become more manageable.

The Justice Management Division (JMD) has initiated several actions to improve its accounting capabilities for seized assets. A departmental order on financial management of seized and forfeited assets is in the clearance process. A steering committee has been established to develop Departmentwide information and accounting requirements for seized and forfeited assets. Also, review of DEA and the Federal Bureau of Investigation (FBI) seized cash practices has been completed and procedures are now being implemented to deposit nonevidentiary and forfeited seized cash in a more timely manner.

The USMS, which operates the National Asset Seizure and Forfeiture (NASAF) program, continues to take corrective actions to improve the management of property subject to administrative forfeiture, upgrade its management information and inventory system and improve coordination with other DOJ agency operations. The first contract to provide for the comprehensive care of seized vehicles was signed on September 30, 1986. Since August 1, 1986, the USMS has held three auctions for vehicles forfeited administratively by the Immigration and Naturalization Service. Progress continues toward implementing similar programs elsewhere along the southwest border.

The Asset Forfeiture Office (AFO) in the Criminal Division is working on several initiatives which will assist in easily understanding the criminal and civil forfeiture laws. The Division is assisting with revisions to the United States Attorneys Manual in these areas. AFO is also working with other Federal organizations to provide information which will assist them to more efficiently store, use, or distribute seized assets.

Material Weakness:	Funds Control in the Executive Office for the United States Trustees (EOUST) (New)
Category of Weakness:	Other - Financial Management
Year Reported:	1986

Description of Weakness: An internal control review conducted by the Department in 1986 revealed problems in funds control within EOUST. The Department's procedures on funds control had not been fully implemented or followed by EOUST. This resulted in funds control problems for FY 1985 and 1986.

Corrective Action: The Director of EOUST has instituted or will shortly institute several corrective actions to resolve the funds control problem. By December 1987, all delegations of authority for funds control will be reviewed and changed as necessary. All EOUST employees will be informed of who is responsible for funds control. An initial 1987 operating plan has been submitted to the Department for approval. Future revisions to the operating plan will be timely and more accurate. Obligation and payment procedures will be reviewed and strengthened for FY 1987. Clear separation of duties and responsibilities will be established and incorporated in the appropriate employees work plans.

The implementation of the above procedures, several other planned adjustments, and adherence to the Department's fund control procedures will resolve this weakness.

Material Weakness:	Acute Demands Placed on the United States Marshals Service Attributable to the Comprehensive Crime Control Act of 1984 (New)
Category of Weakness:	Program Management
Year Reported:	1986

Description of Weakness: The USMS has experienced a considerable increase in activity due to demands placed on many of its programs. The increase is attributable primarily to the implementation of the Comprehensive Crime Control Act of 1984. Current USMS resources are being significantly stretched.

There is a potential that, if unattended, the inordinate workload could impair the fulfillment of USMS' missions. Demands have been particularly acute in following areas:

- Threats against members of Judiciary, United States Attorneys, and other court officers have increased 89% in the last two years. In addition, concern for terrorist acts against Federal judicial facilities, as well as officials and employees in those facilities, has increased.

- Pre-trail detention of defendants by Federal judges has increased substantially. The number of in-custody defendants which the USMS must house in state and local facilities has escalated. Many of the state and local facilities housing Federal detainees are under court order to ease overcrowded conditions and space is not always available to serve USMS' detention needs. This necessitates housing detainees in facilities located long distances from the urban areas where courts are

situated, resulting in substantial amounts of overtime and workload pressure.

- The increased efforts to fight organized crime and the implementation of the Child Custody provisions of the Comprehensive Crime Control Act of 1984 also have increased the demands on the USMS to provide the security needed to protect endangered witnesses.

- The number of extraditions carried out by USMS has doubled in the last 2 years. The USMS has a primary role in the apprehension of fugitives. The major drug enforcement initiatives being carried out by the Department's organizations and other law enforcement agencies have generated an active extradition program. This places additional workload pressure on the USMS.

- The USMS telecommunication capacity needs to be addressed. Due to the increases in activities, USMS must upgrade its telecommunications systems to keep pace with the demand. For certain operations, voice privacy radios are needed in order to assure that communications are not compromised.

- The increase in the debt collection effort by the Department and court ordered service of civil process has increased service of process by 40% over 1985 levels. Three quarters of government civil process is directly related to the debt collection activity. At the present time, USMS collects $3 per piece of private process served when the actual cost for the service to USMS is approximately $18 per piece. The fee schedules are unrealistic and must be revised to offset costs.

Corrective Action: The Department is considering several corrective actions in this area. A number of these corrective actions will require additional resources while others may require legislative changes. As soon as the appropriate actions are taken the acute demands placed on USMS will become more manageable.

Material Weakness:	Inmate Overcrowding in the Federal Prison System (Previously Reported)
Category of Weakness:	Program Management
Year Reported:	1985

Description of Weakness: Overcrowding in the Federal Prison System is unacceptably high. As of November 1986, overcrowding was 49% over the rated capacity.

Corrective Action: We plan to add additional capacity to reach a more manageable 20% overcrowding rate by 1993. This will be done through the expansion of existing facilities, acquisition and conversion of existing properties to minimum security correctional facilities, and construction of new Federal Correctional Institutions. The planned program will begin expanding capacity by FY 1990 contingent on securing the necessary resources.

Failure to implement this expansion program in an orderly fashion can have serious consequences on the the Federal criminal justice system. The overcrowding rate could deteriorate to 90% by FY 1993. This would be an intolerable level. Furthermore, the results of insufficient prison space of this magnitude would seriously impede high priority Federal law enforcement programs. Most important, it could threaten the life and safety of Bureau of Prisons (BOP) staff, Federal inmates, and society at large.

Material Weakness: Financial Management (Previously Reported)
Category of Weakness: Other - Financial Management
Year Reported: 1984

Description of Weakness: The Department's accounting systems, while in conformance with the General Accounting Office (GAO) principles and standards, are experiencing a series of programmatic problems which require attention. At the request of the Office of Management and Budget (OMB), the Department initiated an effort to implement a single integrated financial management system throughout the Department. This system was a major financial management initiative but it was contingent on obtaining necessary resources. These resources were not fully provided by the Congress.

Corrective Action: The Department will continue to address the need for a single, integrated financial management system but this will be done within existing resources. This will significantly delay the implementation of a fully operational integrated financial management system as initially envisioned by OMB and the Department.

Material Weakness: Legal Process Debt Collection (Previously Reported)
Category of Weakness: Loan Management and Debt Collection
Year Reported: 1983

Description of Weakness: Legal process debts are not fully controlled through the accounting system. The Departmentwide system reflecting legal process debt management for DOJ and legal process debts referred for litigation by other agencies has not been fully implemented. Data on these debts are required to be in an accounting system meeting the requirements of Comptroller General's accounting principles and standards.

Corrective Action: During FY 1986, significant improvements were made in the control of legal process debts. The majority of collection offices are now reporting all debts received from referring agencies. Our goal is to be able to account for all debts, both unliquidated and in a collection status. This will permit the Department to reconcile its outstanding debt balances with the referring agencies. By the end of FY 1987, we expect to have a complete reporting and aging system for all legal process debts. Debt collection accounting will then be in conformance with the GAO standards and the debt collection program will no longer be considered a material weakness.

SIGNIFICANT CONCERNS

Significant Concern: ADP Security
Category of Concern: ADP Security

Description of Concern: The security of ADP, which supports a multitude of the Department's activities and programs, was identified as a significant concern in the 1985 Internal Control Report. Protection of these systems from unauthorized access and their physical security are vital to the Department. Actions are being implemented to correct problems which have been previously identified. The Department is following a prudent course of action to secure its sensitive operations as it introduces new technologies into its management process.

The JMD's efforts in this area have focused on two aspects of the security of the common user facilities, i.e., security of information and physical security of the data centers. Several reviews were conducted in 1986 of computer security controls at the Justice Computer Service (JCS) Data Centers. An audit provided recommendations that will enhance the JCS computer system's protection against failures, human error, security breach, and natural catastrophies that could result in improper disclosure, modification, destruction, or denial of services. In addition, a private contractor conducted a computer security analysis of the Justice Data Centers to identify and define ADP application systems, telecommunications and software security procedures and mechanisms necessary to assure the security and integrity of user-defined sensitive information processed at the JCS data centers. The JMD's Policy and Planning Staff has developed an options paper for ensuring effective oversight of ADP security. The Department's Security Staff, in December 1986, will complete a report on the Department's compliance with the provisions of DOJ Order 2640.2A, Automated Information System Security. As soon as the latter item is complete, the appropriate corrective actions will be initiated.

The Justice Data Center - Washington, D.C. is experiencing problems with physical security. The existing environmental support systems are inadequate. The Department contracted with an architectural and engineering firm to analyze, evaluate, and recommend improvements to the existing ADP environmental support systems. A plan and milestones have been established to provide a long-term solution to these problems.

Several of the Department's organizations focused on the security of ADP systems during the year. For example, BOP audited 31 of its institutions and included information systems and a review of its SENTRY, the BOP automated inmate tracking system, in the audits. The USMS included an ADP systems inventory in 17 compliance reviews. The DEA performed an ADP vulnerability assessment and completed the worldwide encryption of their computer access lines. The two regional computer centers of the FBI performed risk assessments this year.

Significant Concern: Storage of Drug Evidence
Category of Concern: Property/Inventory Systems

Description of Concern: Internal control issues regarding the handling and storage of drug evidence were reported by the Department in 1985 and continue to be of concern.

Current procedure often requires DEA to store vast quantities of drugs, at times for several years, until all court proceedings are concluded. Potentially, DEA faces serious storage-related security problems in addition to the expense of the storage space. Storage of large quantities of drug evidence with a high dollar value creates the risk of penetration of the laboratories and storage facilities by hostile elements. This creates a threat to the safety of the United States Government personnel and property, as well as the possibility of the contraband drugs being re-introduced into the drug traffic if they are stolen. The estimated dollar value based on the 1986 street value of the current stored drug evidence is in excess of $12.1 billion dollars.

Corrective Action: The Department's Criminal Division, with participation by the United States Attorneys, Federal judges, and DEA, conducted a comprehensive review of this issue. The review is in draft and, as soon as the Department's leadership is provided with the final recommendations, the appropriate actions will be taken.

Significant Concern: Impact of the Federal Employees' Retirement System Act of 1986 on the Law Enforcement Career Development Program (FBI)
Category of Concern: Personnel and Organizational Management

Description of Concern: The new retirement system requires law enforcement personnel to be in a "first-line" operational position for 10 years prior to promotion to a supervisory or administrative position in order to retain eligibility for law enforcement retirement benefits. The FBI is a good example. Under the Law Enforcement Career Development Program, special agents may be, and have been, promoted to supervisory and administrative positions within their first 10 years of service. It is believed that the new 10-year requirement would deprive the FBI of the benefit of managerial talents of those who could become managers within 10 years, force accelerated managerial advancement because in some instances the special agent's total tenure might be only 20 years, discourage some special agents with managerial aptitude from entering the program, and may even be the reason for their leaving the FBI for managerial positions elsewhere.

Corrective Action: The FBI is pursuing a solution to the 10-year requirement of the new retirement act. The Department will work with the FBI and its other law enforcement components to assist in finding an equitable solution to this issue.

Significant Concern: Inadequate Base Funding for Travel, Confidential Expenses, and Supplies (FBI)

Category of Concern: Program Management

Description of Concern: Primarily because of the inadequate base funding for travel and confidential expenses and supplies it was necessary to reprogram funds designated for automobiles and certain technical equipment for this purpose. The reprogramming has caused delays in replacing needed automobiles, implementing certain management systems, and in procuring needed technical equipment, all of which has had an adverse impact on operational effectiveness and efficiency of the Bureau.

Corrective Action: Several management adjustments have been made and adequate resources are being sought to prevent the recurrence of this situation.

Enclosure C

DEPARTMENT OF JUSTICE
1986 FEDERAL MANAGERS FINANCIAL INTEGRITY ACT REPORT
ACCOUNTING SYSTEMS REVIEW

Section 4 of the Federal Managers Financial Integrity Act (FMFIA) requires a review of accounting systems for the purpose of determining whether they are in conformance with the Comptroller General's principles, standards, and related requirements. During FY 1986, Department of Justice personnel reviewed cash management practices as they apply to the timeliness of collections and disbursements, and performed an indepth evaluation of commercial "off-the-shelf" software packages for financial management systems. Department personnel also reviewed the status of corrective actions on previously reported deficiencies, audit reports and management studies. The reviews disclosed that, taken as a whole, the Department of Justice accounting systems are in conformance with the Comptroller General's principles, standards, and related requirements.

We applied the new Office of Management and Budget (OMB) criteria for reporting non-conformance. Accordingly, we are only reporting a material non-conformance in the accounting for legal process debts which is an activity of the accounting system for the Offices, Boards, Divisions, and United States Marshals Service. This was reported for the first time in our 1985 report.

The accounting for legal process debts does not fully conform to accounting principles and standards. In order to correct this, complete accounting requirements were issued to organizations maintaining subsidiary systems. Most of the reporting offices have implemented these requirements. However, until all offices report all unliquidated claims and submit required aging reports, full general ledger control will not be complete. All reporting elements should complete these last phases in FY 1987.

Non-conformances were found throughout the Department which are not material in nature. Generally, these non-conformances are the result of insufficient resources in financial management, particularly in systems development and improvement.

Recently, the OMB expressed concern about Federal agencies not complying with the Prompt Payment Act and not analyzing erroneous payments in benefit, grant, and loan programs for the purpose of improving payment controls. The review of cash management practices discussed above included a review of the implementation of the Prompt Payment Act and no material deficiencies were reported.

In regard to OMB's concern about agencies not analyzing erroneous payments, the Department does not have benefit and loan programs and its grant programs are not susceptible to erroneous payments. Requests for advances and reimbursements to grantees are reviewed prior to payment. A system modification has been implemented to identify possible excess advances, and drawdowns and expenditures are reconciled. Failure on the part of grantees to submit timely expenditure reports or reconcile accounts results in payment suspension.

ENCLOSURE E

Subject	Date
Semiannual Report (Unresolved Audit Report Status)--INFORMATION MEMORANDUM	NOV 3 1986

To

The Attorney General

From

/s/
Harry H. Flickinger
Acting Assistant Attorney General
for Administration

As required by paragraph 8 of the Office of Management and Budget (OMB) Circular No. A-50, "Audit Followup," Revised, attached please find the necessary information which fulfills the semiannual reporting requirements on unresolved audit reports over 6 months old. For the period April 1, 1986 through September 30, 1986, there were no unresolved audit reports over 6 months old. Additional information provided is: the number of audit reports resolved; the amount of costs questioned; the amounts of questioned costs recovered, adjusted and offset; and the number of demands made for payment.

If you have any questions regarding this information, please call me.

Semiannual Report on Status
of Unresolved Audit Reports
Audit Staff
Justice Management Division
April 1, 1986 through September 30, 1986

1. Status of unresolved audit reports over 6 months old.

   As of September 30, 1986, there were no unresolved audit reports over 6 months old.

2. Number of audit reports resolved during the reporting period: 134.

3. Costs questioned as a result of audits performed during the reporting period: $6,394,086.

4. Amount recovered during the reporting period: $124,571.

5. Amount of offsets during the reporting period: $39,259.

6. Amount adjusted/waived during the reporting period: $1,078,612.

7. Number of demands for payment made during the reporting period: -0-.

DEPARTMENT OF JUSTICE
OPERATING PLANS FOR FINANCIAL MANAGEMENT SYSTEM IMPROVEMENTS
MARCH 1 - SEPTEMBER 30, 1987

AGENCY CONTACT NAME: JAMES E. WILLIAMS
TITLE: DEPUTY DIRECTOR, FINANCE STAFF/JMD
TELEPHONE NUMBER: (202) 633-5538

1.0 Project Title: Comparative Analysis: Justice Management Division's Financial Management System and the FAMIS Logical Model.

Project Description: This project will identify the financial management improvements that must be made to the present Justice Management Division's financial management functions of accounting, budgeting, procurement, and property in order to achieve the objectives of the FAMIS logical model. A walkthrough questionnaire has been developed to ascertain each system's current performance of the financial requirement/function, the necessary changes, the impact on other financial functions, and the enhancement benefits. The financial management system user community is also being polled to assist the project team in identifying enhancements to the existing system(s).

Systems: Accounting, Budgeting, Procurement, and Property

Benefits: Provides a structural approach to system developments and enhancements, and provides for the efficient and economical use of financial and human resources.

	Task	Milestone	Start	End
1.1	Gather Data	- Interview system analysts, programmers, and operators	10/86	12/86
		- Interview user community	12/86	1/87
1.2	Utilize Collected Data	- Analyze data	12/86	1/87
		- Identify projects	1/87	2/87
		- Prioritize projects	2/87	3/87
1.3	Develop Schedules	- Prepare project development and implementation schedules	3/87	5/87

2.0 Project Title: FMIS/LAGA Synchronization

Project Description: The current Offices, Boards, Divisions and the U.S. Marshals Service Accounting System (OBD/USMS) is supported by two financial systems - the Financial Management Information System (FMIS) and the Legal Activities and General Administration (LAGA) System. The FMIS is an on-line system using modern commercial off-the-shelf application generator software. It is easy to use, maintain, and enhance. The LAGA system is an older system which is labor intensive for maintenance purposes and very limited in its ability to adopt to changing requirements. Because of differences in the type of data processed and the processing procedures, the financial data from these two systems may not be in agreement.

This immediate project provides for the synchronization of data within the two systems, and the availability of all accounting data on an on-line basis. Once the data bases are synchronized, projects will be established to eliminate the LAGA system.

System: Accounting

Benefits: Eliminates inconsistent data and provides more timely information

	Task	Milestone	Start	End
2.1	Analysis	- Define Requirements	11/86	11/86
		- Develop crosswalk of transactions between both systems	12/86	12/86
2.2	Detail Design	- Develop software logic	1/87	1/87
2.3	Implementation	- Test programs	3/87	3/87
		- Document	4/87	4/87
		- Train Users	4/87	5/87

3.0 Project Title: Redesign of the Expenditure and Allotment Report

Project Description: As a result of the project to synchronize the FMIS and LAGA data, this project provides for better reporting of the data. The Expenditure and Allotment (E&A) Report will be redesigned to improve data classification, provide a more descriptive report title and reporting columns, and add information for analytical purposes.

System: Accounting

Benefits: Improves management information and standardizes the use of the report

	Task	Milestone	Start	End
3.1	Analysis	- Analyze current reporting requirements	1/87	1/87
		- Define new requirements	1/87	1/87
3.2	Detail Design	- Develop format	1/87	2/87
		- Revise software logic	2/87	2/87
3.3	Implementation	- Test posting of data	2/87	3/87
		- Document	3/87	3/87
		- Train users	3/87	3/87

4.0 Project Title: Implementation of General Ledger (Government-Wide Standard General Ledger and Existing General Ledger) on the FMIS

Project Description: The General Ledger is currently maintained on the LAGA System. As a part of the strategy to eliminate the LAGA System, the General Ledger will be maintained on the FMIS. This project will provide for both the implementation of the Government-Wide Standard General Ledger and the movement of the current General Ledger to the FMIS.

System: Accounting

Benefits:
- Will satisfy the Office of Management and Budget's and the Treasury Department's reporting requirements
- Will standardize financial information accumulation within the Department and government-wide
- Will provide daily access to General Ledger information

Task	Milestone	Start	End

4.1	Analysis	- Compare Standard General Ledger to existing General Ledger	7/87	7/87

Task		Milestone	Start	End
4.1	Analysis	- Define requirements for implementation on FMIS	7/87	8/87
		- Develop implementation approach	9/87	----

5.0 Project Title: Standardization of Departmental Financial Management Data Definitions and Processing Logic

Project Description: Consistent with the Department of Justice Financial Management System (DOJ FMS) Plan to establish a single logical FMS, this project will standardize the financial data elements and processing logic (including financial management policies and procedures) within the Department.

Systems: Accounting, Budgeting, Procurement, and Property

Benefits: - Provides for a single logical FMS within the Department

- Will provide for uniform financial management data

Task		Milestone	Start	End
5.1	Analysis	- Review for potential use the data definitions of the FAMIS Logical Model	8/87	8/87
		- Compare the logical model definitions with each Departmental component's existing data definitions	9/87	----

6.0 Project Title: Integrated Procurement System •

Project Description: This project will replace and enhance the current Procurement System with a system that makes use of database and fourth generation language technology and operates within the Justice Management Division's existing Financial Management System.

System: Procurement

Benefits: - Fully integrates procurement and accounting

- Provides a model system for all Departmental users

- Replaces an aging document/file processing system
- Reduces redundant keying and storing of data
- Greatly improves reporting flexibility and speed
- Provides for tracking at a detail level
- Aimed toward a Department-wide, integrated Financial Management System

Task		Milestone	Start	End
6.1	Analysis	- Analyze the existing system	12/86	1/87
	Task	**Milestone**	**Start**	**End**
6.2	Design	- Develop prototype system	1/87	3/87
		- Design file structures	4/87	5/87
		- Design input screens and reports	4/87	5/87
		- Write programs	5/87	8/87
6.3	Implementation	- Test system	8/87	9/87
		- Run parallel systems	9/87	9/87
		- Initiate operation of system	10/87	

7.0 Project Title: Upgrade of OBD/USMS Accounting System for Processin of Assets Forfeiture Fund Financial Information *

Project Description: This project will enable the OBD/USMS Accounting System to address a material weakness identified in the Attorney General's annual report under the Federal Managers' Financial Integrity Act. Through the use of a systems development contractor, the accounting system will be upgraded to process forfeiture accounting information on a transaction level basis from the USMS District Accounting System. This enhancement represents a significant improvement in the current system where forfeiture accounting information is received only monthly and at a summary level, with supporting documentation maintained manually in the USMS field offices.

System: Accounting

Benefits:
- Provides full disclosure of forfeiture financial transactions
- Provides accurate, timely, and reliable management information
- Increases control and accountability for forfeiture transactions

Task		Milestone	Start	End
7.1	Define requirements	- Analyze current reporting system	1/87	2/87
		- Gain familiarity with USMS District Accounting System	2/87	3/87
7.2	Procure systems development contract	- Develop RFP	3/87	3/87
		- Bidding Period	4/87	6/87
		- Analyze bids and select contractor	6/87	7/87
7.3	Systems development	- Work with contractor to develop system	8/87	----

AGENCY CONTACT NAME: JAMES A. SHEALEY
TITLE: ASSISTANT DIRECTOR
FOR FINANCIAL MANAGEMENT
U.S. MARSHALS SERVICE
TELEPHONE NUMBER: (703) 285-1231

1.0 Project Title: District Accounting Subsystem

Project Description: This project provides for the development of a subsystem which supports the accounting requirements of the U.S. Marshals Service's (USMS) district and sub-district offices. It will provide automated assistance for recording accounting data, querying accounting data, preparing accounting reports, and generating end-of-month close-out data for the Headquarters, USMS, and the OBD/USMS Accounting System. The system has been developed, tested, and implemented in several of the district offices. During

Fiscal Year 1987, the system will be implemented in additional USMS offices and integrated with the Departmental financial management system (FMS).

System: Accounting

Benefits:
- Provides more timely information
- Provides an audit trail of all accounting data
- Standardizes the accounting functions and practices at all USMS offices
- Improves data accuracy
- Addresses weaknesses previously identified in the Department's accounting system certification reports
- Fully integrates the USMS FMS with the Departmental FMS

Task		Milestone	Start	End
1.1	Implementation	- Install equipment	10/86	9/87
	Task	Milestone	Start	End
		- Implement system at 30 offices (including 28 districts, Headquarters, and training center)	10/86	9/8
		- Train users	10/86	9/87
1.2	System Integration	- Develop and implement integration requirements with the Departmental FMS	5/87	----

FEDERAL BUREAU OF INVESTIGATION
OPERATING PLAN FOR FINANCIAL MANAGEMENT SYSTEM IMPROVEMENT
MARCH 1 - SEPTEMBER 30, 1987

AGENCY CONTACT NAME: TED R. PING
TITLE: CHIEF, ACCOUNTING SECTION
TELEPHONE NUMBER: (202) 324-3440

1.0 Project Title: Upgrade Existing Systems

Project Description: New releases of commercial software used to support the Financial Management System will be implemented during this period.

Systems: Accounts Payable, Budgetary Control, and General Ledger

Benefit: A higher level of integration, improved control and reporting

	Task	Milestone	Start	End
1.1	Implementation	- Run test data	1/87	10/87
		- Test interfaces	1/87	10/87
		- Test reports	1/87	10/87
		- Convert files	1/87	10/87
		- Full implementation	1/87	10/87

AGENCY CONTACT NAME: TED R. PING
TITLE: CHIEF, ACCOUNTING SECTION
TELEPHONE NUMBER: (202) 324-3440

2.0 Project Title: Implement New Systems (Replacement)

Project Description: Replace existing Purchasing, Fixed Assets, and Inventory Management Systems with new commercial software

Systems: Fixed Assets, Purchasing, Inventory Management

Benefits: New software will integrate with existing financial software, provide higher level of functions, improved control, and reporting

	Task	Milestone	Start	End
2.1	Implementation	- Run test data	1/87	10/87
		- Test interfaces	1/87	10/87
		- Test reports	1/87	10/87
		- Convert/Load files	1/87	10/87
		- Train users	1/87	10/87
		- Full implementation	1/87	10/87

AGENCY CONTACT NAME: JOHN H. SKAGGS
TITLE: CHIEF, VOUCHER PAYROLL
TELEPHONE NUMBER: (202) 324-2865

3.0 Project Title: Implement New Personnel/Pay System

Project Description: Acceptance testing of contracted software for the integrated Personnel/Pay System

Systems: Payroll/Personnel

Benefits: - A single integrated system

- Improved processing

- Reduction of data entry

- Improved reporting

- Making use of the Departmental Payroll/Personne Information Model, the FBI system will employ the common data definitions and processing logic resulting in a single Department of Justice payroll/ personnel logical system physically operated at two sites (FBI and JMD)

	Task	Milestone	Start	End
3.1	Implementation	- Dual testing of new data base for payroll processing	1/87	10/87

	Task	Milestone	Start	End
		- Employee Thrift Savings Plan for new retirement system	1/87	10/87
3.2	Analysis	- Plan to incorporate Drug Enforcement Administration into new system	1/87	10/87

1985 DOJ FMS PLAN . . . . . Attachment A

INVENTORY OF DOJ FINANCIAL SYSTEMS/SUBSYSTEMS . . . . Attachment B

EXECUTIVE SUMMARY ----DECEMBER----

On April 5, 1985, the Department of Justice (DOJ) implemented a Financial Management System (FMS) Directive which prescribed the policy for establishing and managing a single, integrated FMS. The Justice directive fully embraces the objectives of OMB Circular A-127 and the other circulars and bulletins governing management of Federal information resources. On April 21, 1986, the Attorney General issued Order DOJ 2860.3A, The Department of Justice Internal Control and Financial Management Systems, which delegated to the Assistant Attorney General for Administration the authority to establish a single, integrated FMS within the Department, and to prescribe financial management system responsibilities in the establishment, maintenance, and evaluation of and reporting on the system.

Justice's FMS will continue the use of contemporary technology to achieve functional and organizational integration of financial information systems. It represents a key initiative in the Department's overall Management and Productivity program.

Justice's FMS program will minimize duplication and maximize utilization of systems development resources. The FMS will be supplemented by specific organizational subsystems only where truly unique requirements exist. A FMS Oversight Committee was established to plan the evolution of the FMS consistent with OMB objectives. The FMS plan is designed to:

(1) Provide necessary financial information to support all levels of management in all DOJ organizations;

(2) Integrate automated functions for accounting, budgeting, procurement, property (personal and real), payroll, and personnel;

(3) Account for all resources owned or managed by the Department;

(4) Apply a uniform financial information model throughout the Department;

(5) Store data on a common data base management system at each data processing center;

(6) Use shared software for single source input and processing; and,

(7) Maximize the use of off-the-shelf software which is maintained by a vendor for multiple federal users, where it is determined to be cost-effective.

The FMS will provide the opportunity for consolidating financial operations and systems management to the extent that can be cost-effective.

The Assistant Attorney General for Administration is the senior management official responsible for implementing and directing the FMS. The FMS planning process is a subset of Justice's Automated Information Systems (AIS) planning process.

The FMS plan requires DOJ-wide user involvement. A comprehensive planning structure has been established to insure involvement of all components. All six bureaus and the Justice Management Division have been designated as FMS segments. A segment manager has been appointed to represent the interests of each segment. All segment managers must ensure that all of the financial systems functions of their segments have been considered in any matter affecting the system.

The Justice segment managers comprise the Justice FMS Oversight Committee. The Committee is chaired by the Deputy Assistant Attorney General, Office of the Comptroller. The Deputy Assistant Attorneys General for the Office of Personnel and Administration and the Office of Information Technology are members of the FMS Oversight Committee. Within the Justice Management Division, each central staff hosts a working group to coordinate Department-wide issues and matters of interest to that staff's financial function. For example, the Financial and Accounting Working Group, which meets periodically, addresses such matters as financial policies and general ledger standardization. With this planning structure, the Department ensures full participation within each segment and full Department-wide involvement in each functional area.

The Justice FMS strategy calls upon the FMS segment managers to take lead roles in defining and designing those aspects of the system for which they possess a particular interest or expertise. For example, the Office of Justice Programs, the major granting organization, will define grant related requirements; the US Marshals Service has the lead role in the definition of requirements for seized and forfeited assets.

The software functions of the Justice FMS are classified for management purposes into three sets or tiers:

Tier I, Core Functions, such as general ledger processing, are functions common to all segments. The policies, rules, and data requirements with respect to the operation of each function must be the same. Software for core functions will be used by all DOJ components.

Tier II, Shared Functions, such as grant accounting and seized asset management, are functions that are performed by more than one but not all segments and are a primary responsibility of a particular bureau. Shared software will be used by all DOJ components which have activities classified as a shared function.

Tier III, Unique Functions, such as prison industries, are functions performed by only one major Departmental organization. DOJ components which have activities classified as unique may develop and operate independent modules.

The information model and requirements for core software (Tier I) will be managed by a central management organization of the Department. Core software will be maintained and enhanced in conformance with the information model.

The model and requirements for shared software (Tier II) will be managed by a lead bureau or division in coordination with affected organizations. Shared software will also be maintained and enhanced consistent with core software to the maximum extent practicable.

Unique software (Tier III) will be developed and maintained using common languages and conventions to maximize potential for later sharing. Also, non-core functions will be developed and managed through the FMS planning process.

The core and shared software will meet uniform standards for analysis, design, coding, testing, and operations within the scope of the servicing data center. Unique software will conform to the same standards to the extent practicable.

The Justice FMS will employ a multiple data center concept. The core application software and associated resources will be managed by the bureau or division in whose computer center the

software is operated. The selection of data base management systems and fourth generation tools will optimize the use of tools already available in the two principal DOJ data centers.

Justice presently operates two principal data processing centers; one by the Justice Management Division and one by the Federal Bureau of Investigation. The two sites will continue to service mission support systems which must be integrated with the financial and administrative systems of the mission activities. The main software technologies employed at these two sites are different. The Department will standardize the financial management systems at the two data processing centers by requiring that standard data definitions, policies, and procedures be employed. The multiple data center precludes the costly conversion of all mission support systems only to accommodate financial and administrative systems.

In line with the Office of Management and Budget's requirement that agencies use off-the-shelf software, where feasible, in modernizing their FMS, the Department has decided to use off-the-shelf software in the implementation of the DOJ FMS. Two types of off-the-shelf software are being employed. Off-the-shelf application software has been employed by the Federal Bureau of Investigation at its data processing center. The Justice Management Division will use off-the-shelf application generator software to achieve the objectives of its pilot system to support the remainder of the Department.

Justice has a pilot project to develop the Departmental financial information model. Clientele included in the pilot phase of the FMS are the 25 DOJ components currently serviced by the Justice Management Division. This enables the initial system to capture a broad range of financial requirements. It has the further advantage of utilizing a user base which has considerable experience with contemporary technology. These DOJ components have been utilizing fourth generation programming languages in operational financial systems for several years.

The DOJ plans to migrate the pilot FMS to the bureaus serviced by the DOJ data processing center (operated by the Justice Management Division) on an incremental basis. As core modules of

the pilot system are completed, the modules will be implemented by the bureaus on an as needed basis. The Department is implementing modules to service Departmental components in advance of the availability of the fully functional pilot. This strategy assigns primary responsibility for development of core modules to the Justice Management Division. Tier II (shared) modules will be developed by lead components under the Justice Management Division's direction.

All FMS project proposals with estimated development costs of $100,000 are reviewed centrally prior to the expenditure of funds to determine the potential for sharing or inclusion in the core system project.

The Department is in the process of developing an AIS Plan which addresses all Information Resource Management (IRM) components. The FMS Plan is a specific objective of this Departmental Plan. Integration of the FMS Plan with the DOJ AIS Plan represents additional evidence of Departmental conformance with the requirements of OMB Circulars A-123, A-127, A-130, as well as other Reform 88 initiatives.

BACKGROUND

DOJ FMS Strategic Plan

The DOJ FMS Plan submitted with the FY 1987 budget articulated a coherent set of planning policies and a Departmental strategy for accomplishing the objectives of OMB Circular A-127. The plan was developed in concert with all DOJ components and coordinated through the mechanism provided by the Financial and Accounting Working Group and the FMS Oversight Committee. It is a plan for the evolution of computer systems to be consolidated into an integrated Departmental system.

FMS Activities During FY 1986

FMS Working Group Activities

During the year, the Departmental Financial and Accounting Working Group (FAW Group) continued to meet on a regular basis to address common financial management issues and to further coordinate efforts related to the DOJ progress toward a single FMS. The following are financial management policies, procedures, initiatives, and activities that were addressed through the group:

- Government-Wide General Ledger Project. The FAW Group continued to participate in the Government-Wide General Ledger Standardization Project. The group reviewed and provided comments to the DOJ representative of the Department of Transportation Subtask Group. It also was the forum and mechanism for communicating activities of this effort to all Departmental organizations. Naturally, any government-wide standards established will be implemented in DOJ systems.

- Financial System Reviews. The group served as the initiation point for review of the Departmental accounting systems as required by the Federal Managers' Financial Integrity Act and the Cash Management Reviews as required by the Department of Treasury.

- Financial Project Improvements. The group developed a questionnaire for requesting financial system improvements. For interim project improvements of $100,000 or more, a mechanism was needed to ensure that all planned FMS projects are reviewed centrally for conformance with the DOJ FMS Plan.

- The Personnel and Payroll Data Online Access System (PERSPAY). PERSPAY is a Justice Management Division (JMD) developed on-line facility that provides access to the official personnel and payroll data of every organization. FAW Group members were briefed on the information available through the system, its use within the Department, and some of its functional capabilities. As a result, all DOJ segments serviced by the central payroll system have on-line access to their personnel/payroll data within the DOJ Central Payroll System.

- The Seizure and Forfeiture of Assets. Through the dissemination of information and the efforts of group members, (a) monies held by organizations responsible for the seizure of assets were effectively transferred to the appropriate fund of the custodian organization; and (b) a charter was developed and approved for the establishment of an Asset Forfeiture Management Information System Subcommittee. The committee is establishing the direction for a system which addresses all requirements of the investigative, seizing, litigating, and financial management interests of the Department.

- Employee Relocation Contracting. Three relocation contracts have been awarded within the Department: the DOJ contract, the FBI contract, and the U.S. Marshals Service contract. All DOJ components have the option to use any of these contracts. Each of these contracts is providing cross-servicing to DOJ components.

- Diner's Club Credit Card. This cash management initiative was first implemented by the JMD within the OBDs. Through the sharing of information, most of the thirty-one Departmental components are now using the Diner's Club Credit Card for the payment of travel expenses. Use of the Diner's Club Credit Card has substantially reduced

the amount of imprest funds required; has virtually eliminated problems connected with outstanding travel advances; and the use of and accountability for Government Transportation Requests has been all but eliminated. The Department is encouraging expanded use of the credit card to components' field offices and current non-users.

- Cashiers Draft Payment System. The DOJ was designated a pilot agency by Treasury for the Cashiers Draft Payment System. JMD was able to share its accomplishments with other Departmental components. The system has been implemented within other segments and has proven to be an asset to the Department. Some of the advantages of the system are: (a) reduced imprest fund monies outstanding; (b) improved control over travel advance issuances in field offices; and, (c) improved responsiveness to programs which required immediate payment of vouchers.

- GELCO Travel Services. In lieu of using local travel management agencies, the JMD has contracted with GELCO to arrange temporary duty travel and other travel related services on a nationwide basis. The contract provides for many services that are not offered by local travel agencies. The services are available to all Departmental components.

- FMS Data Call and Submission. An FMS data call was developed and issued to all DOJ FMS segments requesting information on all aspects of their present FMS environments. The DOJ segment responses to the data call provide an in-depth description of the Department's present FMS environment. The FMS Data Call is the mechanism used to obtain information on the existing financial management systems and the financial development/improvement projects within the Department. The 1988 FMS Data Call was specifically designed to obtain updated information on the Department's present financial system environment. Information in the following areas were requested from each major Departmental component: (a) personnel resources in the areas of systems policy, operations, maintenance, and developments/improvements; (b) current and proposed

services/product acquisitions; (c) hardware support; (d) currently used and proposed purchases of software; and (e) transaction volumes by functional area.

- Second Year Update to the DOJ FMS Plan. This plan is the update of the first five year plan which was submitted with the Fiscal Year 1987 budget request. The update was coordinated through the DOJ Information Resource Management planning process, the FMS Oversight Committee, and the FAW Group to ensure Department-wide user involvement.

- Department-Wide Regulations. One of the major objectives of the FAW group is the development and implementation of Department-wide regulations in lieu of separately issued component financial management policies and regulations. Through the FAW Group, representatives from each component have been appointed to a task group to revise the DOJ temporary duty travel regulations. The July 1, 1986 travel changes in subsistence allowances will be incorporated into the regulation. The task group will also develop a DOJ regulation for relocation allowances.

FMS Project Requests

Many of the components within the Department are operating under obsolete and inefficient financial support systems which results in unreliable financial data bases, the poor utilization of staff time, and the ineffective and untimely reporting of financial information to internal management and central management agencies. As a result, the Department has received several requests for financial system improvements from its component organizations.

Recognizing that components will have system or management requirements that must be addressed during the development of the DOJ pilot system (FAMIS), the Department established mechanisms for the review and approval of these interim system developments/improvements. All approved system developments/improvements, however, must be consistent with the DOJ FMS Plan.

The following actions have been taken to guide Departmental system developments/improvements toward a single FMS:

- Federal Prison System

  - Bureau of Prisons (BOP). In 1983, the BOP began development of their Trust Fund FMS using off-the-shelf software from Cullinet. After issuance of OMB Circular A-127 in 1984, it was determined that BOP should continue their development effort because (a) the soft-ware had already been purchased, (b) the software was one of the major commercially available financial management systems, and (c) the development of the DOJ prototype was not sufficiently advanced. In September 1985, the BOP solicited Departmental support to procure off-the-shelf software and equipment to replace their Inmate Deposit Fund System (a subsystem of the Trust Fund FMS). The Inmate Deposit Fund System is a financial function of Tier 3 (Unique Functions) of the DOJ FMS software inventory. As a unique function that will be performed only by the BOP, the purchase of Cullinet software for the Inmate Deposit Fund System was determined to be consistent with the DOJ FMS Plan, and was therefore approved.

  - Federal Prison Industries (FPI). The FPI developed plans for an Inmate Payroll System and the purchase of MSA accounting packages. After a review of the plan and a meeting with FPI, a memorandum of understanding was developed. The Inmate Payroll System was determined to be a part of the Tier 3 DOJ FMS software inventory. Therefore, approval was granted for development of a formal requirements analysis and preliminary systems design. Both the BOP and FPI are utilizing off-the-shelf software. Therefore, we have strongly encouraged them to coordinate and consolidate their FMS activities, and preferably to utilize the same off-the-shelf software.

- Drug Enforcement Administration (DEA). The DEA developed plans for implementing a Front End Processing System to its accounting system. Plans called for the system to be written in a data base management system (DBMS) user language that would have represented a major change to DEA's accounting system. Based on Departmental policy, all system upgrades are to be discontinued unless the

upgrade(s) is (are) in accordance with the DOJ FMS Plan. DEA's plan for a Front End Processing System was not supported because (a) the resulting system upgrade would not be consistent with the DOJ FMS policy to minimize the use of different 4GL software tools and DBMS's at the same data processing center, and (b) the plan did not provide for a DEA-FBI sharing arrangement as stated in the Department's DOJ FMS strategic plan. The DEA was advised that all DEA financial system initiatives should be concurred with by the FBI.

- Federal Bureau of Investigation (FBI). On October 1, 1984, the FBI initiated implementation of the MSA packaged software for General Ledger, Budgetary Control, and Accounts Payable. In August 1985, the FBI solicited Departmental support in obtaining OMB approval for procurement of additional MSA off-the-shelf software to automate their remaining financial functions: Purchasing, Fixed Assets, and Inventory Management. The Department and OMB determined that the purchase of additional MSA modules to automate the FBI's remaining financial functions was consistent with the DOJ FMS Plan and OMB.

- United States Marshals Service (USMS). The USMS has developed plans for a District Automation Project. In a meeting with the USMS, the project was discussed in relation to the DOJ FMS Plan. It was agreed that the USMS should continue to enhance their "front-end" processing to the Departmental FMS and that when the pilot FMS was developed the USMS would comply with the transaction level data requirements of the system. Recommended changes to comply with the DOJ FMS Plan were adopted, and approval of the project has been granted.

  The USMS has also developed plans for a Seized Assets Management Information System. The plans did not provide for a shared system development concept as required under Tier 2 of the DOJ FMS software inventory. The Asset Forfeiture Management Information System Subcommittee will work with the USMS in developing a Seized Assets Management Information System Plan that will be consistent with the DOJ FMS.

Accomplishments Under the National
Assets Seizure and Forfeiture Fund

One of the never, important program efforts of the Department which has major importance for financial management is the National Asset Seizure and Forfeiture Program. The program was created within the U.S. Marshals Service to centralize the management of seized assets, and to support the Administration's Organized Crime and Drug Enforcement Task Force initiatives. Some of the major responsibilities of the program are to provide funding and financial control for the maintenance and disposal of property, to provide specialized and timely property management, and to provide program and financial data that reflect the benefits to the government and operation of the program.

The USMS has the lead responsibility for this program which requires close cooperation with the FBI, DEA, INS, U.S. Attorneys, and Criminal Division. In order to coordinate activities of these organizations and to improve the financial management of the program, the following actions have been taken:

- A Departmental order has been drafted which addresses the financial management of seized and forfeited assets. The order has been reviewed by the sharing organizations, and comments received are being reviewed for incorporation into the order. After the appropriate comments are incorporated, the order will be forwarded through the DOJ directives clearance process for approval by the Attorney General.

- Cash (e.g., seized cash, forfeited cash, and sales proceeds) held by organizations responsible for the seizure of assets were effectively transferred to the appropriate fund of the USMS.

- An Asset Forfeiture Management Information System Subcommittee has been established to develop Department-wide information and accounting requirements. The Subcommittee has developed a data call to collect information on existing automated and manual systems maintained by the various components. The information will be used to determine the overall environment of the Department's asset seizure and forfeiture systems.

- Intensive reviews of the FBI, DEA, and USMS current seized cash management practices were conducted. The review was undertaken in accordance with the Department of Treasury Cash Management Review Guide. The results of the review have been provided to the Department of Treasury and to the seizing organizations.

Significant DOJ FMS Developments/Improvements

- The FBI is continuing with implementation of the MSA software. Three additional modules are being implemented.

- The BOP is implementing Cullinet's off-the-shelf software package for its Trust Fund activities

- The FPI has completed the requirements analysis and preliminary systems design of their Inmate Payroll System. They are now in the Detail Design phase of the project.

- The JMD (along with other DOJ components) is working on the development of the DOJ core tier software.

- The following progress has been made in the development of the Department's single payroll/personnel system:

  - The FBI has initiated development work on its portion of the Payroll and Personnel System. The contract calls for the system to incorporate the needs of the DEA, and for the system to be developed using the Departmental Information Model described in the next paragraph.

  - The JMD has awarded a task order to develop the DOJ Human Resource Management Information System (HRMIS) Model. The Information Model will be used by JMD and the FBI to accomplish a logically unified DOJ core payroll/personnel system.

- The travel payment functions of the Office of Justice Programs are now being provided by JMD under a cross-

servicing arrangement. The Department will continue to combine financial operations, functions, and systems where feasible and cost effective.

- Many of the manual processes of the Cashiers Draft Payment System have been automated. Some of the processes that have been automated include: (a) the printing of the drafts; (b) the receipt of information on draft clearances; (c) the direct transfer of information to the Justice Data Center; (d) payments to the third party; and, (e) the development of management reports. Under another new cross-servicing arrangement, the JMD, BOP, and INS are using this software in the operation of their Cashiers Draft Payment System.

- JMD and BOP are operating under the same Diner's Club travelers checks system. The sharing of these functions has resulted in Departmental cost savings in the area of systems development and maintenance.

FAMIS -- FMS Pilot

During 1986, the DOJ Pilot System (FAMIS) continued in accordance with the plan and our systems development methodology. A six month delay introduced by funding issues resulting from the Gramm-Rudman-Hollings Act resulted in the exercise of a contract option to proceed with the Preliminary Design portion of the project in April 1986 rather than in November 1985 as planned. Additionally, this phase proceeded at a slower pace than planned due to partial funding and due to the added emphasis from the Office of Management and Budget to fully examine off-the-shelf software prior to making a decision on the design strategy. Several commercial software packages were examined for implementation within the Department. The results of the review are provided in the section on "Plans for Implementation of the DOJ FMS."

In addition to the evaluation of commercial packages, the products from the first phase of the FAMIS contract (FMS requirements and the FMS Logical Model) were completed and distributed to Departmental components and several external agencies interested in the Department's systems development approach. The package was used by Departmental components as a basis of comparison to their FMS requirements.

Departmental Payroll/Personnel System

The Department's strategy for development of a single payroll/personnel system is the same strategy as that used in the development of other FMS functions. There will be a generic Departmental Core Information Model which will be an independent logical system definition of the Departmental core personnel/payroll requirements. To the extent possible, it will consist of data element definitions and standards, reference tables, edit criteria, and computational formulas. Rules or instructions needed to perform the functional processing of basic personnel actions and salary payments will also be included. The Information Model will be maintained by a single organization in JMD and used by both the FBI and JMD Data Centers to guide standardized implementation of the core personnel/payroll functions under their respective data base management systems. It will be accessed by both JMD and the FBI by means of their separate management information systems.

The JMD management information system, HRMIS, will be designed to process personnel actions and salary payments and to store and provide access to payroll and personnel information used in the following activities: position management and classification, budget, EEO and affirmative action, personnel security support for the OBDs, and the tracking of data on applicants and other non-DOJ personnel such as contractors and vendors who have been granted clearances and/or building passes. The Resource Management System of the FBI will provide automated support for the management and control of the personnel, financial, and statistical resources. It will include the functions of position management, applicant tracking, employee benefits, performance appraisal, recognition and awards, and EEO.

Thus far, the following have been accomplished in the development of the Information Model:

- Obtained agreement within the Department to develop a payroll/personnel system that allows both the JMD and the FBI to access a centrally-maintained Information Model to process personnel actions and salary payments.

- Obtained OMB's concurrence in the Department's approach to developing the Information Model, which will provide a logical model, and the standards and conventions to be used in any Federal payroll/personnel system.

- Defined 480 standardized data elements as the initial step in the development of the Information Model.

PLANS FOR IMPLEMENTATION OF THE DOJ FMS

Design Alternatives

The Department examined several alternatives for implementation of the DOJ FMS. Such alternatives included custom development of a new system, acquisition of off-the-shelf software package(s), and modification of the current financial systems.

Selected Alternatives

After careful consideration of the existing conditions within the Department (e.g., the absence of funding, the diversity of the user community, organizational servicing cost issues, absence of fully functional vendor software, and the existence of modern fourth generation language and DBMS tools), the Department has decided to use off-the-shelf software as a fundamental tool in achieving a single DOJ FMS. Two types of off-the-shelf software will be used: off-the-shelf application software and application generator packages/tools. Off-the-shelf application software is being installed at the FBI operated data center, and commercial application generation systems/tools will be used to enhance the JMD's current financial systems to achieve the objectives of the DOJ pilot system (FAMIS).

Rationale for the Decision

Use of Off-the-Shelf Application Software Packages

The Department examined off-the-shelf application packages and applied them where it made sense, notably at the FBI. Because of the FBI's organizational structure, the state of its previous FMS, and other factors, the package solution was appropriate to address FBI FMS needs. Accordingly, off-the-shelf software was acquired and continues to be installed.

Use of Commercial Application Generator Packages

The decision to modify the current FMS within the JMD using commercial application generator packages was based on the results of the commercial application package evaluations, funding, and other technical factors, as explained below.

- Evaluation of Application Software Packages. The products from the first phase of the FAMIS contract (FMS requirements and the new FMS Logical Model) were used as the basis of a Request For Information (RFI) on commercial FMS packages, and (consistent with the DOJ FMS Plan policies) were submitted to vendors whose packages are presently operating within the Department: MSA and Cullinet.

  An evaluation team which included members from three bureaus and JMD's technical and operating staffs analyzed responses and documentation provided by the vendors. The team was also supported by the FAMIS contractor, Price Waterhouse, who conducted an independent review and a selected in-depth investigation of vendor responses and documentation. During this period, the project team became aware of significant progress in financial management systems offered by two other vendors -- AMS and CDSI. As a result, these vendors were also invited to respond to the RFI and were included in the assessment of the feasibility to utilize a commercial application package as the basis for the DOJ FMS Pilot Physical Design.

  As a result of the Price Waterhouse validation process, the study showed that the Department could expect at best about 61% of its financial system requirements to be satisfied by a software application package with no modification to the package. The remaining 39% could only be satisfied with new program logic, modification of the existing program logic, or redefinition of data elements. With a functional gap of this magnitude and the consideration of other factors (e.g., cost, vendor support, package maintenance, impact on existing systems and procedures, etc.), this alternative was not deemed viable.

- Funding of the DOJ FMS Pilot. Since the inception of the FAMIS project, full funding has not been available through Congressionally approved appropriations. As a result of the funding environment, the Department has had to redirect monies to continue its systems development efforts. In Fiscal Years 1984 and 1985, the FAMIS project was funded from a pool that was specifically set aside for implementation of projects under the JMD AIS Plan. In Fiscal Year 1986, although there was no central pool of appropriated funds, some funds were earmarked for limited continued development of FAMIS.

  Large-scale systems development efforts such as FAMIS require assured funding and other resource support over multiple years in order to accomplish the ambitious goal of consolidated Departmental systems. In 1986, during the Preliminary Design Phase, funding for FAMIS was REDUCED TO THE MINIMUM AMOUNT required to continue to make progress. Current resource commitments appear to be even more constraining. Although the Office of Management and Budget supported the Department's request for full funding for Fiscal Year 1987, only a small portion of the funds requested were made available. As a result, funding became a major consideration in developing the design alternative for the FAMIS project.

- Technical Factors. As stated above, other technical factors were considered in conjunction with evaluating application software packages. The following are some of the technical and cost factors considered.

  - Technical Considerations

    (1) Package Technology. Most of the application software packages examined were written in third generation programming language. The use of such technology is in direct conflict with the objectives of OMB Circular A-127, OMB Circular A-130, and the DOJ FMS Strategic Plan, all of which require the use of the most contemporary technology in the development of financial systems. In addition, there are many problems that result in the maintenance of cobol-based applications as opposed to those written in a

fourth generation language. Software maintenance productivity gains are reported as high as 25 to 1 in maintaining fourth generation language code versus the third generation language used by the packages.

(2) Interoperability. Generally, the application software packages operate in a closed environment; thereby constraining the manner in which they can interact and exchange information with other systems/applications. This is a very important factor for large agencies which require substantial integration among programmatic support systems and financial administrative systems.

(3) Flexibility. Because application software packages are maintained by the vendor, the modification of application software package programs in response to regulatory or policy changes is more difficult to achieve. There would be little if anything the Department could control to maintain or customize the software package since vendor support would be essential. This flexibility requirement is most essential when a large agency is using a single system to support numerous components. The use of a software package would require the Department to give up its ability to respond quickly to system policy changes and to the peculiar requirements of customer organizations.

(4) End-User Computing Support. The application software packages did not possess good ad hoc reporting capabilities or end-user computing support. Our current user environment includes clientele who are active developers of information tools. Users write their own retrieval programs and establish supplemental files within financial data bases to update these files. The lack of end-user computing support would be a major deficiency for Justice in the development of the total FMS.

(5) Distributed Processing. The application software packages were targeted exclusively for mainframe processing while the present user community abounds with personal computers. Today, the users' standards for system performance is a personal computer stand alone program, such as LOTUS 1-2-3. Anything less is unsatisfactory. Therefore, the FMS must provide for distributed processing that utilizes the capabilities of the personal computer. Distributed processing reduces end-user cost and improves productivity. Industry literature and our user trends clearly show the direction towards distributed processing.

- Cost Considerations. Direct and associated costs that were considered in the installation of a commercial application software package are:

(1) The package acquisition cost;

(2) The cost to [illegible]fy the software package;

(3) Data conversion;

(4) Procedural "accommodations" to "jury-rig" the package to work;

(5) Organizational cost issues, such as training and the cost to replace or convert associated user developed management information system servicing facilities supported under the present system; and,

(6) The cost of restructuring off-the-shelf documentation to support Federal FMS operations. Current vendor documentation must be extensively interpreted and modified for the Federal user.

Accomplishing the Financial Systems Modifications

Use of the evolutionary approach to achieve the objectives of FAMIS may require a longer development timeframe to meet 100% of

the DOJ requirements. However, subprojects will be established and accomplished faster than under the previous plan. Some of the initial objectives of this development approach include:

- o Addressing the most important deficiencies in the present financial systems;
- o Establishing a common technological environment;
- o Extending services to bureaus of certain functional modules; and,
- o Establishing guidelines to develop a revised schedule of present system enhancements with priorities reflecting needs of our users in a common development environment.

Resources under this approach will be applied on an as available basis; that is, after the needs of the day to day operations have been satisfied. Unfortunately, needs of daily operations vary immensely in the kind and number of resources required to address them. Thus, it is difficult to apply a sustained level of resources to any major development effort while continuing to support operational requirements. In order to make resources available for system enhancements, it may be necessary to eliminate all support activity for the operational systems except for remedial maintenance or for those enhancements directed by statute or regulation. We realize that this strategy will be extremely difficult to adhere to in the face of user requests for minor modifications to the operational systems. However, we have implemented a comprehensive automated project management system to ensure that all discretionary resources are applied to the objectives of OMB Circular A-127.

This approach affects the underlying development strategy in another way. Because fewer resources are available, the development must be approached in smaller "chunks". That is, in more finite functional increments. Each assignment must be successively reviewed every time a new function is completed. In a major system effort, such as the FAMIS project initiative, this time-consuming task requires significant management oversight.

The evolutionary development strategy possesses advantages other than lower up front costs. Because the tasks are lesser in magnitude and scope, they can be accomplished individually in a shorter time period. Operational implementation of completed

tasks can be initiated more quickly, with the corresponding benefits accruing to the organization more quickly. Implementation of new or improved system functional capabilities on a continuing basis tends to promote to users the view that the system plans are real, the results are tangible instead of theoretical, and the use of the changing system is an ongoing activity which successively addresses some of the major problem areas in systems replacement, that is, conversion and training.

This same strategy will also be used to develop the HRMIS project. To meet the HRMIS requirements, the Department will modify, enhance, and expand the scope of the existing payroll/personnel system using modern technology; i.e., commercial application generator packages and replacing third generation language code only where it is determined to be cost effective.

Migration to the DOJ Pilot

The previous plan (1985 FMS Plan) envisioned a sequenced migration of bureaus to the DOJ FMS over a number of years. This approach was based on the existence of a total operational DOJ pilot. Absent a total operational pilot, no scheduling estimates can be precise and any delays in achieving full implementation of the pilot will result in corresponding delays in migration schedules. Therefore, the Department is migrating certain components to the existing systems for particular FMS functions in advance of the availability of the functionally complete pilot. This will result in easier, more efficient, and cost-effective conversion to the single DOJ FMS.

UNITED STATES DEPARTMENT OF JUSTICE
OFFICIAL FILE COPY

SEP 11 1986

Mr. William F. Madison
Regional Administrator
General Services Administration
7th & D Streets
Washington, DC 20407

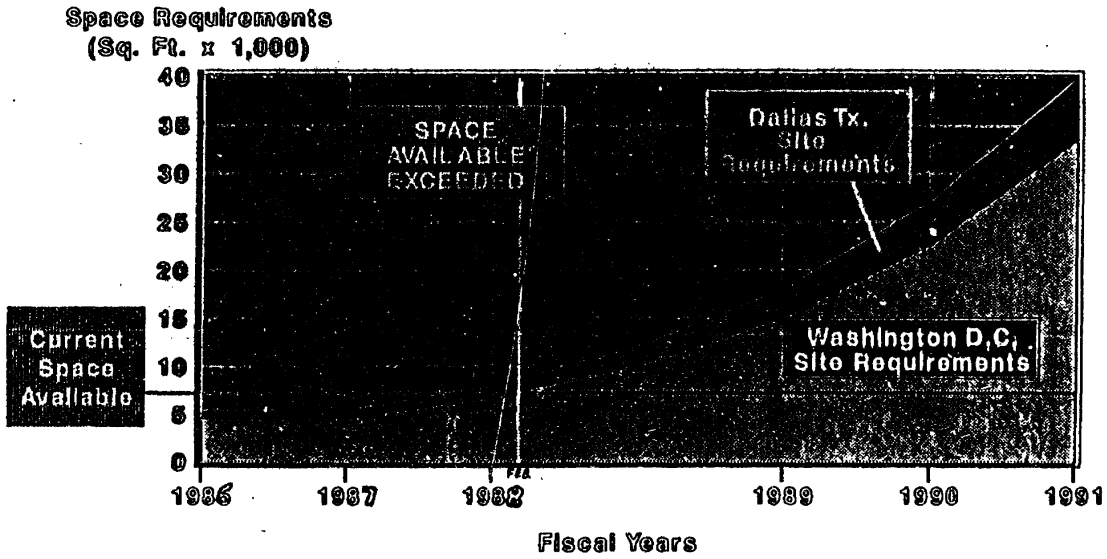
Dear Mr. Madison:

I am writing concerning a critical space-related issue which was addressed in our recent Memorandum of Understanding. This issue is the urgent need for a replacement facility for the Department's Justice Data Center-Washington, which is presently housed in the Chester Arthur Building at 425 Eye Street, NW., Washington, DC. As I have previously written to you, and as we discussed in our recent meeting, the mechanical, electrical, and architectural limitations of the present building are rapidly rendering this facility incapable of functioning as a viable data center. We have been working with members of your Real Estate Division to identify a relocation site for the data center, with a permanent site in a government-owned building being the optimum solution for both of our agencies. Such a site, however, does not appear imminently available. In the interim, steps must be taken immediately to ensure that the Department's central data processing capability is maintained until the permanent site is ready.

As members of my staff have discussed with the management of your Real Estate Division, the Department is specifically requesting that the General Services Administration initiate the required actions to enter into a short-term lease for the Control Data Corporation (CDC) data center located on Seven Locks Road in Rockville, Maryland. The lease should be for five years, with a termination option after three years or a three year lease with two one-year options. Your Real Estate Division has estimated that such a lease will require four to six months to award. It is essential that the relocation of the Department's data center is effected at the earliest possible date, both to ensure the continuity of service to the Department's law enforcement organizations and to preclude the need to invest substantial capital resources into the Chester Arthur Building.

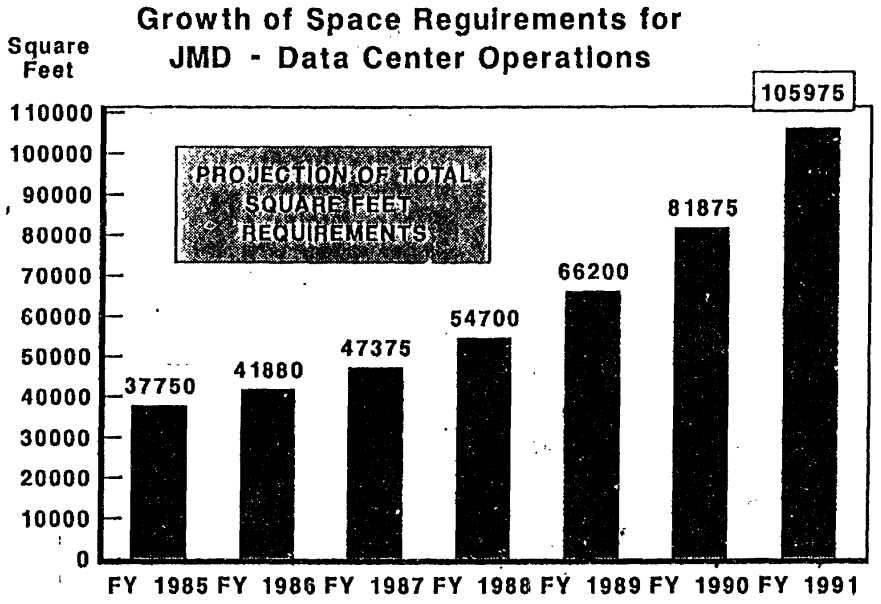
ATTACHMENT #1

My staff is prepared to begin working immediately with members of your staff to modify or supplement our space requirements package, forwarded to the Real Estate Division on May 12, 1986, to make it acceptable for the lease acquisition of the CDC site in Rockville. Your staff may call Philip M. Zeidner on 633-2948 to arrange for a planning meeting. Let me thank you for your assistance and cooperation on this high priority project, and for your invaluable and continuing assistance on the many critical space-related issues we are jointly pursuing at this time.



Sincerely,

/s/



W. Lawrence Wallace
Assistant Attorney General
for Administration

ATTACHMENT 3

Facility Related Problems For The Existing
Justice Data Center-Washington (JDC-W)
In The Chester Arthur Building (CAB)

The CAB was designed and constructed as an office building, and as such does not have the necessary architectural characteristics for the construction of a state-of-the-art data center. The floor-to-ceiling height of 10 feet severely limits the height of the space under the raised floor. This condition causes the cables and piping to interfere with the flow of the chilled air required to cool the computer equipment. In addition, there is not enough raised floor to ceiling height within the data center room to allow the dissipation of heat ejected from the ADP equipment.

Additional CAB Disadvantages:

-- The CAB's architectural limitations will not allow the construction of an efficient state-of-the-art data center;

-- Arbitrary restrictions made by the building owner prevents the government from performing timely alterations and prevents placement of equipment in the most favorable penthouse and roof locations.

-- Increased rental costs beginning in FY 87 at the CAB.

-- The electrical feed to the computer room would require extensive upgrades to correct electrical code violations, upgrade its size, and add additional ground fault protection devices.

-- Amortization period for construction may require a longer term lease than OIT desires in this building;

-- The air conditioning system is showing signs of its age and breakdowns are occurring more frequently. Since there is not any back-up system, each air conditioning failure negatively impacts the data center's operations.

-- Architecturally, there is limited potential for further expansion.

-- Serious security problems exist in this building, both within the building and outside the building; (exagerated by D.C. Governments' presence in the CAB building.)

ATTACHMENT #4

-- Construction of the expansion space would inevitably cause repeated interruptions of JDC-W online operations.

For these reasons, OIT considers expansion of the CAB building to be an unrealistic measure and continues to seek a permanent relocation site for the JDC-W.

GOVERNMENT ESTIMATE FOR OPERATING EXPENSES DURING THE ACTUAL MOVE OF THE JDC-W FROM CAB TO THE NEW ROCKVILLE SITE (FY 87 FUNDS):

	ITEM	COST
1.	Transfer of six Amdahl CPU's	$250,000.
2.	Transfer of Vion disk drives	$250,000.
3.	Transfer STC storage devices	$150,000.
4.	Transfer of front-end processor by COMTEN	$200,000.
5.	New cables	$700,000.
6.	Transfer of IBM, 3M, Pillar converters, etc.	$200,000.
7.	Equipment redundancy costs	$175,000.
8.	Personnel moves	$ 75,000.
	Project Grand Total =	$2,000,000.

ATTACHMENT #5

Government Estimate For Upgrading and Altering
The Rockville CDC Site (Capital Expenses in FY 88)

I.	New Environmental Support Equipment	
	Furnish and install an additional 1,000 KVA rotary UPS system, complete, including 15 minute battery backup.	$500,000.
	Furnish and install four 1,000 KVA diesel generators, complete, including fuel tank and security enclosure.	$680,000.
II.	Renovations To Existing Facility	
	Remove the existing 18" raised floor system; install new 30" substructure pedestals and heads; reinstall the existing bolted stringer supports and 2'x 2' floor panels.	$400,000.
	. Extend A/C piping (drains, refrigerant, water), extend electric feed, extend alarm and control wiring.	$ 35,000.
	. Install new access ramps and steps.	$ 26,000.
	. Raise large fire doors and alarm wiring to new floor height.	$ 14,500.
	. Raise office entry doors.	$ 8,500.
	. Demolish office partitions mounted on existing floor.	$ 4,000.
	. Relocate under floor piping, alarms, electric feeds as needed.	$ 50,000.
	Add ground fault protection at all main breakers and at electrical branch circuit breakers.	$330,000.
	Replace air conditioner units which are determined to be beyond their useful life cycle or are inefficient.	$105,000.

ATTACHMENT #6

Convert pneumatic A/C controls to electronic controls.	$ 18,000.
Reconfigure existing offices as needed.	$ 60,000.
III. Planning	
Architectural and electrical concept study.	$ 50,000.
Renovation design (architectural, mechanical, electrical, plumbing, structural).	$ 50,000.
"GSA" administration, inspections, and construction management fees.	$100,000.
IV. Telecommunications	
Equipment and installation of the Justice Telecommunications Network for Network Control Center and Management Facility.	$600,000.
Site preparation for Network Control Center.	$150,000.
Additional front-end Comten 3690 and message switch.	$150,000.
Parallel communication facility with custom switch arrangement for transition.	$100,000.
V. Security	
Security access control system.	$159,000.
Environmental, fire/safety, and central security monitoring system.	$410,000.
Project Grand total =	$4,000,000.

Justice Computer Service
Justification For Rockville Site Enhancements

The proposed Rockville location for the Justice Computer Service (JCS) currently houses a high quality, commercial data center, which offers significant improvements to the Department's existing facility. Nonetheless, there will be a number of enhancements required to improve reliability, enabling the data center to support the life and property systems of the Department of Justice's law enforcement mission which requires a data center that can operate without failures, 24 hours-a-day, 7 days-a-week.

The Rockville location has a 3200 KVA uninterruptable power supply (UPS) system which should be expanded to a 4200 KVA system. The UPS system filters out electrical impurities generated by the utility company and provides clean, steady current to the highly sensitive computer equipment. The UPS system also has backup batteries that will provide temporary electricity for 10 minutes in the event of a power outage. The battery backup either allows time for an orderly shut down of the data center without the loss of data or provides electrical power to the data center until (optional) diesel generators are started and reach the optimum RPM's to generate the necessary electricity.

In order to guarantee data center availability for power outages in excess of 10 minutes, it is necessary to obtain and install diesel powered generators to provide electricity for the central processing units and their peripheral equipment, teleprocessing equipment, air conditioning, lighting and other environmental support facilities. The necessary electrical switch gear, diesel fuel storage tanks, enclosure to house the equipment and other requirements to operate this backup source of electrical power will have to be procured and installed. The diesel generators are critically needed to ensure that the data center is not affected by lengthy utility related outages similar to an 8 hour outage on February 23, 1987, caused by downed power lines and adverse weather conditions.

The existing height of the raised floor is only 18 inches above the concrete floor of the building. This space is not sufficient to house the necessary cables, conduit, connectors, water lines for air conditioning (A/C) units, and the under floor air supply plenum (duct) which are required to operate a facility of this size and complexity. In 18" raised floor applications, large bundles of data cables, electrical wiring, telephone connections, and A/C piping must be installed on top of each other in several key areas of the data center, creating an 18" solid mass which leaves no room for the under floor air plenum.

For these reasons a 30" raised floor is the optimum solution that will allow up to 18" of cabling, etc., and still provide adequate room for air distribution via the remaining 12" under floor air plenum space. Raising the floor from the existing 18" height to the optimum 30" height will involve raising the floor another 12 inches, necessitating new floor supports, extending plumbing and electrical connections on the floor mounted A/C units, the modification of entrances to the area and moving electrical, telephone and other utility items that may be on pillars and walls.

The electrical feeders that provide power to the building are properly sized to serve our current and future electrical needs. However, the Department's experiences have shown that optional ground fault protection must be installed at numerous points in the electrical distribution system to isolate defective equipment and prevent it from disrupting the power distribution to the balance of the data center's critical operations.

In fiscal year (FY) 1988, the Department will establish a Justice Telecommunications Network (JTN) consisting of a node and network control facility at the Rockville, Maryland site. The project will entail planning, site preparation, training, and equipment acquisition for the node, network control, and message switching devices. In addition, we will fund a special switching arrangement from the telephone company to provide the capability to instantaneously switch from the new site back to the existing Chester Arthur Building network control for back-up. Once a successful cutover is made, the switching arrangement will be discontinued. Based on our current planning, six months of maintenance will be required between March and September of 1988.

As recommended in the Justice Management Divisions Audit Report on ADP Security and in the MITRE study of our current security program, a comprehensive security program is needed to protect sensitive data from unauthorized access. In order to regulate physical access into the data center an access control security system must be installed that would include a microprocessor, photographic equipment, card readers, etc. to ensure that only authorized personnel are permitted to enter. Additionally, monitoring systems must be installed to monitor and control environmental, fire/life/safety, and central security concerns.

In addition to the previously listed items, there are always modifications that a new tenant requires in a building. Among expected modifications are; office realignment and construction, telephone and data cable installations, and other changes that will be discovered only after a closer evaluation by the technical staff of what is actually available.

FEES AND EXPENSES OF WITNESSES

Mr. SMITH. We will now hear testimony concerning the Fees and Expenses of Witnesses appropriation.

[The justification follows:]

Fees and Expenses of Witnesses

Summary Statement

Fiscal Year 1988

For the Fees and Expenses of Witnesses appropriation, the Department is requesting a total of $37,359,000 for 1988, all of which shall remain available until expended. This request represents a decrease of $14,828,000 from the 1987 appropriation anticipated. This decrease reflects the proposed transfer of the Protection of Witnesses activity to "Salaries and expenses, U.S. Marshal Service".

The purpose of the Fees and Expenses of Witnesses appropriation is to pay the fees and expenses of witnesses: (1) who appear on behalf of the government in all cases in which the United States is a party; (2) who are appointed by the Court under Rule 706 of the Federal Rules of Evidence; and, (3) who are called to present factual testimony on behalf of Court-designated indigent criminal defendants. In addition, this appropriation pays compensation to individuals victimized by persons provided protection under the Witness Security Program. This appropriation also pays fees to physicians and psychiatrists who, upon order of the court, conduct mental competency examinations to determine if accused individuals are mentally competent to stand trial and/or were mentally competent at the time of the offense.

The Fees and Expenses of Witnesses appropriation contains two budget activities: Fees and Expenses of Witnesses and the Victim Compensation Fund.

1. Fees and Expenses of Witnesses: Resources provided for this activity are used to pay all fees and expenses associated with the provision of testimony on behalf of the Government. Specifically, there are two types of witnesses that are compensated under this activity. Fact witnesses testify as to events or facts about which they have personal knowledge. These witnesses are paid a statutorily established rate of $30 per day plus reasonable amounts for travel and certain other costs associated with their appearance. Expert witnesses provide technical or scientific testimony and are compensated based on negotiations with the government attorney who is responsible for the case. Also, this activity pays the fees of physicians and psychiatrists who examine accused persons upon order of the court to determine their mental competency. An increase of $1,500,000 is requested for this activity. The legal divisions and the U.S. Attorneys are requiring a greater number of expert witnesses as a result of significant increases in the number of cases presented and the degree of complexity involved.

2. Victim Compensation Fund: Section 1208 of the Comprehensive Crime Control Act (Title II of P.L. 98-473) established a Victim Compensation Fund (18 U.S.C. 3525). The Fund is used by the Attorney General to "pay restitution to, or in the case of death, compensation for the death of any victim of a crime that causes or threatens death or serious bodily injury and that is committed by any person during a period in which that person is provided protection under this chapter." In the case of death, an amount not to exceed $50,000 may be paid to the victim's estate. Moreover, the act authorizes payment of an amount not to exceed $25,000 to the estate of any individual whose death was caused by a protected witness before the enactment of this law.

Fees and Expenses of Witnesses

Justification of Proposed Language Changes in Appropriation Language

The 1988 budget estimates include the proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Fees and Expenses of Witnesses

For expenses, mileage, compensation, and per diems of witnesses and for per diems in lieu of subsistence, as authorized by law, including advances; [$52,187,000], to remain available until expended.[, of which not to exceed $550,000 may be made available for the planning, construction, renovation, maintenance, remodeling, and repair of buildings and the purchase of equipment incident thereto for protected witness safesites]. $37,359,000

(5 U.S.C. 503(b), 5537, 5751; 18 U.S.C. 3495-96, 3525, 4203, 4241, 4242; 28 U.S.C. 524, 1783, 1821, 1825, 1915, 1922; 31 U.S.C. 3324; Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591 section 101(b).

Explanation of Changes

The language change identifies a transfer of language concerning safesite facilities to "Salaries and expenses, U.S. Marshals Service", along with the funding for the Protection of Witnesses budget activity.

5. Mental competency examinations...	301	...	-301	...
6. Victim compensation fund.....	575	...	...	575
Total.....	34,676	17,511	...	52,187

Congressional Appropriation Action

The Congress denied the Department's 1987 proposal to transfer the Protection of Witnesses activity to "Salaries and expenses, U.S. Marshals Service".

Reprogrammings

The reprogramming reflects the consolidation of three similar-in-nature budget activities into one distinct activity. Fact Witnesses, Expert Witnesses and Mental Competency Examinations are combined in Fees and Expenses of Witnesses. The appropriate reprogramming notification was submitted to the Congress on December 8, 1986.

1/Funding for this budget activity is proposed for transfer to the appropriation, "Salaries and expenses, U.S. Marshals Service" in fiscal year 1988.

Legal Activities

Fees and Expenses of Witnesses

Justification of Program and Performance

Activity Resource Summary
(In thousands of dollars)

	1987 Enacted	1988 Base	1988 Estimate	Increase/Decrease
Activity: Fees and Expenses of Witnesses	$34,101	$35,084	$36,584	$1,500

Long-Range Goal. To provide funding for payment of fees and related expenses incurred by those individuals who provide factual, technical or scientific testimony on behalf of the United States or court designated indigents, as provided by law. Funds provided for this activity also guarantee the right of accused persons to a fair and impartial trial by ensuring that the accused is mentally competent to stand trial and that the court has testimony regarding the mental competency of the accused at the time of the offense.

Major Objectives.

1. To provide an adequate number of expert witnesses for the United States when legal proceedings require testimony of a scientific or technical nature.

2. To provide reasonable compensation for expert witnesses at rates established by the Attorney General or the Assistant Attorney General for Administration, pursuant to 28 U.S.C. 524.

3. To provide adequate resources to compensate fact witnesses who testify on behalf of the government for the expenses associated with attendance at legal proceedings. The court-attendance fee paid to fact witnesses is set by law (28 U.S.C. 1821). As a result of Public Law 96-346 (September 10, 1980), the amounts authorized for travel, per diem and mileage are set by regulations governing official travel by federal employees and promulgated by the Administrator of the General Services Administration.

4. To provide adequate resources to compensate fact witnesses utilized by those defendants designated as indigent by the courts. Expenses are paid to those witnesses who appear in criminal proceedings in federal court for the indigent defendants.

5. To provide for the fees and expenses of physicians or psychiatrists who perform court-ordered examinations to determine the mental competency of an accused person, pursuant to 18 U.S.C. 4241 and 4242.

Base Program Description. This program provides for payment of fees and expenses of expert witnesses who appear on behalf of the government when scientific or technical expertise is required in the prosecution or defense of a case. The pursuit of complex litigation by the Department would not be possible without qualified experts to testify and to refute the non-legal particulars of individual cases. The testimony of expert witnesses is essential to the successful outcome of such litigation. While a wide array of specialized disciplines are involved in the Department's litigation, experts from certain disciplines are utilized extensively. For example, approximately sixty percent of expert witnesses used by the Department in 1986 were either physicians, psychiatrists, appraisers, engineers, or economists. Also, the testimony of fact witnesses is used in court proceedings by the Department's legal divisions and the U.S. Attorneys. Fact witnesses are used primarily in criminal proceedings where the defendant is accused of violating federal law. Fees and expenses paid to witnesses are intended to defray the costs of appearing to testify and are set by law and/or regulation. Further, the importance of this program is underlined by the need to protect the rights of accused individuals. Courts often order the government to pay the costs associated with competency examinations conducted by physicians or psychiatrists. These examinations are performed in an attempt to determine whether an accused person is mentally competent to stand trial and/or was mentally competent at the time of the offense.

Accomplishments. This activity provided sufficient funds to allow adequate testimony on behalf of the U.S. Government by fact and expert witnesses. This activity also provided sufficient funds to ensure the protection of the rights of accused individuals through the performance of mental competency examinations.

Program Changes.

This level of funding will provide sufficient resources to enable the litigating organizations within the Department to utilize the services of an increased number of expert witnesses to testify on behalf of the government. The need to use expert witnesses has grown steadily in recent years. This growth is projected to increase further in 1988.

A major reason for the projected increase in the use of expert witnesses is the increasing number of cases involving complex and technical issues. Opposing parties continue to employ expert witnesses having access to highly sophisticated techniques of data collection and analysis. To counter the testimony of these individuals effectively, government attorneys must have the ability to hire competent expert witnesses to support their position. The costs of collecting the information used as testimony have accelerated rapidly. These increased costs, as well as competition for highly qualified expert witnesses, have led to a steady increase in the fees charged by such experts in recent years and correlates to the increased complexity of the Department's caseload.

Funding at the requested level will allow the government to utilize the vital resources provided by expert witnesses in an effort to enforce the laws of the United States and to defend the government in lawsuits brought against it.

The following chart represents estimated 1987 and 1988 resource requirements by organization, as well as actual 1986 obligations.

Expert Witness Requirements -- by Organization
(In thousands of dollars)

Organization	1985	1986	1987	1988
U.S. Attorneys	$4,936	$4,506	$5,047	$5,246
Land and Natural Resources Division	2,781	4,211	4,700	4,901
Civil Division	2,600	3,629	3,688	4,224
Tax Division	1,502	1,611	1,332	1,875
Civil Rights Division	917	1,149	1,100	1,337
Antitrust Division	238	244	290	284
Criminal Division	156	360	225	419
Total	13,130	15,710	16,382	18,286

Note: Amounts shown for 1987 and 1988 indicate the growing demand of the various user organizations on expert witness resources. The Department realizes that certain budget constraints will be needed to remain within funding limitations already established for 1987.

	1987 as Enacted	1988 Base	1988 Estimate	Increase/Decrease
Activity: Victim Compensation Fund	$575	$575	$775	$200

Long-Range Goal. To pay restitution, or in the case of death compensation for the death, to any victim of a crime that causes or threatens death or serious bodily injury that is committed by a protected witness.

Major Objectives:

To provide compensation to those individuals, or, in the case of death, to the individual's estate, who are victimized by a protected witness, as authorized by Section 1208 of the Comprehensive Crime Control Act of 1984 (Title II of P.L. 98-473), enacted October 12, 1984.

Base Program Description. This program provides resources to compensate individuals who are victimized by a protected witness. The Fund was established in 1985 with funds provided in the 1985 Supplemental Appropriations Act (P.L. 99-88) and is authorized to be appropriated $1,000,000 annually to make payments to victims of crimes committed by a protected witness. The Department currently estimates eligible claims will fall short of the $1,000,000 authorized in 1988.

Restitution will not exceed $50,000 for those victimized since the establishment of the Fund. Restitution not to exceed $25,000 shall be paid to the estate of victims killed as a result of crimes committed by persons who have been enrolled in the Witness Security Program if such crimes were committed prior to enactment of P.L. 98-473.

Accomplishments. The Department has provided adequate compensation to those victims who have been identified, submitted appropriate claim information, and were found eligible to receive benefits.

The Criminal Division has promulgated guidelines for identifying and notifying potential claimants, reviewing the claims, and making payments from the fund.

Program Changes: The Criminal Division has indicated that there will be an increase in the number of eligible claims against this Fund. The requested level of funding will allow the Department to process those additional claims, as well as pay those compensable claims submitted in prior years.

Justification of Adjustments to Base
(In thousands of dollars)

Transfers to and from other accounts:	Amount
1. Transfer to U.S. Marshals Service..... This represents the proposed transfer of the Protection of Witnesses activity to "Salaries and expenses, U.S. Marshals Service".	-$17,511
Uncontrollable increases:	
1. Locality based per diem..... Public Law 99-234 authorized a new locality based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $458,000 is requested to meet the expected increase in total travel requirements.	458
2. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.	525
Total uncontrollable increases.....	983
Total adjustments to base.....	-$16,528

OPENING STATEMENT

Mr. SMITH. Mr. Flickinger will continue to testify on behalf of this appropriation. Do you have a statement?

[The prepared statement of Mr. Flickinger follows:]

DEPARTMENT OF JUSTICE

FEES AND EXPENSES OF WITNESSES

STATEMENT OF THE ACTING ASSISTANT ATTORNEY GENERAL FOR ADMINISTRATION, HARRY H. FLICKINGER BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am also pleased to appear before you in support of the 1988 budget request for the Fees and Expenses of Witnesses appropriation. This appropriation is used by all of the Department's litigating organizations for the payment of fees and expenses of fact and expert witnesses, and for the payment of expenses associated with mental competency examinations. Through the end of 1987, the appropriation will also be used by the U.S. Marshals Service to pay the expenses associated with the protection of witnesses and their dependents. The 1988 request for the appropriation is $37,359,000, a decrease of $14,828,000 below the 1987 appropriation of $52,187,000.

The 1988 request includes a program increase of $1,500,000 for the Fees and Expenses of Witnesses activity. This activity is the result of a previously approved reprogramming which consolidated the Expert Witnesses, Fact Witnesses and Mental Competency Examination activities. Notification of the reprogramming was transmitted to members of the appropriations committee in December 1986. The additional resources will allow the Department's front-line attorneys to make greater use of the valuable testimony provided by expert witnesses. The costs of expert witness testimony have increased due to the increased

volume of cases, involving complex issues, which are approaching the trial phase. For the Victim Compensation Fund, the Department requests an additional $200,000. Criminal Division estimates indicate that by 1988, approximately $1,000,000 will be required to pay the costs of claims against the Fund. Although a portion of the anticipated claims could be liquidated with prior-year carryover funding, we require a small enhancement to be able to pay all anticipated claims.

The 1988 request also reflects the transfer of the Protection of Witnesses activity to the "Salaries and expenses, U.S. Marshals Service" appropriation. This represents a reduction of $17,511,000 to the appropriation. The Department also proposed this transfer in the 1987 budget request. This transfer is designed to bring together in one appropriation the two budget activities which comprise the protected witness program. Like the two sides of a coin, the Witness Security and Protection of Witnesses activities should be maintained in the same appropriation to ensure that full and equal consideration is given to these highly integrated activities. There is little of a policy or program management nature which will affect one aspect of the program without affecting the other. However, with these two activities assigned to different appropriations, there is a significant risk that important policy or program decisions will be applied to one side of this coin while ignoring the other.

In addition, there are significant differences between the Protection of Witnesses activity and the other witness activities

in the Fees and Expenses of Witnesses appropriation. Unlike fact or expert witness funding, a majority of the funding in the Protection of Witnesses activity is not spent on court attendance or the preparation or delivery of testimony in court. It is spent on relocations, living expenses, facility renovations, etc. Also, a significant portion of the costs are not spent on witnesses but rather on witnesses' dependants. Finally, the costs incurred under the Protection of Witnesses activity are both more predictable and more controllable than the costs incurred in preparing and delivering testimony. Most fact and expert witness rates and costs are determined by external factors and, therefore, are largely uncontrollable to the Department. However, the Department has significant discretion regarding the number of participants in the protected witness program, the rates at which allowances will be paid, and the need to incur costs. Thus, there is little merit in retaining the Protection of Witnesses activity in the Fees and Expenses of Witnesses appropriation.

The Department realizes that if this proposal is approved, the recently enacted no-year funding authority would be lost to the Protection of Witnesses program. The potential loss of such authority should not be viewed as a reason to deny this proposal. For the reasons stated earlier, the Department does not believe that no-year treatment is as important for the Protection of Witnesses activity as it is for other activities within the Fees and Expenses of Witnesses appropriation. In fact, both the 1987 and 1988 budget requests for the Department drop the no-year

treatment for Protection of Witnesses funding. Thus, we do not believe this should be a factor in deciding this issue.

TRANSFER OF PROTECTION OF WITNESSES

Mr. FLICKINGER. Briefly, Mr. Chairman the total request for 1988 for the Fees and Expenses of Witnesses appropriation is $37,359,000. This represents a decrease of $14,828,000 from the 1987 level of $52,187,000. The major substantive issue here, is our proposal to transfer the protection of witnesses activity money—that amounts to some $17,511,000—to the U.S. Marshals Service. The rationale is that we have two different budget activities and two different locations in the Department dealing with essentially the same program. The Marshals Service, as you know, is responsible for the protection of witnesses' security program, and yet we have a major portion of the expenses for that program coming out of Fees and Expenses of Witnesses. We would like to merge those two activities under the U.S. Marshals Service Appropriation.

Mr. SMITH. The Marshals tell us some people don't want to be in their program.

Mr. FLICKINGER. I am not aware of that.

Mr. SMITH. Maybe it was the FBI we discussed that with? Some people have good, personal reasons why they do not want to be protected by one Department or another. You don't save any money by doing this, though?

Mr. FLICKINGER. No, sir. It is a matter of trying to put order into what is what we believe now to be a bifurcation of similar activities.

Mr. SMITH. Does it change personnel or anything else?

Mr. FLICKINGER. No, sir.

Mr. SMITH. Just a bookkeeping thing?

Mr. FLICKINGER. Correct.

Mr. SMITH. And you've got a request for $1.5 million for Fees and Expenses, an increase?

Mr. FLICKINGER. Yes, sir, there is some increase in there.

Mr. SMITH. That is not nearly as big an increase as there was from 1986 to 1987, is it? What do you base that estimate on?

Mr. FLICKINGER. Do you recall that increase last year?

Mr. ROPER. I don't recall the exact increase, but you remember, sir, this account, with your help, was made a no-year account, and that has reduced the need for program increases this year. In 1986, which was the first year that we had the no-year authority, we were able to carry forward approximately $1.3 million.

Mr. SMITH. I see. That does not, then, reflect necessarily the level of outlays?

Ms. CURTIS. Yes, you are correct.

Mr. FLICKINGER. If I might add, Mr. Chairman, the fact that the protection of witnesses funds are now available on a no-year basis should not be viewed negatively in terms of transferring that activity over to the Marshals Service appropriation. The protection of witnesses fund is a much more predictable account. It is possible to project with accuracy what the financial needs are going to be, unlike the remaining activities within the Fees and Expenses of Witnesses appropriation where you are at the mercy of case situations.

VICTIMS COMPENSATION

Mr. SMITH. Tell us about the Victims Compensation Fund. You are predicting a substantial change or difference in the requirements there?

Mr. FLICKINGER. The victims compensation?

Mr. SMITH. Yes. What is that based on, or is that just a guess?

Mr. ROPER. No, sir. You know, the Victims Compensation Fund, this particular one, was enacted as part of the Comprehensive Crime Control Act of 1984, so we are only now into the third year of operation and we have established regulations and procedures to be able to identify potential victims of protected witnesses. We believe now that the numbers of awards that may go out will be greater. The fund was originally authorized up to a million dollars, and I believe, with this request, we would be near that level in 1988. The awards have been increasing now as the program has gained some experience.

Mr. SMITH. This is just a projection, then, of what you think the demand will be?

Mr. FLICKINGER. Yes, sir. This is difficult to predict.

Mr. SMITH. Thank you.

Mr. FLICKINGER. All right, sir. Thank you very much.

[A question and answer for the record follows:]

QUESTION FROM MR. EARLY

FEES AND EXPENSES OF WITNESSES

Victim Compensation

Question:

In 1986 you obligated only $275,000 for the Victims Compensation Fund. You are projecting obligations of $575,000 for 1987. What are your obligations to date for 1987 and do you still believe you will obligate the full $575,000?

Answer:

To date, the Department has paid one claim against the Fund for 1987 in the amount of $3,162. As of March 22, there were 44 claims pending against the Fund that could potentially be paid during this fiscal year. Twenty-one of the pending claims are either pre-statute filings or claims received in 1985 and 1986. These are currently awaiting background information from the U.S. Marshals Service. We believe that final determinations and payments could be made on these prior year claims this year. The total amount of the payments would be approximately $315,000. The remaining 23 claims are active cases in which information is currently being collected from local law enforcement agencies. Due to the current backlog of prior-year cases, it is unlikely that all of these current claims will be processed this year, however, we anticipate the total amount of these claims to be approximately $230,000.

TUESDAY, MARCH 17, 1987.

U.S. PAROLE COMMISSION JUSTIFICATION

Mr. EARLY [presiding]. We will continue with our review of the Department of Justice, and now hear testimony from the United States Parole Commission. The Commission requests $12,253,000 in fiscal year 1988, a 16 percent increase over fiscal year 1987 amounts. We will insert in the record at this point the Commission's fiscal year 1988 budget justifications.

[The justifications follow:]

Approved: B. F. Baer Date: 4-5-84

Benjamin F. Baer
Chairman

U.S. Parole Commission

Salaries and expenses

Summary Statement

Fiscal Year 1988

The United States Parole Commission is requesting, for 1988, a total of $12,253,000, 179 permanent positions and 176 workyears. This represents an increase of $1,714,000 over the 1987 appropriation anticipated of $10,539,000.

The United States Board of Parole was created by Congress in 1930. The Parole Commission and Reorganization Act of 1976 (Public Law 94-233, effective 5/14/76) retitled the agency as the United States Parole Commission. Placed within the Department of Justice for administrative purposes, the Commission is an agency with independent decisionmaking powers set forth by statute. The Commission has parole jurisdiction over all eligible Federal prisoners, wherever confined, and continuing jurisdiction over those who are released on parole or as if on parole (mandatory release).

National parole policy is reviewed by formal Commission deliberation at least quarterly. This continual study and review is designed to monitor and refine parole practices throughout the Federal system.

On a cooperative basis, the Commission uses the services of staff employed by the Federal Prison System, who are assigned to the correctional institutions throughout the nation. The staff prepares classification summaries, progress reports, and other reports concerning parole applicants.

Field supervision of released prisoners is provided by U.S. Probation Officers, who are employed by the U.S. Probation Service in the Administrative Office of the U.S. Courts. According to statute, they function as "parole officers" for Federal prisoners. Reports concerning the adjustment of parolees and mandatory releasees are prepared by those officers and submitted to the Commission.

As part of the Comprehensive Crime Control Act of 1984 (Public Law 98-473), the United States Sentencing Commission was established to develop and issue comprehensive guidelines for federal cases. As a result of this, the current federal parole system is scheduled to be phased out. Because the Sentencing Commission was not appointed until October 1985, an extension for when the sentencing guidelines will go into effect has been enacted. The guidelines are now scheduled not to go into effect before November 1987. The Parole Commission anticipates its workload will not begin to diminish until late 1988. Abolishment of the Commission will not occur until the fall of 1992.

U.S. Parole Commission

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For necessary expenses of the United States Parole Commission, as authorized by law; [$10,300,000] $12,253,000.

[18 U.S.C. 4202-04, 4212, 4255, 5005, 5041; Department of Justice Appropriation Act, 1987 as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.]

Explanation of changes:

No substantive changes proposed.

U.S. Parole Commission

Salaries and expenses

Crosswalk of 1987 Changes
(Dollars in thousands)

Congressional Appropriation Actions

Congress increased the Commission's full-time permanant positions by 4 and $180,000 to help the Commission handle its increased workload. This was more than offset by a $300,000 reduction which continued many of the reductions to the base imposed by the Balanced Budget and Emergency Deficit Control Act of 1985 and made cuts in some of the uncontrollable increases requested.

Supplementals Requested

The supplemental request of $155,000 provides for the additional costs in 1987 necessary to implement the Federal Employees' Retirement System Act of 1986, P.L. 99-335. The pay supplemental request provides $84,000 to meet 50% of the increased pay requirements effective January 4, 1987.

Long Range Goal: To make decisions relative to grants and denials of parole, conditions of parole, supervision of parolees and mandatory releasees, recommittal in event of violation of conditions of supervision, and termination of supervision as outlined in the Parole Commission and Reorganization Act of 1976.

Major Objectives:

- To establish, with the aid of statistical data, a national paroling policy and promote the consistent exercise of discretion in the paroling process, including the development and application of specific guidelines for decisionmaking so that the duration of terms of imprisonment throughout the Federal system will be equitable for those prisoners over whom the Commission has jurisdiction.
- To make fair decisions regarding the grant or denial of parole which are fair to the prisoners and which adequately protect the public welfare, within specific time requirements for decisions established by law.
- To provide forceful supervision for released parolees and mandatory releasees to enhance community protection and the rehabilitation of such released offenders.
- To promptly modify or revoke the parole or mandatory release of any individual who violates the conditions of release.

Base Program Description:

The Parole Commission and Reorganization Act provides for nine Commissioners, appointed by the President with the advice and consent of the Senate. One Commissioner is designated as Chairman. Each of the five Regional Offices of the Commission is under the supervision of a Commissioner, and three Commissioners comprise a National Appeals Board in Chevy Chase, Maryland. Hearing examiners working out of the regional offices, interview prisoners eligible for parole and make recommendations to the Commissioners. These hearings are conducted by examiner panels at all Federal prisons on a bi-monthly schedule. Examiners also conduct revocation hearings at state and local facilities, as required. Summaries of the hearings are recorded and then transcribed and sent to the Regional Office for the initial review and decision of a Commissioner.

An appeal system is in effect to permit review of parole decisions. Decisions on appeal at the National Appeals Board must be completed within 60 days.

Professional level personnel in the area offices coordinate the work with the Federal Prison System institutions and the probation officers attached to each United States District Court.

An ongoing research program is conducted in areas related to parole and information and guidance is provided to state parole boards, criminal justice agencies, and others interested in improving the criminal justice process.

Research projects include:

1. Development of methods for increasing hearing panel reliability in guideline assessments.

2. Refinement of the offense severity and salient factor score scales used by the Commission.

3. Development and implementation of a parole Decision Recording and Monitoring System for automated data processing of offender information and office automation.

4. Evaluating the Reparative Work Project in which parole dates are advanced for up to 60 days for selected inmates who complete 400 hours of unpaid community service.

5. Maintaining the Curfew Release Program in which inmates, at the request of the Bureau of Prisons, have their parole date advanced up to 60 days but are required to remain in their homes under curfew during the night.

6. Conducting an evaluation of parole supervision practices.

The General Counsel's office advises the Commissioners and staff on interpretation of the agency's enabling statutes and policy, drafts implementing rules and regulations, and assists U. S. Attorneys offices in defending the Commission against lawsuits brought by prisoners and parolees. The office is also a resource for staff on problems involving the processing of requests for information under the Privacy Act of 1974, as amended in 1975. The Counsel's office responds directly to requests submitted under the Freedom of Information Act. Finally, the General Counsel staff has responsibility for analyzing applications for exemption from prohibitions imposed by Federal law against persons who have been convicted of certain crimes from occupying labor union, management, or pension fund positions, and ensuring that the hearings under the Administrative Procedures Act are properly conducted.

The Commission's legal staff also participates with the State Department and other units of the Department of Justice on various phases of the development of treaties and implementing legislation for the exchange of prisoners with other countries.

The Commission's Case Management and Training Section gives functional supervision to regional hearing examiners and analysts. It provides quality control of case decisions, coordinates the training program, and develops procedures to implement Commission policy including a comprehensive manual.

Accomplishments:

1. A total 24,223 individual decisions regarding the grant, denial, or revocation of parole, as required by statute, were made during 1986.

2. A total 4,854 National Appeals Board considerations were made during 1986 as required by statute.

3. Supervision was provided to 27,283 parolees, special parolees and mandatory releasees from October 1, 1985 to September 30, 1986.

4. Development of methods for increasing hearing panel reliability in guideline assessments.

5. Refinement of the offense severity and salient factor score scales used by the Commission.

6. Designing and implementing a parole Decision Recording and Monitoring System which is intended to automate many manual, paper-oriented processes and to provide current parole statistics of codefendants.

7. Evalulating the Reparative Work Project in which parole dates are advanced for up to 60 days for selected inmates who complete 400 hours of unpaid community service.

8. Maintaining the Curfew Release Program in which inmates, at the request of the Bureau of Prisons, have their parole date advanced up to 60 days but are required to remain in their homes under curfew during the night.

6. Conducting and evaluation of parole supervision practices.

The workload of the Parole Commission is presented in the following table.

**Includes Dispositional Revocation Hearings.

Program Changes: An increase of $600,000 is requested to help the Commission continue to meet its statutorily mandated requirements.

An increase of $200,000 is requested to provide for six reimbursable examiner/analyst positions to be filled with employees from the Bureau of Prisons and other Federal agencies. With the Commission anticipating beginning phase-out in 1989 this will lessen the chance of having to implement expensive RIF procedures in that year. It is anticipated that the total number of reviews/hearings will have increased by approximately 12,800 from 1986 to 1988. Within the past few years, the Federal Prison System has been aggressively implementing a policy of spreading the inmate population over an increased number of smaller, more modern institutions. The Federal Prison System will continue their expansion program during 1987 and 1988. This program has created a substantial increase in Commission workload. The Commission conducts hearings for all prisoners who are included in an institutional docket during regular, bi-monthly visits to each Federal institution. Dividing hearings among more institutional dockets creates an obvious increase in travel time and associated expense. Moreover, work and costs associated with the administrative functions for a separate docket must be multiplied by the percent increase in the number of dockets.

The Administration's successful effort against major drug traffickers and members of organized crime reflect a large increase in the Commission's workload. Unlike simpler offenses, such as bank robbery, these cases almost always involve multiple defendants. To render equitable decisions in such cases, it is necessary to evaluate the relative culpability of each codefendant and make decisions which are appropriately relative to all offenders (i.e., relative to the guidelines) and specifically relative to the other codefendants. Drug cases can involve up to twenty or more codefendants each confined in one of over forty Federal institutions. The substantial increase in complexity of these cases has produced a corresponding increase in the Commission's workload.

The increased number of institutions has required our current line examiners to spend three weeks of each month in travel status conducting hearings. The increased complexity of the cases, has however, placed increased demand on high quality, and time-consuming pre-hearing reviews conducted in the regional offices preparing for the hearing. The resulting demands on examiner time and effort has strained examiner capacity and morale. The pre-hearing review process was adopted by the Commission as a policy to increase the quality of the hearings and the decisions. The General Accounting Office (GAO) Report, "Better Management and Legislative Changes are Needed to Improve Federal Parole Practices" was critical of the Commission's reliability in the application of its decision guidelines. The report also stated that hearing examiners should have adequate time to review case files prior to the hearing. The implication that the examiners did not have adequate time was a legitimate complaint. The Commission's response to this report was the pre-hearing review process, which is now fully implemented. The total effect will be improved quality of our decisionmaking, but total time devoted to a case (pre-hearing revi · plus the hearing) has increased substantially.

All Federal youth offenders sentenced under the Federal Juvenile Deliquency Act (FJDA) are boarded outside the Federal Prison System in various state facilities located most times in remote areas. Also, because of security or other reasons, certain Federal prisoners must be boarded in the same fashion. Under Federal statute, these individuals must be given in-person parole hearings which require an unusual amount of examiner resources from a travel and per diem standpoint. Further, because of the workload placed on the existing examiner corps, the Commission has had to request the U.S. Probation Service to conduct virtually all parole revocation hearings in state institutions and a substantial number of local revocation hearings in the more remote areas of the country. The U.S. Probation Service has informed the Parole Comision that it can no longer conduct these hearings due to its increased workload. Therefore, the Commission will need to send its own hearing examiners, as we believe was originally intended by Congress, to do these hearings carrying an increased workload for them and substantial time in travel status to conduct a single hearing at one of these locations.

Funding of $300,000 is requested to relocate professional staff in the field and central offices. Relocations are necessary for the Commission to maintain a uniform implementation of national paroling policy and guidelines due to shifting workload as new institutions are opened, to fill vacancies with the best qualified staff in the areas most needed, and in preparation for the anticipated consolidation of regional offices due to the phase-out of the Commission. Included in relocation expenses are travel and subsistence costs, costs for temporary quarters, transportation and storage of household goods, and certain real estate costs. Based on past experience, at $30,000 to $50,000 per relocation, this would allow the Commission to relocate 6-10 employees per year.

Finally, the Commission is requesting an additional $100,000 for contract typists. The Commission is utilizing contract typists more and more to do typing on a per page basis, and perform other routine clerical functions on an hourly basis, thus allowing Commission personnel time to perform other necessary functions. There have also been procedural changes (e.g., the pre-hearing assessment of every hearing) which have increased the Commission's typing workload. At an hourly rate of $8.00 this would provide approximately 6 additional clerical support for the Commission.

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Transfers to and from other accounts:			
1. Transfer of Financial and Administrative System Support Group	...	...	$4
This represents the transfer of the Financial and Administrative System Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative system support services on a user-reimbursable basis.			
Uncontrollable Increases:			
1. One additional compensable day	...	...	23
The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $23,000: 260 = $20,000 plus $3,000 for benefits.)			
2. Annualization of Federal Employees' Retirement System Costs	...	...	412
This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $155,000 of the 1987 requirement was absorbed. Total annualization required is $412,000.			
3. Annualization of 1987 pay increase	...	...	67
This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 5, 1987) which were not included in the pay raise amount of $168,000. Additionally, $84,000 of the 1987 pay requirement was absorbed. Total annualization required is $67,000.			

	Perm. Pos.	Work-years	Amount
4. Within-grade increases	...	...	$70

This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $62,000 and benefits $8,000 = $70,000).

5. Locality based per diem	...	...	106

Public Law 99-234 authorized a new locality base per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $106,000 is required to meet the expected 15 percent increase to total travel funds.

6. GSA Rent	...	...	274

In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $274,000 is required to meet our commitment to GSA.

7. GSA recurring reimbursable services	...	...	3

Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $3,000 in fees for these services in 1988 over 1987 charges of $71,000.

8. Federal Telecommunication System (FTS)	...	...	26

The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $26,000 over the 1987 base of $102,000 is requested.

	Perm. Pos.	Work-years	Amount
9. GPO printing cost	...	...	$1

The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $37,000. An additional $1,000 will be required in 1988.

10. Employee data and payroll services	...	...	7

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.

An additional increase of $5,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.

11. General pricing level adjustment	...	...	145

This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.7 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.

Total uncontrollable increases	...	...	1,134

Decreases (Automatic non-policy):	Perm. Pos.	Work-years	Amount
1. Reduction for change in hourly rate	...	...	-$18
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates to be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
2. Reduction in Health Benefits	...	...	-5
The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 4 percent due primarily to reduced carrier rates. The requested decrease includes $5,000 for decreased rates over the 1984 budgeted base of $136,000.			
3. Reduction in per page cost of the Federal Register and the Code of Federal Regulations	...	...	-1
The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.

OPENING STATEMENT

Mr. EARLY. The committee is pleased to welcome Mr. Benjamin F. Baer, chairman of the Commission. You may proceed with your statement.

Mr. BAER. Mr. Chairman, members of the committee, I am pleased to have the opportunity to appear before you in support of the 1988 budget request for the United States Parole Commission.

The 1988 budget request is for $12,253,000 and 179 permanent positions. This represents an increase of $1,714,000 above the 1987 appropriation anticipated. The increase in funding includes $600,000 in program increases and $1,114,000 in uncontrollable increases.

The program increases are necessary to help the Commission meet its statutory requirements in carrying out its mission. Of this, $200,000 is requested for positions to be provided by other Government agencies on a reimbursable basis. This will allow the Commission to have six additional Examiner/Analysts to help handle the increased workload without having to increase the workyear ceiling.

A request of $300,000 is being made to provide funding for six to ten relocations which the Commission anticipates will be necessary in 1988, to accommodate the shifting workload and managerial needs and to maintain uniformity in paroling policy nationwide. We are also requesting $100,000 to fund additional contract typists for the Commission in order to help handle the added clerical needs associated with the increased workload anticipated.

The Commission's workload for 1988 is expected to be above its 1987 level. The Commission anticipates that with the requested increase in resources and increased productivity and efficient management, the higher workload caused by the increase in prison population can be achieved while retaining the high quality of paroling decisions in a timely and policy consistent basis nationwide.

[The following information for the record was submitted subsequent to the hearing:]

EFFECTS OF REQUESTED INCREASES

By handling the increased workload due to increased prison population; making paroling decisions which are consistent with the Commission's rules and procedures; and making paroling decisions in compliance with the time limitations imposed by statute.

Mr. BAER. This concludes my statement, Mr. Chairman. I shall be pleased to answer any questions you or members of the Subcommittee have.

ADDITIONAL 1987 STAFFING

Mr. EARLY. This Committee gave you additional staff over the original recommendation in last year's budget. Did it help at all?

Mr. BAER. Yes, sir, it helped a great deal. The workload in 1986 was higher than we had anticipated, so it was certainly appreciated, Mr. Chairman.

PROPOSED ELIMINATION

Mr. EARLY. Mr. Baer, are you an ex officio member of the Sentencing Commisison?

Mr. BAER. By law I am a non-voting member, yes, sir.

Mr. EARLY. The guidelines currently being developed are supposed to eliminate the need for the Parole Commission. When is the Commission scheduled to be abolished?

Mr. BAER. The Parole Commission will be phased out five years after the sentencing guidelines become effective.

In other words, if they become effective, as now scheduled, November 1 of 1987, the Parole Commission will be phased out November 1, 1992.

Mr. EARLY. When do you plan to begin the phase-out of the Commission?

Mr. BAER. We anticipate that our 1988 workload will not diminish, but that it will begin to diminish in fiscal year 1989, and we will be planning a phase-down based on that.

Mr. EARLY. I have some reservations about that, Mr. Baer, and whether the workload will really start to diminish in 1989.

I am not sure that you are going to be able to be phased out by 1992 with the responsibility that your Commission has. Are you planning any actions in fiscal year 1988 in preparation for the 1992 phase-out?

Mr. BAER. Well, as I said, our workload, which means primarily our initial hearings, will not diminish, at least until the very end of 1988. We will be doing some planning, not very drastic planning or specific planning until we see whether the guidelines that are now being proposed by the Sentencing Commission are being put into effect.

SENTENCING COMMISSION'S GUIDELINES

Mr. EARLY. Are you actively participating with the Sentencing Commission in the preparation of those proposed guidelines?

Mr. BAER. I attended a number of meetings and hearings after the September draft was issued. There were seven days of public hearings in six cities in the United States. I attended four of those.

I listened to the criticism but, as I say, I am not a voting member. I will leave it at that.

WORKLOAD ESTIMATES

Mr. EARLY. You predict the 1987 workload of the Commission to be 46,204 parole hearings, and 5,987 appeals. These are approximately 33 and 24 percent higher, respectively, than the projections you made in your fiscal year 1987 request. What has caused this tremendous growth in the workload? Chairman Baer, to what do you attribute this increase? That is a tremendous increase.

Mr. BAER. There was a big increase in 1986 which we did not anticipate. Most of our hearings obviously relate to the prison population, and as a new prisoner comes in, unless he has a sentence of 30 years or more, if he applies, he is entitled to a hearing within 120 days after he arrives.

That is the policy that we have had since 1977. As more prisoners come in, well, let me go back. As the DEA and FBI arrest more people, and more people are prosecuted and the judges sentence more people, that impacts on our workload. Thus we have more hearings.

Mr. EARLY. Were you able to reduce the backlog of cases?

Mr. BAER. We are more or less on schedule. It bothers me that we are not consistently meeting the statutory requirement that we give every inmate a written decision 21 days after the hearing.

Mr. EARLY. What is the average number of days it now takes you to render a written decision?

Mr. BAER. It varies somewhat from region to region. In the more efficient regions, we are getting around 80 percent out within 21 days, but in one region, it is a lot less than that.

Mr. EARLY. Have you always been able to keep up in the past?

Mr. BAER. It became much worse during this past year.

Mr. EARLY. You project a continued growth of 15 percent in fiscal year 1988 and yet you are holding your staff level at fiscal year 1987 levels. Do you believe your staff can adequately handle the increased workload?

Mr. BAER. Well, I must admit, Mr. Chairman, last summer when we made our presentation, we didn't think the actuals would be as high as they were, and so we were a little too conservative in our projections at that time.

REQUEST TO OMB

Mr. EARLY. Provide for the record what you requested of OMB for staffing for your 1987–1988 budget.

Mr. BAER. We are scheduled to be phased out, and we did not ask for additional workyears for fiscal year 1988, but we asked for additional funds which would enable us to hire more contract typists and to increase the number of reimbursable agreements and allow us to hire some reemployed annuitants. By doing that, it would reduce our RIF problem, when the time came to cut back, so OMB granted that $600,000 for program increases.

Mr. EARLY. Will the combination of additional workload and level staffing cause backlog to increase in your professional opinion in the year 1988?

Mr. BAER. If those projections hold true, I know we will have trouble making the deadlines on the decisions, and the response of our analysts in our regions to our parole agents for warrants and other orders that need to be modified will not be achieved in a timely fashion.

[The information follows:]

REQUEST TO OMB

For FY 1987, the Commission requested 183 permanent positions and 182 workyears of OMB. Of this, eight permanent positions and six workyears repreesented program increases.

For FY 1988, The Commission requested 179 permanent positions and 180 workyears. Of this, four permanent positions and four workyears represented program increases. Four permanent positions were provided to the Commission in the Congressional 1987 appropriation.

CONTRACT TYPISTS

Mr. EARLY. The Commission requested an additional $100,000 in 1988 for funds for additional contract typists.

How much are you spending in fiscal year 1987 for contract typists?

Mr. BAER. We are spending about $250,000 for contract typists in 1987.

Mr. EARLY. Does the Federal Government get a better bang for its buck using contract typists or would we be better off trying to hire full-time?

Mr. BAER. We make the dollar go further with that kind of arrangement, and it gives us a lot of flexibility.

Mr. EARLY. These people are paid at an hourly rate of $8. Have you performed any kind of study to determine if this type of clerical support is cheaper?

Mr. BAER. Before October 1st we paid them by the page. After some study, we concluded it would be more cost effective if we paid $8 an hour. After we have six months experience, we plan to do another study.

INNOVATIVE RELEASE PROGRAMS

Mr. EARLY. Chairman Baer, what are you doing with regard to the question that was directed at Mr. Carlson earlier involving any innovative types of early release?

Mr. BAER. Mr. Chairman, during the last couple of years, we initiated what we call a reparative work project, which we operate in conjunction with the Bureau of Prisons. Prisoners, when they are still in the halfway house, on a volunteer basis and limited to people that were going out in certain release areas, if they would perform 400 hours of what we call reparative work, community service, we would advance their parole date 60 days.

That was a pilot project on a very limited basis, which, in my opinion, was very successful.

The people worked in a number of private agencies—Salvation Army, Red Cross, and we got nothing but accolades. They were pleased with the prisoners. It was a good experience for the prisoners and got them out 60 days earlier.

Mr. EARLY. Will you provide the number of prisoners that were involved in that program for the record. I would imagine those were not criminals of high risk?

Mr. BAER. There was a selection basis, but with the exception of what we knew were very high risk, anybody going out, I mean most people going out in a halfway house would be eligible. I will furnish you with a brief summary report of that program.

[The information follows:]

STATUS REPORT
REPARATIVE WORK PROGRAM

Benjamin F. Baer, Chairman
U.S. Parole Commission
September, 1986

On March 1, 1985, the U.S. Parole Commission, with the assistance of the National Office for Social Responsibility, implemented an experimental Reparative Work Program as an alternative form of punishment for selected federal prisoners. This project involved the joint efforts of the U.S. Bureau of Prisons and the U.S. Parole Commission and was funded by the National Institute of Justice.

The goal of this program was to develop an alternative sanction that punishes the offender, but also allows him to repay, in some small way, the harm he has done to society. In this pilot study, carefully screened offenders returning to selected cities had their parole dates advanced by two months if they volunteered to complete 400 hours of reparative work. For example, a bank robber serving 48 months could be released after 46 months upon the completion of the required hours of reparative work. Before release, the selected offenders performed work without pay which provided a meaningful, realistic and needed service to the community.

Over two hundred Reparative Work positions have been developed with such agencies as the Volunteers of America, the American Red Cross, the Salvation Army, Goodwill Industries, Jewish Community Centers, Catholic Charities of Dallas, Lutheran Social Services of Southern California, Florida Association of Workers for the Blind, and the YMCA. Jobs included loading and unloading trucks, building maintenance, answering telephones, sorting donations, computer programmer, Red Cross safety instructor, park service aide, orderly, and providing services to the elderly. During the last months before release, offenders completed the work while residing in a residential treatment center/halfway house and while still under the custody of the Bureau of Prisons. All offenders were closely supervised and monitored to insure that their job performance was satisfactory and that they did not pose a threat to the community. They were required to remain in the halfway house when not working except for two four-hour passes per week for recreational and religious purposes and were subject to more restrictions than the usual halfway house resident.

It was necessary to terminate the initial phase of the project in April of 1986 because the Bureau of Prisons, in response to budgetary constraints (Gramm-Rudman-Hollings), was required to curtail the amount of time that an offender could stay in a halfway house. The shorter halfway house placements no longer allowed sufficient time for reparative work. After a period of 13 months, the Reparative Work Project ended with a

total of 100 inmates having participated in the program and having worked for 53 different agencies. Despite the abbreviated nature of initial phase, the following significant results can be demonstrated:

- o 38,481 hours of unpaid reparative work was completed.
- o The participating agencies reported that it would have cost over $168,000 to hire a paid employee to perform the same work.
- o Release dates were advanced a total of 5,538 days, which represents a savings in prison bed space.

With the curtailment of the initial phase of the project, the Bureau of Prisons has agreed to adapting reparative work to another aspect of Bureau programming. Accordingly, a reparative work program is presently being implemented at the Federal Correctional Institution in Ft. Worth, Texas. The plan allows inmates at Ft. Worth who meet the selection criteria to volunteer to perform reparative work in the city of Ft. Worth. Under this modifica-tion, a prison instead of a CTC will be used as the residential base for Reparative Work volunteers.

As of August 1986, 12 inmates have been accepted by the Bureau of Prisons and the U.S. Parole Commission to participate in the second phase of the Reparative Work Project. Several of the agencies participating in the Ft. Worth project have had sister agencies in other cities participate as volunteer sites for other

reparative workers. Some of these agencies are: Volunteers of America, American Red Cross, Goodwill Industries, Jewish Federation, and Disabled American Veterans. These inmate volunteers are providing agencies with similar services as in the first phase of the Reparative Work Project.

This project will continue at Ft. Worth on an experimental basis for six more months. In the meantime, the project will be reviewed with the Bureau of Prisons to determine if the results justify expanding the project nationwide and continuing it beyond the experimental phase. The project will also serve as an example for state correctional agencies, many of which have serious overcrowding problems.

PAROLE SURVEILLANCE

Mr. EARLY. In my opinion, the Parole Commission would be able to release additional people early if there was more parole surveillance available. Is that an accurate statement?

Mr. BAER. Yes, I think it is, Mr. Chairman.

My bottom line is the protection of the public, and I know what the Federal prison population is compared to State prison populations. Ours is significantly different.

Also, however, on the Federal system, the Parole Commission is dependent on the United States probation officer to give us the supervision. We don't hire United States probation officers. The judge of the judicial district hires them, under an arrangement, that was worked out many years ago. Those U.S. probation officers become parole agents of the people that we release and there are about 1,800 probation officers throughout the country. We maintain what I would consider a very effective working relationship with those people, but their first priority is to the judge.

They have to prepare the pre-sentence report, so it is important that the agency have the resources so they can properly supervise not only their probationers, but also our parolees. In answering your question, I would be comfortable releasing some of our Federal prisoners earlier if I was sure we had the resources to supervise them properly.

Mr. EARLY. Has the Parole Commission examined house arrests?

Mr. BAER. As Mr. Carlson described it to you earlier, we initiated with the Bureau and with the Probation Service a year ago, partly as a response to Gramm-Rudman, a program where we released prisoners to what we call a curfew parole where they had to be in by 9 o'clock at night and the probation officer had to check on the telephone to be sure that they were there.

We again advanced their release by up to 60 days, and in less than a year we saved the Bureau over a million dollars. That is a drop in the bucket for the Bureau, but that is a million dollars saved.

PAROLE STAFFING AND RESPONSIBILITIES

Mr. EARLY. How many of your Commissioners are actually involved in the decision-making process, regarding the release of inmates?

Mr. BAER. Nine Commissioners. Five of the nine are in charge of the five regions. Three compose the National Appeals Board where every inmate can appeal his decision. The ninth is the Chairman, the Chief Executive Officer.

Mr. EARLY. How are they staffed for clerical help? How much of their time is spent on clerical responsibility?

Mr. BAER. Maybe I am speaking too narrowly here. We don't have enough help to get the reports to the Commissioners, then to process the case once the decision is made and then to get the decision out to the inmate, to the Bureau and the Probation Service.

Mr. EARLY. Are all your Commissioner slots filled?

Mr. BAER. Yes, sir.

Mr. EARLY. What is the next rung under the Commissioners?

Mr. BAER. In the regions we have a Regional Administrator who holds the top civil service position in the region. He oversees the examiners and the analysts, and is the person who is in charge of the support staff.

Mr. EARLY. And how many of them are there?

Mr. BAER. Five of those. Each has an assistant. Between the two of them, they review every case before it goes to the Commissioner. By law, only the Commissioner can sign the order.

Mr. EARLY. What if this Committee gave you an additional $500,000, what would you do?

Mr. BAER. The biggest need right now, Mr. Chairman, is for additional support resources and additional examiners and analysts in the regions. To me it is very important that the parolees on supervision, and the people we don't parole who go out mandatory release, are being supervised. It is important from where I sit that we have the analysts to do the staff work.

Mr. EARLY. Briefly describe an analyst.

Mr. BAER. One analyst deals primarily with the probation officers supervising our cases. If an inmate violates the conditions of his parole and even though he has not been convicted of another offense—he is an addict in the first place, robbed the bank because of that, and he goes back to the use of drugs—we need to know that. We have a special condition, so he is being tested regularly. If he continues to use drugs and the probation officer lets us know, we issue a warrant, and evaluate that. The analyst is the liaison between the probation service and the Commissioner.

DIFFERENCE BETWEEN ANALYST AND PROBATION OFFICER

Mr. EARLY. I have a hard time seeing the difference between an analyst and a probation officer.

Mr. BAER. The analyst is in our regional office. The probation officer is out there in the district. In California there are four Federal judicial districts—San Diego, Los Angeles, Sacramento and San Francisco. Each has a number of probation officers who work for the court and who supervise probationers and parolees.

The analyst is stationed in our regional office.

Mr. EARLY. If he takes the probation officers report, and he draws a conclusion—then what?

Mr. BAER. He makes a recommendation to our Commissioner.

Mr. EARLY. Who recommends to terminate someone on parole. What if the Commission says that bank robber that robbed a bank and was on drugs, has gone back to drugs. Who recommends what shall be done?

Mr. BAER. The probation officer is our agent. He supervises many parolees. If he sees what is happening, he will make a report and address it to our Commissioner. That report is evaluated by our analyst, and there may be some questions the probation officer has not answered.

REINCARCERATIONS

Mr. EARLY. In the past three years what has been the percentage of people that you have reincarcerated for rate of recidivism?

Mr. BAER. I am not sure of the percentage but in fiscal year 1986 we returned 2,618 parolees. One thousand thirteen of those were what we call technical or administrative violators. They had not yet committed another crime, but I emphasize "not yet" because if we hadn't acted when we did, since the guy is using drugs again, he very likely would in just a matter of time. It is a public protection measure, taking him off the streets, and we don't do it the first time he has a positive test result. The probation officer works with him for a while, and he may put him in a halfway house; give him another chance.

Mr. EARLY. Do you know what has been the number you reincarcerated in the last few years—1985, 1986?

Mr. BAER. I don't have the numbers. I will provide that to you.

[The information follows:]

REINCARCERATIONS

In 1986, we reincarcerated 2,613 parolees. In 1985, we revoked 2,561 parolees.

REVOCATIONS BECAUSE OF DRUGS

Mr. EARLY. Also provide for the record what number are due to drug abuse.

Mr. BAER. Okay.

[The information follows:]

NUMBER OF REVOCATIONS

	Fiscal year—	
	1985	1986
For new criminal conduct involving drugs	333	379
For new criminal conduct not involving drugs	1,318	1,226
For technical or administrative violations involving drugs	592	650
For technical or administrative violations not involving drugs	318	363
Total revocations	2,561	2,618

ADDITIONAL FUNDING

Mr. EARLY. If you had additional money would your first choice be for analysts?

Mr. BAER. And support staff so we can get the paperwork done to make these decisions, and to get the decision out to the inmates and to the attorneys.

Mr. EARLY. Where is that backlog of paper?

Mr. BAER. In the regional offices. It is the staff of the regional commissioners, sir.

Mr. EARLY. Do you have any unfilled positions in any of these regions?

Mr. BAER. At the present time, we have about 9 unfilled positions. Now, we are at various stages of filling those. All of our people need a security clearance, and there have been difficulties, particularly in the San Francisco area, because of the comparative salary, plus the cost of living in that region.

Mr. EARLY. How many vacancies are there in the San Francisco regional office?

Mr. BAER. Five in that one office.

Mr. EARLY. What is the background of one of these people?

Mr. BAER. The analyst generally comes to us from the Bureau of Prisons where he has been a case manager, or from a state agency where he has been a probation or parole agent.

Mr. EARLY. What is the recruitment cost for that?

Mr. BAER. We start them at a GS-11, and they can be promoted to a 12.

Mr. EARLY. That is difficult to live on in San Francisco.

Mr. BAER. Particularly, we have had two analyst positions vacant for six months. Six weeks ago we thought we had somebody hired, and when he evaluated, even though he would have got a promotion, he decided not to take the job because of the high cost of living there.

RECRUITMENT PROBLEMS

Mr. EARLY. Is the fact that you are supposedly going out of business in 1992—and I will believe that when I see it—is that hurting your recruiting process?

Mr. BAER. Yes, sir, it is. It is a morale problem, and it has been a definite factor in the recruiting. Until about a year ago, when we had an analyst vacancy, or an examiner vacancy, we got applicants from the Bureau of Prisons, because there was an opportunity for faster promotion. We have some very good people. They all know we are scheduled to be phased out so people are reluctant.

Mr. EARLY. So as phase-out of the Commission gets closer and closer, you must have a greater morale problem with the Commission employees?

Mr. BAER. The morale problem is related to two things: the recruitment problem, which means we have more vacancies than we should have and that the people who are there really are overworked. If many were not workaholics, we would be in real trouble. I can give you some cases where people have come to us from other agencies and they have gone back. Many have stayed.

Mr. EARLY. Why have you continually had such a high lapse rate between your on board strength and your authorizing positions?

Mr. BAER. It is more of a problem now. Well, last year—this sounds like an excuse, but Gramm-Rudman was a factor. Currently, we are having more and more trouble getting people interested.

SUPERVISING PAROLEES AFTER ABOLISHMENT OF COMMISSION

Mr. EARLY. Mr. Chairman, tell us about the supervision of prisoners over the next five years and after—or upon the abolishment of the Commission—assuming it gets abolished in 1992.

Mr. BAER. What our role is?

Mr. EARLY. Yes.

Mr. BAER. The Sentence Commission legislation phases the Parole Commission out five years after the guidelines become effective. When that happens the new guidelines will apply to an offender who has committed the offense after the effective date of the guidelines. If the guidelines are effective November 1, 1987,

any offense that was committed prior to November of 1987 will be sentenced under the current procedures which means that we will deal with that.

Another section of the law states that six months before we are to be phased out, we have to give everybody left in prison, who has come in under the old system, a date within the guidelines. That was a mistake on the part of the drafters, because it means the ones that will be left will be the most dangerous, long-term offenders, and our regulations permit us to go above our guidelines as well as below our guidelines, and we do go above in eight or ten percent of the cases.

Mr. EARLY. We are probably going to have 45,000 people that fall in that category, assuming a date, hypothetically of 1992, Wouldn't that mean everyone that is incarcerated under the old system? Wouldn't it be in the area of 40,000 to 45,000 prisoners that will be your responsibility?

Mr. BAER. The ones who committed an offense prior to November 1, 1987, we have the responsibility.

Mr. EARLY. Wouldn't that be the whole population—about 45,000?

Mr. BAER. That is correct, plus a number who are entitled to enter, after 1992; also there will be a number of prisoners who by law will be entitled to interim hearings.

Mr. EARLY. Explain that again, please.

Mr. BAER. I say there will be a number of prisoners in the system after 1992 who will still be entitled to an interim hearing. They will be entitled to have an advancement. In other words, our present regulations will apply to those people who are left.

Then there are all the people we parole who will be supervised under current procedures.

Mr. EARLY. Assuming you went out of business in 1992—what would happen to the 45,000 people incarcerated before November 1, 1987—what about the ones of that group that start getting paroled in 1992, who will they report to? Who will the parole or protection officer send the report to?

Mr. BAER. That is a very good question, and I can't give you an answer, but I can tell you that somebody, some unit of government has to carry out that function.

Mr. EARLY. I would hope so.

Mr. BAER. It is not resolved at this point. It is a very good question, if I may say so.

Mr. EARLY. We really have an awful lot of problems. There is no question. You are going to have to release some of the less serious offenders earlier than you would probably like to. We just do not have the facilities.

Mr. Carlson told us thirty-eight of the State systems are beyond capacity. Thirty-eight States are under some kind of federal court order, most relating to prison overcrowding. One judge says let them out. Another judge wants to be tough so he is not going to let anybody out. Congress is saying that we are going to phase the Parole Commission out in five years. That does not seem feasible to me.

Mr. BAER. The guidelines will go into effect six months after submission, the middle of April. They go into effect unless Congress acts to the contrary.

Mr. EARLY. Will we be doing the right thing to give you more clerical staff and more analysts to catch up as much as you can by 1992?

Mr. BAER. Yes, sir.

Mr. EARLY. It probably would be good?

Mr. BAER. It would be very helpful.

Mr. EARLY. I appreciate your coming. The Parole Commission does an excellent job under these conditions and circumstances. The Committee will look at your testimony extensively once again, because you do a good job representing them. With that, we will recess until 10 o'clock tomorrow morning.

[Questions and answers for the record follow:]

QUESTIONS SUBMITTED BY MR. EARLY

U.S. Parole Commission

Question:

You project the 1987 workload of the Commission to be 46,204 parole hearings and 5,987 appeals. These are approximately 33 percent and 24 percent higher, respectively, than the projections you made in your 1987 request. What has caused this tremendous growth in workload?

Answer:

The overall increase in hearings from 1985 actuals to the 1986 actuals was 17%. On the basis of percentage increase by hearing type from 1985 - 1986 the estimates for 1987 and 1988 were developed. The same method was used to develop the appeals estimates. The growth in workload was caused by the increases in new commitments to the Bureau of Prisons.

Question:

You request an increase of $300,000 in 1988 to relocate staff in field and central offices. How much did you spend for this purpose in 1987, and why will you require more in 1988.

Answer:

Over the years the Commission has always found it necessary to relocate personnel between its offices. However, Congress has never appropriated funds specifically for this purpose. In 1986, the Commission spent $175,000 on relocations. To date the Commission has obligated $75,000 in 1987 for relocations.

Question:

You state that some of these funds result from preparations for consolidation of regional offices due to the phase-out of the Commission. Considering the uncertainties surrounding the sentencing guidelines don't you believe this is a little premature?

Answer:

It is anticipated that the relocations will be necessitated for reasons similar to those the Commission has experienced in the past: a) maintenance of a uniform national paroling policy; b) shifting workload due to the opening of new prison facilities; and c) the filling of professional vacancies with the best qualified personnel. It is for these reasons with an awareness of the possible eventual consolidation of regional offices and phase-out of the Commission the funding is requested. Relocations based solely on phase-out plans are not anticipated in 1988.

Question:

Also, due to uncertainties surrounding sentencing guidelines, why is it necessary to be shifting personnel to fill vacancies, unless there are unusual circumstances? Isn't this especially true considering that you can receive reimbursable assistance from Bureau of Prisons personnel?

Answer:

The level of professional and specific experience required to fill vacancies of Regional Administrators and Hearing Examiners can usually only be found within the ranks of Commission personnel. Because of this, relocations are necessary. Bringing in people from outside the Government or receiving reimbursable assistance from within the Government is usually done at the analyst level, but even then, finding the individual with the right qualifications already located in the geographical area of the need is often difficult and sometimes impossible.

Question:

How much are you requesting in 1988 for research and development?

Answer:

Approximately 7% of the Commission positions come under the Research and Program Development section.

Question:

Considering the eventual phase-out of the Commission, is it really necessary to continue to fund research projects to develop new methods, and procedures for the future?

Answer:

The Research and Program Development section performs many vital functions necessary for the Commission to carry out its mission. It is responsible for: a) the development and implementation of an automated codefendant information system to improve the ability of the Commission to provide equitable decisions for all codefendants; b) maintenance of the Parole Decision History data base used for statistical analysis, workload projections, administrative, management and budgeting requirements; c) liaison with Congress and the Sentencing Commission, other Governmental and criminal justice agencies; d) maintenance of the reliability and quality of parole decisionmaking; and e) support for all automated office information systems internal to the Commission. The resources allocated for the development of new methods and procedures for the future is only a very small part of the function of our Research and Program Development section.

FRIDAY, MARCH 13, 1987.

LAWRENCE S. McWHORTER, DEPUTY DIRECTOR, EXECUTIVE OFFICE FOR U.S. ATTORNEYS

BUDGET REQUEST

Mr. EARLY [presiding]. The meeting will come to order.

Continuing in our review of the Department of Justice, we will now hear testimony concerning the General Legal Activities Appropriation. General Legal Activities requests $763,441,000 in Fiscal Year 1988, an increase of 13 percent over Fiscal Year 1987 amounts.

We will insert in the record at this point the Fiscal Year 1988 Budget Justifications for General Legal Activities.

Legal Activities

Salaries and expenses, General Legal Activities

Summary Statement

Fiscal Year 1988

The Attorney General is requesting a total of 10,696 permanent positions, 10,354 full-time equivalent (FTE) workyears and $765,441,000 for the General Legal Activities appropriation in 1988. This request represents an increase over the anticipated 1987 appropriation of 864 permanent positions, 698 FTE workyears, and $140,603,000.

The Department proposes to consolidate the Antitrust and U.S. Attorneys appropriations within the General Legal Activities appropriation. In consolidating the legal activities within one appropriation, the Department will have the flexibility to more efficiently manage the legal resources at its disposal. The Department's policy level believes strongly in streamlining its legal activities and achieving the goals established by the Administration in the most productive way possible. Merging the Antitrust and U.S. Attorneys' activities will not affect the Congress' ability to provide thorough oversight. The Department will continue to adhere to Congressional reprogramming notification requirements assuring the Congress full control over the appropriation. The Congress will maintain its prerogative in establishing resource levels by program. (For purposes of comparability, the Antitrust and U.S. Attorneys appropriations are included in the 1987 appropriation anticipated levels).

Also included in the anticipated 1987 appropriation is a pay and retirement supplemental totaling $10,392,000 and a program supplemental totaling 68 positions, 22 FTE workyears and $8,972,000. The program supplemental includes funding for the Criminal Division's relocation to the Bond Building; increased telecommunication tariffs; and a variety of litigation programs.

The General Legal Activities appropriation supports the Attorney General through the establishment of litigative policy, the conduct of litigation and the performance of other legal responsibilities. The organizations, their major responsibilities and associated resource requirements are summarized below.

Conduct of Supreme Court proceedings and review of appellate matters

This activity is responsible for the conduct and supervision of all aspects of government litigation in the U.S. Supreme Court and approval of all federal appellate actions brought by the United States. The Department is requesting an increase of $150,000 to buy-out existing computer equipment and expand the existing case-tracking system.

General tax matters

The Tax Division is requesting 60 positions, 45 FTE workyears and $8,826,000 as a result of recent legislation that expands and enhances the effectiveness of the Internal Revenue Service. In addition, 10 positions, 9 FTE and $2,151,000 is requested for workload increases as a result of the Tax Reform Act of 1986. The Tax Reform Act of 1986 represents the first major transformation of the U.S. tax system in thirty years.

Criminal matters

The supervision and conduct of, or prosecutions of offenses arising under most federal criminal laws, are conducted by this activity. Program increases of 45 permanent positions, 33 FTE workyears and $4,469,000 are requested for 1988. The additional resources requested will be targeted for organized crime prosecutions; terrorism; international coordination and economic crime. The increase of resources in the area of organized crime is necessary to address the findings of the President's Commission on Organized Crime which recommended the enhancement of prosecutorial efforts. Dramatic increases in terrorist incidents directed at American targets has aroused public concern and the Administration has attempted to respond with a multifaceted program which includes the prosecution, under certain circumstances, of offenses occurring outside of the United States. Increases are needed for the Division's Office of International Affairs to address the growing volume of transactions occurring between the United States and foreign governments as a result of the negotiation of several new Mutual Legal Assistance Treaties. The Criminal Division is also requesting increases for its Defense Procurement Fraud Unit which serves as a central clearinghouse for nationally significant Defense procurement fraud investigations.

Claims, customs and general civil matters

This activity has responsibility for the litigation of civil cases initiated by and brought against the United States or its officers. The Division is seeking program increases of 114 permanent positions, 72 FTE workyears and $13,579,000 to address necessary defensive and affirmative litigation in the federal appellate, torts, federal programs and commercial litigation areas. The additional resources are divided into two major program initiatives--necessary defensive litigation and necessary affirmative litigation;they will enable the Division to cope with the phenomenal growth in caseload in recent years and provide an effective level of representation in litigation of increasing complexity. The largest portion of the requested enhancements would be used to address the projected increases in 1988 in defensive litigation. Claims against the government are expected to grow from a level of $88 billion in 1983 to over $190 billion by 1988. On the affirmative side, the resources will provide stronger support for the Administration's efforts to recover money lost through fraud, waste and abuse; assist in the litigation of mounting claims against the Social Security disability insurance programs; protect the Government's creditor rights in bankruptcies and foreclosures; and sustain agencies' determinations involving the enforcement of Federal statutes and regulations. Additional funding is also necessary to address the expanded workload which is anticipated as a result of passage of the Immigration Reform Act and the civil antifraud legislation.

Land, natural resources and Indian matters

This activity conducts litigation of civil and criminal matters relating to areas such as the exploration and development of minerals and energy resources from federal lands, the control of pollution and hazardous waste, the conservation of wetlands and wildlife, and the general protection of the physical environment. The Division is requesting program increases of 26 permanent positions, 23 FTE workyears and $6,499,000 in its appropriated level plus an additional 132 FTE workyears for the Superfund program. These increases represent three major program initiatives: environmental protection, which is concerned with enforcement of statutes and regulations governing the quality and safety of our natural environment; defensive litigation, which relates to the defense of the Government in its application of statutes and regulations concerning natural resource policy and environmental impact; and Indian Water Rights litigation where the Government is required under numerous treaties, statutes and Executive Orders to protect the rights of Indians in cases which involve competing claims to water resources.

Legal Opinions

This activity is responsible for serving as legal advisor to the President, the Attorney General and Executive agencies and for review of proposed Executive Orders and proclamations of the President as to form and legality. Also reviewed are proposed orders of the Attorney General, and all regulations requiring the Attorney General's approval. For 1988, the Office of Legal Counsel (OLC) is requesting an additional $42,000 to handle the production and publication of Presidential Emergency Action Documents (PEADs).

Civil rights matters

Criminal and civil enforcement of federal civil rights laws, coordination of civil rights investigations and matters within the Department, monitoring certain civil rights decrees by order of federal courts, and assisting Federal, state and local agencies in responding to and complying with federal civil rights laws are all responsibilities of this activity. The Civil Rights Division is proposing reductions of 4 permanent positions, 4 FTE workyears and $100,000 as a result of management and productivity improvement initiatives in the Special litigation and Educational opportunities programs. The Division is also requesting an increase of $800,000 to allow the Division to hire outside expert consultants to conduct analytical tests and to construct complex data bases to assist in the enforcement efforts in three of its program areas: Special Litigation ($120,000), Voting ($280,000) and Employment Litigation ($400,000).

INTERPOL-USNCB

This activity is responsible for providing efficient communications for law-enforcement programs between this country, other International Criminal Police Organization (INTERPOL) member countries, and the INTERPOL headquarters. A program increase of 12 positions, 9 FTE workyears and $540,000 is requested to enable the USNCB to provide 24-hour per day

operation. With an around-the-clock operation, the organization will be able to address an existing workload backlog and process international message traffic more efficiently.

Legal Activities Office Automation

The Department is requesting a program increase of $25,181,000 in 1988 for the development and acquisition of office automation systems for the Washington-based legal divisions and U.S. Attorneys offices. Through joint planning and acquisition of these systems by the Department's litigating components, economies of scale may be achieved through larger competitive procurements, and greater systems compatibility will promote efficiencies in the exchange of information between organizational elements.

Antitrust matters

The mission of the Antitrust Division is to protect and promote competition in the economy through the prosecution of violations of the antitrust laws. In 1988, the Department is proposing a program reduction of 100 permanent positions, 85 FTE workyears and $2,109,000 to provide offsets to increases in other law enforcement activities. These savings are available because the Division has been able to institute management improvements which have produced savings through increased productivity and through aggressive restructuring of the Division which increased the efficiency and effectiveness of its mission.

U.S. Attorneys

The U.S. Attorneys are responsible for the prosecution of criminal offenses against the United States and the representation of the U.S. Government in civil actions, suits or proceedings in which the United States is concerned. Program increases of 542 positions, 487 FTE workyears and $28,124,000 are requested in 1988. The major focus of the U.S. Attorneys request is in the areas of narcotics and dangerous drugs, white collar crime and affirmative civil litigation. To effectively remove the profit motive for those engaged in illicit narcotics trafficking and to aggressively prosecute the criminals involved, the U.S. Attorneys are requesting 417 positions, 313 FTE workyears and $21,119,000. In the area of white collar crime, resources of 28 positions, 22 FTE workyears, and $1,561,000 to support the President's Council on Integrity and Efficiency, and prosecute defense procurement fraud, money laundering schemes, bankruptcy and bank frauds and embezzlement. For affirmative civil enforcement, resources of 80 positions, 60 FTE workyears and $3,970,000 are requested to recover cash owed to the U.S. Government because of fraud and abuse of government programs, drug forfeitures, bankruptcy, real estate foreclosures and debt collection. Finally, the Department is requesting 17 positions, 12 FTE workyears and $522,000 to improve cooperation between Federal, state and local law enforcement agencies by placing coordinators in selected districts, $500,000 for security-related office renovations,and $452,000 for legal education.

Special counsel for discrimination

This activity is responsible for the investigation of charges of discrimination filed by private individuals or by others on their behalf. If such charges are determined to have merit, the Special Counsel for Unfair Employment Practices is authorized to file formal charges before an administrative law judge. The specific provisions and authority for this office are set forth in the newly enacted Immigration Reform and Control Act of 1986, P.L. 99-603. For 1988, the Department requests an additional 30 positions, 23 FTE workyears and $2,315,000 to continue the effort initiated in 1987.

Legal Activities

Salaries and expenses, General Legal Activities

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below: New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, General Legal Activities

For expenses necessary for the legal activities of the Department of Justice, not otherwise provided for, including not to exceed $20,000 for expenses of collecting evidence, to be expended under the direction of the Attorney General and accounted for solely on his certificate; and rent of private or Government-owned space in the District of Columbia; [$200,934,000] _, of which not to exceed $6,000,000 for litigation support contracts shall remain available until September 30, [1988]_ $763,441,000 1989

Provided that of the funds available in this appropriation, [$1,537,000] _shall be available for office automation systems for the legal divisions covered by this appropriation, and for the United States Attorneys [and] the Antitrust Division, and offices funded through Salaries and expenses, General Administration, to remain available until expended: Provided further, That of the funds appropriated to the Department of Justice in [title II of] this Act, not to exceed $1,000,000, may be transferred to this appropriation to pay expenses related to the activities of any Independent Counsel appointed pursuant to 28 U.S.C. 591, et. seq., upon notification by the Attorney General to the Committees on Appropriations of the House of Representatives and the Senate[and approved under said Committees' policies concerning the reprogramming of funds contained in Section 607 of this Act]; Provided further, That amounts obligated under the headings, Salaries and expenses, United States Attorneys and Salaries and expenses, Antitrust Division, shall be merged under this appropriations: Provided further, That the Chief, U.S. National Central Bureau, INTERPOL, may establish and collect fees to process name checks and background records for noncriminal employment, licensing, and humanitarian purposes and, notwithstanding the provisions of 31 U.S.C. 3302, credit not more than $150,000 of such fees to this appropriation to be used for salaries and other expenses incurred in providing these services.

(5 U.S.C. 181, 3101; 15 U.S.C. 4, 9, 18, 21, 1312a; 18 U.S.C. 3192; 19 U.S.C. 1619; 21 U.S.C. 884; 28 U.S.C. 501, 503-506, 516-520, 524-526, 541-550; 40 U.S.C. 1424, 1617, 1694; 50 U.S.C. App. 6; Department of Justice and Related Agencies Appropriation Act, 1987; additional authorizing legislation to be proposed.)

Explanation of changes:

The President's budget request to the Congress for 1987 merged the United States Attorneys into the General Legal Activities appropriation. In 1988, the Department is also including the Antitrust Division in this appropriation. This language also allows the Department to use office automation funds available in this appropriation for the General Administration appropriation. Finally, this language will allow the U.S. National Central Bureau, INTERPOL to collect fees for the processing of name checks and background records for non-criminal employment, licensing, and humanitarian purposes and credit up to $150,000 to this appropriation to cover the expenses incurred for providing such services.

Congressional Appropriation Actions

Congressional action under P.L. 99-500 reduced uncontrollable increases, reduced some program increases, and continued the Gramm-Rudman-Hollings sequestration.

Supplementals Requested

1. The program supplemental includes $3,302,000 for the forced relocation of Criminal Division personnel from the Federal Triangle building to the Bond Building. The request also includes $2,000,000 for expenses related to the activities of Independent Counsel, appointed pursuant to 28 U.S.C. 591, et. seq. In addition, $3,035,000 is requested for increased immigration litigation work, including the establishment of a special counsel for discrimination, and other legal activities. Finally, $1,635,000 is included for increased telecommunications charges.

2. The supplemental request provides $6,779,000 for increased pay requirements pursuant to P.L. 99-500 and $6,153,000 to cover costs associated with the implementation of the new Federal Employees Retirement System.

Status of Congressionally Requested Studies, Reports, and Evaluations

1. The Senate Report relating to Department of Justice Appropriation Act, 1987 (Senate Report No. 99-425) required the Department to report by February 1, 1987, on whether the Palestine Information Office (PIO) in Washington, D.C. has fully complied with the Foreign Agents Registration Act. On the basis of a review of the registration statements filed under the Act by the PIO, together with a recent inspection of the registrant's books and records, there appears no indication of any significant violation of the Act by the registrant. The PIO, however, has been requested to file amendments to its registration which will more completely set forth its activities. The registrant has indicated that it will file the requested amendments.

General Legal Activities

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Savings resulting from management initiatives	109	35	-$4,471

The Department proposes a saving of $2.534 million by reducing the current Assistant U.S. Attorney approved position level by 100 and replacing it with 250 paralegal positions; $600,000 by better managing commercial litigative expenses; and $1.024 million by consolidating like functions and eliminating layering within the Executive Office for U.S. Attorneys (EOUSA). The latter initiative to reduce EOUSA is predicated on the relocation and consolidation of various EOUSA offices to one site in Washington, D.C. This cost savings will not be fully realized if physical fragmentation of the Executive Office continues. The remaining personnel and funding reductions for the Tax and Civil Rights Divisions are associated with the net savings from elimination of certain general administrative, managerial and clerical positions and the performance of these functions by private contractors.

Transfer of Financial and Administrative Systems Support (FASS) group	...	...	244

This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.

Transfer from Interstate Commerce Commission	16	16	843

This represents the transfer of rail-related activities from the Interstate Commerce Commission. The Justice Department would assume responsibility for reviewing applications for rail-related mergers, consolidations and acquisitions.

Uncontrollable increases:

1. One additional compensable day	...	...	1,423

The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $338,840,000 divided by 260 = $1,303,000 plus $120,000 for benefits.)

2. Annualization of 1987 program and Bond Building supplementals	...	46	2,635

As the result of a forced relocation, the Criminal Division will be consolidating its personnel in two buildings, Main Justice and the Bond Building. Because GSA rental charges are distributed among all of the Washington, D.C. area offices, the increased rental charges were charged to all Washington, D.C. area offices for a portion of the year. This request ($336,000) represents the annualization of those costs. In addition, 46 full-time equivalent (FTE) workyears and

	Perm. Pos.	Work-years	Amount
$2,349,000 is requested as an annualization of program supplementals for the Civil Division, Office of Legal Counsel and the Special Counsel for discrimination.			
3. Annualization of additional positions approved in 1987	...	65	$2,824

	Approved 1987 Increases	Annualization Required
Annual salary rate of approved positions	$10,076,000	
Less lapse (25%)	-2,519,000	$2,519,000
Net compensation	7,557,000	
Associated employee benefits	907,000	305,000
Total costs subject to annualization	-8,464,000	2,824,000

4. Annualization of Federal Employees' Retirement System Costs	...	...	18,385

This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This Act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement system who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Total annualization required is $18,385,000.

5. Annualization of 1987 pay increase	...	...	8,734

This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 48 paid days (October 1, 1986 through January 3, 1987) not included in the pay raise amount of $9,550,000. Additionally, $4,779,000 of the 1987 pay requirement was absorbed. Total annualization required is $8,734,000.

6. Within-grade increases	...	...	2,091

This request provides for an expected increase in the cost of within-grade increases exclusive of Assistant U.S. Attorneys' salaries covered by administrative salary increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $1,854,000 and benefits $237,000 = $2,091,000).

7. Retirement contributions - Social Security (FICA)	...	...	114

Beginning January 1, 1985, the base on which earnings for Social Security computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 7.0 to 7.15 percent. This increase is computed for 372 eligible employees.

	Perm. Pos.	Work-years	Amount
8. Medicare costs	...	...	$26
Beginning January 1, 1985, the base on which earnings for medicare computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 1.35 to 1.45 percent. The increase is computed for 9,469 eligible employees.			
9. Locality based per diem	...	...	747
Public law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $747,000 is required to meet the expected four percent increase in total travel funds.			
10. Federal Employees' Compensation Act (FECA) - Workers' Compensation	...	...	-93
This decrease reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $784,000, or $93,000 below the 1987 base of $877,000.			
11. GSA Rent	...	...	11,578
In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $11,578,000 is required to meet our commitment to GSA.			
12. GSA recurring reimbursable services	...	...	112
Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $112,000 in fees for these services in 1988 over 1987 charges of $2,762,000.			
13. Federal Telecommunication System (FTS)	...	...	737
The General Services Administration (GSA) has advised of a 16 percent increase in FTS Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $737,000 over the revised 1987 base of $8,253,000 is requested.			
14. Telephone service	...	...	538
On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $91 million and set the rates for C&P's intrastate services.			
The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel			

	Perm. Pos.	Work-years	Amount
services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000.			
An increase of $539,000 is requested to pay these charges.			
15. GPO printing costs	...	...	$94
The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $2,250,000. An additional $94,000 will be required in 1988.			
16. Employee data and payroll services	...	...	384
Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information system maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change of $108,000 is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service. In addition, $276,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting an procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.			
17. Foreign allowances	...	...	5
Allowances for Government employees in foreign areas are determined by the Department of State. The State Department anticipates a 7.9 percent increase in 1988. The requested increase of $5,000 provides 7.9 percent more than the $64,000 budgeted for 1987.			
18. Audio visual and media services	...	...	73
This increase reflects proposed rate increases for various types of audiovisual services that range from seven to 240 percent higher than present rates. An estimated 16.5% overall increase will be assigned to each affected organization for 1988. This equates to an increase of $73,000 over the 1987 base of $400,000.			
19. General pricing level adjustment	...	...	3,672
This request applies OMB pricing guidance as of July 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.7 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.			

	Perm. Pos.	Work-years	Amount
20. Administrative salary increase	...	...	85,650
Assistant U.S. Attorneys occupying ungraded permanent positions are, under certain circumstances, granted successive annual pay increases at varying rates until a maximum level is reached.			
Total uncontrollable increases	...	111	59,591
Decreases (Automatic non-policy):			
1. Reduction for change in hourly rate	...	...	-849
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates be based on 2,087 hours rather 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
2. Reduction in health benefits	...	...	-444
The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately six percent due primarily to reduced carrier rates. The requested decrease includes $444,000 for decreased rates over the 1987 budgeted base of $7,400,000.			
3. Reduction in per page cost of the Federal Register and the Code of Federal Regulations	...	...	-8
The Legislative Branch Appropriation Act of 1978 (P.L. 95-961) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 page decrease for the CFR.			
4. Nonrecurring costs for 1987 relocation and program supplementals	...	...	-2,822
The Criminal Division will incur $822,000 in one-time relocation costs in moving its personnel from the Federal Triangle, Hamilton and Old Dominion (VA.) Buildings to the Bond Building. The $822,000 is requested in a 1987 supplemental for telephone relocations, electrical outlets, vaults, alarms, door locks and variety of other one-time purchases. In addition, the Department will incur $2,000,000 in one-time costs for expenses related to the operation of Independent Counsel in 1987.			
5. Nonrecurring costs for background investigations	...	...	-38
This represents a reduction in one-time costs for Background Investigations for new positions approved in 1987.			

	Perm. Pos.	Work-years	Amount
6. Nonrecurring costs for equipment	...	...	-$10
This represents a reduction of $10,000 for one-time equipment purchases for the U.S. Attorneys.			
Total decreases	...	...	-4,172
Total, adjustments to base	...	111	55,412

Legal Activities

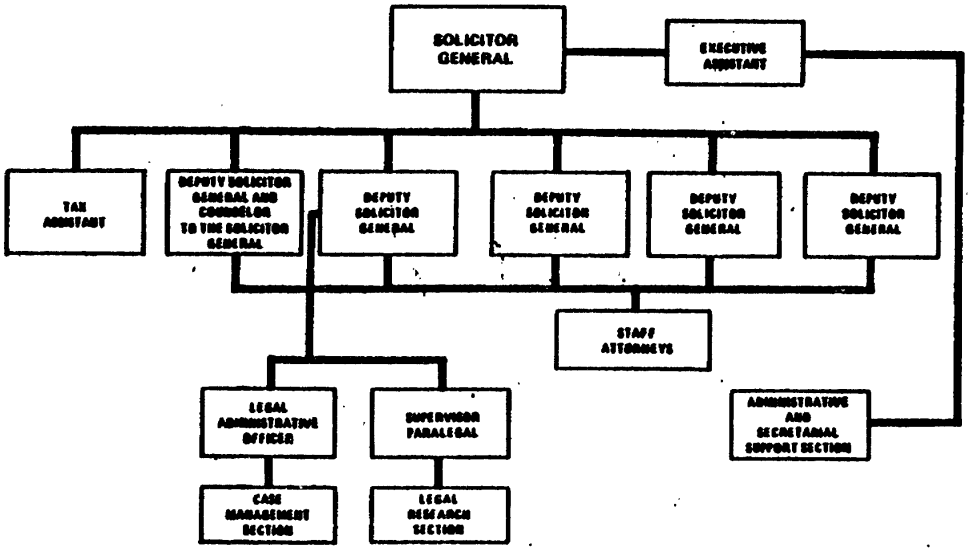
Salaries and expenses, General Legal Activities



Consulting and Related Services

(Dollars in thousands)

	1986 Actual	1987 Estimate	1988 Estimate
Consulting Services	434	485	1,179
Management and Professional Services	68	93	51
Special Studies and Analyses	...	...	...
Total	502	578	1,230

Consulting and related services are used in the General Legal Activities appropriation only for services which cannot be performed in-house. Services are required primarily for the development and implementation of automated litigation support projects. To a lesser extent, consultants are occasionally employed to render technical or expert advice without the requirement to testify in court, and in these few cases they would be employed as consultants rather than expert witnesses.

Congressional Appropriation Action

Final congressional action enacted under P.L. 99-500 reduced the President's budget request by $181,000.

Supplementals Requested

1. The program supplemental request of $32,000 includes $25,000 for the increased space charges for a portion of the year associated with the move of the Criminal Division into the Bond Building. Also included is $7,000 for increased rates charged for access to the Federal Telecommunications System.

2. The request of $73,000 provides $35,000 to meet increased pay rate requirements pursuant to P.L. 99-500, and $38,000 to meet increased federal employees' retirement system costs pursuant to P.L. 99-335.

The Office of the Solicitor General is responsible for conducting and supervising all aspects of Government litigation in the Supreme Court of the United States. The Office also acts upon every case in which a decision is rendered in any court against the United States to determine whether an appeal will be undertaken. In addition, the Solicitor General also determines whether the Federal Government should file a brief as amicus curiae in any case of particular interest in any appellate court.

Long-Range Goal: To be as effective as possible in the conduct of all aspects of Government litigation in the appellate courts and the U.S. Supreme Court.

Major Objectives:

To adequately represent the interests of the U.S. Government in cases before the Supreme Court.

To review appellate cases to determine their suitability for appeal to the U.S. Supreme Court or to a lower Federal Appellate Court.

To meet all filing dates of cases before the U.S. Supreme Court.

Base Program Description: The major function of the Solicitor General's Office is to supervise the handling of government litigation in the Supreme Court of the United States.

The Office of the Solicitor General is the Government's foremost legal office. The original Statutory Authorization Act of June 22, 1870, states: "There shall be in the Department of Justice an officer learned in the law, to assist the Attorney General in the performance of his duties to be called the Solicitor General." As stated in 28 C.F.R. 0.20, the general functions of the Office are as follows: (1) conducting, or assigning and supervising all Supreme Court cases, including appeals, petitions for and in opposition to certiorari, briefs and arguments; (2) determining whether, and to what extent, appeals will be taken by the Government to all appellate courts (including petitions for rehearing en banc and petitions to such courts for the issuance of extraordinary writs); (3) determining whether a brief amicus curiae will be filed by the Government, or whether the Government will intervene, in any appellate court; (4) assisting the Attorney General, the Deputy Attorney General and the Associate Attorney General in the development of broad Department program policy.

Accomplishments and Workload: Recent accomplishments and workload of the Office of the Solicitor General are presented as follows:

	1985	1986	Estimates 1987	Estimates 1988
Cases:				
Pending, beginning of term	370	297	398	412
Received	1,864	1,626	2,052	2,147
Terminated	1,850	1,575	2,038	2,138
Pending, end of term	384	348	412	426
Other Activities:				
Appellate determinations	1,440	1,801	1,512	1,512
Certiorari determinations - 1/	689	710	723	723
Miscellaneous recommendations - 2/	345	542	362	362

Explanation: The Office of the Solicitor General does not initiate any programs or have any control of the Supreme Court litigation it conducts or the number of recommendations it handles. All of the Office's work results from lawsuits initiated by one of the operating divisions of the Department or by an independent regulatory agency. All figures for Cases are based on Supreme Court terms; Other Activities figures are based on fiscal years.

1/ Includes certiorari authorizations, no certiorari decisions, direct appeal authorizations and no direct appeal decisions.

2/ Miscellaneous decisions include the following: amicus participation, mandamus, rehearing, settlement, bails, stays, etc. This figure does not include oral arguments in the Supreme Court, conferences, correspondence, etc.

Cases heard during the 1986 Term in which the Solicitor General's Office has participated include those in which the Court has held that: (1) the Due Process Clause is not implicated when a mentally insane defendant confesses a crime to police officials (Colorado v. Connelly); (2) the Panama Canal Treaty does not exempt United States citizens working in the Canal Zone from paying United States income taxes (O'Connor v. United States); (3) an employer does not violate the civil rights laws if it can demonstrate that it has attempted a reasonable accommodation of an employee's religious beliefs (Ansonia Board of Education v. Philbrook); (4) a court may only award attorney's fees in an action to enforce the civil rights laws, and not in an action solely to recover those fees (North Carolina Department of Transportation v. Crest Street Community Council).

Cases heard during the 1986 Term in which the Solicitor General's Office has filed a brief include those arguing that: (1) the neutral use of the term "political propaganda" in the Foreign Agents Registration Act of 1938 does not violate the First Amendment (Meese v. Keene); (2) preventive detention of criminals who pose a danger to the community does not violate the Due Process Clause (United States v. Salerno); (3) Section 504 of the Rehabilitation Act of 1973 does not prohibit an employer from discriminating among workers based on concern about contagiousness (School Board of Nassau County v. Arline); (4) a one-black-for-one-white promotion quota violates guarantees of equal protection under the Fifth and Fourteenth Amendments (United States v. Paradise); (5) a statute regulating the rates that cable television operators can be charged by those who have permitted the attachment of the cable operators' wires to their utility poles does not effect a "taking" under the Fifth Amendment (FCC v. Florida Power Corp.); (6) an alien's burden of proving eligibility for asylum is equivalent to his burden of proving eligibility for withholding of deportation (INS v. Ponseca).

Program Changes: As a result of Gramm-Rudman cuts in 1986, the Office of the Solicitor General was unable to buy out existing computer equipment or expand the existing case-tracking system to ultimately link (network) the entire office. This increase will allow the Office of the Solicitor General to do away with a partial manual case-tracking system, thereby utilizing personnel resources more effectively.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

Final Congressional action enacted under P.L. 99-500 reduced the President's budget request for the Tax Division by $1,646,000 in requested budget authority.

Supplementals Requested

1. The supplemental request for $295,000 provides necessary funds for unanticipated and presently unfunded budget requirements, specifically for relocation costs and additional Federal Telecommunications Systems costs.

2. The pay request provides $226,000 to meet increased pay requirements in P.L. 99-500 and $412,000 to cover costs associated with the implementation of the new Federal Employees Retirement System.

The Tax Division, as primary counsel for the Internal Revenue Service (I.R.S.), assists I.R.S. officials in enforcing the tax laws of the United States. In this regard, the Tax Division plays a significant role in assessing, collecting, and enhancing revenue for the Federal Treasury. The effective initiation of criminal tax prosecutions and management of civil tax litigation reinforces the faith of the American taxpayer in the United States tax system. This, in turn, results in greater compliance with internal tax revenue laws accompanied by an increase in Federal revenue and an associated reduction in the Federal deficit.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity .	102	99	$5,325	101	100	$5,801	113	109	$8,149	12	9	$2,348

Long-Range Goal: To ensure that the Government adheres to and enforces uniform and equitable policy positions on all tax related matters arising before various Federal and State Appellate Courts.

Major Objectives:

To maintain the quality of the Government's written and oral advocacy in tax cases that are appealed to the various Appellate Courts, despite increasing caseloads.

To recommend appeal of adverse Appellate Court determinations or Supreme Court review of adverse determinations to better protect the Government and the public interest in ensuring an equitable Federal tax system.

To prepare quality briefs, petitions, and other legal documents required by the Solicitor General for submission to the Supreme Court.

To adequately and effectively interpret complex new tax statutes, such as the Tax Reform Act of 1986, in cases being presented in various Federal and State Appellate Courts.

To develop an expanded appellate workload management data base and utilize appellate litigation research tools more effectively.

Base Program Description: The Federal Appellate Section is responsible for preparing and presenting the Government's written and oral arguments in all civil tax cases on appeal to the United States Courts of Appeals and to the various State Appellate Courts. Similarly, it handles or supervises the presentation of legal documents and arguments in criminal tax cases on appeal to the United States Court of Appeals. Although the U.S. Attorneys actually handle most criminal cases under appeal, this is done in direct consultation with, and under the supervision of, Tax Division attorneys in the Federal Appellate Section. However, it should be noted that Division attorneys do occasionally argue significant criminal tax appeal cases involving important precedent-setting issues.

In addition, these program attorneys prepare the drafts of all pleadings and briefs which are filed by the Solicitor General in the Supreme Court for all civil and criminal tax cases under appeal. In conjunction with this responsibility, program attorneys develop recommendations for the Solicitor General regarding: (1) the filing of petitions for certiorari in all tax cases lost by the Government in the various Courts of Appeal; (2) the prosecution of all tax appeal cases lost by the Government in the District Court, the Claims Court, and State Appellate Courts; (3) and the prosecution of all tax appeal cases lost by the Government in the United States Tax Court. These latter cases are referred to the Department of Justice Tax Division by the I.R.S. Finally, program attorneys litigate Freedom of Information Act and Privacy Act appeal cases involving I.R.S. personnel. Civil torts suits involving I.R.S. officials and employees are also handled by program attorneys.

The activities conducted by the Federal Appellate Section are critical for the preservation of a uniform and equitable internal taxation system. Effective interpretations of the tax laws must be provided to the various Federal and State Appellate Court Judges if consistent decisions regarding the nation's tax laws are to be made. This will ensure that the American taxpayer's faith in and compliance with the United States tax system is maintained.

Accomplishments and Workload: The accomplishments of the Federal Appellate Activity Program are presented in the following table:

	1985	1986	Estimates 1987	Estimates 1988
1. Appellate Caseload:				
a. Pending, Start of Year	1,358	1,330	1,149	1,049
b. Received	1,010	977	1,100	1,400
c. Closed	1,038	1,158	1,200	1,350
d. Percent Government Wins	89%	90%	90%	90%
2. Work Products:				
a. Main Briefs	1,000	1,000	1,050	1,215
b. Reply Briefs	110	125	150	175
c. Briefs in Opposition	98	100	125	150
d. Oral Arguments	338	350	375	400
e. Memoranda	622	700	750	800
f. Dispositive Briefs	132	200	225	250

In 1986 the Federal Appellate Section filed more than 1,000 judicial briefs and handled an overall caseload of 2,307 appeals cases. Of further significance is the fact that of the 1,158 appeals cases which were closed, 90% were successfully litigated by Federal Appellate attorneys on behalf of the United States Government. The Section's success rate of more than 80% in obtaining reversals of adverse trial court rulings is equally impressive. The successful performance of Section attorneys in the Appellate Courts enhances the Government's ability to determine and collect taxes and to promote a fair and equitable tax system.

The Section's attorneys have successfully argued appeals cases before the United States Supreme Court which, in turn, has benefited the Government and made for a more uniform and equitable internal system of taxation. As an example, on June 23, 1986 in United States vs. American Bar Endowment, (U.S. Sup. Ct.) the Supreme Court reversed the Court of Appeals for the Federal Circuit and held that (1) income earned by the American Bar Endowment, a charitable affiliate of the ABA, from the sale of group insurance to ABA members constitutes unrelated business income, taxable to the Endowment, and (2) ABA members who buy the insurance are not entitled to deduct any portion of their premium payments as charitable donations to the Endowment. The Supreme Court agreed with the Government that the Endowment's insurance operation amounts to a "trade or business" within the meaning of the Internal Revenue Code, i.e., an activity carried on for the production of income from the sale of goods or the performance of services. The Court noted that the Endowment prices its policies competitively with other insurance generally available in the same market. By the same token, the Court ruled against four insured members of the Endowment who were seeking charitable deductions, since none of them proved that they intentionally paid more for the Endowment's policies than they would pay to acquire comparable insurance coverage elsewhere. The favorable ruling by the Supreme Court means that Federal revenues will be increased and the Federal deficit reduced because of the revenue ramifications this decision has on other groups with similar types of unrelated business income.

In yet another case, United States v. American College of Physicians, (U.S. Sup. Ct.), decided in April, 1986 and litigated by Tax Division Appellate Section attorneys, the Supreme Court ruled in favor of the United States Government. The judicial issue was whether income derived by a tax exempt medical association from the sale of commercial advertising space in its monthly journal, i.e. Annals of Internal Medicine, is an "unrelated business income" subject to tax under Sections 511 through 513 of the Internal Revenue Code. The Supreme Court, reversing the Federal Circuit, held that the journal's income from advertising, which was substantial, was subject to the unrelated business income tax. Being able to impose the unrelated business income tax on the American College of Physicians and other tax exempt associations with similar sources of income will allow the I.R.S. to generate additional revenue for the Federal Treasury.

The successful litigation undertaken by Federal Appellate attorneys is also demonstrated by the case, Khalaf v. Regan a case which was heard in the Circuit Court of the District of Columbia. On September 19, 1986, the Court of Appeals for the District of Columbia Circuit Court affirmed the Court's decision that the plaintiffs lacked standing to maintain a suit against the Secretary of the Treasury requiring him to revoke the tax exempt status of the United Jewish Appeal and five other Jewish organizations. The plaintiffs in the case, which included several former Palestinian West Bank mayors, a member of a minority party in the Israeli parliament, an anti-Zionist rabbi, a former United Jewish Appeal fundraiser, a former United Nations official, and others, alleged that they had been injured in various respects by the Israeli occupation of the West Bank and that Israel had been improperly subsidized in this occupation by donations from American sources that were channeled through the six tax exempt organizations. In affirming the District Court's dismissal of the plaintiffs' complaint, the Court of Appeals relied upon the Supreme Court's separation of powers decision in Allen v. Wright, 468 U.S. 737 (1984), and stated that "no sensible jurisprudence could allow this case to proceed while disallowing for want of standing cases like Allen, supra; Simon v. Eastern Kentucky Welfare Right Organization, 426 U.S. 26(1976); and Linda R.S. v. Richard D., 410 U.S. 614 (1973)." These examples reflect merely a few of the extraordinary accomplishments of the Division's Federal Appellate Section and they clearly demonstrate the ability of Federal Appellate attorneys to litigate effectively on behalf of the United States Government, despite an ever-growing caseload.

Program Changes: The Federal Appellate Section urgently requires additional personnel and funding resources if it is to maintain effective operations. Specifically, 12 additional positions, including 7 attorneys and 5 paralegal and support personnel, and $1.6 million are required to address the workload increase anticipated in FY 88. The funding includes $1 million specifically for automated litigation support. The Appellate Section will become increasingly dependant on automated legal research and automated document support as their caseload docket increases. The recent passage of the Tax Reform Act of 1986 makes the need for additional funding for this program in FY 88 critical. This legislation represents the first major transformation of the United States tax system in thirty years and it is inevitable that legal suits will be initiated contesting its technical provisions. While these suits initially will be litigated by the Division's Civil Trial Section attorneys, the workload of the Federal Appellate Section will also increase because more tax suits will be appealed. It is anticipated that Federal Appellate caseload will increase by a minimum of 5 percent in FY 88 solely as a result of the enactment of the Tax Reform Act.

In addition, the 500 additional positions authorized by the Congress in FY 87 to the I.R.S. to expedite resolution of disputed tax audits, will impact the workload of the Federal Appellate Section. These positions provided to the Appeals and Tax Litigation Unit will be used by the I.R.S. to close an additional 20,000 cases and to accelerate collection of $470 million in tax receipts. It is highly likely that more taxpayers will appeal I.R.S. determinations and suits will be initiated which will have to be litigated by the Division's Federal Appellate attorneys. An estimated 7 percent growth in caseload will occur in FY 88 as a result of the I.R.S. enhanced enforcement efforts in these areas. Additional resources must be provided if this increased caseload is to be litigated successfully in support of the I.R.S. and on behalf of the Federal Government.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal tax prosecution	106	107	$6,525	104	105	$7,132	110	110	$7,903	6	5	$ 771

Long-Range Goal: To enhance public compliance with the nation's tax laws by ensuring timely, consistent, and equitable prosecution of fraudulent and criminal tax evasion.

Major Objectives:

To prosecute tax evasion cases received from the I.R.S., as warranted.

To prosecute and/or supervise the prosecution of cases involving tax protestors and tax shelter plans involving money laundering and off-shore banking operations.

To monitor U.S. Attorneys' Offices grand jury investigations and to review grand jury findings to determine if prosecution is required.

To effectively manage grand jury investigations and trial proceedings referred to the Division by the U.S. Attorneys' Offices.

To develop, in conjunction with the I.R.S., a more effective criminal tax investigation program.

To maintain an effective tax protester enforcement program to address the threat presented by illegal, and often times violent, tax protest groups.

To serve as liaison with the criminal tax units established in several U.S. Attorneys' Offices throughout the nation.

Base Program Description: The criminal tax prosecution program is extremely important for the maintenance of an equitable internal tax system. This program addresses the increasingly growing problem of tax evasion through tax shelters, off-shore banking, money laundering, and other criminal tax avoidance activities. All criminal tax cases referred to the Department of Justice by the I.R.S. are reviewed by program attorneys upon receipt. In turn, program attorneys refer non-complex criminal tax matters to the appropriate U.S. Attorneys' Office, generally within ten days after receipt. This expeditious method of review allows program attorneys to devote more concentrated efforts on complex criminal matters which are referred by the I.R.S.

For complex criminal tax cases, program attorneys carefully examine all reports, exhibits, and evidentiary materials provided by the I.R.S. A legal assessment as to whether or not a case warrants prosecution is made, and those matters recommended for prosecution are transmitted to the appropriate U.S. Attorneys' Office. Program attorneys continue to provide litigative support for criminal tax cases under prosecution. These activities include: (1) providing advice on evidentiary problems, trial tactics, plea bargaining, and general tax matters; (2) preparing indictments and other pleadings; (3) providing legal memoranda, trial briefs, jury instructions, and other materials as required; (4) and closely monitoring the status of criminal tax cases pending in U.S. Attorneys' Offices. Assistance is also provided in grand jury investigations and in the actual prosecution in court when extremely complex issues requiring specific criminal tax expertise are involved. In addition, program attorneys frequently handle criminal tax cases when a case involves a sensitive issue or individual or when prosecution is declined by the U.S. Attorneys' Office but the Division feels that criminal prosecution is warranted.

Criminal tax prosecution attorneys assume sole responsibility for litigating criminal tax cases involving the Church of Scientology, and in cases involving tax protester groups, and certain other tax shelter activities. These cases generally contain extremely complex issues and relevant judicial decisions have nationwide ramifications. As a result, it is particularly important that Tax Division program attorneys with specialized experience in the area of criminal tax law manage these cases.

The effectiveness of this program ensures that tax revenues, which otherwise would be lost due to non-disclosure of income by individuals, corporations, and other taxable entities, are in fact demanded. This is increasingly more important as sophisticated means of tax evasion through off-shore banking, money laundering, and other illegal sources are now in existence.

Accomplishments and Workload: The accomplishments of the Criminal Tax Prosecution program are presented in the following table:

	1985	1986	Estimates 1987	Estimates 1988
1. Number of Defendants in Cases Reviewed:				
a. Pending for Review	697	664	664	664
b. Received for Review	2,271	2,400	2,500	2,600
c. Transmitted to U.S. Attorneys or Declined	2,304	2,400	2,500	2,500
2. Trials Assigned to Unit Attorneys				
a. Total Trial Assignments Pending	52	60	70	70
b. Total Trials Assigned	70	100	110	120
c. Trial Assignments Completed	62	90	100	100
3. Grand Jury Activities by Unit Attorneys				
a. Authorizations Approved and Forwarded to U.S. Attorneys	492	647	700	800
b. Investigations Initiated	12	15	25	25
c. Presentations for Indictment	59	80	100	100
4. Memoranda Completed	2,634	2,750	3,000	3,000

The increasing evidence of tax evasion, non-reporting of income from both legal and illegal enterprises, overstatement of deductions and omissions of income by individuals, and offshore banking and money laundering operations necessitates maintaining an effective criminal tax prosecution and enforcement program. The Division's criminal tax prosecution attorneys have worked diligently using new compliance provisions and increased criminal tax penalties enacted by Congress as part of the Economic Recovery Act of 1981 (ERTA), the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), the Deficit Reduction Act of 1984, and most recently the Tax Reform Act of 1986 to improve the Division's criminal tax prosecution and enforcement program.

The new criminal tax related provisions in these measures have been used successfully by program attorneys to prosecute and seek the imposition of stiff fines and or jail sentences for tax protesters such as the $10,000 fine and 5 year imprisonment of Otto Hurst, United States v. Mattie and Otto Hurst (D. Nev.) in April 1986. They have also been used to convict and secure sentencing of individuals involved in illegal activities such as the Reckmeyer brothers who were found guilty of income tax violations and drug trafficking in United States v. Reckmeyer, et al (E.D. Va.).

Other examples of effective criminal tax prosecution and enforcement cases can be cited. In United States v. Dana Kirk (W.D. Tenn.) on November 20, 1986 in Memphis Tennessee, a grand jury returned an indictment against Dana Kirk charging that he willfully attempted to evade his individual income tax liability for 1982 and 1983, in violation of 26 U.S.C. Section 7201. Additionally, Kirk was charged with having violated 26 U.S.C. Section 7206(1) with regard to those same returns. He was also charged with violating 18 U.S.C. Section 1341 (mail fraud). Kirk, the former Memphis State University basketball coach, achieved fame for having turned Memphis State into a Top 20 contender. Kirk was fired by Memphis State as coach in September, 1986, after seven seasons. At that time, Memphis State President, Thomas Carpenter, refused to discuss his reasons for firing Kirk, other than to say that the move was in the best interest of the University. His reasoning became readily apparent when information regarding Kirk's indictment was made public.

Criminal tax prosecution attorneys were also successful in the case of United States v. Richard Patrick (W.D. Pa.). On November 12, 1986, Judge McCune sentenced Richard Patrick to the maximum period of incarceration prescribed for violation of 26 U.S.C. Section 7201 — five years — on each of four counts charging a violation of Section 7201 for which Patrick was convicted on September 19, 1986. Patrick was also convicted of a single count charging a violation of 26 U.S.C. Section 7206(1) and on November 12, 1986, Judge McCune sentenced him to five years on that count as well notwithstanding that the maximum period of incarceration prescribed for a violation of Section 7206(1) is three years. The sentences are to be served concurrently. The Section 7201 charges relate to Patrick's individual income tax returns for 1978 through 1981, inclusive; the single count charging a violation of Section 7206(1) related to the filed income tax return of the Richard Coal Company for fiscal year ending July 31, 1982. Judge McCune refused to set bond pending appeal. He ordered Patrick to begin serving his sentence on November 17, 1986. In addition to the period of incarceration, Judge McCune imposed a fine of $10,000 on each of the five counts, for a total of $50,000.

Preliminary estimates made by the I.R.S. indicate that Patrick's tax liabilities, including penalties and interest, will approximate $2.5 million. It is assumed that Judge McCune will issue a Corrective Order relating to the five-year term of incarceration imposed by him on Patrick regarding Count V (Section 7206(1). This case clearly reflects the Tax Division's effectiveness in litigating criminal tax prosecution matters and in generating substantial sums of revenue for the Federal Government.

A final example of Criminal Section attorneys' effectiveness in litigating criminal tax matters is United States v. Hercules Gray (N.D. Fla.). On November 25, 1986, in Pensacola, Florida, Judge William Stafford sentenced Hercules Gray to a period of incarceration of three years on each of two counts charging a violation of 26 U.S.C. Section 7201 and to a period of incarceration of two years on one count charging a violation of 18 U.S.C. Section 1341 (mail fraud). The periods of incarceration are to run consecutively. The eight-year sentence was imposed following Gray's plea of guilty to having willfully attempted to evade his individual income tax liability for the years 1978 and 1979 and his plea of guilty to mail fraud. In addition to the period of incarceration, Judge Stafford imposed a fine of $21,000 plus costs of prosecution. Gray, the owner of a Pensacola bar and grill called the Stomping Ground, entered his pleas of guilty on September 29, 1986 — the date trial was to have begun.

Program Changes 1. As with other litigating sections in the Tax Division, additional personnel and funding resources are urgently needed to maintain effective criminal tax prosecution and enforcement operations. An additional six positions and $771,000 are required to ensure that criminal tax evaders are investigated and prosecuted more aggressively. Without these additional resources, individuals who should be prosecuted for criminal tax law violations will go unpunished. The limited personnel resources presently available for this program are insufficient to address the increasing number of criminal tax violation schemes that are now being developed.

In addition, with the implementation of the new I.R.S. revenue compliance initiatives, this program must have additional resources if it is to provide sufficient legal support and assistance to the I.R.S. in their efforts to investigate and prosecute criminal tax evaders. Congress increased the number of I.R.S. special agents 8 percent, and provided the I.R.S. Criminal Investigation Unit an additional $5 million in FY 87. The Division anticipates, at the very minimum, a 5 percent increase in cases being forwarded to our Criminal Section. If additional resources are not provided for this program area in FY 88, the Division will be unable to manage this increased workload, and revenue which could be collected through aggressive prosecution of criminal tax evaders will go uncollected.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil tax litigation	319	314	$17,197	311	310	$18,750	357	345	$25,919	46	35	$7,169

Long-Range Goal: To establish uniform interpretation of the internal revenue laws so as to maximize Federal tax revenues received and ensure equitable resolution of disputed tax matters through litigation against taxpayers' claims, the recovery of outstanding tax liabilities, and other civil tax matters under dispute.

Major Objectives:

To uniformly and effectively litigate refund suits, so as to maximize the tax revenues collected for the Federal treasury.

To successfully defend all injunctions, declaratory reliefs, suppressions, mandamus, jeopardy assessments, and other civil tax suits on behalf of the Federal Government.

To vigorously defend all civil tort actions in order to discourage "nuisance" suits and prevent harrassment of I.R.S. personnel.

To maximize the collection of unpaid taxes through successful litigation of all civil tax recovery suits and through prompt collection of all tax judgments issued in the Government's favor.

To provide legal support to court judgments in bankruptcy proceedings in order to establish Government priority in relation to other creditors, and to collect all non-dischargeable debts.

To rigorously enforce all administrative summonses issued by the I.R.S. to ensure that on-going tax investigations are not impeded.

To develop a consistent Government position with regard to complex legal cases involving Federal immunity from State and local taxation and in cases under Code Section 7428 governing the criteria for tax exempt status.

To effectively manage new responsibilities resulting from the enactment of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) and the Tax Reform Act of 1986.

To maintain an equitable Freedom of Information Act and Privacy Act program so that a taxpayer's right to information concerning the policies and practices of the I.R.S. in enforcing the nation's tax laws is balanced with the I.R.S.' ability to conduct effective tax investigations, limit Government disclosure of tax return information, and maintain third-party confidentiality.

Base Program Description: Of primary significance, the Civil Tax Litigation program provides a uniform interpretation of the internal revenue laws thereby ensuring a fair and equitable internal system of taxation. In this regard, civil tax litigation attorneys conduct litigation to maximize Federal tax revenues, by resolving disputed tax matters arising from individual taxpayers' claims and by successfully recovering outstanding tax liabilities for the Federal treasury.

Civil tax litigation attorneys work in close cooperation with I.R.S. officials in enforcing the tax system of the United States. I.R.S. review of individual and corporate tax returns frequently reveals a discrepancy between the actual tax liability and the amount paid by the individual or

corporate tax entity to the I.R.S. When a taxpayer disagrees with an I.R.S. determination of additional tax liability, the taxpayer may either withhold payment and file suit in the U.S. Tax Court challenging the I.R.S. determination, or the taxpayer may pay the additional liability and subsequently file suit for a refund of the amount in question in a U.S. District Court or the U.S. Claims Court. The Division's civil tax litigation attorneys are responsible for litigating all such cases in these two latter Courts, as well as for cases filed in these courts by taxpayers who believe they have initially overpaid a tax obligation. Responsibility for litigating cases in the U.S. Tax Court is maintained in the I.R.S. Office of the Chief Counsel. In both instances, attorneys strive vigorously to conduct successful litigation so as to increase revenues in the Federal treasury and to ensure the maintenance of an equitable internal revenue system.

The civil tax litigation program also defends the Government's interests in other taxpayer initiated claims against I.R.S determinations. Among these are recovery of money adjudications; bankruptcy litigation; suits against I.R.S. and other U.S. Government officials for torts allegations with respect to the collection; actions filed against the United States Government pursuant to certa' ovisions of 28 U.S.C. Section 2410; and other civil tax matters under dispute. In every instance, the primary objective is to ensure that fa and equitable judicial determinations are made both to protect the interests of the Federal Government and those of the taxpayer.

The broad ranging activities of the civil tax litigation program also include providing legal advice and assistance to I.R.S. officials in tax investigations' matters. In addition, civil tax litigation program attorneys handle Freedom of Information and Privacy Act suits; summons enforcement cases; declaratory judgment actions to determine an organization's qualification for tax exempt status; and State and local tax immunity suits. The uniform and equitable interpretations of the U.S. civil tax laws, which are enabled by the activities of this program, enhances taxpayer compliance with the internal revenue system and ensures the maximum collection of tax revenues for the Federal treasury.

Finally, the enactment of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) and the Tax Reform Act of 1986 has significantly increased the responsibilities of civil tax litigation program attorneys. With the enactment of TEFRA, program attorneys defend the Government's interest in abusive tax shelter cases through injunctive relief and penalties against these tax evaders (26 USC Sections 7408 and 6700). Similarly, successful litigation under the provisions of TEFRA (26 USC Section 6661) enables the imposition of substantial monetary penalties on investors in abusive tax shelters. It must be emphasized that litigation of abusive tax shelter injunction and penalty matters requires particular expertise, as the Government bears the burden of proof. As a result, these matters require extensive investigation and trial preparation by the Division's civil litigation attorneys. This will also be true when the new and extremely complex provisions of the Tax Reform Act of 1986 become contested.

Accomplishments and Workload: The accomplishments of the Civil Tax Litigation Program are presented in the following table:

	1985	1986	Estimate 1987	Estimate 1988
1. Defense of Monetary Claims				
a. Tax Refund Cases				
Pending	3,035	2,909	3,143	3,443
Received	1,133	1,108	1,300	1,600
Closed	1,259	874	1,000	1,200

The Division's Civil Trial Section not only represents the Government in tax fraud suits brought by taxpayers, but also in a wide variety of other cases under the Internal Revenue Code and in tax-related litigation in Federal and State Courts. Civil trial cases represent the overwhelming majority of the Tax Division's total caseload and they are defined under several major categories. These categories include: (1) litigation in defense of monetary claims; (2) litigation for the recovery of money; (3) litigation to enforce Federal civil programs; (4) litigation under the provisions of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA); (5) and, most recently, litigation which will result from the enactment of the Tax Reform Act of 1986. In addition, the Division's Civil Trial Section attorneys have supervisory responsibility over the more than 15,000 tax lien matters that are handled primarily by the U.S. Attorneys' Offices.

The importance of the litigation conducted by Civil Trial Section attorneys cannot be understated. Civil litigation conducted by program attorneys on behalf of the Government results in billions of dollars being collected for the Federal Treasury. Of equal significance, successful litigation undertaken by program attorneys ensures that uniform and equitable determinations regarding civil tax matters at issue are applied nationwide. This, in turn, encourages taxpayers to comply with the nation's internal revenue system and increases taxpayers faith in this system.

While numerous examples of this program's successful accomplishments can be cited, a brief summary of four successful cases demonstrates the effectiveness of the Division's Civil Trial Section attorneys in conducting litigation on behalf of the Federal Government. The first example involves a major tax shelter plan. In United States v. Music Masters, Ltd., et al (W.D. N.C.) Judge Potter entered an injunction against three defendants in this action brought by the United States under Sections 7408 and 7402 of the Internal Revenue Code. In a lengthy memorandum, the Judge found that the "Music Masters" recording tax shelter plan was abusive within the meaning of Code Section 6700 on four different counts. The Court ruled that the alleged "recourse" notes entered into by the defendants to purchase "Music Masters" should be disregarded and that the correct value of "Music Masters" could be no more than the cash that was paid initially. Each "recourse" note used to purchase "Music Masters" was found to have been overvalued by defendants by more than 200 percent. The Court also found that defendants made false financial statements on three different grounds within the meaning of Section 6700 of the Internal Revenue Code.

The Judge ruled on several important legal issues in this case, including that the appropriate legal standard to be applied in this matter was the "preponderance of the evidence" rule. The Court also found that an injunction may be issued as a matter of law once the statutory requirements are met, and that traditional equity grounds need not be proven. The Court then determined that injunctive relief was appropriate in this case under both Section 7408 and Section 7402 of the Code.

The Court's order required the defendants to, among other things, notify the I.R.S. before participating in the sale of future tax shelters. In addition, a copy of the final judgment and a copy of a letter offering to rescind the lease agreement were required to be sent to each lessee in the tax shelter and to the I.R.S.

In another civil matter, Carol Comp, Administratrix of the Estate of Adler B. Seal v. United States (E.D. La.), a $29.7 million jeopardy assessment was made against Adler B. Seal for 1981 through 1983 income tax evasion. Seal allegedly was one of the nation's top drug smugglers during that period. Then in March, 1984, he became a Drug Enforcement Administration informant. He later testified in Federal Courts in Miami and Las Vegas and before the President's Commission on Organized Crime in 1985 concerning his, and others, drug trafficking activities. The I.R.S. received information that Seal was dissipating assets, and the jeopardy determination was made on January 30, 1986. Two weeks later Seal was murdered.

At this trial, the plaintiff argued that Seal's death indicated that jeopardy no longer existed. Evidence was also introduced suggesting that the District Director relied on false information in making his determination. Civil Trial Section attorneys then introduced "subsequently developed" evidentiary information in support of the District Director's determination. The Judge ruled in the Government's favor in finding that the assessment was reasonable, the assessed amount was appropriate, and that Seal's death was irrelevant to the matter. Among the indicia of jeopardy against Seal were his burning of records, ownership of airplanes and boats, extensive use of Cayman Islands corporations as tax shelters and for narcotics trafficking activities, and cashing of $151,000 in payable checks within 30 days of the jeopardy assessment.

Another example of the accomplishments of Civil Trial Section attorneys is reflected in Bethel Baptist Church, et al. v. United States (M.D. Pa.). On March 6, 1986, the Court granted the Government's motion for summary judgment, dismissing the complaint in this tax refund case. The plaintiffs challenged the constitutionality of the 1983 and 1984 social security amendments to the Internal Revenue Code, which brought churches, as employers, into the Social Security System. Before 1983, churches could participate, as employers, in the Social Security System on a voluntary basis. The 1983 amendments changed this provision and then required churches to belong to the system. In 1984, Congress, concerned that some churches would perceive that their First Amendment interests were adversely affected by the 1983 amendments, permitted churches to elect out of the system. However, by electing out, employees were subjected to a higher rate of taxation under the self-employment taxing system.

Civil Trial Section attorneys effective litigation of this matter resulted in the Court's denial of Bethel's claim for a refund of $17,800 of employment taxes paid for the first quarter of 1984. The Court, before reaching the merits, held that various individual co-plaintiffs had standing to pursue this suit. In addition to the church, the pastor, the deacon, five employees, and seven parents of children attending the church's school were included as plaintiffs, although none had filed administrative claims for refund as required by 26 U.S.C. Section 7422(a). The Court found

that the pastor and deacon did not have standing, but that the employees who, permissibly, did seek to have the church advance their claims for refund on their behalf, did have standing separate and apart from the church. The Court's only explanation of its rationale was that Section 7422(a) was satisfied when Bethel filed a claim with the Government which include the employees' taxes, thus permitting the employees to file suit on their own behalf. The Court found that the parents did not have standing to bring suit for refund under the jurisdictional provision of Title 28 applicable to tax refund suits, 28 U.S.C. Section 1346(a)(1). However, the Court held that it had jurisdiction over the parents' claims under 28 U.S.C. Section 1346 (a)(2), which provides for jurisdiction of an action or claim against the United States not exceeding $10,000 in amount founded either upon the Consitution or any act of Congress, the theory being that the parents' First Amendment rights were threatened because the tax makes it financially more difficult to give their children a religious education at the school.

Civil Trial Section attorneys were also successful in the matter of Edison International, Inc. (formerly Studebaker-Worthington, Inc.) v. United States which was heard in the Claims Court. At issue in this case was a deduction of some $20 million for loss of "goodwill" claimed to have occurred in the year that Studebaker ceased manufacturing automobiles. The plaintiff contended that "goodwill" in that amount originated with plaintiff's ancestor, Studebaker Corporation of New Jersey, upon its formation in 1911 and remained unimpaired until 1966, when it was lost after Studebaker stopped manufacturing automobiles. The Government contended that no "goodwill" had ever been acquired or, if it had been acquired, it was previously lost. It was further argued that any "goodwill" in the event that it ever had been acquired had a lesser value (and basis) in 1911 than at the present.

The Claims Court recently concluded that the plaintiff failed to demonstrate that the 1911 "goodwill" value was $20 million "or indeed any amount even remotely approaching that figure." Accordingly, the Court considered it unnecessary to pass on the defendant's alternative contention, or to set any figure for the amount of "goodwill" that might have been acquired. The Claims Court decision resulted in a substantial savings in Federal revenues.

Program Changes: Personnel and funding resources are critically needed to manage the anticipated workload increases resulting from the Tax Reform Act of 1986 and the additional resources authorized for the I.R.S. The Tax Reform Act of 1986 will have an immediate and significant workload impact as a result of the provision treating interest on most tax deficiencies of individual taxpayers as "personal interest" and not fully deductible after 1986. New I.R.S. regulations will encourage more taxpayers to pay their tax deficiencies and interest liabilities in 1986 to retain the full deduction for interest paid. Taxpayers are then expected to file for refunds which must now be filed in the Claims Court or U.S. District Court, where Civil Trial Section attorneys are the Government's defenders. The Civil Trial Section's litigation caseload in FY 88 is likely to increase at least 5 percent due to the new tax reform procedures.

Similarly part of the resources provided to the I.R.S. to implement the Tax Shelter and General Revenue Initiatives include 500 appeals officers, auditors, and attorneys, and 1,000 collection personnel to expedite resolution of tax audits and reduce the enormous inventory of unpaid accounts. The increased ability of I.R.S. to complete audits and initiate tax collection actions will result in more taxpayers filing suits contesting I.R.S. decisions. These suits must then be litigated by the Division's Civil Trial Section attorneys. A minimum increase of 10 percent in workload is anticipated in FY 88 as a result of I.R.S.' intensified enforcement efforts. To be effective in managing the increased caseload generated by these two measures the Division must be provided with an additional 46 positions for its civil trial litigation program. These positions include 38 attorneys and associated legal personnel and 8 support personnel and $7.2 million. Automated litigation support which will be contracted out to provide the technological support for research, filing and document control makes up $2.0 million of the new funding. This represents an extremely conservative personnel and funding request given the significant increase in civil tax caseload which will result from passage of these measures.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Organized crime drug enforcement....	14	12	$929	14	13	$1,025	20	18	$1,714	6	5	$689

Long-Range Goal: To assist in the investigation and prosecution on tax related charges of organized criminals and narcotics traffickers through cooperative efforts with other agencies participating in the Organized Crime Drug Enforcement Task Forces (OCDE).

Major Objectives:

To provide litigative and prosecutorial support to the 13 regional OCDE Task Forces.

To ensure prompt and successful prosecution of narcotics traffickers by expediting the review of I.R.S. special agents' reports and by providing legal advice on evidentiary matters and theories of proof.

To effectively utilize the expertise of Tax Division attorneys when handling criminal narcotics cases at the grand jury and trial stages upon request from the OCDE Task Forces.

Base Program Description: The OCDE Task Forces, initially established in October, 1982 to eliminate drug trafficking enterprises, exist in 13 regions throughout the nation. The primary mission of the Task Forces is to investigate and prosecute major narcotics trafficking organizations through multi-agency cooperative efforts. Among the participating agency representatives are the I.R.S. investigators and Department of Justice Tax Division attorneys. This consolidation of agencies' resources enables the OCDE Task Forces to fully utilize all financial investigative techniques, including tax law enforcement and forfeiture actions.

The Tax Division's OCDE program was developed initially with the establishment of a separate unit within the Division's Criminal Section. This unit, which also handled other matters, managed successful investigative and prosecutorial efforts against suspected drug traffickers, primarily in the I.R.S. Southeast Region. A program attorney was also assigned to the Financial Crime Task Force in Chicago to assist in the investigation and prosecution of tax cases involving major narcotics traffickers. From this prototype, the Division expanded its OCDE program in 1985.

Presently, OCDE program attorneys serve as the liaison with the 13 OCDE Task Forces and they provide litigation support, advice, consultation, and other legal assistance in OCDE Task Force cases. Program attorneys also monitor the drug-related docket of the OCDE Task Forces so that, upon request by a Task Force, legal assistance can be provided expeditiously for the successful investigation and prosecution of major narcotics trafficking cases. OCDE program attorneys are also available to provide legal advice, assistance, and training to the OCDE Task Forces for financial/tax investigations and for cases under appeal which involve technical and extremely complex issues. It should also be noted that OCDE program attorneys provide legal expertise to the OCDE Task Forces for non-Task Force drug/financial related cases as well.

The involvement of OCDE program attorneys in OCDE Task Force cases is extensive because these cases generally involve lengthy grand jury investigations (from 9 to 40 months). These cases and associated investigations include multiple defendants, each of whom is charged with various criminal violations. As a result, Division attorneys not only provide drug and financial legal advice and expertise to OCDE Task Force personnel, but often provide assistance on other charges as well.

The OCDE Task Forces rely heavily upon the services provided by the Division's OCDE program attorneys to ensure that investigations are handled expeditiously and that authorizations on relevant tax charges are coordinated successfully so that tax-related charges are not erroneously separated from the drug-related charges in the case.

In sum, the nationwide and multi-agency OCDE programs result in the efficient and effective use of Federal resources by eliminating duplication of agency efforts in criminal drug-related cases, and by ensuring that the maximum penalty and greatest recovery of money are obtained in major drug trafficking prosecutions.

Accomplishments and Workload: The accomplishments of the Organized Crime Drug Enforcement program are presented in the following table:

	1985	1986	Estimate 1987	Estimate 1988
Attorneys Assigned to Regional Drug Task Forces	9	9	13	13
a. Number of Defendants in Cases Received	342	449	550	600
b. Prosecutions Authorized	282	327	370	400
c. Grand Jury Receipts	117	146	200	225

The Tax Division has acquired substantial experience and expertise in tax and financial investigations of narcotics traffickers. In addition to assisting in individual case development, Tax Division OCDE liaison attorneys participate in training new Assistant U.S. Attorneys and Task Force investigators. OCDE program attorneys also maintain a current clearinghouse of legal and investigative materials and information and they coordinate dissemination of this information to regional OCDE Task Force personnel.

Tax Division OCDE program attorneys contributed significantly in the investigation and prosecution of a major narcotics trafficking ring in the case United States v. Harold Garmany,et. al. (D. Ariz). The participation of a Tax Division OCDE program attorney in handling this matter resulted in the successful prosecution of a series of cases involving 39 defendants and 77 counts concerning a marijuana and cocaine distribution ring which generated over $20 million in profits between 1979 and 1982 alone. Harold Garmany, the leader of the operation, received a life sentence without possibility of parole for his convictions. Moreover, the jury, by special verdict, required forfeiture to the Government of all of Garmany's assets from the drug-trafficking operations. Two of Garmany's principal lieutenants received 30 year prison terms for their convictions.

In another case, United States v. Carlos Ernesto Armenta LaFaurie, OCDE program attorneys were successful in litigating a repatriation suit. In these suits, the Government seeks to compel a taxpayer to return assets to the United States from a foreign country to satisfy his or her United States tax liabilities.

In this case OCDE program attorneys brought suit against Carlos Ernesto Armenta LaFaurie, to return proceeds from a Swiss bank account to satisfy his tax liabilities. LaFaurie had previously been convicted of money laundering by a Federal Court in Miami. Suit was brought against LaFaurie as a first measure before proceeding directly against the Swiss bank to enforce levies previously served by the I.R.S. on U.S. branches of the bank in Miami and New York. LaFaurie's agreement to repatriate the bank account proceeds from Switzerland made the latter enforcement action unnecessary. While Government suits against United States-based banks having foreign branches are viable enforcement actions, the Tax Division is willing first to proceed against taxpayers holding the foreign accounts where practicable, since they bear the primary responsibility for transferring assets to offshore tax havens to avoid their tax obligations.

In total, $4 million was involved in satisfying LaFaurie's tax liabilities resulting from his money laundering schemes. The Tax Division intends to employ this novel tax law enforcement approach, which has been used sparingly in the past, with greater frequency to combat the growing use by taxpayers of offshore facilities to remove or conceal assets from U.S. tax authorities.

Finally, it should be noted that during 1986, the Tax Division authorized 153 OCDE Task Force grand jury investigations involving 485 individual targets. In addition, prosecution of more than 250 OCDE Task Force defendants for criminal tax violations relating to their narcotics activities was authorized. As the regional drug task force program has developed and grown, Tax Division participation has been increasingly requested by OCDE Task Force prosecutors and investigating agents.

Program Changes: The war on narcotics trafficking is one of this Administration's highest priorities. The OCDE Task Force cases increasingly involve tax charges and a conscious effort is being made to rely upon forfeitures to cripple drug trafficking rings to eliminate their profits. As a result, Congress recently approved an 8 percent increase in the number of I.R.S. special agents for FY 87 and provided I.R.S.' criminal investigation function an additional $5 million for criminal and drug/tax related law enforcement. The additional resources provided to the I.R.S. in FY 87, and those requested in FY 88, will cause at least a 5 percent increase in cases being forwarded to the Criminal Section of the Tax Division and more specifically to the OCDE unit. In particular, Congressional emphasis on investigation and prosecution of organized crime and drug-related money laundering activities, when indeed enforced by the I.R.S., will have a major impact on the Tax Division's OCDE program. Millions of dollars in unreported income is in some way connected to narcotics trafficking. I.R.S. enforcement efforts in this area will be vastly improved due to these additional resources. This, in conjunction with a strengthening of the Tax Division's OCDE program, will result in the collection of a substantial portion of the funds now unreported and currently untaxed. Additional resources are essential if the Division is to manage this workload and maintain a viable OCDE program in support of the OCDE Task Forces and I.R.S.' tax law enforcement efforts. Specifically, six positions and $689,000 are requested to handle the anticipated increases in workload in 1988.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration	98	111	$4,413	91	104	$4,781	91	104	$4,781	...	...	...

Long-Range Goal: To provide Division-wide management and direction including: selecting, developing, and leading the Division's supervisory team; initiating new Division programs in response to Administration priorities; ensuring timely review, analysis, and comment on proposed legislation affecting the Division's policies, practices, and the internal revenue laws; fulfilling the Division's administrative responsibilities under the Freedom of Information and Privacy Acts and Section 6103 of the Internal Revenue Code; and providing essential administrative and information systems support services.

Major Objectives:

To review and analyze legislation affecting the Division's policies and practices and to respond to all legislative inquiries.

To develop legislative solutions to recurring problems in the area of tax litigation.

To ensure the maintenance of precise, consistent, and uniform litigating positions and to enhance Division liaison activities with the I.R.S.

To appropriately handle all FOIA and Privacy Act matters by conforming to statutory mandates of these acts and by maintaining confidentiality when releasing tax return information.

To provide essential administrative support and information systems services to all Tax Division Sections through both the continued performance of current activities and the identification of areas where administrative management techniques, modern office technology, improved productivity, and other modern administrative innovations can be initiated to support the Division's overall mission.

Base Program Description: Effective management, direction, and leadership for each program area are essential if the Tax Division is to successfully perform its responsibilities as legal counsel to the I.R.S. and other client agencies. This guidance is provided by the Division's Executive Direction and Control, Legislative Affairs, and Administrative Services components.

The Executive Direction and Control program provides leadership and policy guidance for the Tax Division for all areas of its litigation responsibilities. This component provides civil and criminal tax litigation policy guidance; promotes effective communications and liaison activities with the I.R.S. and other client agencies; reviews the Division's major litigation decisions to ensure that appropriate and uniform policies regarding the nation's tax laws are developed and maintained; and negotiates acceptable compromises effected by the Division regarding discrepant opinions involving internal revenue law interpretations and legal decisions.

The legislative program is responsible for providing required legislative and other reports to the Congress, the Office of Management and Budget, and the Department of Justice Office of Legal Policy and Legislative Affairs concerning pending or proposed legislation affecting the Division. The legislative program also involves coordinating Division-wide efforts to identify appropriate legislative proposals which may positively impact the Division's legal efforts. Finally, responsibility for managing the Freedom of Information and Privacy Act activities of the Division falls within this program area. Specifically, this involves developing and coordinating the Division's response to all taxpayer requests under these acts and related statutory provisions for handling administrative appeals arising from the denial of such requests.

The Administrative Services section is divided into four basic units, including: (1) the Executive Office, which is responsible for providing the overall control and guidance to the program; (2) the Comptroller's Staff, which is responsible for the financial management, budget, and program evaluation functions; (3) the Information Resources Staff, which is responsible for the development, coordination, and maintenance of the automated case management, litigation support, and word-processing activities of the Division; (4) and the Services Staff, which is responsible for the personnel management, resource services, and case and file control activities of the Division.

Accomplishments and Workload:

Despite a change in leadership through the appointment of a new Assistant Attorney General for the Tax Division, the quality of the Division's executive direction and leadership guidance has been sustained throughout the transition period. The Executive Direction and Control component of the Tax Division has ensured the maintenance of a viable and effective organization, despite increasing caseloads with no associated personnel increase. Under this direction, attorney and other personnel have been utilized efficiently so that successful enforcement of the nation's internal system of taxation has been maintained. Improved relations with I.R.S. officials in their efforts to enforce the nation's tax laws has also been further stimulated by the Division's leadership.

The Executive Direction and Control program has maintained the Division's priorities with respect to tax law enforcement. Specifically, emphasis is directed toward the elimination of abusive tax shelters and offshore tax havens through the further expansion and development of the Office of Special Litigation. Management direction has also been provided for other priority areas, including the prosecution of leaders of tax protester movements and activities, and increased support for the Division's Organized Crime Drug Enforcement program.

In sum, the Executive Direction and Control program has maintained an effective Tax Division through its support of priority program areas, its streamlining of operations through the use of more sophisticated automation and technical support capabilities, and its attention to improving tax enforcement cooperation with other client agencies.

The Administrative Services program of the Tax Division also has been further developed and improved. The Comptroller's Staff has been expanded to provide additional resource support to address Departmental and OMB reporting requirements such as A-123 (Internal Controls) and A-76 (Productivity Improvements). Additional budgetary support has been obtained to ensure that all required budgetary materials are of a professional quality and are provided in a timely manner, and to ensure that the expenditures of the Division's limited budgetary resources are carefully monitored. Finally, an effective travel program under the Citicorp Diners Club Government Credit Card system has been maintained, despite difficulties with its initial development.

The Information Systems Staff worked aggressively with other Department components to develop an integrated office automation system network. In addition, efforts were devoted to the further development of the automated systems. Currently, shared logic word-processing systems have been implemented in the Appellate, Civil Trial - Northern Region, and Civil Trial - Western Region Sections of the Division. Efforts are currently underway to install this system in the Division's Civil Trial - Southern Region and Civil Trial - Central Region. Displaywriter capabilities exist in the Civil Trial - Central Region, Claims Court, and Office of Special Litigation components of the Division. The objective is to develop an office-wide automated system which will include Document Production, Case Management, Legal Research, and Administrative Management capabilities. The Division's long-range information technology systems plan centers around the effective and efficient integration of sophisticated information technologies. The plan reflects a radical departure from past automation efforts by calling for the application of technology directly to the activities of the legal and paralegal staff, in addition to enhancing capabilities previously available to only the secretarial/ administrative functions. This system, when fully developed and implemented, will enable all personnel to utilize system software to produce documents, communicate with all other parts of the Division, and access external organizations and databases as necessary via a single video display workstation desktop terminal.

In 1986 the Services Staff coordinated and conducted a successful office move of over one half of the Division workforce to a new facility. Similarly, they oversaw the successful completion of office renovations in the Main Justice Department building for other Division personnel. The Staff continues to emphasize further improvements of support services in all areas of its responsibility.

Finally, through improved management and administrative efficiency, the Division is sustaining a management savings reduction in its FY 88 budget for 18 positions, 17 FTE workyears, and $193,000.

Congressional Appropriations Action

The final congressional appropriation, enacted under P.L. 99-500, reduced the President's budget request for the Criminal Division by $2,154,000.

Supplementals Requested

The 1987 supplementals requested by the Criminal Division include $1,354,000 for costs associated with the relocation of most of its Washington, D.C. operations from the Federal Triangle Building, at Ninth and D Streets, to the Bond Building, at Fourteenth Street and New York Avenue; $175,000 for increased charges for the Federal Telecommunications System; $429,000 for increased pay costs associated with the January 1987 pay comparability increase; and $520,000 for costs associated with the new Federal Employees Retirement System (FERS).

Long-Range Goal: To secure judicial interpretations favorable to the administration of criminal justice.

Major Objectives:

To prepare briefs and petitions for the Solicitor General in Supreme Court cases.

To handle circuit court appeals referred to this program by other components of the Division and by the United States Attorneys.

To prepare memoranda on behalf of the Criminal Division to the Solicitor General recommending whether further review should be sought for lower court decisions which are adverse to the government.

To devise creative and, when necessary, innovative approaches to issues of first impression so as to provide a foundation for the development of new concepts in criminal law.

Base Program Description: The Appellate Section reviews all federal criminal cases presented to the Supreme Court for a writ of certiorari, and the Section determines whether to respond or to waive a response because the written opinion of a lower court adequately answers the claims presented in the petition. If a response is deemed unnecessary, that decision is forwarded to the Office of the Solicitor General. If the decision is made to respond to the petition, a brief opposing review by the Supreme Court is prepared by an Appellate Section attorney and forwarded to the Solicitor General for approval and filing. The Appellate Section also examines Court of Appeals decisions that are adverse to the Department of Justice, making influential recommendations to the Solicitor General on behalf of the Criminal Division as to whether review of these decisions by the Supreme Court should be sought. The Solicitor General authorizes a request for Supreme Court review, the Section prepares petitions for a writ of certiorari. The Appellate Section is charged with researching the law thoroughly and drafting the strongest possible arguments in favor of the government's position. Whenever the Supreme Court agrees to review a federal criminal case, the Appellate Section is responsible for formulating the position of the Criminal Division on issues presented for review, researching the applicable principles of law, and drafting the Criminal Division's view for the government's brief. The Appellate Section also makes recommendations for the Criminal Division as to whether the Federal government should participate as amicus curiae in State cases pending before the Supreme Court. If such participation is authorized, the Appellate Section performs the research and brief-writing tasks in preparation for the filing of the amicus curiae brief. With regard to federal Court of Appeals cases, the Appellate Section performs several important roles. First and foremost, the Appellate Section provides advice and guidance to Assistant U.S. Attorneys who seek assistance in the preparation of an appeal to a federal circuit court. Frequently, at the request of United States Attorneys, Section attorneys write briefs and participate in oral argument. This assistance is particularly noteworthy because it leads to the handling by the Appellate Section of many important appeals containing serious constitutional questions or issues of first impression. The development of caselaw in some crucial areas has been favorable to the government's position because of the contribution of expertise by Appellate Section attorneys. Since the Supreme Court reviews fewer than one percent of all cases presented for its consideration, the decisions rendered by Courts of Appeals customarily represent the final say on critical issues of law.

Accomplishments and Workload: The quantitative experience and expectations of the Appellate Section are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Briefs in opposition to certiorari petitions	317	336	350	350
Court of Appeals briefs and arguments	196	205	200	200
Supreme Court briefs (including amicus curiae)	29	32	25	25
Government petitions for certiorari	25	21	20	20
Adverse decision memoranda	827	784	800	800
Supreme Court waivers of response	792	763	750	750

The Appellate Section's major role last year was to ensure that the Comprehensive Crime Control Act of 1984 (Title II of P.L. 98-473), would be implemented in a manner fully consistent with its underlying purposes. To ensure that, the Section:

-- rendered advice to United States Attorneys' Offices in connection with problems arising under the new Act, including information pertaining to positions or policies adopted by the Department, and of relevant arguments, including supporting materials.

-- handled cases generated under the new Act to ensure a favorable judicial interpretation. Such cases included one upholding the constitutionality of the new pretrial detention provisions of the bail statute and another construing the "first appearance" requirement contained in the Act.

-- assisted in the preparation of the Government's petition for a writ of certiorari to have the Supreme Court review the constitutionality of the new Act.

Another important statutory scheme which the Appellate Section successfully sheparded during the year was the Speedy Trial Act. In connection with this important Act, the Section provided advice to United States Attorneys' Offices on important policy issues arising under the Act, and directly handled cases involving important questions of statutory construction.

Several cases handled successfully by the Section included issues of critical importance to the Department's mission, such as: U.S. v. Smith, in which the Court of Appeals held for the first time that governmental privileges applicable in other cases must be applied also in espionage cases brought under the Classified Information Procedure Act. This case allowed the government to insist upon a showing of special need before secret information is disclosed either to, or by the defense, including information relating to surveillance gathering techniques; A case in which the Third Circuit upheld the President's power to convene a Commission and appoint to it members of the Judiciary, over arguments that such appointments violated the separation of powers; A case upholding that any attempted assassination of an official guest of the United States (in this case from India), may be prosecuted under 18 U.S.C. §1116, 1117, despite the failure of the State Department to formally designate the victim as an "official guest" pursuant to internal regulations; and, another case in which the Court of Appeals held for the first time that the government may obtain from the court, in appropriate cases, a protective order preventing a witness subpoenaed before the grand jury from disclosing that he has appeared, the nature of his testimony, as well as which, if any documents, the grand jury requested.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Organized crime prosecution.....	249	230	$15,090	249	230	$16,770	273	253	$19,082	24	18	$2,312

Long-Range Goal: To reduce the influence of major organized criminal activities on the economic, political, and social institutions of the United States.

Major Objectives:

To conduct the investigation and prosecution of all major organized crime matters.

To initiate new investigative approaches and ensure full and appropriate use of all statutory and other tools effective in organized crime prosecution.

To provide prosecutorial support and assistance to other Federal, state and local officials combatting organized crime.

To maintain national liaison, planning and coordination among all Federal agencies involved in organized crime law enforcement.

Base Program Description: The resources of the Division's organized crime program have been directed at those organized crime groups which appear to pose the greatest threat to the economic, political and social well-being of the country. Most of the attorneys in this program are assigned to Organized Crime Strike Forces located in 26 major cities where organized crime is viewed as most influential and, therefore, constituting the greatest threat. The program's Washington-based office is responsible for overseeing the activities of the Strike Forces, and ensuring that they comply with the five general priority areas established for the program: organized criminal involvement in labor-management racketeering, business infiltration, violent crime, public corruption and narcotics. The policy guidance provided to the individual Strike Forces is also tailored to accommodate special regional considerations. Each individual Strike Force is responsible for coordinating the Federal effort against organized crime within its assigned region. In cooperation with the U.S. Attorneys and with state and local authorities, it identifies the major organized crime organizations and activities, conducts the appropriate investigations, and prosecutes the targeted offenders. Each Strike Force is composed of Criminal Division attorneys, investigators from virtually every Federal agency concerned with organized crime, and, in many cases, representatives of state and local agencies. This interagency approach means that more information is shared, that inefficient competition among agencies and duplication of effort is reduced to a minimum, and that the expertise of a variety of disciplines is marshaled for a unified, more comprehensive approach to the problem. Attorneys in the Strike Forces are brought into an investigation at its

investigation to determine whether the case has sufficient merit to be continued, in light of established priorities, and to ensure that the conduct of the investigation both complies with all applicable legal requirements and takes advantage of the most effective statutory tools available. The Washington office is responsible for assessing the relative needs of different cities and districts for Strike Force attention. Finally, the objective to maintain liaison among all Federal agencies involved in organized crime law enforcement is being addressed at two levels. First, the fact that each of the Strike Forces is composed of representatives of virtually all these agencies means that an effective liaison is maintained at the working level through day-to-day, on-the-job contact. Prosecutors and investigators work side-by-side on their joint cases, and Strike Force heads are in constant communication with the managers of the investigators' respective agencies. Second, at the national level, the chief of the program chairs the National Organized Crime Planning Council (NOCPC), which meets almost every month. The members represent all the Federal agencies combatting organized crime, and the primary purposes served are achieving a consensus on planning national efforts, evaluating Strike Force activities, maintaining liaison among Federal agency directors, sharing information, and identifying and resolving common problems.

Accomplishments and Workload: The recent experience and future projections of the Organized Crime prosecution program are summarized quantitatively in the following table:

Item	1985	1986	Estimates 1987	1988
Matters:				
Pending, beginning of year	421	430	407	412

Convictions	483	392	406	469
Acquittals/dismissals	107	66	35	35
Other dispositions	157	301	55	63

--Erosion of Leadership. Major mob leaders and operatives from the Midwestern cities most heavily affected by organized crime were awarded substantial prison terms following a prosecution in Kansas City, Missouri. Joseph "Joey Doves" Aiuppa, boss of the Chicago Syndicate, and his underboss, John "Jack the Lackey" Cerone, received 28½-year prison terms. Carl Deluna, a top candidate for boss of an organization in Kansas City decimated by a pervious prosecution, received 16 years' imprisonment, as did Cleveland syndicate member Angelo La Pietra. Milton Rockman, the financial advisor to the Cleveland mob, received a 24-year sentence. Milwaukee mob boss Frank Balistrieri was given a ten-year sentence (his third in as many years) on an earlier guilty plea. All were convicted of creating and sharing in an systematic skim of cash from casinos in Las Vegas, Nevada.

New England underboss Gennaro Anguilo was sentenced to 45 years in prison and fined $130,000; mob captain Samuel Granito received a 20-year prison sentence and $35,000 fine, while syndicate members Francisco Anguilo and Donato Anguilo received 25- and 20-year sentences. The sentences were passed in a racketeering prosecution in which six murders, previously unsolved, were attributed to the group, which used them to instill discipline and compliance in carrying out other racketeering businesses. A second captain and the family counselor remain to be tried. Some $4 million in property was forfeited to the Government.

--Infiltration of business. Family captain Michael Franzese was sentenced to ten years in prison, fined $35,000 and ordered to make restitution of $10 million. In addition, $4.7 million in property acquired by Franzese was declared forfeit to the Government. Franzese had entered guilty pleas to racketeering and other charges grounded in his participation in frauds committed in the automobile industry in New York City. These include evasion of millions in gasoline excise tax owing to the Federal, State and local governments, which represented most of the restitution ordered.

Colombo family captain Salvatore Profaci was sentenced to four years in prison for bribing James Gow, a former vice president of the A&P Food Stores, to divert the grocery chain's scrap corrugated boxes to recycling firms controlled by Profaci. Gow was imprisoned for two years.

--Corruption of Public Officials. Former Cook County, Illinois, Sheriff's Officers Bruce Prasch and James Keating were each sentenced to 15 years in prison followed by five years' probation, conditioned on payment of all taxes, penalties and interest. Prasch commanded the Vice Control Unit and Keating the Intelligence Unit. They and three other officers had received bribes from local prostitution operators for years prior to detection by an FBI undercover investigation. The operation also resulted in the indictment of the prostitution operation and of Michael Spilotro, brother of Anthony Spilotro, who attempted to collect a mob "street tax." Michael Spilotro's body was found next to that of his brother on June 22, 1986.

--Mob Violence. Vincent Frank Santa and Thomas Orlando were convicted of extortion for their part in a threat to kill at random an employee of an air freight firm and reinstall pickets from Teamster Local 295 if agreed payoffs were not continued. Frank Calise, President of Local 295, had pled guilty to a related indictment earlier.

Guilty pleas to racketeering charges were entered by Anthony Colombo and seventeen of the 25 defendants associated with his "crew" of the Colombo family. Those entering pleas included three mob members. The indictment had charged systematic violations of murder, extortion, robbery, theft and fraud statutes. Colombo pled to a prison sentence of 14 years plus half a million dollars in forfeiture and restitution.

Bail of Angelo Ruggiero was revoked in a previously pending drug charge when he threatened the prosecutor during a bail hearing occasioned by his indictment as a member of the Gambino family. Information developed during the hearing indicated that Ruggiero had been a participant in three gangland slayings, including that of Paul Castellano, the late boss of the family.

Colombo family member Beniamin LoCicero was awarded a five-year sentence for his part in firebombing the home of a citizen allegedly indebted to an associate of LoCicero.

--Labor Racketeering. In what is probably the most significant labor racketeering case of the decade, the Court of Appeals affirmed the judgment of the lower court which installed court-appointed trustees to replace the racket-riddled seven-member executive board of Teamster Local 560 in Newark, New Jersey. The trial court had found, after a four-month civil trial, that the local had been infiltrated by "mobsters" and "gangsters aided and abetted by their relatives and sycophants" who had "engaged in a multifaceted orgy of criminal activity" which had extinguished all semblance of union democracy. Local 560 had been run for years by Anthony "Tony Pro" Provenzano, a captain in the Gambino crime family. When he was sentenced to 20 years in prison for extortion to be followed by a life term in New York prisons for the slaying of his original rival for union office, his brother Nunzio took over the union. When Nunzio received a ten-year sentence for labor racketeering, a third brother, Salvatore, assumed the presidency and Tony Pro's daughter, Josephine Provenzano, became secretary-treasurer. The Government brought suit under the civil provisions of the racketeering statutes to turn the rascals out and attempt to place the union back into the hands of its members--the first such action ever filed in Federal court. Approval of this strategy by the appeals court opens the possibility of wresting many union locals from the control of organized criminals, and another such suit has already been filed. Ironically, the former trustees are now sponsoring a letter-writing campaign to the President of the United States protesting the loss of union democracy.

--Drug Trafficking. In Miami, Florida, Raymond Michael Thompson was convicted by a jury for importing and distributing over 1,000 tons of marijuana. From 1979 until mid-1981, Thompson had used the Amity Yacht Center as his base of operations, dispatching prosperous-looking employees (he had over 200) on shiny yachts to meet mother-ships offshore and bring in the loads. At one point, two of his attorneys even duped the former president of the Dominican Republic into aiding them in laundering the profits from the enterprise. (Both lawyers were also convicted.) Forfeiture of the marina and other property and equipment related to the case approaches $4 million.

In Detroit, Michigan, a cocaine ring run by J.D. Thornton, originally capitalized by a $1 million armored car robbery, was broken upon conviction of all major participants on racketeering charges. Cash and property worth $650,000 was declared forfeit. Thornton was sentenced to 15 years.

--Washington Operations. In addition to the management cadre, a small staff of attorneys is based in Washington, D.C., to give legal support to the Strike Forces and U.S. Attorneys on the racketeering, labor, gambling and other laws managed by the Section and to staff major projects of national import. The budget for the Organized Crime and Racketeering Section in 1986 was just over $14 million.

Program Changes: The Criminal Division requests an increase of 24 positions and $2,312,000 to enable it to respond to the recommendations of the President's Commission on Organized Crime.

444

In its report, the President's Commission on Organized Crime noted three major characteristics of organized crime in the United States today. In the first place, there has been a rapid growth in recent years of newly organized, crime groups. Most are ethnic-based, although some originated in U.S. prisons or as motorcycle gangs. They share with traditional organized crime, i.e., La Cosa Nostra, a drive to establish a criminal territory, a disrespect for law and a willingness to rely on violence, criminality and corruption to achieve their ends. Organized crime in the United States today is a complex tapestry of multiple groups supported, wittingly or unwittingly, by numerous protectors, specialists and associates. In the second place, the Commission found that the forces of law enforcement indeed have "the mob on the run." Recent successes by law enforcement against the leadership, membership, and associates of La Cosa Nostra have seriously disabled its operations. The emerging groups cited in the report, however, are attempting to fill the vacuum and the Report recommends that law enforcement must broaden its perspective to address the full panoply of organized criminal groups and their methods of operation. The final finding of the Commission has been widely reported previously and has been the subject of a Reagan Administration program for several years; namely, the increased concentration of Organized Crime on drug trafficking. This problem has been, in general, the project of the Organized Crime Drug Enforcement Task Forces; however, in offenses, where traditional Organized Crime families are involved, the Criminal Division's Organized Crime Strike Forces have taken the prosecutorial lead.

In a separate report on labor racketeering, the Commission has instructed the Department of Justice to develop new initiatives against organized crime activity in labor unions and the market place. It has recommended the more widespread application of all the remedies available to the government, under the Racketeer Influenced and Corrupt Organized (RICO) laws, more extensive efforts to decertify hoodlum unions, and the creation of industry-specific task forces to remove organized crime from these industries. The Attorney General has created a working group to examine the Commission's recommendations and to implement such new policies as appropriate.

In addition to the funds required to support the new positions included in this request, an increase of $95,000 in funds for overtime and awards and an increase of $565,000 for automated litigation support are contained in this request. The overtime and award funds are intended to bolster the morale of the overworked and underpaid support staff serving in the Strike Force offices. Out of sheer dedication to the purposes of this activity, clerical employees have been regularly volunteering for compensatory leave in lieu of paid overtime. However, due to work pressures, they have been, in most instances, unable to use the compensatory leave that they have earned. Morale is suffering badly, and sufficient funds to provide for paid overtime and some incentive awards will help to correct the present inequitable situation. In addition, the Strike Forces are in ever increasing need for automated litigation support to index and analyze transcripts and other documents that are necessary to prepare for grand jury and courtroom presentations. The estimated requirement of $565,000 is based on the estimated cost of several recent projects that the Division has considered, but ultimately rejected for lack of funds.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Public Integrity	34	33	$2,341	34	33	$2,465	34	33	$2,590	...	...	125

Long-Range Goal: To enhance the public's confidence in elected and appointed officials at all levels of government by deterring dishonesty and corruption in the discharge of the public's business and by protecting the integrity of the franchise.

Major Objectives:

To supervise the investigation and conduct the prosecution of selected corruption cases at the Federal, State and local government levels.

To supervise the investigation and conduct the prosecution of all matters involving alleged criminal misconduct by Federal judges.

To ensure an effective Federal law enforcement effort against election fraud and criminal conflicts of interest among Federal employees.

To assist U.S. Attorney personnel in developing their own capabilities to recognize, investigate and prosecute public corruption and election fraud offenses.

To respond, within the statutory time limits, to complaints subject to the Independent Counsel provisions of the Ethics in Government Act (28 U.S.C. 591, et seq.) and, after investigation, to make timely recommendations to the Attorney General concerning the need for the appointment of independent counsel in such matters.

To establish and maintain liaison with the Inspectors General and others responsible for the investigation and administrative discipline of public employees and to ensure the flow of intelligence concerning employee crimes to federal prosecutorial personnel.

Base Program Description: The Public Integrity Section prosecutes selected cases against Federal, State, and local officials, and its staff is available as a source of advice and expertise to law enforcement officials and prosecutors at all levels of government. In addition, the program serves as a center for planning, coordinating and implementing nationwide programs focused on public corruption and abuse of the franchise. Approximately 75 percent of the program's resources are presently devoted to operational responsibilities for investigation and litigation of cases and matters, while about 25 percent of its resources are presently devoted to support of United States Attorney activities. In addition to the cases it has developed itself or cases that arise out of its special initiatives, the program is responsible for the prosecution of corruption cases in which United States Attorney personnel have recused themselves, and it routinely assists in the disposition of public corruption matters involving multi-district problems or unusually sensitive subject matter.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the Public Integrity Section is directly responsible are summarized quantitatively in the following table:

Item			Estimates	
Matters:	1985	1986	1987	1988
Pending, beginning of year	112	134	147	147
Opened	145	298	160	167
Closed	123	285	160	165
Pending, end of year	134	147	147	149

Cases (lead prosecutions):

Pending, beginning of year	30	34	44	40
Opened	36	31	32	35
Closed	32	21	36	35
Pending, end of year	34	44	40	40
Disposition of defendants in cases litigated:				
Convictions	55	47	50	55
Acquittals/dismissals	3	...	...	...
Other dispositions	...	...	...	...

--Independent Counsel Allegations. The Section is responsible for all Independent Counsel matters under the Ethics in Government Act. The Section supervises any necessary preliminary investigation, and prepares a recommendation to the Attorney General as to whether the Independent Counsel provisions have been triggered and whether a further investigation is warranted. The Section has been able to apply a uniform standard and to develop a consistent procedure applicable to each case, ensuring that these matters are properly handled within the stringent time limits of the Act. Recently, the Section has handled preliminary investigations of allegations against former White House officials Michael Deaver and Lynn Nofziger, and allegations against Justice Department officials concerning their handling of a 1983 investigation of the Environmental Protection Agency, and allegations concerning the transfer of arms to Iran and the diversion of the proceeds from sales to the Nicaraguan Contras.

--Investigations of Federal Judges and Federal Law Enforcement Officials. The Public Integrity Section has exclusive jurisdiction over allegations against federal judges. In FY 1986, the Section obtained the conviction of Chief Judge Walter Nixon of the Southern District of Mississippi on charges of perjury.

Cases against federal law enforcement officials are also frequently handled by the Section. For example, in FY 1986, the Section obtained the conviction of an Assistant United States Attorney in New York on drug charges, the conviction of an FBI agent in California on charges of perjury concerning his theft from the government, and the convictions of several members of the South Florida Drug Task Force on allegations of fraud against the government.

--Election Crimes. A special Election Crimes Branch has been part of the Section since 1980, and it has made considerable progress in making election fraud a national priority. The Branch has three major functions: it prosecutes selected cases itself, such as one ongoing project in North Carolina in which over 40 convictions for vote fraud and related offenses have already been obtained. Through such prosecutions and accompanying appellate victories, previously unclear areas of election fraud law have been clarified and endorsed by the courts, and used with increasing frequency around the country. Secondly, the Branch provides advice and support to the United States Attorneys' Offices in the application of election fraud and campaign financing laws to the myriad situations that arise in the course of a campaign and election. Finally, in order to encourage greater awareness of election crimes, it has taken on a major role in training prosecutors and election officials, giving lectures on the various statutes available to combat these offenses, and publishing four editions of a comprehensive election crimes manual.

—Other Section Priorities. The above are the most publicly visible of the Section's responsibilities, but it has also initiated a number of other important public corruption projects. The Section has developed valuable expertise and close working relationships with the CIA, the State Department, and other agencies with overseas operations, enabling it to prosecute a number of crimes occurring in whole or in part overseas. In the past, these cases have received little attention because they are plagued by diplomatic complications, extremely expensive travel, uncooperative witnesses, and evidence beyond the reach of process. Despite these problems, the Section has actively pursued overseas corruption cases, and has successfully prosecuted American officials for their crimes committed abroad. For example, in FY 1986, an officer of the United States Agency for International Development assigned to North Yemen pled guilty to defrauding the government.

Conflicts of interest is another area of corruption where the Section has focused its attention. The area of the criminal law dealing with conflicts of interest is complex and technical, and is only beginning to take on substance through litigation. The Section's Conflicts of Interest Crimes Branch handles several conflicts prosecutions each year, and fields many requests for advice from other federal agencies and prosecutors.

State and local corruption continues to be a high priority of the Section. In FY 1986, the Section handled major local corruption projects in Mississippi, Boston, and Rhode Island.

Program Changes: The Criminal Division is requesting increases for the Public Integrity Section amounting to $12,000 for overtime and incentive awards, $14,000 for employee relocation expenses, $57,000 for travel expenses and $42,000 for automated litigation support. The increase in overtime and award funds will bolster the sagging morale of the Section's support staff. The relocation funds will assist in the recruitment of experienced federal prosecutors who are asked to transfer to the Washington, D.C. location of the Public Integrity Section. The travel money will enable the Section to intervene in criminal prosecutions in all instances when the U.S. Attorney does not possess sufficient staff or specialized expertise, when an investigation has been coordinated exclusively by the Division and referring the prosecution to the U.S. Attorney would be impractical because of the complexity of the case, or when a prosecution requires intervention by national authorities in order to coordinate aspects of the case that extend beyond a single judicial district. Finally, the increase for automated litigation support will enable the Section to apply appropriate technology to indexing and analyzing transcripts and other documents that are essential to preparation of grand jury and courtroom presentations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Fraud	80	71	$5,414	80	74	$5,814	86	78	$6,522	6	4	$708

Long-Range Goal: To reduce the incidence of white collar crime through a comprehensive program of prevention, detection, investigation, prosecution, and punishment of white collar crime offenses.

Ko or Objectives:

To conduct fraud prosecutions which require resources that exceed the capacity of individual U.S. Attorneys.

To assist in the formulation of prosecutorial policies, especially through the conduct of selected litigation which will serve to demonstrate the viability of particular statutes, theories or techniques as model prosecutions.

To develop and enhance local, state, federal and international law enforcement cooperation in combatting white collar crime.

To identify recurring illegal schemes and devise new practices and procedures for minimizing opportunities for criminal conduct.

To provide specialized training to prosecutors and investigators on effective techniques and procedures for investigating and prosecuting white collar crime cases.

Base Program Description: The Fraud program's overall objectives are accomplished to a great extent, through the work of its four litigating branches and its Defense Procurement Fraud Unit. The primary function of the litigating branches, around which all other functions are designed, is the conduct of major criminal investigations and prosecutions. The selection of specific investigations is based on a variety of criteria, including: magnitude of the alleged fraud scheme; ability of United States Attorney's office to handle; complexity; unique fact pattern or theory of prosecution/investigation; and, contribution to long range prosecutorial goals. Many of the investigations are complex and lengthy, requiring over two years to develop, and a team of investigators and auditors with the Section prosecutor directing the team. The Fraud program has been actively involved in numerous DOD procurement fraud cases drawn from the nearly $600 million per day spent by DOD. Using their experience from prosecutions and investigations, Section attorneys present training programs for Federal auditors and investigators on a regular basis. In the securities fraud area, the Section maintains liaison with the national office of the Securities and Exchange Commission (SEC) and with the Commission's eight regional offices. Section attorneys are investigating several matters referred from SEC national headquarters and regional offices. The Section is often instrumental in obtaining evidence from foreign jurisdictions through the implementation of treaties and executive agreements on the use of Letters Rogatory proceedings, through reciprocal assistance provided by foreign prosecutors as a result of the assistance provided to them by the program, and through diplomatic channels as a result of the program's close liaison with the Department of State. Section attorneys are assigned to assist in the administration of the Foreign Corrupt Practices Act (FCPA) review procedure, established to satisfy the Presidential directive to provide guidance to the business community, thereby reducing any export disincentives created by perceived ambiguities in the FCPA. Section attorneys also provide staff support to projects of the Economic Crime Council, with the Section Chief serving as Executive Director of the Council. Through this work in particular, Section attorneys maintain ongoing liaison with several Inspectors General.

Accomplishments and Workload. The recent experience and projections for the future with regard to litigation for which the Fraud Section is directly responsible are summarized below:

Item	1985	1986	Estimates 1987	1988
Matters:				
Pending, beginning of year	74	47	20	30

Other dispositions	...	2	...	...

During 1986, the Fraud Section's Defense Procurement Fraud Unit continues to pursue cases of mischarging, product substitution, falsification of testing, kickbacks, and illegal sale of bidding information. Gould Defense Systems, Inc., a major defense contractor involved in the development and manufacture of Navy torpedoes, was convicted of making false statements in connection with progress payments on contracts and mischarging labor. Gould was fined $50,000 and paid the United States approximately $3.6 million in penalties. The GTE Government Systems Corp. was convicted of conspiracy to convert Defense Department documents containing classified information to their own use, was fined $10,000, and paid over $3.6 million in civil penalties. Three individuals were also charged and are awaiting trial. The Unit's investigation of the Defense Industrial Supply Center (DISC) in Philadelphia resulted in the convictions of five corporations, eight corporate officials and twelve DISC employees for giving or taking bribes totalling over $500,000 to influence procurement decisions in defense contracts. The Unit, working with the Federal Bureau of Investigation (FBI) and the Defense Criminal Investigative Service, obtained convictions of the president and other personnel of Golden Gate Forge and Flange, Inc., for conspiring to falsify results for pipe fittings in nuclear submarines when the materials failed to meet military safety specifications for strength and chemical composition. Defective materials, supplied by this firm to at least 11 naval installations, have been removed from several nuclear submarines. The meteoric growth of bank failures, particularly those due to insider frauds, has led to a new criminal referral system developed by the Bank Fraud Working Group. This body is comprised of the five financial regulatory agencies, the FBI and the Department. The Fraud Section plays a major role in this Group.

The Section is carrying out a directive to upgrade, audit and investigate capabilities of Health and Human Services (HHS) to detect health care provider fraud. The Section organized a training conference on health care provider fraud enforcement efforts for representatives of the health care providers, the FBI, HHS, U.S. Attorneys and the Fraud Section. In a major Medicare provider fraud case, a thoracic surgeon was convicted on conspiracy, Medicare fraud, and extortion charges. In sentencing him to 10 years and the maximum fine ($70,000), the judge stated a desire to deter others and make it clear that white-collar "offenders have no special status in our system of criminal justice," strengthening not only the Section's efforts to combat provider fraud but to obtain stronger sentencing deterrents in white-collar crime.

Finally, In a case prosecuted jointly by the Fraud Section and the United States Attorney's Office in Hawaii, Ronald Rewald was convicted on 94 counts of mail fraud, securities and other charges for devising a Ponzi scheme through which he defrauded approximately 400 investors of over $22 million. When Rewald's firm collapsed and went into bankruptcy, he claimed that he was merely operating a front for the Central Intelligence Agency. Rewald was sentenced to a total of 80 years in prison, fined $352,000 and ordered to make restitution to all of the investors named in the indictment.

Program Changes: The Criminal Division requests an increase of 6 positions and $708,000 for the prosecution of cases involving procurement fraud in the Federal Government's space exploration and national defense programs.

On August 26, 1982, Attorney General Smith and Secretary of Defense Weinberger agreed to establish a special unit to investigate and prosecute fraud and corruption cases involving Department of Defense (DOD) procurement contracts. The Defense Procurement Fraud Unit was established within the Fraud Section of the Criminal Division on October 15, 1982, and is now operating from its own offices in Alexandria, Virginia. It will however be relocated along with other Criminal Division components, to the Bond Building, at 14th and New York Avenue in Washington, D.C., in January 1987.

In the last three years, the Unit and the Fraud Section has focused on a number of areas, the principal among them being the intentional mischarging of labor costs by Defense contractors. The first of these cases to come to a conclusion was United States v. Sperry Corporation. Sperry agreed to enter a guilty plea to intentional mischarging on an Air Force contract involving the Minuteman Missile System. As part of the plea bargain, Sperry agreed to make restitution to the United States in the amount of $600,067. Another of these cases is United States v. Gould Defense Systems, Inc. Gould pled guilty to five civil matters and paid back in excess of $2.2 million which includes double damages for the criminal mischarges. An individual manager of Gould was acquitted by a jury. A more recent case is the indictment of General Dynamics and four corporate officials, including a former NASA Administrator, for shifting contract expenses for the Divisional Air Defense Gun System (DIVAD) prototype contract to independent research and development or bid and proposal overhead accounts. The Unit has also successfully prosecuted other mischarging cases and is handling another two dozen mischarging investigations.

The Unit is also responsible for the prosecution of GTE Government Systems, Corp. for conspiracy to defraud the United States by unauthorized conversion of Department of Defense documents containing classified and proprietary information. GTE has pleaded guilty and three individuals are awaiting trial pending an appeal by the United States of the trial judge's order authorizing the defendants to disclose classified information.

Another major focus of prosecution is product substitution cases in which companies sell substandard goods to DOD. The Unit has successfully prosecuted five individuals for directing the alteration and falsification of test results in connection with the manufacture of defective pipe fittings for installation in nuclear submarines. The material provided by Golden Gate Forge and Flange, Inc. had critical application in submarines and has been located and removed from several submarines. The Unit has half a dozen active cases in this area. Unit attorneys have participated in approximately two dozen training sessions for auditors, investigators, and prosecutors during the last year.

The last major area of concentration within the Unit concerns bribery of public officials in relation to procurement decisions. The Unit has coordinated a major investigation of the Defense Industrial Supply Center (DISC) in Philadelphia. To date, five corporations, ten corporate officials and ten DISC buyers have been convicted. Two DISC buyers were convicted in July for accepting more than $100,000 in bribes each. The prosecutions have established approximately $500,000 in bribes. Additional prosecutions have resulted in the suspension and debarment by DOD of several dozen individuals.

As public concern for the efficiency of the space exploration program continues to grow, especially with the Strategic Defense Initiative that has attracted many Defense contractors, the Defense Procurement Fraud Unit will be expanded to the Space/Defense Procurement Fraud Unit. The Criminal Division has already had one successful prosecution involving fraud in the construction of the shuttle launch facility and another involving micro-chips used in satellites unsuccessfully launched into orbit. Numerous allegations of fraud involving both the space exploration and defense programs have not been as effectively developed as the cases that are now being reviewed by the Defense Procurement Fraud Unit. In order to ensure adequate staffing for these increased responsibilities, an increase of three attorney positions, one paralegal and two clerical positions is requested for 1988.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Narcotic and dangerous drug prosecution	35	31	$2,163	35	33	$2,362	35	33	$2,503	...	...	$141

Long-Range Goal: To combat the growth of major criminal enterprises involved in drug trafficking by prosecuting the organizers and heads of criminal organizations that manufacture, smuggle, and distribute illicit drugs on a national or international scale.

Major Objectives:

To assist in the formulation of Federal drug prosecution policies, including the development of innovative investigative and prosecutorial methods and the enhancement or modification of existing statutory authorities to foster more effective drug enforcement.

To prosecute directly and/or to assist U.S. Attorneys in major international and multi-district cases involving the most significant violators or in implementing innovative prosecutorial methods, especially in the area of narcotics-related financial investigations.

To furnish instruction that will improve the effectiveness of federal enforcement agents and prosecutors who are responsible for investigating and litigating drug cases.

To promote interagency and inter-jurisdictional cooperation in the conduct of drug investigations and drug prosecutions.

To provide legal advice to the Executive Director of the Organized Crime Drug Enforcement Program and to otherwise assist the Director in matters pertaining to policy, implementation and evaluation of the program.

Base Program Description: This program works to alleviate the conceptual and operational problems that have historically limited the effectiveness of the Federal drug enforcement effort. Its efforts involve three main areas of activity. Organizing major investigations and prosecutions that extend traditional methods, assuming direct responsibility for the prosecution of specific cases and providing legal support, in the form of instruction and advice, to drug enforcement and prosecutorial agencies. The first activity is to be exemplified by Operation Greenback. This highly sophisticated enforcement operation is directed at identifying the assets and profits of illegal drug trafficking organizations and then seizing and obtaining the forfeiture of those assets. These efforts to disrupt the financial arrangements supporting drug distribution networks are conducted in addition to the prosecution of offenders under the drug laws. This program has provided hands-on training for enforcement agents and prosecutors in investigating and prosecuting the financial aspects of drug cases. The program, in addition, has fostered ongoing interagency cooperation because the investigations are conducted on a multi-agency basis.

All of the cases for which the Section assumes operational responsibility involve Drug Enforcement Administration Class I violators, have international or multi-district ramifications, and involve more than one federal investigative agency. The criteria considered in evaluating requests for this program's involvement include: the size, complexity and importance of a case, the extent to which the case exceeds the United States Attorney's resources, the likely investigative and prosecutive results if the Section declines the case, and the need for multi-district or interagency coordination. These cases are also undertaken at the request of the U.S. Attorney in situations where the U.S. Attorney has insufficient resources, where there could be a conflict of interest or for some other appropriate reason. The legal support activities of the Section include advising U.S. Attorney personnel on such matters as Department procedures, and recent court decisions, etc., reviewing adverse district court decisions for consideration of appellate review, analyzing legislative proposals, producing training courses and conferences, publishing a regular newsletter and assorted monographs, and participating in interagency working groups.

Accomplishments and Workload. The recent experience and projections for the future with regard to litigation for which the Narcotic and Dangerous Drug Section is directly responsible are presented quantitatively in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988

Disposition of defendants in cases litigated:

Convictions	123	57	50	50
Acquittals/dismissals	4	2	...	...
Other dispositions	...	...	...	...

Some of the major accomplishments of the Narcotic and Dangerous Drug Section in Fiscal Year 1986 include the following:

--Major prosecutions. The Section prosecutes directly and/or assists the U.S. Attorneys in major international and multi- district cases. These cases usually involve significant violators, the testing of innovative prosecutorial methods, especially in the area on narcotics-related financial investigations, or prosecutions under newly enacted statutes.

In Providence, Rhode Island, the Section was involved in a joint task force investigation which included the FBI, DEA, and the IRS. As a result of the drug-smuggling operation, two indictments were returned. In the first, a defendant was named in three counts, for evasion of taxes; in the second indictment, 14 defendants were named in a 15-count indictment charging (1) a continuing criminal enterprise, (2) conspiracy to import and possess with intent to distribute, (3) substantive counts of importation and possession with intent to distribute, (4) interstate and foreign transportation of securities, the proceeds of which were obtained by fraud, (5) filing of a false tax return, and (6) making a false statement to an agent of the IRS. All but one of the nonfugitive defendants have been convicted or pleaded guilty.

In Virginia, 14 defendants pled guilty in an Organized Crime Drug Enforcement Task Force (OCDETF) investigation of a continuing criminal enterprise, which included a retired county police officer, who was trafficking in marijuana and later cocaine for a period of eight to ten years, between 1974 and 1982-1984.

The Section is involved in a prosecution of approximately eight individuals in Okeechobee County, Florida. These individuals used a ranch with a clandestine airstrip to import multi-ton quantities of marijuana and multi-hundred kilogram quantities of cocaine. The grand jury returned a six-count indictment against four of the defendants. Three of the defendants are cooperating witnesses and have pled guilty. Trial against the remaining defendants is pending.

In Florida, an indictment was returned against 18 individuals, including a St. Petersburg attorney and a stockbroker. This 25-count indictment charged various defendants with Racketeer Influenced and Corrupt Organizations (RICO), RICO conspiracy, marijuana importation and distribution, and money laundering offenses. Five of the defendants pled guilty, two remain fugitives and fourteen went to trial. Twelve defendants were convicted and sentenced to serve prison terms ranging from six to 110 years.

An intensive investigation was undertaken approximately two years ago by the DEA/PRPD Drug Task Force, USCS and the FBI to disrupt the Panzardi narcotic trafficking organization which has been operating within the District of Puerto Rico, the U.S. Virgin Islands, and the Caribbean Islands, for approximately ten years. A total of 62 persons have been indicted, 43 of whom have been arrested or were already in custody on other charges. One extradition request is in progress. The investigation has yielded sufficient evidence for the seizure of 12 residences, 11 vehicles, three speedboats, and 12 aircraft. The drugs involved are multi-ton quantities of marijuana, multi-kilo quantities of cocaine and heroin, and 400 grams of hydromorphine.

Program Changes: The Criminal Division is requesting increases for the Narcotic and Dangerous Drug Section amounting to $13,000 for overtime and incentive awards, $17,000 for employee relocation expenses, $77,000 for travel expenses and $35,000 for automated litigation support. The increase in overtime and award funds will bolster the sagging morale of the Section's support staff. The relocation funds will assist in the recruitment of experienced federal prosecutors who are asked to transfer to the Washington, D.C. location of the Narcotic and Dangerous Drug Section. The travel money will enable the Section to intervene in criminal prosecutions in all instances when the U.S. Attorney does not possess sufficient staff or specialized expertise, when an investigation has been coordinated exclusively by the Division and referring the prosecution to the U.S. Attorney would be impractical because of the complexity of the case, or when a prosecution requires intervention by national authorities in order to coordinate aspects of the case that extend beyond a single judicial district. Finally, the increase for automated litigation support will enable the Section to apply appropriate technology to indexing and analyzing transcripts and other documents that are essential to preparation of grand jury and courtroom presentations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Internal security	30	29	$2,043	30	29	$2,150	30	29	$2,227	...	...	$77

Long Range Goal: To enforce, in an effective and uniform manner, approximately 100 criminal statutes and regulations affecting the national security and foreign relations of the United States.

Major Objectives:

To investigate and litigate cases and matters in the area of national security.

To provide oversight and supervision of all prosecutions involving the Neutrality statutes, the Espionage statutes, the Arms Export Control Act, the Export Administration Act and the Classified Information Procedure Act.

To provide legal support and investigative guidance to all Federal investigative agencies engaged in national security matters.

To administer and enforce the Foreign Agents Registration Act (FARA) and two additional registration statutes.

To enforce the Federal Regulation of Lobbying Act, a conflict of interest statute, and a portion of the Federal Election Campaign Act of 1976.

To provide assistance to Members of Congress and all other appropriate officials involved in the regulation of lobbying.

To provide staff support (in particular, the Executive Secretary) to the Interdepartmental Committee on Internal Security (ICIS).

Base Program Description: This program enforces statutes and regulations relating to the national security and foreign relations of the United States by: supervising investigations and prosecutions involving national security and foreign relations; providing legal and policy guidance to U.S. Attorneys, law enforcement agencies and the intelligence community in the area of national security litigation; administering and enforcing the FARA, including the registration of representatives of foreign governments and entities; supervising investigations, conducting inspections and conducting all FARA-related criminal and civil litigation; providing specialized legal support to U.S. Attorneys in the areas of policy interpretation, legal research, and the drafting of indictments, pleadings and other legal papers; directly participating in criminal litigation, including grand jury proceedings, trials, appeals, and related legal actions; developing, analyzing and evaluating proposed legislation related to the internal security field; serving as the focal point for interagency coordination in cases such as espionage, neutrality, arms export control and export administration violations and cases involving the Classified Information Procedures Act; and, providing staff support personnel, including the Executive Secretary, to the Interdepartmental Committee on Internal Security.

Accomplishments and Workload: The recent experience and projections for the future with regard to cases for which the Internal Security Section is directly responsible is summarized quantitatively in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988

During fiscal year 1986, seven individuals were indicted for espionage. Three of these were convicted after jury trials, three entered pleas of guilty, and one case is pending trial. Additionally, six individuals who were indicted before October 1, 1985, were convicted or entered pleas of guilty to espionage or espionage-related offenses during the fiscal year.

John Walker, a retired Navy warrant officer and one of the most significant spies of the post-War era, and his son Michael, a Navy enlisted man, entered pleas of guilty to charges of espionage on behalf of the Soviet Union. Pursuant to their plea agreements, they will be sentenced to life imprisonment and 25 years' imprisonment, respectively. Arthur Walker, a retired Navy officer, John's brother, was sentenced to life imprisonment for his participation in the spy ring. Thereafter, John Walker testified at the trial of his chief supplier of cryptographic secrets, Jerry Alfred Whitworth, a retired Navy chief radioman. Whitworth was convicted after a four-month trial, the longest espionage trial in U.S. history. He was sentenced to 365 years' imprisonment by a judge who called him one of the most spectacular spies of the century and ordered that the 47-year-old Whitworth not be released on parole until he has served 60 years of his sentence.

Former Federal Bureau of Investigation (FBI) agent Richard W. Miller was convicted of espionage and bribery involving the Soviet Union, resulting from his association with a Soviet emigre, Svetlana Ogorodnikova. He was sentenced to life imprisonment.
Several prosecutions involved the sale to foreign governments of information concerning or derived from United States intelligence activities. Ronald Pelton, a former employee of the National Security Agency, was convicted of providing the Soviets with highly sensitive information about signals intelligence projects. Larry Wu-Tai Chin, a retired Central Intelligence Agency (CIA) employee, was convicted of providing intelligence information from CIA files to the People's Republic of China. Jonathan Pollard, an intelligence analyst for the Navy, who furnished intelligence information to Israel, pled guilty, with his wife Anne Henderson Pollard, to espionage and related offenses.

Convictions in two other espionage cases became the basis for two international prisoner exchanges. Karl Koecher, a former CIA employee, entered a plea of guilty to espionage on behalf of Czechoslovakia, was sentenced to life imprisonment, and then exchanged for Anatoly Scharansky, the Soviet dissident and human rights activist, and three individuals incarcerated in East Germany for espionage. The second exchange resulted from the prosecution of CIA employee Sharon Scranage and Michael Soussoudis, a citizen of Ghana. Scranage pled guilty to disclosing the identities of covert CIA assets in Ghana to Soussoudis, who entered a plea of nolo contendere to receiving the information on behalf of his government. Thereafter, Soussoudis was exchanged for a number of Ghanaians who were in jeopardy as a result of Scranage's disclosures.

Among the most significant export control cases during the year are:

— Thomas Donley and 13 other individuals who were arrested as they boarded a chartered airplane to launch a mercenary expedition to overthrow the Government of Suriname, formerly Dutch Guiana, in South America. All of the defendants entered guilty pleas. The three organizers of this expedition pled guilty to felony charges. This case resulted from an undercover investigation by the FBI and the United States Customs Service.

— Seven members of a criminal organization in the Boston, Massachusetts, area who were charged in a 19-count indictment with the attempted illegal export of tons of weapons, explosives and related military equipment to the Irish Republican Army, and the attempted importation of 36 tons of marijuana into Boston. The weapons were loaded on a ship in Massachusetts, and several days later, this ship met off the coast of Ireland with another ship, and the weapons were transferred. However, Irish naval and law enforcement authorities boarded the ship and seized the weapons.

— Eight individuals who were charged with conspiracy and substantive offenses of the Racketeer Influenced and Corrupt Organizations (RICO) statute and with additional conspiracy in Massachusetts. The indictment charges that during a period from 1974 through 1985, the defendants formed and participated as an organization to bring about the overthrow of the United States through a series of 19 bombings and nine bank robberies.

Pihar Semiconductors, a Spanish company, which pled guilty to charges that from 1979 to 1982, Pihar diverted in excess of $2 million worth of semiconductor manufacturing equipment to the Soviet Union and Cuba, in violation of the EAA. Pihar was fined $1 million and placed on probation for five years.

John J. McTavish who was sentenced in Georgia to five years' imprisonment following his conviction on offenses under the AECA, charging the unlawful export of military aircraft parts to Iran and Chile. The Court ordered the forfeiture of $4.5 million of aircraft parts which were seized by the United States Customs Service.

Heinz Golitschek, an Austrian national, who was sentenced in New York to three and one half years' imprisonment after his conviction on charges of conspiracy to export military helicopters and TOW missiles to Iran. Mr. Golitschek had been arrested in Canada and extradited to the United States.

Werner J. Bruchhausen, a West German national, who was extradited to stand trial in California, by a British court, on a 16-count indictment. Bruchhausen is charged with a scheme to defraud the United States by exporting in excess of $8 million worth of computers and semiconductor manufacturing materials to the Soviet Union, in violation of the national security controls placed on such equipment under the EAA.

Edward J. Elkins, a California businessman, and 11 other defendants including Libyan nationals, who were charged with exporting two Lockheed L-100-30 commercial aircraft and spare parts to Libya, in violation of the EAA and related statutes.

The Internal Security Section received 139 additional registrations under the FARA, bringing the total number of registrations to 3,880. In-depth inspections of a broad spectrum of registrants were conducted to insure that they complied with the disclosure provisions of the Act and approximately 3,000 documents were reviewed to insure that accurate and complete information is available for public review.

In connection with the Section's administration of the FARA with respect to three films distributed by the National Film Board of Canada (NFBC), two civil actions were filed in 1983 by members of the public, including a film distributor and a state senator, alleging that their First Amendment rights were violated by enforcement of the Act. The civil actions, Block[1] and Keene[2] were filed in the District of Columbia and California, respectively. The actions sought declaratory and injunctive relief against the application of the provisions of the Act to the NFBC films on First Amendment and other grounds.

In the Block case, the lower court granted the government's motion to dismiss. Plaintiffs appealed to the circuit court where oral argument was held and the court, in a unanimous decision, directed the lower court to enter judgment for the government.

In the Keene case, the court decided that the term "political propaganda" in the Act was an unconstitutional burden on the free speech rights of the plaintiff, and enjoined enforcement of any portion of the Act utilizing that term. The opinion was later narrowed at the Government's request, to the three films at issue. The Supreme Court has noted probable jurisdiction in the Keene case.

The Section's "Graymail" Unit supervised 34 cases involving the Classified Information Procedures Act (CIPA) which involved violations of the fraud, narcotics, arms export, espionage and other federal criminal statutes. The Unit is consulted in any case in which there is a possibility that classified information will be disclosed in litigation, and furnishes legal advice concerning all aspects of CIPA to components of the Executive Branch. Also, the Unit prepares the Attorney General's semiannual reports to Congress on cases declined for reasons of national security, as required under the Act.

Program Changes: The Criminal Division is requesting increases for the Internal Security Section amounting to $10,000 for overtime and incentive awards, $13,000 for employee relocation expenses, $17,000 for travel expenses and $37,000 for automated litigation support. The increase in overtime and award funds will bolster the sagging morale of the Section's support staff. The relocation funds will assist in the recruitment of experienced federal prosecutors who are asked to transfer to the Washington, D.C. location of the Internal Security Section. The travel money will enable the Section to intervene in criminal prosecutions in all instances when the U.S. Attorney does not possess sufficient staff or specialized expertise, when an investigation has been coordinated exclusively by the Division and referring the prosecution to the U.S. Attorney would be impractical because of the complexity of the case, or when a prosecution requires intervention by national authorities in order to coordinate aspects of the case that extend beyond a single judicial district. Finally, the increase for automated litigation support will enable the Section to apply appropriate technology to indexing and analyzing transcripts and other documents that are essential to preparation of grand jury and courtroom presentations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
General litigation and legal advice.....	52	50	$3,525	52	50	$3,717	56	52	$4,175	4	3	$458

Long-Range Goal: To achieve directly, or through assistance to the U.S. Attorneys, the prompt disposition of all matters within the five major law enforcement responsibilities of the program, and to improve the efficiency and effectiveness of Federal, State and local criminal law enforcement efforts through the encouragement of improved intergovernmental coordination and cooperation.

Major Objectives:

To develop and implement enforcement programs in certain key statutory areas where special requirements indicate the need for centralization.

To develop and prosecute major cases under a vast range of statutes, when appropriate, due to recusal, lack of resources or pertinent expertise in U.S. Attorneys' offices.

To defend civil suits seeking to obtain information or to interfere with criminal justice activities and national security operations.

To provide support to the U.S. Attorneys in the conduct of all other litigation within the program's subject areas.

To coordinate and participate in crime resistance programs related to the program's statutory responsibilities, including the encouragement of voluntary involvement by corporations and individuals in the private sector in crime resistance efforts.

To provide legal and policy advice to the Assistant Attorney General, Associate Attorney General, Deputy Attorney General, and Attorney General, as well as other components of the Department, on issues of major importance to the Department.

Base Program Description: The five major substantive areas addressed by the General Litigation and Legal Advice Section include: (1) crimes against government operations - attacks on designated Federal officials, including the President, Vice-President, Members of Congress, cabinet officers, Supreme Court Justices, candidates for Federal office, foreign officials and official guests of the United States, depredations of mail and government property, counterfeiting, customs violations, obstruction of justice, perjury, escape and prison offenses, and Selective Service violations; (2) crimes against the public - aircraft and maritime piracy, kidnapping, extortion, bombing, bank robbery, theft from interstate shipment and interstate trafficking in stolen vehicles, securities and other property, illegal electronic surveillance, obscenity, copyright and firearms violations, crimes involving the recently enacted false identification and tampering with consumer products statutes, and crimes in the special jurisdiction of the United States; (3) regulatory enforcement - protection of safety, health and consumer interests in mining and other occupations, handling nuclear materials, marketing of agricultural products, and disposition of hazardous and toxic wastes; (4) special civil matters - defense of civil actions to obtain information on or to interfere with criminal justice and national security operations; and, (5) prison/parole matters - defense of suits challenging the legality of Federal sentences, probation and parole actions, conditions of confinement, prisoner transfer within, and from foreign custody to, the United States, and treatment of mentally incompetent prisoners. Approximately 75 percent of all Federal criminal statutes are assigned to the program, including many violent crimes and most Federal "street" crimes. In priority or sensitive criminal areas, the program serves as an enforcement entity, prosecuting and assisting in the prosecution of cases, and coordinating the various U.S. Attorneys' offices and investigative agencies. When a matter is likely to merit prosecution by Section attorneys, the agencies immediately advise the Section of the initiation of an investigation, thus affording the opportunity for Section attorneys to provide guidance on crucial aspects of the investigation. In a more general way, the Section supports litigation by drafting or commenting on proposed legislation. Legislation can overcome the long-run effects of an adverse decision and usually has an effect on both the scope and nature of future litigation. To conserve Federal litigation resources, Section attorneys also interact with the private sector, e.g., industry and labor, and Federal and non-Federal enforcement agencies, regarding adoption of crime resistance measures.

Accomplishments and Workload: The recent experience and projections for the future with regard to litigation for which the General Litigation and Legal Advice Section is directly responsible are summarized quantitatively in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Matters:				
Pending, beginning of year	24	27	22	22
Opened	6	13	15	20
Closed	3	18	15	17
Pending, end of year	27	22	22	25

Cases (lead prosecutions):				
Pending, beginning of year	8	10	12	12
Opened	4	12	10	10
Closed	2	10	10	14
Pending, end of year	10	12	12	16
Disposition of defendants in cases litigated:				
Convictions	8	7	15	20
Acquittals/dismissals	2	2	...	...
Other dispositions	...	2	...	...

The current primary enforcement initiatives of the General Litigation and Legal Advice Section involve terrorism, pornography, intellectual property and nuclear safety.

--Terrorism. The Section is combatting terrorism through exhaustive investigation and vigorous prosecution of persons responsible for terrorist acts. To upgrade its response to terrorism, the Department created within the Section a Counter-Terrorism Management Group, headed by a senior attorney experienced in terrorism prosecutions.

Investigations currently pending in the Section include, among others: 1) the hijacking of TWA Flight 847 by Shiite terrorists, 2) the hijacking of the Achille Lauro on the high seas, 3) the hijacking of Egyptair Flight 648, flying from Athens en route to Cairo, and diverting it to Malta, 4) the taking and detention of American hostages in Beirut, Lebanon, 5) the bombing of TWA 840 over Athens, en route to Athens from Rome, 6) the kidnapping by the Popular Liberation Army of five employees of various companies constructing an oil pipeline in Columbia, 7) the kidnapping of an American missionary and 10 Carmelite nuns in the Philippines by Moslem warlords and bandits, 8) the bombing of a Pan Am Airlines jet, en route to Honolulu, Hawaii, and 9) assisting in the matter of 16 defendants who are charged with the robbery of $6,956,520 from a Wells Fargo facility. The defendants include many leaders of violent Puerto Rican independence groups.

--Pornography. The Section continued to assist United States Attorneys in implementing the Department's aggressive enforcement efforts in child pornography. During the first eleven months of FY 1986, 175 individuals involved with this material have been indicted and 83 have been convicted. One defendant, Marvyn Harold Cross, was sentenced to 95 years' imprisonment based upon his conviction for violations stemming from a scheme he devised which would have involved numerous children in the production of sexually explicit films and photographs. Significant sentences were achieved in other cases as well, including two defendants in unrelated cases who were each sentenced to 20 years' imprisonment.

In connection with the Department's international effort to stem the importation of child pornography, the Section designed a multi-agency working group to review imported and forfeited obscene material to develop information on producers of child pornography and furnish it to appropriate officials in the exporting countries. The working group, which includes Postal Inspection Service, FBI, Customs Service and Criminal Division personnel, has been in place for several months.

The Section has initiated a major new enforcement effort in the obscenity (adult pornography) area and prepared legislative reports and testimony on legislation dealing with cable pornography, obscene telephone messages, the use of computers in pornography, and the interstate exchange of advertisements for child pornography and child sexual abuse.

--Intellectual Property. The Section continues its efforts to protect intellectual property through the enforcement of criminal law, particularly in the fields of copyright and trademark. The increasing use of counterfeit trademarks in domestic and foreign commerce was recently evidenced by enactment of the counterfeit trademark statute, 18 U.S.C. 2320, and by the Report accompanying the appropriations bill for the Department, in which the Senate Committee on Appropriations indicated its increasing concern about the rise in imports of goods that violate American copyright and trademark laws. For example, Aaroni Jacob Shinyder recently pled guilty to the manufacture and distribution of hair care products bearing counterfeit Nexxus trademarks. Shinyder was sentenced to five years' imprisonment. The Section has also participated in the investigation of a case involving the manufacture, importation, and distribution of counterfeit birth control pills (Ovulen 21).

--Nuclear Safety. The Section reviews all Nuclear Regulatory Commission (NRC) referrals of criminal investigations. During the last year, they successfully prosecuted a company and an individual for violations of NRC regulations in connection with the conduct of the business of radiography. Several cases involving the industrial use of radioactive materials as well as the operation of nuclear power plants are now being reviewed or investigated by Section staff. Two corporations and an individual were indicted for the operation of the D.C. Cook Nuclear Plant in Bridgman, Michigan, in violation of NRC fire protection regulations.

One of the Section's other major roles is to develop and prosecute major cases, when appropriate, due to recusal, lack of resources or pertinent expertise in U.S. Attorneys' Offices. The nature of the Section's activities in this area is best illustrated by some of the investigations and cases below.

Two Section attorneys are working extensively with the FBI and DEA concerning the assassination of DEA Agent Enrique Camarena-Salazar who was kidnapped, tortured, and murdered in Mexico. The Section also has the lead role in investigating the August 13, 1986 abduction and assault by Jalisco State Police officers in Mexico of DEA Agent Victor Cortez.

Robert Brodhead, Athletic Director of Louisiana State University, pled guilty to a conspiracy to intercept a radio communication. The plea resulted from Brodhead's endeavoring to intercept communications between National Collegiate Athletic Association investigators and Louisiana State University athletes concerning possible recruiting violations of the University.

Section attorneys are currently preparing for trial in a case involving nine people in the District of Columbia charged with 22 violations of conspiracy, obstruction of justice, false statements, and perjury. The defendants are present and former officials and residents of the Synanon Foundation, Inc., later known as the Synanon Church.

In addition, the Section defends civil suits seeking to obtain information or to interfere with criminal justice activities and national security operations.

Currently, the Section is defending a class action suit of national importance which seeks injunctive relief and monetary damages against nine Parole Commissioners. It is also defending the coram nobis actions filed in three separate districts by American citizens of Japanese Ancestry. These actions seek to overturn the 1942 convictions of these individuals for minor crimes which they committed while they were under the World War II Japanese internment program. Further, the Section successfully defended the Secretary of the Treasury in denying Secret Service protection to Lyndon H. LaRouche who asserted that he was a major candidate campaigning for the 1984 nomination of the Democratic Party.

The Section regularly provides support to the U.S. Attorneys in the conduct of litigation. For example, the Section has been involved in efforts to structure the Selective Service nonregistrant enforcement program. The Section has assisted the various offices by handling the selection of targets, providing appropriate memoranda of law, playing the primary role in the processing of pretrial discovery requests, and, as needed, handling resulting appeals. The incidents of nonregistration has declined. The Section is also directing its efforts at suspected nonregistrants who made false statements concerning Selective Service compliance to obtain federal student loans.

Program Changes: The Criminal Division requests an increase of 4 positions and $458,000 to assist in responding to the increase in terrorist related matters and to take appropriate advantage of the recent increase in prosecutorial jurisdiction permitting the prosecution in the United States of overseas terrorist acts.

The dramatic increase in terrorist incidents directed at American business, military and civilian interests has aroused public concern in the United States and the Reagan Administration has attempted to respond with a multifaceted program. Since the hijacking of TWA 847 in June 1985, the Criminal Division has provided the Department's crisis management response to all major international terrorist incidents over which the United States has jurisdiction. One of the first actions of the FBI in response to an extraterritorial act of international terrorism is to contact a Division attorney for an assessment of the United States' jurisdiction over the incident. Indeed, the first log entry in the FBI's Command Center records regarding the recent bombing of TWA 840 is a telephone call to the home of a Division attorney. That attorney provided an oral response to the inquiry concerning jurisdiction and provided a written response (with statutory citations) within hours of the telephone inquiry. In addition to responding to immediate crises, the Criminal Division is responsible for the formulation and implementation of policies with regard to a wide range of criminal statutes relative to terrorism including the Hostage Taking provisions of the Comprehensive Crime Control Act of 1984, P.L. 98-473. This law permits the prosecution, under certain circumstances, of offenses occurring outside of the United States and, accordingly, the enforcement of this statute is fraught with many sensitive policy issues.

The additional resources included in this request are required to provide legal advice to representatives and policymakers responsible for responding to international terrorist incidents. The additional staff will assist in obtaining evidence from foreign jurisdictions, convening grand juries and instituting criminal prosecutions against terrorist offenders. In addition, they will assist in the establishment and maintenance of regular communications links with other government agencies, including the FBI, CIA, NSA, and State Department, to ensure that the Department of Justice is fully and promptly informed regarding terrorist related matters. The additional staff will also be responsible for preparing contingency plans for dealing with terrorists in various foreign jurisdictions. These plans will be used to govern negotiations with foreign authorities and assist in bringing the terrorist incident to a favorable conclusion. Finally, the Criminal Division will produce training courses and instructional materials for government prosecutors who may be called upon to prosecute terrorist related cases; it will collect information on trends and recent developments in terrorism cases; it will furnish advice to the Congress on any new legislation concerning this issue; and, it will coordinate and oversee any multidistrict terrorism cases that may arise.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Office of special investigations.	47	47	$3,377	47	47	$3,547	47	47	$3,547	...	...	...

Long Range Goal: To denaturalize and deport individuals who concealed activity committed during World War II involving the persecution of others because of race, religion, national origin, or political opinion, in order to gain entrance to the United States.

Major Objectives:

To identify all alleged Nazi war criminals living in the United States.

To review and investigate systematically all relevant allegations received by the program.

To prosecute appropriate cases.

To develop and maintain working relationships with foreign governments having information relating to the activities of suspected Nazi war criminals.

Base Program Description: This program detects, identifies, investigates, and, where appropriate, takes legal action to denaturalize and/or deport any individual who: (1) assisted the Nazis by persecuting any person because of race, religion, national origin or political opinion, and (2) later was admitted as an alien into, or became a naturalized citizen of, the United States. The activities of this program include historical research, file review, investigations, witness interviews in the U.S. and abroad, litigation support, and denaturalization/deportation litigation before administrative bodies and U.S. courts. There are four major phases of work: (1) identification, consisting of matching a name of a United States resident to an allegation or suspicion of war crimes, and opening an Office of Special Investigation (OSI) file on that person; (2) investigation of suspects; (3) filing litigation; and, (4) appeals of judgments or other final orders. Four types of litigative action may be conducted: (1) if the subject is a naturalized citizen, a civil complaint may be filed in the U.S. District Court seeking a judgment of denaturalization; (2) for resident aliens (including denaturalized citizens), administrative proceedings are brought to seek their deportation; (3) criminal indictments may be pursued in cases which involve perjury (18 U.S.C. 1001) or other crimes within the statute of limitations; and (4) extradition. The litigation phase begins when the Complaint/Order to Show Cause/Indictment is filed; it ends with the judgment or the final order, and that is the basis for appeal.

Accomplishments and Workload: The recent experience and projections for the future of the Office of Special Investigations is summarized quantitatively in the following table:

Item	1985	1986	Estimates 1987	1988
Investigative Matters:				
Pending, beginning of year	308	424	437	467
Opened	154	72	50	50
Closed	38	59	80	80
Pending, end of year	424	437	467	497
Cases:				
Pending, beginning of year	27	27	28	28
Opened	4	7	10	10
Closed	4	6	10	10
Pending, end of year	27	28	28	28

Some of the specific accomplishments of the Office of Special Investigations during 1985 include the following:

- Completion of an extensive investigation and report of the connection between Robert Verbelen, an accused Nazi war criminal living in Vienna, and the United States occupation and intelligence forces during the close of World War II. The investigation involved two years of Archival research in the United States and abroad and numerous interviews with key participants.

- Completion of a special report to the Attorney General on the notorious war criminal Josef Mengele. The report is a result of 18 months of investigation and historical research, and it documents Mengele's career from the time he disappeared from sight in 1945 until death in 1979.

- John Demjanjuk was extradited to Israel in February 1986. This ended almost ten years of litigation by the Government, during which time Demjanjuk was denaturalized and then ordered deported.

- Andrija Artukovic was extradited to Yugoslavia in February 1986. He was tried and convicted this year in Yugoslavia for war crimes stemming from his cabinet level position in the Nazi puppet State of Croatia, in which position he was instrumental in the policy of persecution and genocide.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Prosecution Support	115	115	$6,476	125	119	$7,166	136	127	$7,814	11	8	$648

Long-Range Goal: To provide the legal assistance and central coordination necessary to maximize the effectiveness of Federal criminal law enforcement.

Major Objectives:

To promote the negotiation of treaties with foreign governments that will improve the ability of the United States to extradite fugitives, to acquire evidence, to transfer prisoners, and to accomplish other purposes which will aid the criminal justice system in the United States.

To assist Federal and state authorities in obtaining fugitives, evidence and legal assistance from foreign governments.

To represent, or supervise the legal representation of, foreign governments' extradition and evidence requests in U.S. courts.

To monitor the execution of Prisoner Transfer treaties so as to minimize any delay in transferring prisoners eligible for transfer to their countries of nationality.

To provide effective and reliable service to Federal prosecuting attorneys in the implementation of the statutes and regulations that affect them.

To maintain a usable and used legal brief and policy memoranda bank and to integrate into the legal brief bank the briefs in opposition to petitions for writs of certiorari and the Solicitor General appeal memoranda that are generated by the Division annually.

To maintain an up-to-date U.S. Attorneys' Manual and have Criminal Division updates prepared on a regular basis so that all portions of the Division's contribution to the Manual will remain current and informative.

To coordinate responses to (Freedom of Information Act and Privacy Act) requests pertaining to the Criminal Division.

To review requests for authorization of electronic surveillance and recommend authorization or disapproval of requests pursuant to 18 U.S.C. 2518 in an expeditious manner.

To perform the appropriate review of witness relocation requests and deal with the myriad matters associated with the Witness Security Program.

To litigate and assist U.S. Attorneys' Offices in litigating forfeiture cases where:
(a) major cases arise in districts in which the U.S. Attorney's Office lacks the expertise or personnel to conduct the cases effectively.
(b) backlogs of forfeiture cases arise because of other demands on U.S. Attorneys' Offices.

To advise and train investigative agents and Assistant U.S. Attorneys to make greater use of forfeiture provisions and better manage seized and forfeited assets.

To process and resolve petitions for remission and mitigation in judicial forfeiture cases.

To support directly the U.S. Marshals Service and investigative agencies in improving the management of seized and forfeited property.

To review all settlements in forfeiture cases in which the difference between the gross amount of the original forfeiture claim exceeds $60,000 but is less than $750,000.

To encourage coordination with state and local authorities on forfeiture matters.

To provide legal advice and assistance to United States Attorney Offices regarding the collection of criminal fines and appearance bond forfeiture judgments.

To establish, coordinate, and maintain an "accounts receivable" system for criminal fines and appearance bond forfeiture judgments obtained by the Criminal Division.

Base Program Description: This program seeks, through the Division's Office of International Affairs (OIA), to centralize, coordinate and execute the Department's responsibilities concerning international legal matters related to criminal law enforcement in the areas of extradition, international legal assistance and prisoner transfers. The handling of treaty negotiations and implementation, international legal assistance and prisoner transfer requires effective liaison between OIA and numerous foreign and domestic entities, including the Department of State, foreign governments and INTERPOL. To assure that extradition requests submitted by the United States meet the requirements of the relevant extradition treaties, OIA advises federal and state prosecutors on the preparation of all United States extradition requests, and screens such requests before submission. To promote the reciprocal representation by foreign governments of United States extradition requests, OIA either directly represents, or supervises the representation of, foreign extradition requests before United States courts. Included among cases handled by OIA are some of the most important narcotics trafficking, fraud, and violent crime cases prosecuted in this country and abroad. Similarly, to assure that requests submitted by the United States seeking evidence from foreign countries under mutual assistance treaties in criminal matters meet the requirements of the applicable treaty, OIA, acting as the United States Central Authority under the treaties, advises federal and state prosecutors on the preparation of all such requests, and screens or redrafts them prior to transmittal. When, because of the lack of a mutual assistance treaty, such requests must be made by letters rogatory, OIA performs essentially the same role in processing them as well. To promote the reciprocal representation by foreign governments of United States evidence assistance requests, OIA either directly represents, or supervises the representation of, foreign evidence assistance requests before United States courts. As with extradition, such evidence requests are generally related to some of the most important investigations and prosecutions in this country, e.g., investigations of the international laundering of vast profits of major narcotics trafficking organizations. OIA has also been instrumental in obtaining the execution of search warrants in foreign countries in connection with the unlawful export of advanced technology goods, such as computers which could be used in weapons guidance systems. This program also is responsible for the implementation of the prisoner transfer treaties to which the United States is party. During 1985 and 1986, new prisoner transfer treaties are expected to enter into force with approximately seventeen countries, thereby quadrupling the number of such treaties in force and greatly increasing the problems attendant to their smooth implementation.

Through the Office of Enforcement Operations (OEO), the Criminal Division regulates the effective and appropriate use of sensitive investigative techniques such as wiretaps, consensual monitoring and witness relocations through the application of uniform procedural guidelines by specially trained attorneys and paralegals. These individuals maintain effective liaison with the U.S. Attorneys offices, Organized Crime Strike Forces, U.S. Marshals Service, the Federal Prison System, the Federal Bureau of Investigation, and all other applicable Federal, state and local investigative agencies. The Office of Enforcement Operations possesses full responsibility to review and approve or disapprove requests from U.S. Attorneys, investigative agencies, and Congressional committees to place individuals believed to be endangered by organized crime figures in the Witness Security Program. It is responsible for coordination among government prosecutors, investigative agencies, and U.S. Marshals Service personnel, the conduct of cases requiring witness protection, and participation in litigation arising out of the program, in cases where the United States is named as a party by virtue of any action taken or not taken with respect to the program. (Title V of Public Law 91-452, codified as a headnote preceding Title 18, United States Code, Section 3481).

The Office of Enforcement Operations is responsible for the review, adjudication, and coordination of all applications for electronic surveillance under Title III of P.L. 90-351, codified in Title 18, United States Code, Section 2510-2520, and is solely responsible for the final recommendation to be made directly to the Assistant Attorney General. It participates in and, as required, conducts litigation arising from the grant of an application for electronic surveillance, and is responsible for performing ongoing analysis, review, and in-depth evaluations of the implementation of 18 U.S.C. 2516. The Office also receives and processes all requests received from U.S. Attorney Offices and Organized Crime Strike Forces for witness immunity pursuant to 18 U.S.C. 6001 et seq.; OEO makes the final recommendation to the Assistant Attorney General for approval or rejection of such requests. In addition, OEO provides the various components of the Division and the U.S. Attorneys' offices with a wide range of litigative assistance and prosecutorial support, including the following: processing requests for witness hypnosis in the federal judicial system; processing requests for consensual surveillance in selected cases in sensitive areas; processing requests for disclosure of tax returns, taxpayer information and return information pursuant to the Tax Disclosure Act of 1976, as amended; processing Freedom of Information Act and Privacy Act requests; responding to allegations of illegal electronic surveillance; processing requests for authorization to subpoena a member of the news media; processing requests for authorization to seek closure of any part of a criminal proceeding; coordinating responses to subpoenas and court orders directed to the Department; processing requests for permission to seek issuance of a search warrant for documentary material in the possession of a disinterested third party; updating the Criminal Division's portion of the United States Attorneys' Manual; maintaining the legislative files and records of the Division; maintaining the Legal Reference Unit, a legal brief and policy memorandum bank for use by Division attorneys and paralegals; responding to citizen mail on criminal matters by the Correspondence Unit; and preparing the Division's monthly and annual reports to the Attorney General. The provision to these services is accomplished through close liaison between OEO and litigating components of the Criminal Division, and the United States Attorneys' offices.

The final aspect of this program is provided by the Asset Forfeiture Office created in June 1983 through a reorganization of the Criminal Division. The responsibilities of this Office include the conduct of civil and criminal asset forfeiture litigation, the development of policies which incorporate asset forfeiture into an overall law enforcement program and the improvement of existing practices regarding the management of seized and forfeited assets. Forfeitures are an important part of law enforcement, because forfeitures allow the government to take property away from criminals which, in turn, deters crime and promotes justice. Forfeitures deter crime because the government can take away the property that lawbreakers use to commit crimes, e.g., the airplanes and boats they use to smuggle narcotics into the country and the cash they use to buy drugs for resale. By removing this working capital from criminals, forfeitures make it more difficult for lawbreakers to operate. By seizing the fruits of crime, e.g., the stocks and bonds purchased with money traceable to drug sales, or a business acquired by a pattern of racketeering activity, forfeitures further deter lawbreaking by taking the profit out of crime. Forfeiting criminal profits also promotes justice, because criminals should not grow rich from their violations. Fines are also an important part of the penalty structure of federal criminal law. The imposition of a fine, however, serves no punitive or deterrent purpose if it goes unpaid. The Collection Unit within the Asset Forfeiture Office, therefore, assists the various components of the Division and the U.S. Attorneys' Offices by overseeing and assisting in the collection of criminal fines, criminal penalties, appearance bond forfeiture judgments, and criminal court costs.

Accomplishments and Workload: A quantitative summary of the prosecution support workload is presented in the following table:

Item	1985	1986	Estimates 1987	1988
Foreign Extradition Requests Received	179	127	205	230
U.S. Extradition Requests Transmitted	310	221	290	340
Foreign Legal Assistance Requests Received	119	128	150	165
U.S. Legal Assistance Requests Transmitted	227	250	375	500
Witness Immunities Issued	5,146	5,533	6,200	6,200
FOI/PA Requests Received	1,575	1,600	1,650	1,650
Title III Applications Reviewed	525	535	600	600
Consensual Wiretap Applications Reviewed	1,167	1,252	1,300	1,300
Witnesses Accepted in Protection Program	154	180	200	200
Forfeiture Cases:				
Pending, start of year	7	60	60	60
Opened	85	38	50	50
Closed	32	38	50	50
Pending, end of year	60	60	60	60
Petitions for Remission/Mitigation Reviewed	350	398	400	400
Offers in Compromise Reviewed	36	40	40	40

During 1986, the Office of International Affairs continued with its program of negotiating new treaties, primarily extradition and mutual legal assistance treaties. The negotiation program resulted in one new treaty in force (a mutual legal assistance treaty with Italy), and the signing of three new treaties (mutual legal assistance treaties with Thailand and the Cayman Islands and a supplemental extradition treaty with the United Kingdom). The year was also marked by the extradition from the United States of a number of notorious figures, including the extradition to Italy of Francesco Pazienza (reputedly a major fraud artist and extortionist who was infamous in Italy after his success in insinuating himself into high levels of the Italian government, the extradition to Yugoslavia of Andrija Artukovic and to Israel of Ivan Demjanjuk (both named as major Nazi war criminals), and the extradition to Mexico of Arturo Durazo Moreno (the Chief of Police in Mexico City during the Lopez-Portillo administration who is accused of running a major portion of the organized crime in Mexico at the time). The Office was also successful in obtaining the return from abroad of a large number of fugitives, including dozens of major federal fugitives charged with drug offenses and a large number of state fugitives including the extradition of Catherine Evelyn Smith from Canada who since her return has pleaded guilty in California to the felony murder of entertainer John Belushi.

During 1986, some 5350 electronic surveillance authorizations were processed to approval by the Office of Enforcement Operations. A survey indicates that over 95 percent of targeted interceptees indicted were convicted. The Office revised portions of the United States Attorneys' Manual to reflect new procedures mandated by the Witness Security Reform Act of 1984 and assumed responsibility for the Victims Compensation Fund. The Office completed action on 1,258 Freedom of Information Act (FOIA) and Privacy Act (PA) requests, secured a dismissal with prejudice of an FOIA suit involving over 1,000,000 records, assumed responsibility for staffing requests for authorization to seek an order permitting disclosure of Federal grand jury records to state law enforcement authorities, and continued to provide significant support to Division attorneys.

Some of the most significant accomplishments of the Asset Forfeiture Office in 1986 included provision assistance in the criminal forfeiture of a two-thirds interest in the Thornapple Creek Golf Course in the Western District of Michigan. The Golf Course was purchased with the proceeds of unlawful drug activities and is currently being operated at a profit by the United States Marshals Service. In addition, the Office is involved in the civil prosecution of eleven properties and over $10,000,000 related to "Operation Cash Crop" investigated by the Gulf Coast Organized Crime Drug Enforcement Task Force. The cases involve the forfeiture of narcotics related assets which were part of the Quintero-Gracia Mexican based drug cartel. The Office is also civilly prosecuting over $1.5 million worth of real and personal property relating to the illegal drug profits of Danny Constantine White in the District of Maryland.

The Office is preparing a revision of the United States Attorneys' Manual which will include procedures for the collection of fines under the Criminal Fine Enforcement Act.

Program Changes: The Criminal Division requests an increase of 11 positions and $648,000 to augment its ability to provide advice and assistance to prosecutors in the United States in matters requiring coordination with foreign governments.

In recent years the Department of Justice has applied substantial resources to the negotiation of several new Mutual Legal Assistance Treaties. Through these treaties U.S. prosecutors (local, state and Federal) can obtain evidence residing in a foreign jurisdiction. For each request, however, the U.S. government must submit a detailed request including an explanation of the facts of the case and the statutes under which the investigation is being coordinated, together with an explanation of how the evidence is to be used and the procedures to be followed in the other country to assure its admissibility in U.S. courts. Each request requires extensive coordination with U.S. prosecutors and investigators as well as with foreign authorities. Recent treaties that have been concluded with Canada, the Caymans, the Bahamas and Jamaica are expected to be particularly valuable to U.S. prosecutors. The Criminal Division expects that the number of requests for foreign local assistance will double from 250 requests forwarded to foreign jurisdictions in 1986 to 500 requests in 1988. In order to provide some capacity to absorb this workload increase, the Division is seeking an increase of five attorney positions and six support positions, and $648,000.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Organized Crime drug enforcement.....	6	6	$596	6	6	$632	6	6	$632	...	...	...

Long-Range Goal: To support the Drug Task Forces in investigating and prosecuting violations of Federal criminal laws that prohibit the importation, distribution, sale and use of harmful drugs.

Major Objectives:

To furnish assistance requested by Drug Task Force prosecutors to the full extent possible within the terms of applicable statutes, Departmental policies and procedures, caselaw, international conventions and bilateral treaties.

To provide regular communications and instruction to Drug Task Force prosecutors so as to improve their efficiency and their effectiveness.

To participate in the litigation of certain Drug Task Force cases for which Division personnel have developed special expertise.

Base Program Description: The Administration's law enforcement initiative against organized drug traffickers has increased the demands on the Criminal Division to provide certain types of prosecutorial assistance and to participate directly in the development of particular cases. For example, many Drug Task Force investigations depend upon electronic surveillance to obtain evidence on the activities of wrongdoers. By law (18 USC 2516), all electronic surveillance must be authorized by the Attorney General or a designated Assistant Attorney General. Before authorization, each application is reviewed by Division personnel, and a recommendation is made to the Assistant Attorney General. Then, following authorization of either a wiretap or the wireless interception of communication, reports must be collected and reviewed on the fruits of the surveillance. In addition to employing electronic surveillance techniques, many Drug Task Force prosecutions rely on witnesses whose personal safety is endangered by criminal elements. A prosecutor seeking to arrange for the protection of a witness -- e.g., by providing guards, by relocating the witness out of the danger area, by securing a new identity for the witness, etc -- must submit a request to the Division for review as to the qualification of the witness for the program and a determination as to the level of protection to be afforded to the witness.

The Division has also experienced an increase in the number of extradition requests and requests for mutual legal assistance to and from foreign countries as a result of the Drug Task Force investigations. The initiative against drug traffickers has also spurred interest in the increased use of asset forfeiture provisions of existing statutes against drug dealers. Denying criminals the means of production can sometimes be a more effective deterrent to crime than punishment by imprisonment or fine. Finally, the Division often must lend direct assistance to the development of major investigations involving peculiar legal theories or the organization of extensive evidence in a manner designed by the Division, such as in financial investigations of trafficking organizations as demonstrated by the Operation Greenback initiatives.

Accomplishments and Workload: A quantative summary of the work of the Criminal Division in support of the Drug Task Forces follows:

Item	1985	1986	Estimates 1987	Estimates 1988
Electronic surveillance applications reviewed	33	58	65	65
Witness protection measures authorized	44	62	50	50
Extradition requests transmitted	54	73	75	75
Judicial assistance requests submitted	36	47	50	50

	1987 as Enacted			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Management and administration	83	84	$4,571	83	84	$5,067	83	84	$5,067	...	...	...

Long-Range Goal: To guide the administration of federal criminal justice in an effective, fair and consistent manner.

Major Objectives:

To supervise the development and implementation of Department policy so as to assure an effective, fair and consistent administration of Federal criminal laws.

To establish priorities and to provide general supervision of national enforcement of Federal laws.

To develop and implement policies relating to the efficient administration of the Division.

To provide administrative services necessary to the operations of the Division.

To analyze all legislative proposals developed within the Congress and the Administration which affect either the substance or procedure of the Federal criminal justice system, and to furnish advice, as appropriate, on the probable effect of such proposals on Federal law enforcement.

To analyze policy issues relating to enforcement programs that the Criminal Division oversees in order to identify and resolve problems in the operations of those programs.

To analyze issues relating to the Division's management systems, policies, and procedures and develop needed improvements.

To assist in coordinating Division policies, enforcement programs, and the exchange of information with other components of the law enforcement system, including operating agencies and research institutions.

Base Program Description: The Office of the Assistant Attorney General carries out its policy making, supervisory and liaison functions through the Assistant Attorney General, four Deputy Assistant Attorneys General, a Special Counsel, four Senior Counsel and support staff. Included in the Office of the Assistant Attorney General is the Office of Law Enforcement Coordination which is assigned responsibility for staffing the Executive Working Group for Federal-State-Local Prosecutorial Relations, for reviewing Federal district law enforcement plans, for managing the Division's program to abolish concurrent jurisdiction enforcement lapses, for supporting the Division's Crime Prevention Committee, for overseeing the Division's involvement in regional Law Enforcement Coordinating Committees, and for staffing other intergovernmental law enforcement management initiatives which were previously fragmented among several Division offices.

Administrative services are provided by the Office of Administration. Six operational units work closely with other organizational entities of the Criminal Division, the Department and other Federal agencies, to ensure that the Division's administrative services are provided in an efficient, timely, and cost-effective manner: the Office of the Director; the Personnel Unit; the Fiscal Unit; the Mail, Records and File Unit; the Procurement, Space and Security Unit; and, the Management Information Systems staff. This last unit was established in 1984 to develop and install top priority automated data processing systems for caseload management information and correspondence tracking, and to provide selected ADP applications in support of investigations and litigation. The Office of Legislation draws upon expertise spanning the breadth of criminal

law, as well as familiarity with congressional organization, rules, and procedures to conduct the Division's relationship with the legislative branch. Close liaison is maintained with, among others, Members of Congress and their personal and committee staffs, the Department's Office of Legislative and Intergovernmental Affairs, the Office of the Associate Attorney General, officials of the Department and the Division, the Attorney General's Advisory Committee of U.S. Attorneys and representatives of Federal investigative agencies.

The Office of Policy and Management Analysis provides the Division with the analytical capabilities needed to perform program development, policy analysis, and management improvement functions. The Office advises the Assistant Attorney General on developing priorities for the Division, the Department, and Federal law enforcement generally. Most of the Office's projects are joint efforts with personnel from other units, such as the Division's other sections and offices, the Department's other legal divisions, the United States Attorneys, the investigative agencies, and the Inspectors General. The Office's professional staff includes analysts with expertise in public policy, business administration, criminology, economics, organizational behavior, program evaluation, information systems, statistical methods, and related areas. Each staff member is assigned to work primarily in one of the following areas: organized crime, fraud and corruption, narcotics, law enforcement coordination, or general management improvement.

Accomplishments and Workload: The Office of the Assistant Attorney General continues to provide the Federal criminal justice system with national leadership, centralized coordination and effective direction. The role of the Assistant Attorney General manifests itself mainly in communications imparted to other governmental entities and, by extension, to the public. The legislative proposals transmitted to the Congress represent the best judgment of the Criminal Division as to the changes which are needed to improve the criminal justice system. The arguments formulated for presentation to the Supreme Court and courts of appeal reflect the considered experience of the Division as to the constitutional and statutory interpretations which will best support the enforcement of Federal laws in the long run. And finally, communications delivered to other law enforcement executives, Federal and non-Federal, in speeches, meetings, and correspondence serve to focus attention on the most pressing problems facing the criminal justice system and the means available to law enforcement executives to address those problems.

Within the last year, the Office of Administration has initiated several management improvements that will facilitate the organizational functions of the Criminal Division: 1) Developed and implemented the automated systems which record and track the status of cases and matters, immunity requests, seized assets, Department files, gambling registration, and Freedom of Information Act requests. 2) Intensified efforts to reduce the quantity of internally stored files and records which resulted in nearly fifty percent of such records being disposed of. 3) Completed a major office automation request with the Tax Division and the U.S. Attorneys which would allow multi-purpose terminals at individual work stations, as opposed to the current system which consists of six different types of work stations. 4) Devoted substantial time and resources to the relocation of employees from the Federal Triangle, Dominion Bank and Hamilton Buildings to the Bond Building. This relocation will reduce the number of buildings occupied by the Criminal Division in the Washington, D.C. area to two. The new office space will provide much needed improvements in security, file and storage areas, library and Computer Room working conditions. The move is scheduled to begin in December 1986.

During 1986, The Office of Legislation had lead responsibility for a major bill containing numerous technical amendments to substantive and procedural provisions in the criminal code made necessary by the passage of the Comprehensive Crime Control Act of 1984. The Office drafted the technical amendments bill and the Senate passed many of its provisions in S. 1236. The Office drafted and continued to work on several bills relating to narcotics. It prepared a series of bills to provide increased penalties for drug traffickers, including lengthy mandatory sentences for manufacturers and distributors of illegal drugs that cause the death of another person and the death penalty for kingpins of especially large drug trafficking rings. A bill was drafted by the Office to provide criminal penalties for controlled substance analogs, i.e. "designer drugs" which have the same, or worse, effect as more common substances like heroin but which have a slightly different chemical composit[illegible]. The Office

continued to work for passage of key provisions of the money laundering bill which it drafted in 1985. The House Banking and Judiciary Committees have reported out money laundering bills containing several of the provisions in the Administration's bill. The Office drafted a comprehensive bill to establish a Commission to regulate high stakes gambling on Indian reservations. Gambling is a multi-million dollar enterprise on some reservations but courts have ruled it cannot be subjected to state laws and it is being conducted with only tribal supervision. The submission of the bill, S. 2557, represented the culmination of months of coordination with the Interior Department. The Office continued its work in regard to the passage of death penalty legislation. Testimony for the House Judiciary Committee was prepared and the Office continued its close working relationship with the Senate Judiciary Committee staff on this issue, resulting in the Committee's reporting out a death penalty bill, S. 239.

During 1986, the Office of Policy and Management Analysis evaluated the first year of the Department's program for sharing federally forfeited property with state and local law enforcement agencies, provided ongoing analytic support to the Subcommittee on Asset Forfeiture, and drafted administrative procedures for handling sharing requests. The Office also analyzed options and offered recommendations for international asset forfeiture.

In conjunction with the Narcotic and Dangerous Drug Section and the Drug Enforcement Administration (DEA), the Office examined ways to expedite the destruction of massive quantities of drug evidence now being held in DEA vaults.

Another study reviewed the domestic cannabis eradication/suppression program for the National Drug Enforcement Policy Board. The final report and recommendations have been approved by the Board and sent to Congress. The Office provided additional analytic assistance to the National Drug Enforcement Policy Board on other projects, including a proposed air interdiction plan for the Southeast border and a preliminary analysis of the recommendations from the President's Commission on Organized Crime.

The Office also completed a review of the implementation of the Bail Reform Act of 1984 and revised the information system monitoring its use.

In the area of sentencing, the Office provided staff work for the Economic Crime Council's Sentencing Committee, and organized an advisory group from the Division's litigating sections to prepare a report on offender characteristics for the U.S. Sentencing Commission.

Finally, the Office reviewed and commented on numerous research studies and advised researchers on the concerns and interests of the Criminal Division.

Explanation of Analysis of Changes from 1986 Appropriation Request

Congressional Appropriation Actions. Congressional appropriation actions reduced the President's budget request by $6,351,000.

Reprogramming

Privatization of the accounts maintenance activity has resulted in the transfer of three positions and FTE from Management and Administration to Torts Litigation. Responsibility for the Washington Public Power Supply System litigation (21 positions and FTE and $5,107,000) has been transferred from the Federal Programs decision unit to the Commercial Litigation decision unit to facilitate the most effective management of this massive litigation. To enable all decision units to maintain employment at appropriated levels, $3,089,000 has been transferred from Torts, Federal Programs and Immigration Litigation to Appellate, Commercial Litigation, Consumer Litigation and Management and Administration.

Supplementals Requested

A supplemental appropriation is required to handle litigation arising from passage of Immigration Reform legislation (13 positions, 3 FTE and $936,000); implement and comply with new anti-fraud legislation (21 positions, 5 FTE and $640,000); cover relocation costs ($320,000); and to cover higher FTS costs ($101,000). The pay request provides $504,000 to meet increased pay requirements and the FERS request provides $611,000 for increased retirement contributions.

This activity provides representation for the United States' interests in all types of civil cases and matters except those within the specialized fields of the other divisions of the Department. The litigation encompasses the full spectrum of legal problems encountered by private business enterprises because the departments and agencies of the Government are engaged in innumerable commercial ventures similar to those of a modern corporation, such as buying, selling, construction, shipping, production of energy, insurance, housing and banking. In addition, the Division litigates the significant policy issues, often rising to constitutional dimension, associated with Government activities. Hence, the overall objective of Civil Division activity is to provide the Government with the best possible legal representation. While the Division operates as the Government's law firm, it also functions as a counselor and advisor for important Government programs that may become the subject of litigation.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Appellate Activity..	67	71	$5,041	67	73	$5,629	101	94	$7,960	34	21	$2,331

Long-range Goal: To protect the interests of the United States by successfully defending against appeals seeking reversal of trial court and agency decisions favorable to the Government, securing the reversal of trial court or agency decisions against the Government, and preparing documents for filing in the Supreme Court.

Major Objectives:

To prevail in appellate litigation challenging trial court or administrative decisions in favor of the United States.

To initiate and prevail in appeals in which the Government's opponents were successful at the trial court or administrative levels.

To protect the Government's interest at the highest level of appeal by preparing documents to be filed by the Solicitor General in the Supreme Court.

Base Program Description: The Appellate Staff defends the interests of the United States in litigation in Federal and state courts of appeals and prepares documents for filing by the Solicitor General in the Supreme Court. While many judgments entered at the trial courts level in Civil Division cases are favorable to the Government, they are often appealed by the opponent. To ensure resolution of the problem which initially gave rise to the litigation (i.e. recovery of monies, protection or enforcement of Federal programs, or defense of monetary claims) these cases must be defended at the appeals court level. Similarly, adverse trial court decisions must be studied and analyzed and appeals filed and prosecuted if the Government's interest is to be fully protected. Finally, several major Federal statutes provide direct review of administrative decisions at the appeals court level.

New cases filed in the Supreme Court are projected to increase in 1988 by 50 percent over 1986. At the court of appeals level, new cases are expected to increase by 20 percent over the two-year period.

Workload and Accomplishments: Workload of the Appellate Staff is presented in the following table:

Appellate Litigation	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate Base	1988 Estimate Request
1. Handled by Appellate Staff					
a. Pending Beginning of Year	1,706	2,097	2,473	2,746	2,746
b. Received During Year	1,752	1,969	2,131	1,105	2,567
c. Terminated During Year	1,361	1,593	1,858	1,639	2,143
d. Pending End of Year	2,097	2,473	2,746	2,212	3,170
2. Handled in Branches					
a. Pending Beginning of Year	5,184	3,491	2,845	2,369	2,369
b. Received During Year	1,776	1,517	1,622	1,569	2,082
c. Terminated During Year	3,469	2,162	2,098	1,478	1,728
d. Pending End of Year	3,491	2,845	2,369	2,460	2,723
3. Received and Referred to U.S. Attorneys	1,410	1,534	1,673	2,873	1,828

During the past year, the Appellate Staff handled a variety of nationally significant cases:

Bowen v. Posse. In this case, the State of California and others challenged Congressional authority to alter terms of the Social Security Act. Recently, coverage groups of state and local government workers began to withdraw from the system in large numbers. This trend prompted Congress to change the statute to prevent any further withdrawals by these employees. The district court enjoined operation of the anti-termination provision holding that the states had contract rights allowing them to terminate the agreements. The Supreme Court reversed the district court in a unanimous decision, holding that Congress had retained its sovereign right to amend the terms of the program and that no constitutional right had been violated. This decision saves the Government $500 million to $1 billion annually and reaffirms Congress' plenary legislative authority.

Lyng v. Payne. A north Florida farmer filed this class action asserting that the FmHA had failed to adequately publicize an emergency loan program. The district court held that the publicity given to the loan program was inadequate and ordered FmHA to reopen the loan program for the class' benefit. We appealed, arguing that the publicity accorded the program was adequate and that the Government cannot be estopped from enforcing lawful conditions on the receipt of public benefits -- in this case the date for terminating the loan program. The Supreme Court upheld

FmHA's conduct on the grounds that (1) the Government cannot be estopped from enforcing the statute and (2) the agency acted in compliance with the relevant regulations governing publicity of the loan program. This major victory saved the Government approximately $250 million.

Library of Congress v. Shaw. In this case, the Supreme Court reversed a ruling by the court of appeals that had allowed a 30 percent enhancement of a Title VII attorney's fee award against the Government because of delay between the rendering of the services and the payment of the fee. The Court held that enhancement of the fee for delay amounted to the imposition of interest against the United States and that Congress had not expressly waived the Government's traditional immunity from interest in Title VII. The Court's categorical rejection of delay as a proper basis for enhancement of a Title VII fee award should also lead to reversal of cases authorizing use of "current" rates rather than historical rates to compensate for delay, thereby greatly reducing the dollar amount of fee awards against the United States.

Americans United for Separation of Church and State v. Reagan. Plaintiffs sued the President, Secretary of State and U. S. Ambassador to the Vatican, claiming that Presidential action and Congressional consent in extending diplomatic recognition to the Vatican violated the Constitution. The district court dismissed the suit as nonjusticiable and the court of appeals affirmed on the grounds that (1) the plaintiffs lacked standing to bring this action and (2) the action presented a nonjusticiable political question. Subsequently, the Supreme Court denied certiorari. This case reaffirms the President's constitutional power in conducting international diplomacy without judicial review of political actions.

Program Changes: The Appellate Staff requests 34 new positions and $2,331,000 to handle the enormous growth of appellate litigation.

New positions will enable the Branch to handle the unprecedented increase of appellate litigation. Over the past five years, the number of appellate actions for which the Division was responsible increased by more than 80 percent. By 1988, our courts of appeals and Supreme Court workloads will further increase by 40 and 80 percent, respectively. Potential losses in cases on appeal will more than double from $29 billion in 1986 to over $58 billion in 1988.

This explosion in appellate litigation has its greatest impact in actions against the Government seeking to overturn legitimate trial court and administrative decisions. Cases appealed by the Government's opponents constitute 80 percent of the Branch workload. Without the requested level of resources, the Division will be forced to delegate almost 3,000 defensive cases, primarily to client agency attorneys that generally lack appellate expertise. The loss of a centralized cadre of appeals lawyers would cause an unacceptable diffusion of appeals litigation with no real savings in personnel costs to the Government as a whole.

The Division must also be able to initiate action in appellate courts to reverse judicial decisions which would cost the Treasury enormous sums. In 1988, appellate attorneys will reassert the Government's arguments to reverse more than $2.3 billion in adverse judgments. Other appellate litigation is crucial to vindicate the constitutionality of significant Federal programs and initiatives. Given the tremendous growth in cases brought against the Government which must be defended, without increased resources the Civil Division will have to forego the appeal of adverse trial and appellate court decisions.

Additional positions will enable the Branch to defend the new Immigration Reform Act. The Appellate Staff will be facing challenges to the Act reaching to the Supreme Court. A strong defense is essential to maintaining the integrity of the nation's new comprehensive immigration law in this final appeal stage.

Without the requested level of resources, the explosive growth of appellate litigation will force the delegation of defensive cases and the acquiescence in numerous unfavorable decisions. The defense of immigration reform, 15 years in the making, will be jeopardized. Inadequate funding risks billions in Treasury losses and frustrates crucial Federal programs.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Torts Litigation.....	210	213	$26,431	210	215	$28,083	230	228	$32,036	20	13	$3,953

Long-range Goal: To protect the interests of the United States by successfully litigating in defense of non-meritorious monetary claims, preventing excessive losses from meritorious claims and maximizing the monetary recovery for injury and damages to Government property.

Major Objectives:

To prevail in the defense of tort actions brought against the Government, its agencies and individual Federal employees and to seek contribution and indemnity from third parties where the Federal Treasury has been required to satisfy the obligations of another party.

To initiate and prevail in affirmative actions when the Government has sustained injury or expended resources on behalf of another party.

Base Program Description: In the course of performing the missions and duties assigned by the Congress and the President, the Government is frequently challenged by private plaintiffs seeking monetary damages for alleged negligent or wrongful conduct or for violating constitutional and common law rights of the plaintiffs causing damage or injury. In addition, the acts of private tortfeasors sometimes result in injury or damage to Government property which prompts affirmative actions by the United States for compensation.

The standard rule that the United States should not be liable for its regulatory or program activities is increasingly under attack. Compounding this trend is the liberalization of the expansion of tort law both in the courts and the private sector. Traditional Government defenses are no longer ironclad. Cases which historically would have been the subject of relatively simple motions are now of major importance and threaten enormous fiscal impact. The plaintiffs' bar has begun to view the Government as an opponent with limited litigation resources, but with a "deep pocket" to fund adverse judgments.

The mission of the Torts Branch is to act as the Government's attorney in defending these claims and bringing suit when the Government has sustained injury. Moreover, the Branch serves as the guardian of the public funds, defending tort claims which could potentially cost the U.S. Treasury billions of dollars. New cases are projected to increase substantially, especially aviation, medical malpractice, constitutional torts and toxic torts cases where total dollars defended are expected to reach $192 billion by 1988. In litigation initiated to recover damages for the Government, more than $623 million will be sought during 1988.

Workload and Accomplishments: Workload of Torts Litigation is presented in the following table:

Torts Litigation	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate Base	1988 Estimate Request
1. Personally Handled					
a. Pending Beginning of Year	4,949	5,081	5,234	5,647	5,647
b. Received During Year	1,892	1,333	1,586	781	1,853
c. Terminated During Year	1,760	1,180	1,173	978	1,381
d. Pending End of Year	5,081	5,234	5,647	5,450	6,119
e. Dollars at Issue (Million)	$99,104	$97,483	$128,136	$148,232	$192,739
2. Received and Referred to U.S. Attorneys	3,488	4,134	4,942	6,887	5,968

In aviation and admiralty, the Branch engaged in extensive discovery activities throughout the year in the consolidated multidistrict litigation arising out of the Delta 191 crash at Dallas/Ft. Worth, preparing for a trial expected in the spring of 1987. The Branch obtained reversal of the notorious district court opinion in Honour Brown v. United States, freeing the Government from the potential for enormous liability for negligent marine weather forecasts. In addition to a massive defensive caseload, the admiralty staff continued to provide the Branch's largest source of affirmative recoveries through vessel pollution, cargo, lock damage, wreck removal and ship mortgage foreclosure cases - more than $7 million in 1986.

In the Atomic Weapons Contractor cases, we are defending against attacks on the constitutionality of Section 1631 of the Defense Appropriation Act of 1985 (P.L. 98-525), which established an exclusive damage remedy against the United States for acts of nuclear weapons contractors. An appeal is pending following a favorable decision in the Northern District of California. This decision upheld the statute, applying it to bar more than 40 consolidated suits.

Cases that use the tort system to challenge the administration of Federal programs provide a seemingly limitless variety of novel legal and factual situations. In 1986, Branch attorneys defended successfully many pending toxic tort suits, including Wilhoite v. United States, a $1.3 billion case brought to trial by 1,300 plaintiffs allegedly exposed to DDT manufactured on federal property. Also, in Payton v. United States, the first case of its kind, the Branch tried and won a lawsuit which sought to make the Parole Commission and the Bureau of Prisons liable for the murder of a person killed by a former prisoner who became a serial murderer after his parole.

The Torts Branch has continued its aggressive and successful defense of asbestos claims. In Smith v. United States, the Third Circuit reversed the district court and ordered entry of summary judgment in the Government's favor, dismissing on discretionary function grounds, manufacturers' allegations that the United States was liable for sales of raw asbestos fiber from GSA stockpiles to knowlegable asbestos product manufacturers.

In In re All Maine Asbestos Litigation (FNS Cases), the Supreme Court denied manufacturers' petitions for writs of certiorari, letting stand the Government's victory in the First Circuit dismissing third-party tort claims arising from public shipyards; and in Lopez v. A.C. & S., the Chief Judge for the Western District of Washington agreed with the First Circuit and dismissed third-party tort (as well as contract) claims arising out of another public shipyard.

Constitutional tort attorneys continue to defend aggressively present and former Government officials against the burdens of litigation as well as liability. In Wilkinson v. FBI, a sensitive case arising out of the investigation of the plaintiffs, principals of the National Committee Against Repressive Legislation (NCARL), the Branch recently prevailed on a motion for summary judgment, achieving dismissal of all claims for damages against the Federal defendants as well as the United States. This dismissal successfully terminated six years of resource intensive litigation.

Program Changes: The Torts Branch requests 20 positions and $3,953,000 to adequately defend against the onslaught of unwarranted raids on the Treasury. As part of this increase, $2,141,000 is needed for Automated Litigation Support (ALS) services.

The extraordinary growth over the last decade in the number of tort lawsuits in the Federal courts continues to be reflected in the Division's caseload. Even more alarming is the unprecedented increase in the size of awards sought in the litigation handled by the Branch. At the end of 1986, claims reached a staggering $97.2 billion -- more than doubling in just two years. Potential liabilities in this defensive litigation will reach $192 billion by 1988 -- another doubling.

New positions will allow the Branch to personally handle the massive litigation and claims brought against the United States as a result of airline disasters, including cases arising from the Aeromexico/Carritos midair collision. Such recent experiences coupled with an annual increase in general aviation accidents portend a sizeable increase in aviation cases with as many as 190 new major cases expected in 1988. However, the numbers alone reflect only part of the increasing workload. Major air disaster litigation is becoming more complex with increasing use of consolidated and third-party cases, requiring far more attorney effort than in the past. Dollars at risk in these cases will be as much as $45 billion in 1988. Without these additional resources to handle the escalating aviation litigation, the risk to the Treasury will be unacceptably high. The Division would be forced to compromise the defense of major cases through the understaffing of litigation teams and the delegation of many new cases.

Additionally, Division attorneys must be able to handle constitutional tort cases which have the greatest potential impact upon Government officials. Of particular concern are the activities of Federal law enforcement agencies, agents and officers. These suits can have a debilitating effect on their commitment to reduce crime and curtail illegal drug use in this country. By 1988 we expect that the number of personally defended cases will increase by as much as a third.

The lack of an adequate central core of lawyers to defend against constitutional torts suits will subject various high level officials to a decentralized and uncoordinated defense in numerous and often related lawsuits. Because officials in every activity of Government, particularly law enforcement, are personally sued in these cases, the effectiveness of numerous programs will be compromised and their critical operations brought under unwarranted scrutiny.

Additional positions will also enable the Branch to personally handle the increasingly complex medical malpractice and employee negligence claims. Further, the Branch will be able to defend against damage claims in the atomic weapons contractor cases. These cases will pose a major threat to the Treasury, with plaintiffs seeking billions of dollars.

Branch attorneys will be able to initiate millions of dollars in admiralty claims for vessel pollution, lock damage, wreck removal and mortgage foreclosure cases, the latter being particularly significant with the recent bankruptcies of both Prudential Lines and United States Lines. Without additional resources, the Branch would be forced to forego the initiation of more than 100 cases, with a price tag of more than $250 million in forfeited potential recoveries.

The Branch must continue its aggressive asbestos litigation defense where the United States Treasury is exposed to losses exceeding $18 billion. The intensive devotion of resources by the Branch, thus far, has been indispensable to achieving recent victories. However, the major challenge still lies ahead. The first segment of the Johns-Manville Claims Court litigation is scheduled to begin in March 1987 and the trials of other manufacturers are scheduled to follow in the summer of 1987. Continued support to mount a strong defense is most critical now to solidify the Government's defense and make the most effective use of the extensive preparation to date. The most critical element in support of trial preparation is ALS. The Torts Branch requires $2,141,000 to:

- provide trial and paralegal support for upcoming trials;
- complete processing of nearly 300 million pages of documents in compliance with court-ordered consolidated discovery; and
- cover additional computer processing and storage costs.

The importance of this funding was exemplified in a recent statement by the Claims Court Judge for the upcoming Johns-Manville trial.

> I am not so much concerned about the government's difficulty in preparing for trial, with all due sympathy to the government in terms of its own resource problems. The government can either pay judgments or pay attorneys, and it makes its choice. And if plaintiffs are ready to go, especially with the time periods that have been involved in this case, there is no reason the government can't muster the requisite resources to avoid suffering enormous judgments. So that will not be a major factor. [Emphasis added].

Without relevant documents to rebut plaintiffs' allegations, our attorneys will face judicial hostility, sanctions, preclusion orders, and adverse judgments of billions of dollars.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Commercial Litigation.....	298	278	$24,183	298	301	$27,747	327	319	$32,239	29	18	$4,492

Long-range Goal: To successfully prosecute claims for the recovery of monies fraudulently secured or improperly diverted from the United States; defend international trade policy; defend and assert the Government's contract and intellectual property rights; defend and assert the Government's financial and commercial interest under foreign treaties; and collect monies owed the United States as a result of civil judgments, compromises and defaulted loans.

Major Objectives:

To save the Government money by winning lawsuits and obtaining favorable settlements of contract, intellectual property, international trade and Government employment litigation brought against the United States.

To collect money owed the United States as a result of defaulted contracts, unpaid loans, unsatisfied judgments, breach of grant agreements and misuse of benefit programs.

To recover funds lost through fraud in Government programs and the corruption of public employees and to deter future losses by collecting the statutory penalties allowed for such violations.

To defend Government policies challenged in litigation involving money damages.

Base Program Description: The Commercial Litigation Branch is responsible for defending actions seeking money judgments against the United States and for initiating civil action to collect money owed the United States as a result of various commercial and statutory activities. The Branch is also responsible for the Government's civil litigation arising from fraud, bribery and official misconduct; the collection of civil fines or other money judgments; challenges to Government personnel actions; the collection of defaulted loans; and other litigation arising from the commercial undertakings of the Federal government. As Federal outlays increase, particularly for national defense, litigation resulting from commercial expenditures rises proportionately. The Branch's activities are largely defensive in its efforts to protect the financial interests of the United States.

The defensive workload of the branch continues to rise, particularly in patents, contracts and international trade cases. Associated claims are expected to reach $4.7 billion in 1988.

In affirmative litigation, the Branch will seek recovery of more than $7.3 billion through frauds, bankruptcy and loan default litigation.

Workload and Accomplishments: Workload of Commercial Litigation is presented in the following table:

Commercial Litigation	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate Base	1988 Estimate Request
1. Personally Handled					
a. Pending Beginning of Year	13,864	11,867	12,320	12,373	12,373
b. Received During Year	4,184	3,884	4,420	4,522	4,960
c. Terminated During Year	6,179	3,431	4,367	4,151	4,227
d. Pending End of Year	11,867	12,320	12,373	12,744	13,106
e. Dollars at Issue (Millions)	$26,102	$26,154	$26,884	$26,166	$27,659
2. Received and Referred to U.S. Attorneys	11,274	13,182	15,332	17,529	17,529

In 1986, the Branch handled significant litigation in district courts and bankruptcy courts arising out of the Government's interests in the airline, energy, maritime, steel and utility industries. In the Air Florida bankruptcy, a plan of reorganization was confirmed, resulting in the recovery of over $30 million on the Federal Aviation Administration's claims. Foreclosure litigation over the default of the Great Plains Coal Gasification Plant on $1.5 billion in Department of Energy guaranteed loans resulted in the Secretary of Energy's acquisition of the plant. We represented the Maritime Administration, whose borrowers filed chapter 11 bankruptcy petitions involving over $1.7 billion in defaulted loans.

We represented the Economic Development Administration in the bankruptcy proceedings of its steel company borrowers such as LTV, Wheeling-Pittsburgh, Roebling Steel and Youngstown Steel. In LTV, we succeeded in having $4.5 billion in defense contracts assumed by the LTV Aerospace Division within one week of its bankruptcy filing; permitting the orderly continued performance of those vital defense contracts. Finally, in the utilities field, we expanded our representation of the Rural Electrification Administration with respect to over $3 billion in defaulted loans to rural cooperatives made or guaranteed by the REA and we continued to represent the Bonneville Power Administration in the massive $7 billion Washington Public Power Supply System (WPPSS) bond default litigation.

The Branch continued its emphasis on Department of Defense procurement fraud cases, recovering more than $6 million from Litton Systems, Inc., $2.5 million from Stencel Aero Engineering, $2.2 million from Gould, Inc., and over $1 million from Systems Engineering Associates Corp. Recoveries in cases involving other government agencies included: $2.6 million from Idle Wild Farm, Inc., for skimming beef donated by the Agriculture Department for use in the school lunch program; $2.3 million from Medline Industries Inc. and $1.5 million from Chemed Corp., both for

failing to disclose relevant pricing information during negotiations with GSA and VA procurement officials; and $1.1 million from Loew's Corp. over improper charging of costs by the Mail Handler's Health Plan.

In Zummerling v. Marsh, we successfully argued that the Office of Personnel Management's formula for computing the overtime of federal firefighters conformed to standards required by the Fair Labor Standards Act, resulting in the continuing saving of approximately $1 million a week since 1979. In Bronger v. Department of Transportation, the Federal Circuit accepted the Branch's argument that an air traffic controller's military service is not creditable toward the time civilian air traffic controllers are required to serve to qualify for an early retirement annuity saving approximately $6 million in controllers' retirement benefits and potentially saving up to $18 million in similar early retirement programs.

In Pizzarotti v. United States, the Branch's Foreign Litigation Unit successfully defended a test case in Italy brought by Italian contractors seeking price escalations due to cost increases during the performance of the contracts. The ruling will impact favorably on nine other suits which collectively seek over $9 million from the United States. In the Matter of the Assassination of Lt. Col. Charles Ray, the United States has intervened as a civil party in a criminal case in Paris against Georges Ibrahim Abdallah for the murder of a U.S. Embassy official, successfully using our civil party status as a means of preventing the release of the defendant and strengthening the criminal prosecution.

The Branch's defense of the Government's patent rights saved the Treasury over $5 million in Heineman v. United States and more than $4 million in Hazeltine v. United States.

Program Changes: The Commercial Litigation Branch requests 29 positions and $4,492,000 to resist unwarranted demands on the Treasury and bring suit to recover monies owed to the Government. This funding includes $2,714,000 for Automated Litigation Support (ALS) services.

New positions will allow Branch attorneys to personally handle litigation brought against Federal agencies in the recently created Claims Court and the Court of Appeals for the Federal Circuit. The caseload in these two courts will continue to overburden available resources, particularly in the complex areas of contracts and patents. Not only has the volume of filings increased, patent cases have nearly doubled, but the cases under the Claims Court's jurisdiction are requiring an extraordinary level of effort to master the complex legal and factual issues and to prepare for trial.

The requested level of resources will provide strong support for the Government's efforts to recover money lost through waste, fraud and abuse. The number and quality of civil fraud referrals will continue to increase, particularly defense procurement fraud. Increased positions will allow Branch attorneys to initiate action on almost 100 of these referrals, recovering millions for the Treasury and deterring future misuse of Government funds. Without the ability to file suit in civil fraud cases, the effectiveness of the anti-fraud investigative and audit network will be crippled.

The Division's anti-fraud litigators oppose attorneys representing some of the nation's largest corporations. We cannot achieve parity with our opponents without additional ALS services:

- We need $464,000 to maintain ALS document collections. The Division currently provides ALS for 4 frauds cases with document collections totalling more than half a million pages. By 1988, the number of cases requiring support will double, calling for even greater dedication of funds.

- The recently enacted False Claims Act Amendments authorize the Department to compel production of records and to take sworn testimony before deciding whether a civil fraud suit is warranted. This provision will require $350,000 for ALS to organize, review and secure storage for large volumes of documents.

Additional personnel will allow the Branch to protect the creditor rights of the United States in complex chapter 11 bankruptcy cases. Also, the Division must continue its aggressive pursuit in loan default litigation. Particularly critical are the loan defaults and bankruptcies of several utility cooperatives holding Government loans worth more than $3 billion. Defaulted loans to the ailing shipping industry threaten loss of some $1.7 billion.

We must also continue to defend the mammoth WPPSS cases. The reversal of an earlier decision dismissing the United States as defendant in the WPPSS litigation reopened cases with $7.4 billion in claims and over 240 million pages of documents.

- This expanding document collection requires $1.9 million in additional ALS funding in order to meet court schedules for depositions, discovery and trials. Without the requested funding, our attorneys will miss court deadlines, damaging the Government's cases and opening the attorneys to court sanctions.

Failure to provide these essential resources will hamstring the Civil Division's efforts to defend the Treasury against baseless claims. The Division will be unable to initiate more than 300 fraud, debt and bankruptcy cases, foregoing the recovery of untold millions. Such action will devastate the Division's successful representation of the Government's commercial interests.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal Programs.....	151	157	$10,623	151	157	$11,733	171	170	$13,146	20	13	$1,413

Long-range Goal: To successfully defend against the challenges to Federal civil programs, policies and initiatives and to enforce remedies for statutory violations of Federal programs.

Major Objectives:

To prevail on behalf of the United States in defensive civil litigation which arises from judicial review of the programs, policies, initiatives and decisions of the President, Executive Branch agencies and officials of the Legislative and Judicial Branches.

To initiate and prevail in affirmative litigation aimed at remedying statutory and regulatory violations.

Base Program Description: The Federal Programs Branch serves to defend the integrity and enforcement, and often the continuing existence and viability, of virtually all Federal agencies' programs, policies, initiatives and decisions. The public, either individually or through various organizations and groups, has turned increasingly to the courts in an effort to change programs, policies and decisions they perceive to be deficient. Consequently, the Branch must vigorously defend against legal challenges to an ever-increasing number of vital Government policies and programs to ensure they are not frustrated through the judicial process.

In civil litigation, the Branch represents the United States and its nearly 100 Departments and agencies, Members of Congress, the Federal judiciary, Cabinet members and other Federal executives, officers and employees acting in their official capacities. Most of the litigation is defensive.

The litigation defended by the Branch, while generally not for specific monetary amounts, does include cases with actual or potentially massive impacts upon the Federal treasury and budget. Often this defensive litigation handled by Branch attorneys affects Federal entitlements expenditures where challenges to restrictive statutory provisions and regulations could result in judicial decisions which would entitle plaintiffs to Federal benefits estimated to cost billions of dollars over the life of the entitlements program.

The Federal Programs Branch also serves as the emergency civil litigation center for the Government. This work involves handling the very complex litigation brought against the Government under extraordinarily short time frames. This litigation is most often extremely sensitive, controversial, highly visible and of national and/or international importance.

Workload and Accomplishments: Workload of Federal Programs is presented in the following table:

Federal Programs Litigation	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate Base	1988 Estimate Request
1. Personally Handled					
a. Pending Beginning of Year	1,070	637	936	1,139	1,139
b. Received During Year	350	644	744	757	820
c. Terminated During Year	783	345	541	581	600
d. Pending End of Year	637	936	1,139	1,315	1,359
e. Dollars at Issue (Million)	$2,543	$8,574	$9,496	$10,181	$10,665
2. Received and Referred to U.S. Attorneys	3,073	3,371	3,451	3,784	3,721

As in past years, the Federal Programs Branch has again this year represented the government and its officers in many cases of national importance involving significant constitutional and statutory challenges. For example, in Melcher v. FOMC, the Branch successfully defended the composition of the Federal Open Market Committee, a component of the Federal Reserve, against a constitutional attack on the basis that the statutory provisions governing the appointment of Federal Reserve Bank members to the Committee violate the Appointments Clause of the Constitution. Also, in Hastings v. Judicial Conference of the United States, the Branch prevailed against a constitutional attack on the Judicial Council's Reform and Judicial Conduct and Disability Act of 1980. The challenge was brought by the Honorable Alcee L. Hastings, a district court judge in the Southern District of Florida, who is under investigation by a committee of judges of the Eleventh Circuit for alleged "conduct prejudicial to the effective and expeditious administration of the business of the courts."

During the past year the Branch also successfully defended OPM's decision to allow Blue Cross/Blue Shield to refund $800 million in health insurance premiums to the Federal government and to Federal and U.S. Postal Service employees. Former employees who had been in the insurance plans prior to the membership date which qualified for a refund brought a class action attacking the refund proposal and seeking "equitable" participation in the refunds. Branch attorneys persuaded the court to reject the claim, demonstrating to it that the refund procedures proposed by Blue Cross/Blue Shield were consistent both with the Federal health insurance statute and with general insurance industry practice.

Among the important cases presently being handled by the Branch is State of Nevada v. Dole, challenging the constitutionality of conditioning a state's right to receive certain Federal highway project funds on the state's maintaining a maximum 55 mph speed limit. The Branch is also defending the constitutionality of the Farm Credit Amendments Act of 1985 and all of the Federal drug-testing litigation.

The Branch continues to pursue important affirmative litigation such as Brock v. Gerace and Brock v. Hanley, two cases brought under the Employee Retirement Income Security Act on behalf of the Department of Labor. Both involve allegations of excessive costs and fiduciary breaches against fiduciaries and providers of services to union members under union dental plans.

Program Changes: The Federal Programs Branch requires an increase of 20 positions and $1,413,000 to handle its growing workload, where adequate defense is vital to the economy and effectiveness of Government operations.

The defensive caseload of the Branch will nearly double between 1986 and 1988. The factual and legal issues of these cases have nationwide impact. Many such suits are among the most complex and time-consuming filed against the United States and its agencies, involving multiple issues of constitutional law, statutory construction and regulatory interpretation. Although direct monetary claims are not a primary issue in most cases, dollars at issue will exceed $10 billion by 1988. This figure is compounded when considering that entitlements expenditures may be affected over the life of the programs.

Enhanced resources will allow the Branch to confront litigation arising from class action suits which have doubled in recent years. Another area of significant growth in resource demands will result from banking litigation, which doubled from 1985 to 1986 alone. The deregulation of banks and deterioration or collapse of certain banking institutions and systems will undoubtedly generate as many as 30 percent more cases against Federal banking agencies over the next two years. Additionally, litigation arising from Federal drug testing programs will continue into 1988, raising complicated legal, factual and technical issues. The Branch must already devote significant resources to this newly emerging litigation.

Of major concern is the growing crisis in Social Security disability litigation. These cases have a very real and substantial impact on both the administration and fiscal viability of the Social Security system. The massive volume of cases in the Federal courts — some 53,000 — and the 15,000 cases on remand to the Secretary of HHS will only be compounded by the anticipated 35,000 cases expected in 1987. Equally alarming is the increase in losses in Federal court suits, largely attributable to the difficulties of managing and handling this massive number of suits.

Although most of these cases are delegated to Social Security attorneys for primary handling, the dramatic "explosion" of litigation requires substantial additional commitments of resources by the Division. First, Civil's attorneys must handle the "lead" or major cases which raise constitutional, statutory and regulatory issues and are nationwide in scope and impact. Second, Division attorneys will be called upon to handle the extremely sensitive and important contempt actions against the Secretary of HHS. These matters are anticipated to result from the inability of SSA to respond timely to this enormous caseload. Finally, the cases will require additional resources to assist U.S. Attorneys and HHS officers in responding to the thousands of new suits.

Denial of these resources will force the delegation of extremely significant cases. For example, Freedom of Information and Privacy Act cases which require centralized handling to achieve consistency in interpretation and application of these Government-wide statutes would have to be delegated. The resulting fragmentation will bring inconsistency in interpretation and ultimately damage all agencies in their public information policies and practices. Further, delegation of the highly visible, complex class action discrimination lawsuits would substantially increase the likelihood of adverse judgments or settlements providing relief for overly-broad classes of employees. Without additional resources for Social Security litigation, the Division will be unable to assist in easing the litigation crisis. The continued viability of this already overburdened system will be seriously threatened, portending substantial losses to the Treasury through increased benefits.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Consumer Litigation.....	35	37	$2,063	35	37	$2,323	35	37	$2,323	...	...	...

Long-range Goal: To protect the interests of consumers from defective or harmful products and from unfair and deceptive trade practices.

Major Objectives:

To provide effective enforcement of Federal consumer protection statutes through institution of affirmative civil litigation.

To consider the prosecutive merit of criminal matters under consumer protection statutes and initiate or assist in the conduct of appropriate criminal proceedings.

To represent the United States in defensive litigation when initiatives and programs of the principal consumer protection agencies are challenged.

Base Program Description: The Office of Consumer Litigation has responsibility for litigation under Federal statutes that protect public health and safety and regulate unfair and deceptive trade practices in interstate commerce. The Office defends the programs, policies and decisions of the Government in consumer related areas and enforces those policies by both civil and criminal sanctions in order to avert health risks to the public and deter economic fraud which has a significant impact on the economy.

The Office initiates affirmative litigation to ensure that unsafe and adulterated foods and drugs do not reach the marketplace, protect the integrity of the drug approval process and enforce Federal policies in the regulation of foods. Affirmative litigation also covers hazardous and unsafe consumer products, unfair debt collection and consumer credit practices, franchising, door-to-door and mail order sales, enforcement of administrative orders relating to price fixing and divestiture, unfair and deceptive advertising practices and cigarette and automobile labeling. The Branch defends the Government in challenges to Federal policies and initiatives aimed at protecting the public in its purchase of foods, drugs, devices and consumer products.

The civil litigation initiated by the Office involves millions of dollars in judgments and recoveries for the Government.

Workload and Accomplishments: Workload of Consumer Litigation is presented in the following table:

Consumer Litigation	1985 Actual	1986 Estimate	1987 Estimate	1988 Estimate
1. Personally Handled				
a. Pending Beginning of Year	208	227	278	295
b. Received During Year	157	209	206	211
c. Terminated During Year	138	158	189	196
d. Pending End of Year	227	278	295	310
2. Received and Referred to U.S. Attorneys	165	208	208	208

In 1986, the Office of Consumer Litigation pursued odometer fraud actively, conducting major investigations in a number of states. Recent enforcement activities resulted in a series of successful prosecutions of used car dealers in Tennessee and Georgia. In U.S. v. Homer McDonald, et al., the largest odometer case instituted by the Department thus far, a grand jury in Georgia returned a 124-count indictment against five individuals and a corporation for felony and misdemeanor violations relating to an odometer tampering scheme. In another matter, the court imposed a 10-year jail term, the longest federal term of incarceration ever reported for odometer related offenses.

The Office also successfully prosecuted numerous criminal violations of the Food, Drug, and Cosmetic Act and related acts. The results in these prosecutions included the convictions of several major figures, including a licensed pharmacist, involved in the illegal distribution of steroids (U.S. v. Cecil Kennedy); return of an indictment against a major health products firm and some of its officers for conspiracy to defraud the Government and criminal misbranding (U.S. v. General Nutrition, et al.); and the conviction of one of the largest repackagers and distributors of generic drugs and several of its officers for their criminally obstructive behavior in the course of an FDA inspection (U.S. v. Generix).

The Office won a number of major appellate victories in 1986. In one case, the circuit court upheld controversial infant formula regulations promulgated by FDA (Formula, et al. v. Heckler, et al.). In another case, the court ruled in favor of the Government's position that a stipulation providing for a stay of enforcement proceedings was an unreviewable exercise of agency enforcement discretion (Schering Corp v. Heckler).

The Office successfully concluded several suits against large consumer finance companies in which the Government alleged that the manner in which age and income source were considered was impermissible under the Equal Credit Opportunity Act (U.S. v. Fidelity Acceptance Corp.). The Office also concluded a suit against a major real estate development company for credit advertising violations with the imposition of substantial civil penalties and injunctive relief (U.S. v. Hooker Homes, Inc.).

With respect to Consumer Product Safety Commission (CPSC) matters, the Office was aided by a circuit court ruling in its efforts to collect a criminal fine against a firm that had violated the ban on distribution of TRIS-treated children's garments (U.S. v. Troxler Hosiery Co., Inc.). The Office also obtained a permanent injunction to halt the distribution of certain prescription drug vials that were not child resistant (U.S. v. Surf Drugs, Inc.).

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Immigration Litigation.....	40	30	$3,195	40	38	$3,956	51	45	$5,346	11	7	$1,390

Long-range Goal: To protect the interest of the United States by successfully defending challenges to Federal civil immigration programs, policies and initiatives and conducting civil litigation under the immigration and naturalization laws.

Major Objectives:

To prevail in all civil immigration litigation arising under the Immigration and Nationality Act and related laws.

To enforce programs undertaken for the purpose of facilitating the apprehension, detention and expulsion of aliens who lack lawful authority to remain in the United States.

To represent the United States in civil litigation brought against executives of the Immigration and Naturalization Service and other immigration-interested agencies in their official capacities.

To prevail in appellate litigation challenging trial court or administrative decisions in favor of the United States.

Base Program Description: The Office of Immigration Litigation is responsible for handling a wide variety of immigration cases, the most prominent of which include major class actions attempting to halt or otherwise frustrate enforcement of the laws regulating aliens seeking to enter or to remain in the United States. These cases have the potential for severely hampering the ability of the Immigration and Naturalization Service (INS) to enforce the laws enacted by Congress and for weakening the Government's ability to respond to the influx of illegal aliens. Such suits typically involve requests for temporary restraining orders and/or preliminary injunctions, extensive discovery and trial.

Other major areas of responsibility for the Office of Immigration Litigation involve the defense of both petitions for review filed by individual aliens in the courts of appeals to challenge deportation orders and actions brought by aliens in the district courts to attack the circumstances of their confinement and/or orders of exclusion from the United States. These cases often entail claims for political asylum or applications for other forms of equitable immigration relief that have been rejected administratively. Additionally, an increasing number of suits involve Bivens claims seeking monetary damages against the individual Government officials responsible for immigration enforcement.

Enactment of the Immigration Reform and Control Act of 1986 adds defense of all petitions for review and other civil suits arising under the new statutory provisions to the Office's litigation responsibilities. Although most of the changes wrought by the 1986 Act will not take effect until after June 1987, the fact that the employer sanctions and legalization provisions will affect millions of individual aliens and employers suggests that the Act will have a substantial impact on the Office's caseload.

In addition to this workload, the Office represents the United States in continuing litigation arising from the Mariel "boat lift" of 1980, including challenges by detained Cuban aliens and civil collection actions to secure the administrative fines levied against the owners and captains of vessels that brought undocumented aliens into the United States.

Immigration case receipts are expected to nearly triple from 1986 through 1988. The additional remedies and judicial review opportunities provided by the Immigration Reform and Control Act are expected to add significantly to the Office's trial and appellate litigation responsibilities beginning in 1987. Such additional litigation will include the re-briefing of a portion of the presently pending cases involving aliens who wish to seek relief under the new Act, as well as the defense of wholly separate actions challenging the implementation and application of the newly enacted benefits and penalties.

Workload and Accomplishments: The workload of the Office of Immigration Litigation is presented in the following table:

Immigration Litigation	1985 Actual	1986 Actual	1987 Estimate	1988 Estimate Base	1988 Estimate Request
1. Personally Handled					
a. Pending Beginning of Year	666	3,296	933	1,004	1,004
b. Received During Year	3,565	554	908	681	1,429
c. Terminated During Year	935	2,917	837	659	1,045
d. Pending End of Year	3,296	933	1,004	1,026	1,388
2. Received and Referred to U.S. Attorneys	1,604	910	971	1,757	1,009

The Office of Immigration Litigation has five litigating teams, each headed by an experienced trial attorney. The teams are structured to facilitate the provision of support and guidance to both the field offices of the Immigration and Naturalization Service (INS) and to the various U.S. Attorneys' offices. Team leaders and trial attorneys are assigned to serve as counselors to specific districts and circuits to ensure continuing contact on all civil immigration matters. The litigation organization enhances the coordination of related judicial and administrative proceedings throughout the country and better permits the Office to staff pending litigation in accordance with current priorities.

In addition to its responsibility to provide supervision and guidance on all pending immigration litigation, the Office directly handles the most complex and sensitive trial and appellate immigration matters, which frequently raise significant challenges to the nation's ability to control its borders. Notable examples include:

Fernandez-Roque v. Smith and Garcia-Mir v. Smith. This consolidated action in Atlanta challenges the power of the Government to detain Mariel Cubans with a history of antisocial conduct and involves a claim by the aliens that they are entitled to asylum as a persecuted social group. The Office has been quite successful in the Eleventh Circuit, obtaining reversals of district court rulings that would have severely restricted continued detention and barred deportation for all detainees pending reopened administrative hearings on their class-wide asylum claim, and achieving the actual deportation of 201 detainees who were removed before Cuba suspended implementation of the repatriation agreement. In 1986, the Eleventh Circuit ruled that the detainees do not have a "liberty interest" in release on immigration parole arising from the circumstances of the Mariel Flotilla and ordered that the class action be dismissed. The Supreme Court twice has denied the aliens' petitions for certiorari, and the Government's successes have resulted in the dismissal of many of the more than 1,000 individual habeas corpus actions filed by the detainees.

Orantes-Hernandez v. Smith. This class action brought in Los Angeles by Salvadorans challenges the way the INS processes apprehended illegal aliens. The aliens claim that the INS coerces Salvadorans into agreeing to return to El Salvador and to waive their rights to a deportation hearing and their opportunity to apply for asylum. In 1982, the district court entered a nationwide preliminary injunction requiring INS to provide all arrested Salvadorans with a notice that they could seek asylum in the United States. Part of the aliens' claim relates to the human rights conditions prevalent in their homeland. The trial, which began in December 1985 and will continue into 1987, has focused on political violence in El Salvador as well as on INS practices in the United States.

Committee of Central American Refugees v. Meese. This class action brought in San Francisco on behalf of all Salvadoran and Guatemalan aliens challenges the Attorney General's authority to detain aliens at facilities removed from the place of actual apprehension. Preservation of the statutorily delegated discretion on matters pertaining to the detention and removal of unauthorized aliens is critical in light of the large numbers of aliens apprehended and the limited available detention resources. The Office successfully obtained a denial of preliminary injunctive relief both in district court and on interlocutory appeal to the circuit court.

Fazelihokmabad v. INS and Hernandez-Cordero v. INS. A number of circuit courts have demonstrated reluctance to confine review of discretionary administrative decisions to the narrow scope of review mandated by the Supreme Court. The problem is particularly acute in the expanding category of cases in which aliens, while conceding their deportability, have moved to reopen proceedings to apply for discretionary relief based on claims of extreme hardship. Many such deportable aliens seek favorable dispensations after years of defying lawful administrative orders (as in Fazelihokmabad) or solely on the basis that removal to their native country would subject them to a lowered standard of living (as in Hernandez-Cordero). Preservation of the Attorney General's discretionary authority to waive expulsion of statutorily deportable aliens in appropriately extraordinary cases increasingly requires additional appellate litigation, such as petitions for en banc consideration by the full circuit courts (as in Hernandez-Cordero) or for certiorari to the Supreme Court (as in Fazelihokmabad).

Velasquez v. Senko. With increased frequency, district court actions are brought to challenge the methods by which INS seeks to detect and apprehend aliens who have entered or remained in the United States without lawful authority. A number of such suits, such as this California class action challenging joint operations in which the INS supported the service of arrest and search warrants by state and city police, target the relationship between Federal and local law enforcement agencies in an effort to disrupt or discourage cooperative efforts in matters bearing upon aliens. In Velasquez and similar cases, the Office has successfully resisted the demands for injunctive orders restricting such cooperation.

Program Changes: The Office of Immigration Litigation requests 11 new positions and $1,390,000 to handle the influx of new cases anticipated with the Immigration Reform and Control Act. This funding includes $533,000 for Automated Litigation Support (ALS) services.

The enforcement and legalization provisions will trigger enormous caseload increases for the Civil Division as aliens seek to reverse deportation decisions in courts of appeals and challenge the Immigration and Naturalization Service's (INS) denials of interim relief in district courts. The employers sanctions provision will create substantial increases in defensive cases as employers initiate actions challenging search warrants and fine determinations. Affirmative cases will be initiated against a number of employers exhibiting a pattern and practice of hiring illegal aliens. Conservatively, we expect 235 new trial and 513 new appellate cases to emerge in 1988, representing a 39 percent rise in trial cases and a 53 percent rise in appellate cases over the 1986 caseload.

The most significant element of the Division's caseload will be the anticipated statutory and class action challenges to immigration reform. One such case has already been filed — Catholic Services v. Meese — where plaintiffs seek a nationwide injunction that would paralyze INS' ability to control the borders. No provision of the new Act is immune to this type of attack and we can count on similar challenges to employers sanctions and the Systematic Alien Verification for Eligibility (SAVE) provisions. These challenges threaten to undermine the viability of immigration reform unless additional attorneys and support staff are provided.

In addition to personnel resources, the massive volume of the new litigation will necessitate approval of $533,000 in AIS funding to provide:

- Special data bases to track individual litigants, class members and documents during the various stages of litigation.
- A document center staffed by contractor paralegals and clerical personnel to organize documents and support the attorneys in preparing for trials and appeals.

Failure to provide these resources will necessitate the delegation of almost 750 cases to attorneys who lack knowledge of the highly specialized body of immigration law. Weakening the defense of immigration law by forcing cases onto inexperienced attorneys would be counterproductive to the comprehensive reform of the United States immigration law. Unless the required resources for the Office of Immigration Litigation are provided, the fundamental reforms that were 15 years in the making will be nullified.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management & Administration.....	101	104	$5,322	101	104	$6,104	101	104	$6,104	...	...	...

Long-range Goal: Direct the conduct, handling and supervision of all litigation and other matters delegated by the Attorney General to the Civil Division in a fair, successful and consistent manner.

Major Objectives:

To provide executive leadership and maintain effective management while creating a proper balance between central management control and individual attorney autonomy.

To secure, develop, and retain a competent and motivated staff while maintaining a work environment conducive to maximum productivity and effective decision making.

To plan and execute management improvements and support programs and provide administrative and automated litigation support services.

To effectively manage the Division's financial resources.

To develop and present to the Department legislative proposals which are reflective of a preeminent goal to promote the efficiency and effectiveness of the civil justice system.

Base Program Description: As "the Government's lawyer" the Civil Division is responsible for effectively representing over 180 Federal agencies in tens of thousands of cases which present the potential loss to the Treasury of more than $100 billion annually in direct awards, higher program costs or changes in anticipated revenue. Annually the Division handles thousands of court challenges to the statutory and regulatory integrity of the numerous Federal programs established by the Congress, the domestic and foreign policy initiatives of the President and the immigration laws and policies of the United States, and enforces consumer health and safety laws and prosecutes criminal violations of these statutes. The Management and Administration decision unit is responsible for providing Division-wide direction and management of the activities and staff, supervising and administering its operations, advising and assisting in the formulation of the Department's civil justice policies and programs, and providing management and administrative support services to the Division's staff.

Workload and Accomplishments: The workload and accomplishments of the Management and Administration program is the sum of the workload and accomplishments of its branches and offices.

Civil Division				1988 Estimate	
	1985 Actual	1986 Actual	1987 Estimate	Base	Request
1. Personally Handled

c. Terminated During Year	11,156	9,624	8,965	8,204	9,592
d. Pending End of Year	23,205	22,174	23,204	23,057	25,452
e. Dollars at Issue (Million)	$127,752	$132,215	$164,519	$184,582	$231,066
2. Received and Referred to U.S. Attorneys	21,014	23,339	26,577	33,038	30,263

The Division's accomplishments during 1986 reached the highest levels of excellence -- both in terms of litigative performance and management improvements. Effective leadership and a dedicated executive and management support team have combined with a staff of able, hard-working attorneys to make possible this outstanding record. The litigative highlights include:

- Remarkable success in major appellate cases with victories in over 83 percent of closed cases;
- A 98 percent success rate in defeating monetary claims -- 4,125 cases involving claims against the Government of $6.9 billion with losses of only $162 million;
- Recovery of $73 million in resolved affirmative litigation; and
- Resolution of 2,699 cases challenging Government initiatives and programs and 177 cases enforcing Federal statutes and programs.

Exemplary management accomplishments extend across a wide range of initiatives. Highlights include the following:

- Over $378 million in cash has been collected and deposited to the Treasury since intensified efforts began in 1981;
- Increased use of the private sector to perform administrative support functions such as mail/messenger services, case docketing, central record management, computer operations, supply services and accounts maintenance has contributed to the reduction of the proportion of total staff devoted to administrative and clerical activities from 43 percent in 1983 to 37 percent in 1986;
- AMICUS, the Civil Division's advanced office automation and communications network system, has been extended to all Civil Division employees; and
- Automated Litigation Support (ALS) has provided support to 33 major litigative efforts involving over 4,000 individual lawsuits including asbestos, WPPSS, radiation, aviation disasters and civil frauds.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriations Actions

Final congressional action enacted under P.L. 99-500 reduced the President's budget by $1,150,000.

Supplementals Requested

1. The program supplemental request of $217,000 includes $161,000 for increased space charges associated with the move of the Criminal Division to the Bond Building and $56,000 for higher than anticipated Federal Telecommunications System charges.
2. The Pay and Federal Employee Retirement System (FERS) supplemental includes $302,000 for changes in the FERS and $195,000 to meet increased pay requirements in P.L. 99-500.

This budget activity includes resources for the Land and Natural Resources Division, for personnel both at headquarters and field locations. Defensive and affirmative environmental litigation, land condemnation, natural resource protection and Indian matters comprise the primary mission of the Division.

Long-Range Goal: To defend or assert the government's position in Land and Natural Resources Division cases in the appellate courts.

Major Objectives:

To file appeals from adverse decisions in all cases where appellate review is warranted.
To fully satisfy client agencies by formulating legal positions in the courts of appeals that best represent their interests.
To participate as amicus curiae in selected cases which have a significant impact on the positions and policies of the Division and its client agencies.
To provide the Office of the Solicitor General with initial drafts for those cases in which the unit has had appellate responsibility and which have reached the Supreme Court.

Base Program Description: This unit handles Land and Natural Resources Division cases that are appealed to federal Courts of Appeals or brought to the United States Supreme Court. The appellate program prepares briefs and provides oral argument on virtually all of the Division's cases on appeal. Litigation handled in the decision unit involves a wide variety of cases ranging from highly visible environmental matters to traditional government litigation concerning various federal property interests. For example, the unit is responsible for appellate litigation involving the National Environmental Policy Act, the Resource Conservation and Recovery Act, the Mineral Leasing Act, the Federal Land Policy and Management Act, the Outer Continental Shelf Lands Act, as well as cases pertaining to the federal law of eminent domain, Indian law and water law.

Another function of the appellate unit involves analyzing unfavorable district court decisions and preparing memoranda for the Solicitor General seeking authorization to appeal meritorious cases. This requires the solicitation and evaluation of recommendations regarding appeal from client agencies, trial sections, and United States Attorneys' offices, and is designed to screen from the overloaded courts of appeals those cases which do not warrant appellate review.

The unit also prepares initial drafts of briefs for Division cases which have reached the Supreme Court. This critical service enables the Solicitor General's office to keep pace with its responsibilities; that office freely admits that it could not function without assistance. Moreover, the consistency maintained by this arrangement enables the unit to better serve its client agencies, since draft briefs are formulated by the appellate attorneys most familiar with the facts and the legal issues.

Finally, Division-wide coordination of cases is a unique responsibility of the unit. Because all of the Division's cases on appeal pass through the appellate unit, it is in a position to effect such coordination. Frequently, matters on appeal will affect more than one trial section because of their overlapping legal significance. The unit attorneys, therefore, routinely serve in a clearing house function.

Accomplishments and Workload: The appellate unit has maintained its ability to achieve substantial success in its main objective of appellate advocacy. In a number of high-priority cases the courts have adopted the positions advocated by the unit.

In State of Tennessee v. Herrington, the Sixth Circuit agreed with the argument advanced by the Section and held that the Department of Energy did not have to provide an opportunity for consultation with states before sending to Congress a report it had prepared on sites for a monitored retrievable storage facility for spent nuclear fuel. The court held that the consultation requirement in the Nuclear Waste Policy Act applies only after initial Congressional authorization of the proposal.

In U.S. v. Jones & Laughlin Steel Corp., the Court of Appeals issued a highly favorable decision establishing the parameters under which objections to the settlement of environmental cases will be considered. The court reversed the ruling of the lower court which had refused to approve a settlement negotiated by the Division because provision had not been made to share the civil penalties with the City of Cleveland. Also, the court concluded that the automatic stay of the bankruptcy code, triggered by J&L's filing for bankruptcy, was inapplicable to settlements of environmental enforcement cases because those actions fell under an exception to the automatic stay provisions.

In Dow Chemical v. U.S., the Supreme Court gave the government an extremely favorable decision in a case involving the use of aerial photographs for law enforcement purposes. The court ruled that the use of such photographs need not be specifically authorized by statute, and that the use of commercially available photographic equipment did not constitute a search within the meaning of the Fourth Amendment.

In Suburban O'Hare Commission v. Dole, the Court of Appeals for the Seventh Circuit rejected claims that the Federal Aviation Administration had violated a number of environmental statutes when it approved a massive expansion of the Chicago O'Hare Airport. In its decision, the court adopted all of the Section's arguments and ruled that the FAA had more than adequately satisfied its environmental obligations.

Land acquisition.....	34	30	$2,375	34	30	$2,610	34	30	$2,610	...	...	...

Long-Range Goal: To obtain real property necessary for public purposes through condemnation proceedings which exercise the sovereign power of eminent domain.

Major Objectives:

To secure the lowest possible compensation awards consonant with fairness to both landowners and the government.
To achieve and maintain a current status in the condemnation caseload (i.e., to reduce the pending caseload to the point where the backlog does not exceed annual input and to maintain that balance thereafter).

Base Program Description: By means of the land acquisition program, lands that are needed for Congressionally authorized public purposes, but which requesting agencies are unable to acquire by direct purchase, are obtained through the institution of condemnation proceedings in which compensation is determined and awarded to the property owners. Acquisition by condemnation is a means of last resort; acquiring agencies are required by law, to the greatest extent practicable, to make every reasonable effort to acquire property by negotiation before requesting condemnation. A top priority is to move these high-exposure cases expeditiously and in the best interests of the United States.

The unit condemns land for a myriad of federal public purposes authorized by Acts of Congress. Examples include the improvement and protection of navigable waters, flood control, military facilities, national parks, forests, lakeshores and seashores, scenic and wild river systems, reclamation and irrigation of arid lands in the western states, electric power generation and transmission facilities, wildlife preserves, airports and air traffic control facilities, international boundary stabilization, strategic petroleum reserve storage facilities, nuclear waste storage facilities, and buildings, offices and facilities for federal agencies. Unless the government is able to acquire these lands by an exercise of the power of eminent domain through condemnation proceedings, the public purpose for which the lands are necessary would be frustrated.

Particular cases involving significant monetary exposure include the Redwoods National Park expansion cases in California. These three consolidated cases involve the acquisition of 49,000 acres of redwood timberland for the National Park Service. The government has deposited $358 million as estimated compensation, while owners' claims are about $750 million. Another significant case is the East Lynn Lake project case in West Virginia, an acquisition of 16,286 acres of coal land for the Corps of Engineers. The government has deposited $4.7 million against the owner's claim of approximately $50 million. In a case in Texas involving the acquisition of 243 acres for the Department of Energy's Strategic Petroleum Reserve project, the government deposited $11.1 million, and faces claims of $35 million.

The following legislation and Department orders authorize and support this program:

(1) 40 U.S.C. 257 - requires the Attorney General to file and prosecute condemnation actions to acquire lands for federal public purposes.

(2) 40 U.S.C. 255 - requires the Attorney General to issue an opinion as to the sufficiency of title to land for the purposes for which the property is being acquired, in direct purchase acquisitions.

(3) Subpart M, Chapter I, Section 0.65, Title 28, Code of Federal Regulations -- contains assignment from the Attorney General to the Assistant Attorney General of the Land and Natural Resources Division of the matter set out in (1) above.

(4) Subpart M, Chapter I, Section 0.66, Title 28, Code of Federal Regulations -- contains assignment from the Attorney General to the Assistant Attorney General of the Land and Natural Resources Division of the matter set out in (2) above.

(5) Manual of Organization, Operations and Procedures, Land and Natural Resources Division, Part I, Section B.5(b) - delegate to this decision unit authority to conduct the prosecution of all federal condemnation proceedings.

(6) 40 U.S.C. 258(a) - Declaration of Taking Act -- authorizes the vesting of immediate title and possession to the United States.

Accomplishments and Workload: In 1986, the Land Acquisition Section handled claims of over $450.8 million for property which government appraisals valued at $62.5 million. This difference of $388.3 million was the critical issue in the Section's lawsuits. During this fiscal year, courts have awarded judgments in these cases totaling $102.7 million, representing a savings of $348.1 million achieved by the decision unit. By comparison, the savings achieved in 1984 totaled $59 million and in 1985 totaled $241 million. The amount of money at issue in the currently pending tracts is over $1.3 billion dollars -- the difference between the landowners' known claims of $2.01 billion and the government's appraisals of $629 million. (Landowner claims are unknown in 55 percent of the pending cases.)

For the three years prior to 1986, the number of tracts received from the National Park Service had been small, but with the advent of the Protection Island Project in Washington State, the unit saw 71 percent more work in 1986 than anticipated. The unit's other major client, the Corps of Engineers, anticipates that land acquisition will continue at current levels. The estimate of tracts closed is expected to remain at the decreased level through 1987. The decrease is due to the near completion of the Big Cypress National Preserve project in Florida. This project alone generated over 12,000 tracts in the last eight years through its large-scale settlement program and mass trials.

Two workload indicators have been added to cover the efforts of the Title and Appraisal Units. The principal duty of the Title Unit is to review the sufficiency of title in direct purchase acquisitions, a function mandated by 40 U.S.C. 255. The Appraisal Unit is responsible for both desk and field appraisal reviews.

	1985	1986	Estimates 1987	1988

Amount saved	241,064,000	348,129,000

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Environmental protection	145	138	$9,764	145	143	$10,740	159	155	$15,519	14	12	$4,779

Long-Range Goal: To successfully conduct the enforcement litigation necessary to achieve pollution, hazardous waste and radiation standards mandated by Congress. To investigate and prosecute criminal violations of the nation's environmental

laws, particularly in the area of hazardous waste dumping. To defend agencies of the United States sued in connection with regulatory and other activities affecting the environment and public health. To reduce illegal international trade in wildlife, fish and plants by prosecuting criminal violators of the United States' wildlife and Customs laws, and to provide quality representation to federal agencies in defense of wildlife management and related regulations and programs.

Major Objectives:

To conduct effectively the enforcement litigation cases which are referred to the Lands Division by federal agencies.
To implement a successful enforcement program to maintain voluntary compliance among all regulated industries and induce privately-financed clean up of existing hazardous waste dump and storage sites and to abate certain radiation hazards.
Coordinating and working closely with state and local enforcement agencies, to handle collateral suits to allow agency enforcement programs to operate effectively and without undue delay.
To maintain the rational, coherent operation of agency programs through sustaining agency actions in court.
To bring suits against corporate violators on a national basis when this is more efficient and effective than dealing with their pollution problems on a regional basis.
To obtain a large portion of monetary and injunctive relief sought in cases brought by this unit.
To increase criminal prosecution of serious environmental offenses.
To recover monies spent by or on behalf of federal agencies for damages to natural resources within their control.
To create a capability for and an atmosphere conducive to negotiated settlement of disputes where such an approach can provide swifter and more certain relief, and ease the courts' litigation burden.
To defend client agencies' rules and regulations in order to uphold agency discretion and the integrity of those agencies' programs.
To defend client agencies whose facilities and activities are the subject of environmental litigation initiated by states, municipalities, or private individuals and organizations.
To handle suits to enforce agencies' information requests necessary for effective and timely program operation.
To sustain administrative orders and permits issued by client agencies in furtherance of the agencies' programs and mandates.
To improve enforcement of laws relating to trade in wildlife, fish and plants.
To coordinate and conduct investigations, and successfully prosecute major commercial dealers illegally trafficking in wildlife, fish or plants.
To seek and obtain stiff penalties and incarceration for persons who engage in illegal wildlife or plant trade.
To supply quality representation to client agencies and litigative support necessary to defend the administration of civil programs affecting wildlife, fish and plants.
To revise and improve wildlife forfeiture procedures.

Base Program Description: The Environmental Protection program is comprised of the Environmental Defense, Environmental Enforcement and Wildlife and Marine Resources Sections. The Environmental Defense Section's major clients are the Environmental Protection Agency, the Army Corps of Engineers and the Coast Guard. The Section also is responsible for representing all Federal agencies sued for violations of federal, state and local laws governing the abatement and control of pollution.

Litigation on behalf of EPA comprises the major portion of the Defense Section's workload, and is divided between cases filed in the courts of appeals and district courts. The cases in the courts of appeals typically involve challenges to: 1) EPA rules and regulations promulgated under various statutes such as the Clean Air Act, Clean Water Act and Resource Conservation and Recovery Act; 2) EPA's approval or disapproval of programs delegated to the states for implementation pursuant to federal statutes (e.g., approval of state plans to control air pollution and water storage); and 3) grants or denials of individual permits to engage in certain activities (e.g., permits to discharge pollutants into waters of the United States). All petitions for review in the courts of appeals are handled by attorneys in this Section; there is no involvement by United States Attorneys. The vast majority of district court litigation also is handled by Section attorneys, due primarily to the specialized nature of the district court work.

Litigation conducted on behalf of the Corps of Engineers involves both defensive cases in the district court, in which a party challenges national regulations or permits issued by the Corps, and enforcement actions in which the government prosecutes a party for violations of the statutes administered by the Corps, including the control, abatement and reduction of unauthorized dredging and filling in the navigable waters of the United States. All litigation for the Coast Guard takes place in the Claims Court. The Clean Water Act provides that the owner or operator of a facility from which a hazardous substance has been discharged may sue the United States for cleanup expenses under certain circumstances. Since the Coast Guard has the responsibility for investigating spills from facilities, it is regarded as the client agency. These cases are handled exclusively by Section attorneys on behalf of the United States.

The final category of defensive litigation involves federal agencies charged with violations of federal, state, or local laws governing the abatement and control of pollution. Although cases involving the Department of Defense and the Department of Energy constitute the majority of the cases on the docket, a wide variety of agencies have been represented, ranging from the Veterans Administration to the Federal Reserve Bank. These "federal facilities" cases are enormously complex, highly technical and involve massive potential monetary exposure. The need for close coordination with client agency management and the extremely time-intensive process of factual review, research, scientific analysis and legal strategy development dictate that "federal facilities" cases be litigated by Environmental Defense Section staff.

The Environmental Enforcement Section conducts litigation to support the control, abatement and reduction of pollution to the nation's air and water resources; the abatement and control of hazardous waste dump sites; the regulation and control of pesticides and noise; the regulation of toxic and hazardous substances; and miscellaneous matters pertaining to nuclear power. This program entails both civil litigation on behalf of our client agencies, principally the Environmental Protection Agency, the Army Corps of Engineers, the Coast Guard, the Departments of the Interior, Defense, Commerce, and Agriculture, the Federal Emergency Management Agency, and the Nuclear Regulatory Commission, and criminal litigation under the various pollution control statutes. The primary statutes enforced include the Clean Air Act (CAA); the Clean Water Act (CWA); the Resource Conservation and Recovery Act (RCRA); the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or Superfund); the Safe Drinking Water Act (SDWA); the Toxic Substances Control Act (TSCA); and other miscellaneous environmental statutes including the Rivers and Harbors Act; the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA); and the Uranium Mill Tailing Radiation Control Act (UMTRCA).

Civil cases are referred to the Section by client agencies, which are responsible for initial case investigation and development and for determining the appropriate technical remedy. A Section attorney acts as lead counsel for the government, which involves devising case strategy, and litigation planning, management, and execution. Cases typically involve significant discovery and motions practice. Under the Clean Air and Clean Water Acts, civil actions seek either injunctive relief or civil penalties for violations. The RCRA regulatory program, which requires producers of hazardous waste to dispatch wastes only to facilities with operating permits, may be enforced through an administrative hearing process or through litigation in the federal courts.

For many hazardous waste sites, the government is either the owner of the site or has been a significant generator of hazardous waste. These sites have been handled in either of two ways. If the agency has used its own funds to clean up the site, the Section will commence an action for recovery of the government's costs against other responsible parties under Superfund. In other instances the Section has, on behalf of the agency, commenced an action for injunctive relief, cost recoupment and/or damage to natural resources utilizing Superfund and state common law claims.

The Wildlife and Marine Resources Section handles civil and criminal litigation to halt the growth of illegal wildlife and plant trade. The total value of illegal trade in wildlife is estimated at $50 to $100 million each year. Most of this trade is accomplished through falsification of the documents that must accompany wildlife imports. A lesser but still substantial percentage of the trade is accomplished through smuggling. Profits are staggering; for example, as demonstrated by a recent international enforcement action, certain types of falcons purchased illegally in the United States for $10,000 sell for up to $100,000 in the Middle East.

Violations of wildlife laws often involve complex interstate and international investigations, and are treated as major "white collar" crimes, meriting substantial criminal penalties. Among the statutes under this activity's jurisdiction are the Endangered Species Act, Lacey Act, Fishery Conservation and Management Act, Marine Mammal Protection Act, Airborne Hunting Act, Migratory Bird Treaty Act, Bald and Golden Eagle Act, the Marine Protection Research and Sanctuaries Act, and the custom laws. The Section also has the important responsibility of representing the Federal Government in many civil actions arising under the nation's wildlife laws. Actions under these laws often affect projects of major economic and environmental importance to the nation, such as oil refineries, dams, mineral leasing activities and real estate developments.

Accomplishments and Workload: The Environmental Defense Section was extremely successful in protecting EPA's discretion to issue regulations that take into account both the costs of compliance and the technical feasibility of controlling pollution. In NRDC v. EPA (D.C. Cir.), the court decided that EPA is free to consider cost and feasibility when it regulates emissions of vinyl chloride, a hazardous air pollutant. Environmental groups urged that the Clean Air Act requires EPA to regulate without regard to cost or technical feasibility. The court's rejection of this argument sets a major precedent that will assist EPA in addressing numerous other hazardous air pollutants.

Another significant victory involved litigation over "acid rain" in Thomas v. New York (D.C. Cir.). Several northeastern states and environmental groups filed suit against EPA, claiming that the Agency was required to control emissions because of a letter issued during the previous Administration. That letter stated that emissions from the United States were contributing to "acid rain" in Canada. We argued that the "findings" reflected in the 1981 letter could not bind a successor Administrator to take regulatory action with substantial impact on sources in the upwind states. The court agreed, noting that there was no opportunity for public comment on the original letter. Thus, EPA remains free to address the "acid rain" issue based on its current assessment of the situation.

In the area of wetlands enforcement, the Section achieved a highly favorable result in U.S. v. Cumberland Farms (D. Mass.). Cumberland converted nearly 700 acres of the Great Cedar Swamp in Massachusetts to agricultural use without applying to the Army Corps of Engineers for a permit. In a sweeping opinion, the district court ordered full restoration of the property and imposed a civil penalty of at least $150,000 for the violations. The opinion also emphasizes the importance of wetlands in maintaining water quality and providing wildlife habitat.

Still another major victory occurred in the area of federal facilities defensive litigation. McClellan Ecological Seepage Situation v. Weinberger (C.D. Cal.), involved alleged violations of certain environmental laws at McClellan Air Force Base in California. Plaintiffs, a group of concerned local residents, sought hundreds of millions of dollars in civil penalties from the U.S. Treasury. Judge Ramirez adopted our arguments that the United States is not subject to civil penalties for these violations because there has been no waiver of sovereign immunity for civil penalties. This was a case of first impression, and the decision will save the Treasury billions of dollars in future cases.

The Environmental Enforcement Section's major accomplishments are best represented by a review of some of the significant litigation recently concluded. During the past three years, the Section's annual civil case referrals have more than doubled, while the pending caseload has climbed by 45 percent. Actual workload has consistently exceeded our estimates. In the criminal docket, 147 referrals led to 187 indictments during the same three-year period. The Environmental Crimes Unit obtained 136 convictions, fines of more than $2.8 million, and jail sentences totaling more than 130 years. These workload statistics are indicative of the unprecedented levels of activity in the Environmental Enforcement Section.

In 1985 the Section successfully tried a major penalty action under the Clean Air Act against the St. Joe Minerals Corporation. Following trial the company agreed to a finding of liability and a $12.2 million penalty for violating sulfur dioxide emission rules. The Section was also successful in concluding several difficult enforcement cases aimed at curbing volatile organic compound emissions, which contribute to the nation's ozone problems. Among these was an action against Smurfit Diamond Packaging, which resulted in injunctive relief valued at over $800,000 and a $120,000 penalty. Finally, the Section continued its efforts to vigorously enforce the National Emission Standards for hazardous air pollutants. The Section expanded its enforcement of asbestos and vinyl chloride violations, and has initiated enforcement actions related to benzene violations. In U.S. v. Occidental Chemical Corp., for example, the defendant has agreed to pay a $490,000 civil penalty and to undertake a comprehensive compliance program.

The Section vigorously pursued several Clean Water Act cases against significant municipal violators, and resolved a major action against the City of Los Angeles. In that settlement the City agreed to undertake a substantial remedial program to eliminate discharges into the ocean and Santa Monica Bay and to pay a $625,000 civil penalty. Several Clean Water Act enforcement actions against industrial violators were also resolved in 1986. In U.S. v. Phelps Dodge, for example, the company agreed to install an $8 million run-off control system to abate unpermitted copper mining run-off and to pay a $1 million penalty.

The Section continued to pursue its growing hazardous waste docket, and in 1986, the Section initiated actions to enforce the loss of Interim Status provision under the Resource Conservation and Recovery Act. In several of these actions the Section sought preliminary injunctive relief and was successful in bringing violators into compliance. For example, in U.S. v. CCCI, the violator agreed to cease operations as required by RCRA. The Section also successfully concluded a number of complex CERCLA matters, including U.S. v. Reilly Tar, in which the defendants have agreed to implement a $50 million remedy at a site outside of St. Louis Park, Minnesota and U.S. v. Western Processors, in which the defendants have agreed to implement a remedy valued at over $40 million to abate a site near Seattle, Washington.

Program Changes. Defensive and affirmative environmental protection litigation reflect the Attorney General's highest priorities, and take precedence over all other programs in the Land and Natural Resources Division. However, the environmental caseload will grow by an unprecedented 400 cases by 1988 as a result of new programs under the Resource Conservation and Recovery Act, Safe Drinking Water Act, and the Clean Air and Water Acts. Within this initiative are four major objectives: 1. Defense of agency programs which promote environmental protection without undue economic costs; 2. Protection of the federal fisc from multi-billion dollar environmental damages claims; 3. Swift action to remove imminent threats to public health and safety and collect appropriate penalties and fines; and 4. Promotion of voluntary private compliance with environmental regulations to avoid costly federal intervention. These objectives are accomplished through vigorous defense of regulatory discretion, by well-planned litigation to defend multi-billion dollar "federal facilities" damages claims, through aggressive use of the law to force pollutors to clean dangerous toxic waste dumps and to meet federal standards for air and water pollution, and by the imposition of stiff criminal and civil penalties against those who destroy our Nation's resources.

In a range of areas, major new litigation without any current precedent will emerge in 1988, based on a host of newly enacted statutory provisions and citizen suits. The fundamental role of a government is the protection of its citizens, yet the government's ability to set forth balanced, rational environmental regulations to protect public health and safety is endangered by a constant barrage of legal challenges resulting from brand new statutory requirements and causes of action. Both ends of the industrial-environmental continuum raise objections to virtually every rule promulgated by the Environmental Protection Agency (EPA) to the point where the process of implementing most regulations involves extensive litigation as a matter of course. In the Environmental Defense Section of the Land and Natural Resources Division, defense in judicial review of EPA regulatory programs constitutes a major portion of the growing caseload. The assault on agency decisions arises in virtually all major litigation ranging from legal challenges to individual permits to discharge pollution all the way through petitions for review of entire regulatory schemes. Another key element of this litigation is that environmental regulations, unless soundly administered, can cost the economy billions of dollars per year, and the Department of Justice plays a critical role in defending approaches that minimize cost. The influx of regulatory review litigation has not abated despite far-reaching

Supreme Court victories such as our defense of the "bubble theory" (which is estimated to save over $1 billion annually without any adverse impact on pollution levels). With the 1984 amendments to the Resource Conservation and Recovery Act, and the subsequent need for new or revised rules and regulations, the demands on Division lawyers have greatly increased. Currently, EPA's programs under 10 complex statutes encompass more than 10,000 pages of technical scientific regulations. The average length of time to litigate these cases has jumped from 2-1/2 to 3-1/2 years since 1982, due in part to continued scientific uncertainty surrounding EPA's programs, and in part to the growing sophistication and dedication of resources by opponents. Environmental Defense Section lawyers alone now contribute over 12,000 hours of uncompensated overtime, equivalent to six FTE attorney positions, and yet the backlog of cases continues to grow. This extraordinary pressure on the staff has led to alarming turnover, such that 50 percent of the Section's lawyers have only one year's experience or less with the Division.

The Lands Division's defense of a myriad of new environmental programs, regulations and causes of action will have enormous impact on major American industries and the Nation's economy. Entirely new programs under the Resource Conservation and Recovery Act, Safe Drinking Water Act, and the Clean Air and Water Acts will generate hundreds of cases in the next two years. Under the recent amendments to the Resource Conservation and Recovery Act, over 30 entirely new regulatory programs and over 60 deadlines will produce at least 100 major new cases in 1988. Final regulations under RCRA will be challenged by dozens of parties including the oil, chemical, steel, paper and textile industries, as well as states and environmental groups, yet the 1986 baseline of RCRA cases is negligible. Under the amendments to the Safe Drinking Water Act signed by President Reagan June 19, EPA has new deadlines to regulate some 85 new chemicals in potable water. Many of these deadlines will be missed, and the final rules will be challenged because of the extremely high compliance costs on municipalities, creating 100 new drinking water cases in 1988. Again, the 1986 baseline under the SDWA is near zero. Under the Clean Air Act, at least 27 cities expect to miss the December 1987 compliance date for ozone emissions, generating 100 new air pollution cases as city governments and local industries turn to litigation for relief. As EPA imposes sanctions, these cities and their major industries will sue, yet if EPA does not impose sanctions, environmental groups will sue. The second round of permits under the Clean Water Act will be completed during 1987. Thus, thousands of industrial sources will soon receive permits requiring "Best Available Technology" (BAT) treatment which necessitates a significantly higher compliance costs. At least 100 new BAT suits will arise in the next two years.

The Environmental Defense Section also defends the public fisc in cases alleging environmental damage at federally owned or operated facilities. Over $5 billion in potential liability to the American taxpayers is at stake in cases currently on the docket, but this figure is growing exponentially as federal agencies complete initial inventories of hazardous sites, and could easily top $15 billion by 1988. Public and congressional awareness of the problem is increasing as the media enlarges its coverage of alleged federal environmental damages such as the recent reports on the Aberdeen Proving Grounds. These new federal facility cases are radically different from suits brought against federal agencies in the past that typically sought compliance with state emissions limits or permitting programs. In sharp contrast, these new federal facilities cases focus on past waste disposal practices extending back to the 1940s. Because most of the lawsuits affect vital ongoing military operations or nuclear facilities of the Department of Energy, the strategic importance of this litigation is further heightened. Current federal facilities cases pose liability of over $5 billion, yet government exposure in this area could climb above the $15 billion mark in 1988. Lawyers on these cases today work overtime equivalent to more than one extra full day each week, yet federal facilities case filings in 1988 will jump 150 percent over the 1986 level. The return on investment in this area involves cost avoidances which could easily amount to $1 billion in 1988 alone.

Swift action by government to protect its citizenry from imminent and potential threats to health is a priority Administration initiative. However, without voluntary private compliance, taxpayers could be faced with multi-billion dollar cleanup costs in the future. The Department's leadership role in this effort cannot be maintained without adequate resources, and the alternative is leaving essential enforcement leadership to EPA. Civil enforcement of the Resource Conservation and Recovery Act and the Clean Water Act also are top priorities in 1988, and both have potentially major impact on the economy. Under RCRA, operating waste disposal sites must be kept in compliance since adequate enforcement of RCRA can prevent the need for future superfunds. Since the average remedial cost at Superfund sites is now over $10 million, it is much more cost effective to enforce RCRA guidelines now. Similarly, the federal government has invested over $30 billion through grants for the construction of publicly-owned treatment works. In 1988, EPA predicts that 450 of these major municipally-owned plants will be in violation of treatment standards. Our actions to enforce the Clean Water Act are vital to ensure that the plants which the taxpayers have built are maintained and not allowed to be ruined by pre-treatment violations. The return on investment is dramatic in this program which is self-financing many times over. Affirmative environmental litigation provides an excellent, direct return on investment: over four dollars will be returned for each dollar spent in 1986. This figure does not include Superfund results, which are far more dramatic.1/ Penalties collected in 1985 under the Resource Conservation and Recovery Act, Clean Air Act, and Clean Water Act amounted to $15 million, and are projected at more than $21 million in 1986. Fines imposed in criminal cases will more than double, from a half million in 1985 to more than $2 million in 1987. In December of 1986 alone, we recovered $1.8 million in two criminal cases. In the past five years, the caseload in this unit has soared, especially in relation to staff size. The average number of personally handled active enforcement cases per lawyer has doubled since 1981. In addition, RCRA enforcement reduces the need to spend Superfund tax dollars on government cleanup. Without additional staff many such financially attractive law enforcement cases simply could not be pursued.

Similarly, the swift application of criminal penalties against willful pollutors is one of the most visible and cost effective means to promote voluntary compliance with environmental regulations. This serious, burgeoning area of white-collar crime has been met with outstanding results and public support since the establishment of investigatory units within EPA and the FBI, and the Environmental Crimes Unit in the Lands Division. However, the remarkable achievements of the past five years have increased the size and scope of the program to the point that case referrals doubled in the last year, and prosecutors cannot keep pace with the investigations now underway. As EPA expands its criminal program to include small-quantity generators, and the FBI increases its investigatory efforts, Division staff must increase as well.

The ultimate success of the government's environmental programs depends on voluntary compliance. Through the swift and aggressive application of criminal and civil sanctions, the Division sends a message to potential pollutors that short-term savings gained through violation of pollutant limits are not cost effective when they are offset by fines, penalties, jail

---

1/ Superfund cases are not funded by the General Legal Acitivities appropriation, but do give another perspective on the potential returns from civil and criminal enforcement actions. Since the beginning of 1983, cleanups valued at well over $400 million have been obtained. Including Superfund and non-Superfund cases, then, the Environmental Enforcement Section since 1983 has returned over 21 dollars for each Division dollar spent.

sentences and the attendent publicity. This Administration has reason to boast about the successes of the Environmental Crimes program, established in 1981. Both EPA and the FBI have dedicated resources to the investigation of these serious white-collar crimes in which corporate entities willfully dump hazardous materials and endanger human health. From Oregon to Florida, jail sentences have been meted out and dangerous toxic wastes removed as a direct result of this effort. By 1988, the focus of criminal investigations will be broadened to encompass small-quantity generators of waste, marking a coming of age of this program.

While the majority of hazardous waste enforcement is funded through the EPA Superfund program, a significant new group of actions involving non-EPA clients has arisen. One enforcement action, filed on behalf of the Army to recover from Shell Oil cleanup costs at the Rocky Mountain Arsenal, is illustrative. Over a 40-year period, Shell pesticide manufacturing operations and Army chemical weapons activities have caused massive, widespread contamination of the soil and groundwater at the Arsenal. Many estimates of the costs of cleaning up the Arsenal alone exceed $1 billion. Preparation for the first phase of trial on liability in this case has already required a team of 20 lawyers and over $3 million in automated litigation support costs paid by the Army. The Remedial Investigation/Feasibility Study, a scientific analysis to determine the technical remedy needed at the site, will not be completed until mid-1987, when the trial will begin. Over one million pages of documents from 10 nationwide locations already have been screened and microfilmed, and work continues on expert depositions and privileged issues. The Army has funded automated litigation support through 1987, however, when the trial begins, litigation support costs will be the responsibility of the Department of Justice. For this case alone, $3.1 million is requested to continue litigation support efforts through the final trial.

Long-Range Goal: To defend and promote the public interest in federal land, water and mineral programs; to defend those programs from challenges; to effectively represent Indians and Indian tribes where the United States is trustee; and to review and comment on pertinent legislative initiatives.

Major Objectives:

To successfully defend challenged federal programs and policies affecting the management and protection of public lands, water, minerals and the Outer Continental Shelf.
To defend taxpayers against monetary claims involving federal lands, resources, and the environment.
To effectively represent the interests of Indians and Indian tribes where the United States is trustee, especially in water rights cases.
To defend the government from monetary claims made by Indians and Indian Tribes.
To monitor and evaluate legislative proposals relevant to the Division's programs.
To coordinate with state and local governments on environmental matters.
To respond to Congressional and citizen inquiries and requests under the Freedom of Information Act.
To provide legal counsel to the Assistant Attorney General and to client agencies, to file amicus curiae briefs as requested, and to provide litigation support in emergencies.
To track and evaluate citizen enforcement actions to assure consistency with law and governmental enforcement policy.

Base Program Description: Over the past 20 years, Congress has enacted numerous statutes designed to balance economic growth with environmental protection. These statutes require federal managers to evaluate proposed projects, and in some cases include virtually every agency of the federal government. The decisions of government agencies and officials have consistently been challenged in recent years by individuals, organizations, business entities and political jurisdictions. Suits have been filed by groups on both ends of the conservation-development continuum, using provisions of environmental statutes such as the Endangered Species Act and the National Environmental Policy Act to thwart federal policies and programs. The defense of federal prerogatives in this area is the primary mission of the General Litigation decision unit.

Litigation relating to mineral resources is one of the important responsibilities of the unit. Leasing federal lands for oil, gas and mineral development generates considerable controversy, yet mineral leasing is a significant source of federal revenues. Environmental groups and some states have sought injunctions using provisions of the Coastal Zone Management Act, the Endangered Species Act, the Outer Continental Shelf Lands Act and the National Environmental Policy Act to challenge individual offshore leasing plans and the leasing program as a whole. Other states are not opposed to offshore drilling for environmental reasons; their lawsuits seek a share of the proceeds.

Water rights litigation is another area of concern. The government must advance water rights claims for federal properties and programs such as military reservations and national parks and forests. Water cases handled by the unit are generally expensive and protracted, and because the rights to entire stream systems are usually decided at one time, often involve over a thousand competing claims and years of judicial proceedings before a final decision is rendered. In western states where water supplies are extremely limited, federal claims to water rights are a particularly sensitive issue. The Department of the Interior has made clear its desire to yield to the states in water adjudications, and as a result, most water rights are adjudicated in state rather than federal courts. This occasionally leads to complications. For example, a decision by California's Supreme Court expanded the "public trust" doctrine, allowing the state to change its mind if future circumstances afford a more beneficial use for allocated water. While water rights obtained in federal courts are probably outside the scope of this case, federal rights gained in state proceedings may not be so secure. Recently, government opponents have used the Equal Access to Justice Act to seek attorney's fees in water rights cases, thus raising the taxpayer's ante in the water rights arena.

The program also is responsible for the bulk of public land law at the national level. Offshore boundary disputes with coastal states, involving tracts known or suspected to be rich in minerals, are litigated in the Supreme Court as original actions. Under the terms of the Submerged Lands Act, negotiated settlements are impractical, leaving only litigation to resolve these disputes. Title disagreements under the Quiet Title Act also are litigated by the decision unit. In onshore public lands cases, policies allowing timber development and grazing on federally-owned land have been challenged by industry and environmental groups alike. Efforts to dispose of excess public lands have been met with suits by parties opposed to the way in which the lands will be used after sale. Inverse condemnation suits, in which landowners assert that the government has effectively if inadvertently condemned their lands, continue to plague the military agencies in particular, exposing the taxpayers to enormous potential liability.

Another mandate of this program is the Alaska Native Claims Settlement Act, which was passed in 1971 and established a fund of money and land to be distributed to Alaskan natives in exchange for extinguishing aboriginal claims against the United States. Extensive litigation has arisen out of this complex statutory scheme for registration of natives, establishment of village and regional corporations, selection and distribution of the land and distribution of the money. The decision unit has established a small field office in Anchorage for this litigation.

The United States has established trust relationships with various Indians and Indian tribes through a myriad of treaties, statutes and Executive orders. Under these authorities, the government is obliged to perform a number of functions on behalf of these tribes, including litigation to defend their rights. The Indian Resources Section of this decision unit handles these cases, the most important involving water rights. Many Indian reservations lie in the arid portions of the country where competition for water is fierce, and tribal rights to water must be established before reservation lands can be developed. Over 50 million acres of reservation lands, and the rights to major water systems in dry western states are at stake. Other cases in which the government represents the interests of Indians involve the establishment and protection of hunting and fishing rights, and suits to answer questions about tribal rights to self-determination.

On the other hand, the Division responds to claims by Indians and Indian tribes that they are due compensation for government mistakes in administering Indian programs. These cases pose an estimated exposure to the taxpayers of over $2 billion. Congress has consistently recognized a need to rectify bona fide errors, and the Indian Claims Commission Act of 1946, together with current jurisdictional grants, provides a vehicle for Indians and Indian tribes to apply for monetary restitution. Under the Act, claims filed prior to 1951 are not subject to the usual statute of limitations. Although most of the claims under the Act have been terminated, a 1983 Supreme Court decision has led to increased litigation posing challenges to contemporary government management. The Division reorganized the General Litigation decision unit to consolidate within the General Litigation Section all defensive Indian lawsuits during 1986.

Finally, responsibility to review and comment on legislative proposals for the Division's programs rests in the Policy, Legislation and Special Litigation Section of this program. Over 40 new environmental laws were enacted during the decade of the seventies, and many of these complex and far-reaching statutes are nearing reauthorization. Many other environmental statutes are the subject of new legislative proposals, which benefit from analysis by the Division. After a bill is passed by Congress, the Section's responsibility involves analysis of new issues related to the implementation of the law, particularly in the first three years when few court decisions exist to give guidance on ambiguities that result from changes in laws. Complete screening of new legislation insures that the Division has detailed information in hand concerning the legislative history for use in litigation which arises after a bill becomes a law. Coordination between the various federal, state and local government agencies involved with environmental concerns and the conservation and development of natural resources is also within the purview of the decision unit, as is the initial development of Division policies in these areas.

Accomplishments and Workload: Biotechnology is a new and rapidly developing area of science involving many federal agencies (e.g., Environmental Protection Agency, Department of Agriculture, National Institutes of Health, Department of Defense, Food and Drug Administration). The General Litigation Section has been involved in almost all of the litigation to date in this new field. In Foundation on Economic Trends v. Block, the district court granted our motion for summary judgment in this case challenging the Department of Agriculture's animal breeding research, including certain recombinant (r)DNA experiments. The latter include the so-called "super-pig" experiments involving the use of a growth hormone gene. Plaintiffs raised challenges under the National Environmental Policy Act, the Administrative Procedure Act, and the federal common law of nuisance, asserting that USDA activities have wrongfully focused on enhancing size and growth rates of farm animals and has resulted in the elimination of smaller, slower growing species of livestock, inhumane treatment of animals, and ultimately the undermining of the family farm. In plaintiffs' view, the USDA should consider such alternatives as preservation of the existing gene pool, improved animal husbandry, and educating the American public to eat more plant crops "in their raw and unrefined forms." In a far reaching decision, the court concluded that animal productivity research cannot be considered an activity for which an environmental assessment or environmental impact statement must be prepared, and rejected plaintiffs' contention that the USDA research is a single monolithic program requiring consideration in a programmatic environmental impact statement. In another biotechnology case, Foundation on Economic Trends v. Thomas, plaintiffs challenged EPA's grant of a permit to field test a genetically altered pesticide. This case was argued on plaintiffs' motion for summary judgment in February. The court denied plaintiffs' injunction motion. However, because of disclosures of possible irregularities in the conduct of tests by Advanced Genetic Sciences (AGS), the permittee company, including the use of an

open rooftop area for tests to determine whether the product is pathogenic to trees, the court reserved judgment on our motion. EPA suspended the permits and ordered the company to conduct additional pathogenicity studies. Ultimately, the court dismissed plaintiffs' action. In Foundation on Economic Trends v. Johnson, plaintiffs attacked the Administration's general approach to biotechnology regulation as expressed in a framework plan. The court dismissed the plaintiffs' lawsuit because plaintiffs lacked standing and the suit was premature.

In Kerr-McGee Corporation v. Hodel, the rejection by the Secretary of the Interior of a number of phosphate preference right lease applications for acquired lands in the Osceola National Forest, Florida, was upheld. The determination of the Secretary that plaintiffs had not discovered "valuable deposits" of phosphate and, therefore, were not entitled to leases, the court concluded, "was not arbitrary and capricious but, rather, was justified and supported by substantial and credible evidence." In so concluding the court held, inter alia, that (1) the term "valuable deposits of phosphate," is properly construed in regulations promulgated in 1976, (2) the cost of compliance with lease terms is an important element in determining whether a prospecting permittee has discovered a "valuable deposit" of phosphate, and, if an applicant lacks the technological capability to comply with prescribed lease terms, he cannot satisfy the test and is not entitled to a lease, and (3) plaintiffs must comply with terms and conditions imposed by the Forest Service and are required to show the economic and technological feasibility of reclaiming the lands covered by their lease applications after mining.

In Marathon Oil Company v. U.S., another mining case handled by the General Litigation Section, the Ninth Circuit upheld the district court ruling that Interior can value federally owned natural gas, for royalty purposes, by working back from the price ultimately received in Japan. The circuit agreed that the Secretary's decision to use the net back formula was authorized by law and not subject to de novo review. It also acknowledged the "substantial deference" due the agency's interpretation of its statute. The court ruled that in holding the liquid natural gas is the same as natural gas, the district court was not making a finding on a disputed fact, but rather the question was one for the agency, upon which the courts would defer. Marathon's argument that Interior had improperly delegated lease administration to Alaskan natives was not considered by the court. It found that Marathon waived the argument by failing to raise it before the agency. Finally, the circuit agreed that there was no evidence that Interior had been improperly influenced by an Alaskan native group in issuing the challenged royalty order.

Canadian St. Regis Band of Mohawk Indians v. State of New York involved an action by a Canadian Indian Tribe and several individual Indians as to rights to islands in the St. Lawrence Seaway and a Fifth Amendment taking by federal defendants. The State of New York, its power authority and a power company were also named as parties. Early in the action we successfully resisted plaintiffs' attempt to certify a class action which was comprised of all descendants of the Canadian Tribe in an earlier decision. Thereafter, plaintiffs sought a stay of the action in an attempt to obtain a legislative settlement. While not objecting to a stay as to the other defendants, we successfully opposed the stay as to the federal defendants on the ground that our defense could be severed from the settlement since the Fifth Amendment issue was applicable only to the federal defendants. The district court has now handed down a favorable decision as to our defense of the action.

In another Indian case, Mashpee Tribe, Christiantown Tribe, Chappaquiddick Tribe, Herring Pond Tribe, and Troy Tribe v. Hodel, plaintiffs sued to recover tribal lands allegedly conveyed by their ancestors in violation of the Constitution and the Indian Non-Intercourse Act. The court dismissed plaintiffs' claims in these consolidated cases against both the federal and non-federal defendants, granting the defendants' motions to dismiss or for summary judgment. The court dismissed the federal defendants as parties primarily on sovereign immunity grounds. The court also observed that the plaintiffs lacked the necessary tribal status to state a basis for dismissal against the federal defendants. Also named as defendants were the Commonwealth of Massachusetts, certain towns, and individual citizens with an interest in the lands in question. In June 1982, the court dismissed the complaint brought by the Mashpee Tribe against the non-federal defendants on res judicata grounds. The present opinion dismisses the Non-Intercourse Act claims in the four remaining cses, finding that plaintiffs lacked the necessary tribal status to state such a claim. In addition, the court rejected plaintiffs' estoppel argument. The plaintiffs asserted that the defendants were estopped from asserting that the plaintiff groups do not consititute tribes since the defendants' actions have caused the disintegration of the plaintiff tribes and tribal land bases. The court held that the plaintiffs had not established the necessary elements for estoppel. The court also concluded that the Indian commerce clause does not provide plaintiffs with an independent basis for suit.

Program Changes: Several major new programs will greatly increase the defensive workload of the General Litigation Unit in 1988: Forest Service long-term management plans under the National Forest Management Act; federal water rights litigation in several western states; the Navy Port Dispersal Plan for major new construction at ten nationwide sites; the Administration's sale of excess property program; royalty recalculation issues under the Federal Oil and Gas Royalty Management Act; and commercial testing of genetically-engineereed products. In addition, a surge of cases is expected involving irrigation run-off high in selenium and other heavy metals. At present, over $5.5 billion in potential government liability is at stake in the cases which are defended by the General Litigation Section, as are federal programs, such as oil and gas leasing programs, which have revenues at risk of several times that amount.

The importance of our defense is highlighted by the direct impact on federal revenues of these new programs. For example, federal revenues from timber contracts top $1 billion annually. In the upper Northwest, where logging is a significant source of jobs and income, the Forest Service's long-range management plans for federally owned timberlands will result in numerous lawsuits which may delay or reduce federal revenue. These comprehensive plans, required by the National Forest Management Act, cover the broad spectrum of public purposes for which forested areas may be used, and require federal managers to make tough choices. Undoubtedly, both conservation groups and the logging industry will be dissatisfied with some of these decisions, and will bring suit in federal courts to allocate more or less land for logging. Because of early involvement in the administrative review process within the Department of Agriculture, the Division can accurately predict that a number of these sensitive cases will reach the courts within 12 to 16 months.

Federal water rights is another area where litigation demands will increase subtantially in 1988. During 1988, at least two and possibly five major water adjudications will be in trial. The states of Arizona and Montana have initiated massive, state-wide water allocations, with trials scheduled to commence early in 1988. In California, Washington and Idaho less comprehensive litigation is planned. Water litigation is emotionally charged and complex, and invokes fierce competition

from all sectors of society. Failure to protect Indian rights in these matters opens the United States to breach of trust claims of which pending claims total $2 billion, and in the past these claims have proven more costly to defend than full support of water adjudication cases. Most water rights cases are filed in state courts by the states pursuant to provisions of the McCarran Amendment, and the United States is but one of numerous defendants. Federal claims are litigated in state courts as part of the Administration's New Federalism program to expand state authority over internal resources. Moreover, state authorities are anxious to have this matter settled, and to have the United States' water rights quantified. The Big Horn River adjudication in Wyoming, which is illustrative of the nature of Indian water cases, spanned years of litigation before a Special Master and required several appeals. Numerous expert witnesses were called, and extensive research on allocation impact and historical Indian rights was required. By contrast, the Arizona and Montana litigation will attempt to allocate all of the water in the States, not one river system as in Wyoming. In Arizona, the Court anticipates holding 24 separate trials on the Gila River, the first phase in a novel regional adjudication schedule. This state-wide adjudication involves 11 Indian tribes in Arizona with substantial reserved water rights. Extensive research into historical agreements reached with each Tribe further complicates this "case." In Montana, nine Indian tribes have a stake in the water issue. Because of the extended duration of these major adjudications it is doubly important that the Division is adequately staffed at the outset. Defense of Indian rights to water is crucial to allow Indian tribes a measure of self sufficiency. Without water, neither agricultural nor other development programs will be possible, perpetuating the cycle of dependence on federal programs for support of Indians. Rapid resolution of these claims also provides certainty to developers who invest billions of dollars in western lands. Further, adequate defense in this litigation provides cost avoidances from future breach of trust claims which seek from the Treasury damages equivalent to the difference in value or irrigated and arid reservation lands. Non-Indian federal water rights cases call into question the nature of federal occupancy for such diverse programs as wildlife refuges and Air Force bases, and place the federal government in direct competition with local landowners for precious water. The Navy Port Dispersal Plan calls for the construction of major home port facilities vital to the Nation's strategic defense readiness. Ten sites located on the Pacific, Atlantic and Gulf coasts are involved, with capital investments of $250 to $500 million at each location. Numerous lawsuits with an array of environmental issues ranging from endangered species considerations to nuclear impact analyses threaten this major defense initiative.

Another major Administration project which will result in new defensive litigation is the excess property/privatization program under the direction of the General Services Administration. This major domestic policy initiative calls for the sale of excess federal property to contribute to the reduction of the federal debt. Currently eight major tracts worth hundreds of millions of dollars located in prime development areas such as Hollywood, California and on the beaches of Hawaii are being prepared for sale, and the 1987 budget projects revenues of several billion dollars from this program. However, each project may be delayed by challenges to the other anticipated analyses required by the National Environmental Policy Act. Vigorous defense of these and other anticipated sales of excess property will have significant impact on the federal debt. Oil and gas royalties from publicly owned lands provide over $3 billion in annual federal revenues, and the Federal Oil and Gas Royalty Management Act sets forth royalty calculation and administrative dispute resolution procedures for the Department of the Interior. In the last month, Interior officials have alerted us to a twenty-fold increase in administrative royalty calculation appeals, from 5 to 100 each month. Even if only ten percent of these result in district court litigation, 120 brand new cases annually will result.

For several years the Division has paid close attention to advances in recombinant DNA research and the development of commercial applications for genetically-engineered products. Coordinated by the White House Biological Sciences Coordinating Committee, the EPA, Department of Agriculture, Food and Drug Administration, and National Institutes of Health all have a hand in regulating or funding experimentation in this emerging growth industry, and the Division has adopted a clearing house function on genetic law. The recent case involving frost-free strawberries highlights the issues which will arise in increased future litigation. Industrial development of a gene which retards frost development on strawberries has the potential to dramatically increase harvests, but the scientific uncertainty surrounding release of this gene has lead to enormous public concern. Every aspect of this program from methodology through test protocols has been subject to controversy because of the uncertain aspect of the frost-retardant gene on the ecosystem.

A rapid increase in litigation is expected relating to selenium contamination at sites under Department of the Interior control, such as the much-publicized case involving the Kesterson National Wildlife Refuge. Here, agricultural drainage waters high in organic selenium content have been linked to wildlife birth deformities and deaths resulting from selenium poisoning. This naturally-occurring tract element is beneficial at very low levels, but is lethal when concentrated, and tends to increase exponentially as it moves up the food chain. In the dozen cases under the "Kesterson" heading, the State of California, the Natural Resources Defense Council, and several private citizens have filed suits alleging violations of the National Environmental Policy Act, Endangered Species Act, Migratory Bird Treaty Act, Clean Water Act and Resource Conservation and Recovery Act as well as inverse condemnation claims under the Tucker Act. An enormous administrative record of government decisions dating to the 1978 acquisition of the refuge as well as scientific analyses of selenium dating to the 1930's must be assembled and analyzed to prepare a defense. Exposure in these cases is estimated at more than $300 million, yet "Kesterson" is only the first in a series of similar suits. Sixteen western and midwestern states are presently investigating potential selenium poisoning problems involving dozens of Bureau of Reclamation irrigation projects and refuges operated by the Fish and Wildlife Service. These investigations will develop into a number of complex lawsuits during 1988.

Finally, this initiative calls for additional automated litigtion support in Indian claims cases. During 1986, as part of the continuing efforts to streamline the Division's structure, the Indian Claims Section was merged with the General Litigation Section. As a result, Indian claims cases with government exposure of $2.5 billion are receiving more attention without an increase in the staff. However, because of the maturing docket and pressure from the Claims Court, the Division must begin to actively prepare several of the most complex claims cases for trial. Four historical cases, Soboba, Minnesota Chippewa, Zuni and Navajo, fall into this category, with factual issues spanning several decades. These four cases will be in trial during 1988, requiring increased litigation support.

The Lands Division's defense of Administration initiatives is critical to important revenue-producing programs, including onshore and outer-continental shelf oil and gas leases, sales of excess federal property, and federal timber sales. Projected 1988 revenue from these programs is more than $10 billion, so at current rates, delays caused by legal challenges could cost the Treasury between $1 and $2 million each day in interest. In addition to protecting some $10 billion in current and potential revenue, pending liability cases handled by the General Litigation Section involve claims exceeding $5 billion. Without added staff Treasury exposure would increase due to unfavorable settlements, among other things.

	1985	1986	Estimates 1987	1988

Long-Range Goal: To efficiently and effectively manage the Division, and to provide the administrative systems and support services required to conduct litigation.

Major Objectives:

To develop program initiatives to permit effective responses to the Administration's policy requirements.
To provide policy direction to Division program managers.
To ensure that statutory obligations are met.

To maximize use of office automation technologies to increase efficiency and productivity throughout the Division.
To develop and maintain systems for improved fiscal planning and accountability.
To recruit and develop highly competent and motivated staff.
To implement an automated management and support system.
To establish a management systems review function and to refine and monitor program plans, evaluate program performance and conduct resource allocation studies.
To enhance the Division's ability to identify and implement requirements for expert witnesses.
To identify personnel training needs and initiate a comprehensive orientation program.
To provide all administrative support services, including space and facilities, files, messengers, copying, and supplies.
To update an administrative manual covering issues such as administrative procedures, employee position descriptions and workplans, performance evaluation criteria, promotions, awards, maternity leave, and adverse actions.

Base Program Description: This program provides overall direction and management for the Land and Natural Resources Division and supervises and administers operations necessary to the efficient operation of the Division's litigative mission. The responsibilities of this program include: budget preparation and execution; financial management; development, operation, and maintenance of management and automated support systems; workload and resource requirements analyses; recruitment; processing of personnel actions including payroll and benefits; management of space, facilities, and supply requisitions; provision of office equipment; processing mail; files control; provision of messenger, printing and copying services; performance of management analyses and internal control reviews.

Accomplishments and Workload: The Administrative Services Group completed a number of office moves to foster more efficient utilization of space. Office space and facilities were acquired to house client agency personnel working with the Division in the Shell (Rocky Mountain Arsenal) case and additional facilities were acquired in Alaska for Division personnel working on the Alaska Native Claims litigation. Section personnel worked with the Justice Management Division to design and construct a computer facility for the Division's prototype minicomputer docket tracking system. Additionally, expanded and improved library services were provided to Division personnel located in the New Post Office building. The Group inventoried the Division's furniture and equipment, and implemented controls for tracking and disbursing these supplies. Over 500 files previously closed cases were purged, and the filing backlog has been virtually eliminated. Moreover, the Group oversaw the Division's program to detect, monitor and remove asbestos from two of the buildings assigned to the Division.

Management reviews of each of the Division's sections are continuing. The initial assessments of the three largest sections have been completed, and reviews of the other sections are proceeding. In these studies, data are collected on each facet of section operation, e.g., reporting systems, caseload, organization and management structure. As a result of the completed studies, a number of management reforms have already been introduced by senior Division officials.

The Financial Management Group instituted a system for reviewing and maintaining records of Division requests for expert witnesses. The system is designed to track each request from initiation and approval to payment of invoices. The Group also has taken an active role in reducing the outstanding travel advance balances held by Division employees. Since December 31,

1984, the Division's travel advance balance was reduced by over $90,000. The Group also presented a half-day seminar on the government's travel regulations for Division secretarial personnel. Topics included preparation of authorizations and vouchers, and per diem calculation. Another seminar was developed and presented to Division attorneys, outlining procedures from the traveler's perspective.

The Personnel Group provided support to Division management in redesigning the Division's recruitment methods in order to facilitate hiring high-quality employees and to ensure the application of Division-wide criteria in the hiring process. Efforts have continued in coordinating and developing personnel management seminars specifically geared toward the Division; the latest dealt with managing problem attorneys. The Group also designed and initiated a formal orientation program for new employees. A "working sabbaticals" program for tenured senior attorneys has been proposed to boost morale among career attorneys, and to expand the contacts and experience of our most productive litigators. The Group's program to revise and update workplans is nearing completion, and workplans for student aides in the stay-in-school program have been developed.

Program Changes: The Division requests two FTE workyears in the office of the Assistant Attorney General to allow the Special Counsel and Special Assistant for Management positions to be filled. This is a reflection of the Division's commitment to meeting the Attorney General's goal of a 20 percent increase in productivity by 1992. In cooperation with the Justice Management Division, the Land and Natural Resources Division has undertaken a number of management and productivity improvement efforts. Other programs includes comprehensive management reviews of each section, and a personnel management program to reward high achievers and focus on excellence. The Special Assistant for Management will provide a policy level imprimatur on productivity programs, and oversee other ongoing efforts such as the analysis of the Division's data entry position structure, and the review of the central files program. While these studies are incomplete, it is probable that a move toward reorganization or contracting will be made by the end of 1988, and reflected in the 1989 budget.

Congressional Appropriation Action

Congress reduced the 1987 request by $111,000. The reduction was taken in two areas; uncontrollable increases, and continuance of the 1986 Gramm-Rudman-Hollings sequestration.

Supplementals Requested

1. The program supplemental request provides funding for increased GSA rent costs associated with the Criminal Division relocation ($22,000), increased Federal Telecommunications System (FTS) charges ($5,000) and costs associated with the production and publication of the Presidential Emergency Action Documents (PEAD's) (4 positions, 1 FTE and $120,000).

2. The Pay and Federal Employee Retirement System (FERS) supplemental includes $19,000 for increased pay costs pursuant to P.L. 99-500 and $24,000 for changes in the FERS.

This budget activity includes resources for the primary mission of the Office of Legal Counsel (OLC). Funds requested for this activity support personnel involved with the preparation of the opinions of the Attorney General and other OLC opinions on a variety of significant and complex constitutional, statutory and other legal questions involving the operation of the Executive Branch.

Long-Range Goal: To assist the Attorney General in his role as legal adviser in the Executive Branch, and to provide timely, exceptionally high quality and reliable legal analysis in response to requests for opinions coming from the President, the White House staff through the Counsel to the President, the Attorney General, Justice Department components and the heads of Executive Branch and independent agencies.

Major Objectives:

To increase the timeliness and quality of all OLC formal and informal opinions.
To carry out the President's Executive Order on Federal Legal Services by improving this Office's usefullness as an aid in the resolution of intra-Executive Branch disputes and legal questions.
To assist other components in the Department of Justice in drafting and providing testimony on proposed legislation and to provide comments on the constitutionality and legality of proposed legislation of interest to other departments and agencies.
To assist the Attorney General in his function of providing general legal advice to the President and Executive Branch agencies.
To perform its function of approving Executive Orders and Orders of the Attorney General as to form and legality competently, thoroughly and expeditiously.
To continue the practice, begun in 1977, of making publicly available in published form those Office of Legal Counsel opinions that are of general interest to the public.

Base Program Description: The principal duty of the Office of Legal Counsel is to assist the Attorney General in his function as legal adviser to the President and Executive Branch agencies. The Office also reviews as to form and legality all Executive Orders and Proclamations proposed to be issued by the President. All proposed orders of the Attorney General and all regulations requiring his approval are also reviewed by the Office of Legal Counsel. In addition, the staff is also involved in coordinating the work of the Department with respect to treaties, executive agreements and international organizations and performs a variety of special assignments referred to the Office by the Attorney General, the Deputy Attorney General or the Associate Attorney General.

The statutory authority pertaining to the Office of Legal Counsel is 28 U.S.C. 511-512. There are no pending or proposed legislative changes which would affect this Office.

The Office of Legal Counsel does not initiate any programs or have control over the volume or requests for opinions of the Attorney General or for legal opinions of the Office of Legal Counsel. All of the Office's work results from requests for opinions and legal advice from the President, the White House staff, Attorney General, members of the Cabinet and Executive Branch agencies and other Department of Justice officials.

A small number of requests are considered appropriate for formal Attorney General opinions, which are drafted preliminarily in OLC and reviewed, revised and approved by the Attorney General. The majority requests result in the preparation of legal opinions signed by the Assistant Attorney General or one of the Deputies based upon the research of one or more of the 16 staff attorneys. Other requests result in the provision of oral advice to the client.

Accomplishments and Workload: Accomplishments of the Office of Legal Counsel are presented in the following tables:

Item	1985	1986	Estimates 1987	1988
Executive orders and proclamations	41	50	70	70
Opinions	462	510	530	535
Intradepartmental opinions	494	570	620	625
Special assignments	2,477	2,600	2,900	2,900

OLC provided legal opinions under Executive Order No. 12146 in several disputes between Executive agencies. The Office has continued to respond to every request for any such dispute resolution it receives. OLC has received numerous such requests during the past fiscal year and continues to enjoy a high degree of respect from Executive agencies for its opinions.

OLC has taken a major role in either testifying or preparing testimony in connection with pending legislation of interest to the Department and the Administration. OLC also has assisted in the drafting of legislation and in providing legal advice concerning the legality and constitutionality of proposed and enrolled bills to other components in the Department and to other departments and agencies on subjects as diverse as the work of the Executive Branch itself.

The Office has provided general legal advice to the President and the various departments and agencies of the Executive Branch on a wide range of legal issues including, the constitutionality of provisions of the Gramm-Rudman-Hollings Act, numerous other questions relating to the constitutional separation of powers, other constitutional questions, and questions arising from the laws relating more narrowly to the individual departments and agencies. The Office has also devoted considerable attention to problems of federalism presented by matters that the Office has been asked to examine.

During the past fiscal year the Office has reviewed for the White House numerous Executive Orders as to their form and legality and given advice to the President concerning appropriate revisions and considerations. The Office continues to hire staff expertly qualified and experienced in order to develop procedures necessary to perform this function with only the most sound advice and in an expeditious manner. OLC has also reviewed several major orders of the Attorney General during this period, most of them on very limited time schedules.

Volumes 4A, 4B and 5 of the Opinions of the Office of Legal Counsel for 1980 and 1981 were published in January 1986. Planning and work has begun on volumes 6, and 7 to contain noteworthy opinions issued in 1982 and 1983. We believe we now have in place, and are attempting to refine, a structure that will improve the speed of producing these volumes.

Program Changes: An increase of $42,000 is requested for 1988 for the Presidential Emergency Action Document program (PEAD). The Office of Legal Counsel is accepting responsibility for the production and publication of PEADs. This program has recently expanded to the point that it can no longer be managed by the United States Attorneys who were reimbursed by the Federal Emergency Management Agency (FEMA) for costs associated with PEAD.

The PEAD Project: The primary goal of the PEAD project is to develop an entirely new portfolio of easily understood, legally sufficient and programmatically sound PEAD. A PEAD is a draft executive order, legislation or proclamation which may be required in order to perform essential functions more efficiently during a national security emergency. As an additional goal, the Office of Legal Counsel will continue to document the basis of its legal analyses and develop other types of materials to respond to the requests of and otherwise assist the Department of Justice and other continuity of government planners. These goals are related to and consistent with the current overall executive branch efforts of improving the United States' posture in both a legal and practical sense.

The Department of Justice and the FEMA maintain an interagency agreement to analyze, update, or totally revise the PEAD.

Congressional Appropriation Action

The Congress reduced the Civil Rights Division 1987 request by $1,139,000. Uncontrollable increases were reduced by $48,000; one item for $110,000 (telephone line charges) was denied. Also, the $981,000 sequestered by Congress in 1986 will remain in 1987.

Supplementals Requested

1. Supplemental funds are requested to cover additional GSA rent charges in connection with the pending move of the Criminal Division to the Bond Building. The Civil Rights Division's share of the cost will be $184,000. Also, supplemental funding of $53,000 is requested to cover increases in Federal Telecommunications System charges.
2. The pay request provides for $216,000 to meet increased pay requirements pursuant to P.L. 99-500. This supplemental also seeks $281,000 to handle the increased costs by the recent changes to the Federal Employee Retirement System.

This budget activity consists of resources designed to accomplish the mission of the Civil Rights Division. The Division is responsible for the enforcement of all laws and Executive Orders prohibiting discrimination on account of race, color, national origin, sex, age, handicap or religion. The Attorney General has also been delegated responsibility to administer the special provisions of the Voting Rights Act of 1965, as amended in 1970, 1975 and 1982, including under Section 5, the preclearance of all changes affecting voting in covered jurisdictions; to litigate sex discrimination cases referred under Title IX of the Education Amendments of 1972; and to handle cases involving discrimination by federal contractors referred by the Department of Labor. The Division's delegation of the Attorney General's responsibilities to coordinate and enforce Title VI of the Civil Rights Act of 1964 by all federal program agencies was enhanced significantly by Executive Order 12250, signed November 2, 1980. The Executive Order increased the Division's coordination authority under Title VI and also delegated coordination authority for Title IX of the Education Amendments of 1972 and Section 504 of the Rehabilitation Act of 1973, as amended. In addition, in 1980 Congress enacted the Civil Rights for Institutionalized Persons Act which authorizes the Attorney General to bring litigation against unconstitutionally operated state and local institutions.

would remedy unconstitutional deficiencies identified by investigations at the Fairview Training Center in Oregon and the Fort Stanton State School in New Mexico failed, the program filed its first contested lawsuit involving state institutions for the mentally retarded.

In other matters, the program successfully negotiated and entered into three consent decrees pursuant to the Act. One settlement remedies conditions at the South Carolina State Hospital mental health facility in Columbia, South Carolina; another addressed conditions at the Wheat Ridge Center, a mental retardation facility in Colorado; and, the third resolves two investigations at Michigan state mental health institutions, the Northville Regional Psychiatric Center and Ypsilanti Psychiatric Hospital. Another consent decree has been successfully negotiated and filed with the Court addressing conditions at the Southbury Training School in Connecticut. Following evidentiary compliance hearings, the district court found the State of Michigan to be in non-compliance in the area of prison mental health care services and also granted the United States' motion for the enforcement of its consent decree in this case involving conditions of confinement at three Michigan prison facilities. The issues include fire safety, medical care, access to courts, sanitation, safety and hygiene, and overcrowding and protection from harm.

Program Changes. The request for an increase of $120,000 will enable the hiring of nongovernment consultants (psychiatric, sanitation, medical experts, etc.) to perform on-site tours of public facilities under investigation and to prepare reports and recommendations in conjunction with the Civil Rights of Institutionalized Persons Act (CRIPA), allowing the program to bring facilities into compliance with rights provided for in the Constitution and other laws of the United States. The CRIPA permits litigation only as a last recourse. This program spends a major portion of its current budget on the hiring of expert consultants and utilizes employees from other federal agencies whenever possible. The number of expert consultants which can be hired impacts directly on the program's ability to perform its mission, as well as on its productivity.

This program is required by law to investigate, inspect, suggest remedial actions, and, if necessary, initiate legal action against facilities operated by the states, or agents thereof, when there is reasonable cause to believe that conditions of confinement are depriving persons confined of any rights, privileges, or immunities guaranteed by the Constitution or laws of the United States. The class involved in these matters is unable to defend itself. The entire concept of CRIPA is based on the government's desire to ensure rights within these facilities in agreement with the states involved and without resorting to litigation. An average investigation requires the services of two expert consultants for several days in order to physically tour the facility and prepare a written report of observations and conclusions. The median cost for such an investigation is $6,000 to $8,000 and includes daily fees, as well as travel and subsistence expenses. (It should be noted that the program has been fortunate to find many consultants who are willing to work at a lower daily rate than they normally charge because of the issues involved.) These costs are inherent to the operation of the program and will continue to increase with the rise in enforcement activities. Without an increase in the expert consultant fund, the number of investigations the program is capable of performing will be sharply curtailed and the rights of the institutionalized will be adversely affected.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Long-Range Goal: To prevent and eliminate systemic barriers to the full participation by racial and language minorities and overseas, blind, handicapped, disabled and illiterate citizens in the electoral process, and to achieve effective remedies for those citizens in specific instances where their right to vote has been denied or abridged.

Major Objectives:

To prevent through the Section 5 preclearance program the implementation of new standards, practices and procedures that have the purpose or effect of denying or abridging racial and language minorities' right to vote throughout the 909 counties specially covered by the Voting Rights Act (VRA).
To assure the assignment of federal observers to those polling places within the specially covered counties where observer personnel are needed to document misdeeds in the electoral process or to ensure confidence of the minority community in the electoral process and actions of individuals conducting the elections.
To provide a federal alternative for voter registration when the actions and practices of local authorities discriminatorily deny racial and language minorities' access to the voter registration rolls.
To defend lawsuits that are brought against the United States under the special provisions of the VRA before three-judge panels in the United States District Court for the District of Columbia to preclear voting changes and to terminate coverage.
To initiate lawsuits against jurisdictions that violate the preclearance requirements of Section 5.
To discover and remedy methods of conducting elections that dilute the voting strength of racial and language minorities.
To discover and remedy actions of state and local election and voter registration administrators that prevent a full and fair exercise of the franchise by racial and language minorities; overseas citizens; and, voters who are elderly, handicapped, blind, disabled or are unable to read or write.

Base Program Description: The program is divided into two components. The Section 5 component, staffed by equal opportunity specialists/program analysts under the supervision of attorneys, reviews changes in voting practices or procedures proposed by the 909 jurisdictions which are required to have such changes cleared before they can be implemented. If a jurisdiction fails to carry its burden of proving that a change does not have a discriminatory purpose or effect, this program recommends to the Assistant Attorney General that he interpose an objection to the change. As an alternative to administrative preclearance, the VRA provides that jurisdictions may seek judicial preclearance through declaratory judgment suits. The litigation component of the program handles these suits, brings suits against jurisdictions which implement voting changes which have not been precleared, and handles suits under the provision of the Act that allows jurisdictions to seek a judicial determination that they no longer need to be subject to the preclearance requirement. The preclearance requirements of the VRA relate to changes in voting practices and procedures.

Other provisions of the Act and other voting laws relate to existing practices and procedures which were instituted before the Act went into effect in jurisdictions covered by the special provisions, or those which exist in jurisdictions not covered by the special provisions. The litigation component brings lawsuits to remedy existing practices which result in the denial or abridgment of minorities' voting rights by maintaining systems of election that dilute minority voting strength, and by restricting participation in the electoral process by minorities, overseas citizens, and voters who are elderly, handicapped, blind, disabled or illiterate. Enforcement of the 1975 exclusive English prohibition is handled through the administration and litigative enforcement mechanisms described above. In addition, staff members assist local election officials in understanding their responsibilities for assisting language minorities and voters who are elderly, handicapped, blind, disabled

or are unable to read or write in exercising their voting rights. In a similar manner, the program helps U.S. Attorneys carry out their language provision enforcement responsibilities.

Both components of the program assist in determining where federal observers are needed to observe election day activities (to report indications of interference with or abridgment of minorities' voting rights). Through file reviews, telephone contacts and field surveys, jurisdictions needing coverage are identified, appropriate numbers and locations of observers are determined, and the Office of Personnel Management is contacted to work out the appointment and deployment of observers. The program's attorneys work closely with the observers and coordinate their activities and information on election day.

The program also encourages the ultimate goal of voluntary compliance with federal civil rights voting laws by remaining available to confer with other elements of the Federal Government, such as the Federal Election Commission, the Department of Defense, and the Bureau of the Census, and with individuals and associations of state and local election administrators, such as Secretaries of State and county clerks, regarding their concerns about the impact of federal law and regarding the Department's position with respect to the import and requirements of federal law.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Defensive Litigation	4	6	4	6
Offensive Litigation	343	79	130	152
Section 5 Submissions Received	3,041	3,890	3,000	3,500
Section 5 Submissions Processed	3,041	3,890	3,000	3,500
Matters Received	184	33	50	60
Matters Terminated	118	25	50	60
Cases Filed	17	14	15	16
Cases Closed	32	7	15	16

During 1986, over 3,800 submissions involving the largest number of changes (more than 20,000) ever were submitted under Section 5. The submissions involved 97 changes to which objections were interposed, including redistricting plans for Lynn County, Texas, and Sunflower and Yazoo counties, Mississippi, the latter two of which represented the third objectionable redistricting plan that the counties presented for review. Also, objections were interposed to the following: (a) annexations where the proposed addition of white persons would have diminished black persons' voting strength in at-large elections for city council members in Forsyth, Georgia; Sumter, South Carolina; and, Franklin, Virginia; (b) changes in methods of holding elections for city or county council members and districting plans which were dilutive of minority voting strength in the Cities of El Campo and Plainview, Texas; Jesup, Lyons and Quitman, Georgia; Elizabeth City, North Carolina; Lamar County, Texas; and, Marengo County, Alabama; (c) the addition of a majority vote requirement to the at-large voting method in Batesburg, South Carolina; (d) the use of residency requirements for the election at-large of school board members in Onslow and Pitt Counties, North Carolina; and, (e) a deannexation from Greensboro, Alabama, of land on which a housing project with a projected majority black occupancy was scheduled to be built.

The program participated in 14 new cases during the year. Of these, the Division was the plaintiff in seven, plaintiff-intervenor in one, defendant in four, and amicus curiae in two. Of the seven lawsuits filed as plaintiff, five charged violations of Section 2 of the VRA, four of which were resolved by consent decree. The program filed one suit charging

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Federal appellate activity.....	32	32	$1,871	32	32	$2,057	32	32	$2,057	...	...	...

Long-Range Goal: To reduce the incidence of unlawful denials of civil and constitutional rights.

Major Objectives:

To file, on a selective basis, appellate level cases initiated by the government.
To serve as a friend of the court in appellate cases which have a substantial impact on federal civil rights enforcement.
To handle all appropriate appellate level litigation in the civil rights area, rather than to have such cases handled by the enforcement programs.
To provide legal counsel to government departments and agencies with respect to their civil rights related programs and nondiscrimination requirements.
To provide significant substantive support for the Division's legislative initiatives and to comment on the legislative proposals of others.
To provide, with respect to pending litigation, legal counsel and research assistance to other enforcement activities and to the Department.

Base Program Description: Once a litigating program has obtained a district court judgment, the case may be reviewed in the courts of appeals or the Supreme Court. This program handles or supervises the handling of all appeals from both favorable and adverse judgments in which the government participated. Supreme Court cases require coordination with the Office of the Solicitor General. A favorable district court decision is meaningless if it is reversed on appeal, and the program needs and resource expenditures of district court litigation demand the ability to appeal adverse decisions. The success of the Division's front-line litigating programs depends on this program's effectiveness on appeal.

In addition, since appellate court decisions in private cases may profoundly affect the entire civil rights effort, the Division participates as a friend of the court in appellate cases which raise issues that, when resolved, will have an impact on the scope of the Division's enforcement jurisdiction. Occasionally, at the request of the Assistant Attorney General, program staff participates in the district court in cases in which appeals appear to be imminent.

In support of an effective civil rights enforcement program, the program develops (as requested) new legislation or modifications or amendments to existing legislation in the interest of protecting the civil rights of all citizens; comments on civil rights legislative proposals of others (as required by the Department's Office of Legislative and Intergovernmental Affairs and as requested by the Office of the Assistant Attorney General); provides legal counsel to federal agencies responsible for the administration and development of programs with civil rights implications which invariably present difficult legal and policy questions. The advice the staff gives is designed to ensure the legality of such programs, promote uniform policy application, and lessen the possibility of expensive and disruptive litigation later. Such counsel involves commenting on draft regulations and the efficacy of program administration as well as advising on proper litigating strategy.

For 1988, no additional resources are requested for this program. At the base level, the program will adequately represent the United States in its important appellate litigation. Legislative and legal counsel activities will be handled as resources permit.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Cases/Matters Received	114	130	140	148
Briefs Filed	72	59	70	72
Solicitor General Recommendations	14	27	20	22
Decision Not to Participate or Appeal	18	10	18	21
Legal Counsel & Research Assistance Provided	54	34	48	51
Legislative Comment & Testimony	6	9	9	14
Cases/Matters Handled	213	143	215	245

During the year, the Division filed approximately 36 papers in the Supreme Court and 44 in the courts of appeals, 95 percent of which were prepared by this program. Seventy percent of the decisions reaching the merits were in full or partial accord with the Division's contentions. The Supreme Court reached the merits in 10 cases; six of these decisions were consistent with the government's position. The courts of appeals rendered 36 merits decisions, 26 of which were in full or partial accord with the Division's contentions. In the area of education, the Fourth Circuit upheld the constitutionality of a school board's decision to abandon its busing of elementary school students. In accordance with the argument the division made as amicus curiae, the court held that because the board had eliminated all vestiges of its dual system, it was free to eliminate busing unless its decision was motivated by discriminatory intent. In another case, the Sixth Circuit affirmed a lower court's entry of a consent decree in a higher education case. The court held that a special preprofessional program for black students was sufficiently tailored to correct the effects of past discrimination. The court also held that the United States could not prevent entry of the consent decree merely by withholding consent when the government did not offer to present evidence that would have rebutted the presumption raised by statistics showing little integration at the professional schools.

In the area of employment, the Supreme Court held that a public school faculty lay-off quota based on race violates the Equal Protection Clause. The Court accepted the government's arguments made as amicus curiae that: (1) the same strict judicial scrutiny must be applied to all racial classifications, including those that disadvantage whites; and, (2) the concept of societal discrimination (rather than actual discrimination by a particular employer) cannot justify racial preferences. In another case, the Supreme Court ruled that Section 706(g) of Title VII of the Civil Rights Act of 1964 does not prohibit a court from ordering, in appropriate circumstances, affirmative race-conscious relief that may benefit nonvictims of discrimination as a remedy for past discrimination. The Court also held that Section 706(g) did not apply to relief awarded in a consent decree and thus, regardless of whether it precludes a court from imposing certain forms of race-conscious relief after trial, does not prohibit entry of a consent decree which provides relief that may benefit individuals who were not actual victims of a defendant's discrimination. In other areas, the Fourth Circuit accepted, in full, the Division's contention that the United States was improperly denied an opportunity to demonstrate the need for a special election in a

vote dilution case. Finally, the Supreme Court ruled that the Department of Health and Human Services had not established a factual base for its Section 504 regulation regarding medical treatment of handicapped infants. The Court affirmed a lower court injunction against further enforcement activities by that Department under Section 504 regarding medical treatment of handicapped infants but appeared to limit the injuction to actions taken in furtherance of the regulation.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil rights prosecution.....	45	44	$2,658	45	44	$2,912	45	44	$2,912	...	...	...

Long-Range Goal: To significantly reduce police criminal misconduct as well as criminal misconduct of other public officials who violate the federal criminal civil rights statutes; eliminate or substantially reduce violent activity by private citizens which interferes with federally protected civil rights on the basis of race, religion, national origin or sex, particularly interference by organized, violent hate groups such as the Ku Klux Klan and Aryan Nations; and eliminate or significantly reduce peonage and involuntary servitude violations, particularly those affecting migrant workers.

Major Objectives:

To expeditiously respond to and cause to be investigated all valid complaints of potential criminal civil rights violations.
To present potentially meritorious incidents to grand juries for investigation and, where warranted, for indictment.
To try cases in which indictments have been returned or informations filed.
To review and authorize criminal civil rights prosecutions proposed by the U.S. Attorneys.
To ensure uniform and effective application of the federal criminal civil rights statutes throughout the country.
To reduce the amount of time required to review and make prosecutive determinations on matters investigated by making decisions not to prosecute within three months of receiving a complaint; initiate prosecution on all meritorious cases within six months of receiving a complaint.
To initiate prosecution of members of organized hate groups such as the Ku Klux Klan and Aryan Nations and other persons involved in incidents of racial violence in violation of federal criminal civil rights statutes.
To continue the outreach program dealing with the victimization of migrant workers in violation of the involuntary servitude and peonage statutes.

Base Program Description: This program is responsible for the investigation and prosecution of violations of the federal criminal civil rights statutes which were designed to preserve personal liberties. Two of these laws (18 U.S.C. 241 and 18 U.S.C. 242), passed during Reconstruction, prohibit persons from acting under color of law or in conspiracy with others to interfere with an individual's federally protected rights. Other statutes enforced prohibit the holding of individuals in peonage (18 U.S.C. 1581) or involuntary servitude (18 U.S.C. 1584). The program is also authorized to enforce provisions of the 1968 Civil Rights Act (18 U.S.C. 245 and 42 U.S.C. 3631) which prohibit the use of force or threats of force to injure or intimidate any person involved in the exercise of certain federal rights and activities. Some 30 additional criminal civil rights statutes fall within the program's jurisdiction but are not frequently used.

The program receives approximately 9,000 complaints and inquiries each year. Of these, about 3,400 are fully investigated by the Federal Bureau of Investigation (FBI). Line attorneys and paralegals are responsible for reviewing the complaints and investigations and making recommendations for further action. The results of approximately 50 to 55 investigations are presented to federal grand juries each year for additional investigation or indictment, and approximately 30 cases are tried annually. Because of the seriousness of criminal civil rights violations and the need in a free society to bring sanctions to bear when such violations occur in order to maintain public confidence in our system of justice, an effort is made, consistent with available resources, to prosecute all meritorious cases in which sufficient evidence exists to establish a violation.

The Division continues to encourage the involvement of United States Attorneys in civil rights prosecutions. Experience demonstrates that prosecutions handled jointly by this program and United States Attorneys' staffs have a greater likelihood of success. Program attorneys are familiar with the substantive issues that repeatedly arise while the Assistant U.S. Attorneys are familiar with local court practices. Coordination is also required with investigative agencies, primarily the FBI but also with the Immigration and Naturalization Service (INS) and the Department of Labor.

At this level of funding, the program will achieve success in accomplishing its objectives. Resources will be available to continue the encouragement of U.S. Attorneys to take a more active role in the prosecution of criminal civil rights violations and to ensure uniform application of the statutes throughout the country. Emphasis will again be placed on prosecutions against members of organized hate groups and other persons involved in incidents of racial violence in conformance with the Department's efforts to combat violent crime. The outreach program to deal with the victimization of migrant workers will also continue.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Complaints Received	9,044	7,546	7,546	7,546
Complaints Reviewed	8,735	7,869	7,869	7,869
Matters Investigated	2,970	2,792	2,792	2,792
Matters Terminated	3,142	2,924	2,924	3,070
Average time to close without prosecution (in months)	7.3	2.9	2.9	2.8
Average time to file a case	13.2	9.7	9.7	9.2

During the year, the program reviewed over 7,500 complaints alleging criminal interference with civil rights; approximately 2,700 of these complaints were investigated by the Federal Bureau of Investigation. The results of 49 investigations were presented to federal grand juries; 35 indictments were returned and 14 informations were filed charging a total of 112 defendants, including 70 law enforcement officers. Trials were held in 34 cases, resulting in conviction for 55 defendants and acquittal for 20 defendants. In addition, the 41 defendants who pled guilty to violations of criminal civil rights statutes led to a success rate of 82 percent.

Highlights of the continued emphasis on the prosecution of incidents of racial violence include: a three-year grand jury investigation in the Western District of North Carolina into crossburnings and shootings by members of the White Knights of

liberty of the Ku Klux Klan were concluded. Of 21 individuals charged during the investigation, 19 were ultimately convicted, including three statewide leaders of the Ku Klux Klan. Sentences included prison terms of up to seven years and a total of $17,000 in fines. In Philadelphia, four defendants including a juvenile, were convicted of destroying by fire the home of a black couple who had moved into a white neighborhood in order to intimidate that family and other black families who may have wished to move into the neighborhood. The defendants received prison terms and were ordered to pay restitution to the family. In North Carolina, a white state prison guard, a member of the Carolina Knights of the Ku Klux Klan, pled guilty to interfering with the employment rights of a black correctional officer, who had filed a grievance for his unsuccessful attempt for a promotion at the correctional facility. The defendant had sought to intimidate the victim by burning a cross near his home.

Investigations into complaints alleging misconduct by law enforcement officials continued to account for much of the program's activity resulting, in one action, in the conviction of a New Jersey State Police trooper of the unlawfull beating a shackled prisoner, resulting in the prisoner's death. The trooper was also convicted, along with another state trooper, of conspiracy to obstruct justice by covering up evidence of the fatal beating and of committing perjury before the grand jury. Previous attempts at local prosecution of this incident had been unsuccessful. A direct result of the program's continued emphasis to improve the federal investigative and prosecutive efforts in curtailing police misconduct in Puerto Rico, five police officers were convicted and two others pled guilty in two cases. In both cases, victims died as a result of the unlawful acts of the officers. In North Carolina, the superintendent and five officers were indicted for the severe beatings of two inmates. Four of the defendants pled guilty prior to trial and the superintendent was convicted of conspiracy at trial. The remaining defendant, the assistant superintendent of the prison, was also convicted of perjury at a separate trial. An indictment charging 13 prison officials and guards of the Texas Department of Corrections with conspiring to cover up their involvement in the beating of an inmate, who suffered permanent brain damage, resulted in two guilty pleas while others await trial.

Cases involving violations of the peonage and involuntary servitude statutes include a trial involving the smuggling of Indonesian laborers into the United States to perform domestic work resulting in two convictions after a month long trial. A guilty plea was subsequently obtained from a third defendant who had been a fugitive. Two of these defendants were fined a total of $21,000 and ordered to pay restitution to the victims. Two wealthy homeowners, who recruited illegal aliens to perform domestic work in their homes in California, Nevada and Hawaii and who misled the victims as to their working condition and physically abused them, were tried and convicted of violations of the laws against involuntary servitude, conspiracy, transportation of illegal aliens, and escape from federal custody. In another involuntary servitude case, eight members of a religious cult called the House of Judah, including its leader who was called "the Prophet," were indicted, tried and convicted for conspiring to hold children in involuntary servitude and for the actual enslavement of one child. One child was severely beaten with an ax handle by several cult members and later died from the injuries he sustained. Eleven other children were found to have been physically abused, one child with facial burns from an iron.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Special litigation.....	57	38	$2,451	35	36	$2,620	35	36	$2,740	...	...	$120

Long-Range Goal: To establish and protect constitutional rights of institutionalized persons, mentally and physically handicapped persons of all ages, and persons confined in state and local prisons and jails and enforce federal laws prohibiting racial discrimination in all public facilities such as prisons and jails.

Major Objectives:

To investigate, upon reasonable cause, the conditions of confinement and treatment provided to persons in publicly operated institutions, and to obtain voluntary compliance in correcting any constitutional deficiencies or other violations of federal law.
As a last resort, to initiate civil actions on behalf of persons confined to publicly operated institutions wherein egregious conditions deprive them of their constitutional or federal statutory rights.
To initiate civil actions designed to remove racial discrimination from public facilities.
To participate as plaintiff-intervenor in litigation to establish constitutionally acceptable conditions of confinement, care and treatment of institutionalized populations.
To initiate and participate in litigation to remove discrimination against handicapped persons.
To ensure compliance with judgments or consent decrees obtained in the cases handled by the program.

Base Program Description: This program is responsible for the enforcement of the Civil Rights of Institutionalized Persons Act (CRIPA) which was enacted in May 1980. The Act authorizes the Attorney General to investigate and initiate civil actions on behalf of persons confined to publicly operated institutions wherein flagrant conditions deprive them of their constitutional rights. Such actions may be initiated only after appropriate state or local officials have been afforded a reasonable opportunity to voluntarily remedy unlawful conditions of confinement and have failed to do so. Persons involved include inmates of state prisons and local jails; clients of publicly operated mental health, mental retardation and juvenile detention centers; and, residents of nursing homes, facilities for the physically handicapped and chronically ill. The program also has the responsibility of enforcing compliance with federal laws which prohibit discrimination in public facilities on the basis of a person's race, color, sex, religion or national origin.

The activities of the program are based on the Civil Rights of Institutionalized Persons Act, 42 U.S.C. 1997, Titles III and IX of the Civil Rights Act of 1964, Presidential Directives of November 16, 1971, September 8, 1974, October 11, 1974, April 28, 1976, and November 2, 1980; the Rehabilitation Act of 1973, as amended; the Education of All Handicapped Children Act of 1975, and other legislation enacted which provides funding for programs for the mentally and/or physically disabled. In addition, the Attorney General has independent pattern and practice authority to file suit where a public facility is receiving revenue sharing funds and is shown to be discriminating on the basis of race, color, religion, sex or national origin.

Under requirements of the CRIPA, the Division must follow a specific enforcement format. When the program receives plausible information that the Act is being violated, it is required to officially inform the Governor or other public officials that an investigation will commence. Investigative techniques include evaluation of the institution's physical plant, programs and practices by expert consultants, review of institutional documents, interviews of persons with knowledge of the institution's operations and analysis of state plans concerning budgetary and other resources. If the results of the investigation indicate an ongoing violation of the Act, program attorneys are required to notify state officials, prior to the filing of a civil action, of the specific factors which may violate the Act and the minimum measures which must be taken to remedy the

illegal conditions. After certification by the Attorney General that appropriate state officials have been encouraged to correct deficiencies and have failed to do so, a civil action may be initiated under this Act.

When suit has already been initiated by private parties seeking redress for unconstitutional conditions, the Division may participate as plaintiff-intervenor or as amicus curiae in litigation to establish constitutionally acceptable conditions within the institution. Where an investigation indicates that a public facility practices racial discrimination in violation of Title III of the Civil Rights Act of 1964, the program staff initiates civil suit. The program initiates and participates in litigation which has as its purpose the eradication of discrimination directed against handicapped persons as mandated by Section 504 of the Rehabilitation Act of 1973, as amended.

The program monitors compliance with judgments or consent decrees previously entered in the cases on its docket by conducting on-site inspections, reviewing court-mandated reports, by authorizing FBI investigations and, in appropriate cases, by continuing contact with court-appointed monitors responsible for assuring compliance. It presently coordinates its activities with a number of federal organizations including: Federal Prison System; U.S. Marshals Service; Office of Civil Rights, Department of Health and Human Services (HHS); Office of Human Development Services, HHS; Office of Special Education and Rehabilitative Services, Department of Education (ED); President's Committee on Mental Retardation; Office of Revenue Sharing (ORS), Treasury; Office of Justice Programs; and, the National Center for Child Abuse and Neglect. The Division also exchanges information with various advocacy organizations and the American Bar Association's Commission on the Mentally Disabled.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Cases Filed	5	7	16	32
Cases Closed	1	2	8	29
Cases Pending (end of year)	33	43	51	54
Matters/Complaints	1,482	[illegible]	1,200	1,300
Matters/General	200	131	140	200
Congressional/White House Referrals	192	39	50	50
Major Institutional Investigations Initiated	12	21	21	31
Major Institutional Investigations Closed	10	6	8	30
Major Institutional Investigations Pending (end of year)	26	41	54	55

In 1986, the program took action in 21 cases, including seven cases filed pursuant to the Civil Rights of Institutionalized Persons Act. Also, 21 new investigations were initiated under the Act. Four investigations were commenced at mental health institutions; five were initiated at mental retardation facilities; one at a nursing home; two at juvenile detention centers; and, nine at adult penal institutions. Enforcement actions include: a move for a preliminary injuction to enjoin the County of Los Angeles from interfering with the Division's investigation and granting us access to the Los Angeles juvenile halls. The court granted our motion and issued a permanent injuction barring the County from imposing state confidentiality laws to control access to the facilities and their records. When attempts by program staff at reaching settlement agreements which

violations of Section 203 of the Act against McKinley County, New Mexico, which was resolved by consent decree; one enforcement action under Section 5 of the Act seeking to enjoin the use of unprecleared at-large elections for two school board seats; and, intervened in one lawsuit to defend the constitutionality of the 1982 Amendments to Section 2 of the Act. The remaining six cases included two where objections interposed under Section 5 of the Act led to declaratory judgment actions against the United States by the State of North Carolina, which is seeking judicial preclearence for the use of staggered terms in multi-member judicial districts; the Brunswick-Glynn County, Georgia, Charter Commission which unsuccessfully sought judicial preclearence of the referendum method for consolidating the city and county governments. The Attorney General was a nominal defendant in two cases where Section 5 was cited in private plaintiffs' complaints. Section 5 also was the subject of two cases in which the Division participated as amicus curiae, one where the court ruled, as the Division urged, that the lawsuit to the City of Franklin, Virginia, to enjoin the impact of our Section 5 objection to three annexations; could only be brought in the District of Columbia; and, the other, where program staff provided to the court Division views on the kind of redistricting plan that would resolve the Section 5 objections that have been interposed to Sunflower County, Mississippi, redistricting plans.

In other litigation during the year, boundary lines for city council districts in Chicago, Illinois, and in Los Angeles, California, were redrawn as the result of program law suits that claimed the lines as originally drawn diluted the voting rights of, respectively, black, and black and Hispanic voters. Special elections were scheduled in both cities to give their residents an opportunity to choose representatives from the new, fairly drawn districts, and, in Chicago the results made a significant difference in the make-up of the city council. The Los Angeles election has not yet been held.

Consent decrees required that single-member district election plans replace at-large methods of election in Darlington County, South Carolina; Wilson County, North Carolina; Chavez County, New Mexico; the Roswell, New Mexico, Independent School District; the City of Demopolis, Alabama; and the City of Bessemer, Alabama, where the decree also required the city to adopt a racially nondiscriminatory annexation policy and to hold annexation referenda in near-by areas of predominantely black population that previously were not permitted to become a part of the city. In Bessemer's first elections after new districts were adopted and surrounding territory was fairly annexed, black persons, who never had won an election for city office, were elected to four of the seven city council seats.

Another racially selective annexation policy was enjoined by the terms of a consent decree in a Section 2 lawsuit against the Town of Indian Head, Maryland. The program successfully opposed racially motivated annexations by the all-white City of Pleasant Grove, Alabama, in a declaratory judgment action by the city before a three-judge court under Section 5 of the majority vote requirement for the election of council members in the City of Barnwell, South Carolina, where the city had not asked for preclearence of these potentially discriminatory practices when it submitted other, related election procedures.

Under the special provisions of the VRA that authorize the Attorney General to assign federal observers to monitor elections to ensure that the right to vote and to have the vote properly counted is not denied during the election process, 431 observer were assigned to cover 11 elections in 17 counties in five states in 1986. Included in this activity were the first ever assignments of federal observers to New York (for the 1986 municipal primary election in the three specially covered New York City counties) and to New Mexico (for the court certified counties of McKinley, Cibola and Sandoval during the 1986 primary election), to monitor compliance with the language minority provisions of the VRA.

In continuing its efforts to assure that jurisdictions' voting and election procedures do not violate the rights of protected classes of voters under federal civil rights laws, the program conducted a survey of the methods of election in the State of Arkansas with regard to Section 2 of the VRA for the councils of 27 counties and 16 cities in which minorities comprise a significant percentage of the populations, and a survey of all 40 specially covered counties in North Carolina to determine whether changes in their method of election and, for the county school boards, changes in their voting constituency have been submitted for preclearance under Section 5 the Act. Violations of federal law that were disclosed by these surveys are being pursued and the program was successful in obtaining the submission of nine previously unprecleared changes made by North Carolina county commissions.

The program continued to maintain contact with the Department of Defense Federal Voting Assistance Program, the Federal Election Commission National Clearinghouse on Election Administration and the Office of Personnel Management to coordinate with and assist the personnel in those agencies who have responsibility for implementing programs relating to statutes enforced by the program.

Program Changes. This request of an additional $280,000 will allow the program to hire nongovernment consultants to perform statistical and computer services to enable it to conduct VRA activities, specifically Section 2 investigations and litigation and Section 5 preclearance and litigation in a manner conducive to settlement pre-suit or by consent decree, allowing for an increase in the program's productivity.

Consultants are retained primarily to assist in formulating large data bases and in analyzing election data to determine the existence and degree of racially polarized voting. The racially polarized voting analysis has become increasingly complex in recent years, as the issue of racial bloc voting has occupied center stage in cases brought under Section 2 of the VRA. The general policy is to evaluate election data before recommending a Section 2 lawsuit. However, inadequate resources have precluded this and the analysis of bloc voting set out in the justification memoranda to file suit is preliminary. The Assistant Attorney General and the U.S. Attorneys have in several instances suggested that a consultant be retained to do the required in-depth analysis before a decision to institute legal proceedings is made. Due to severe budgetary restraints, funds were not available from Division resources to contract for consultant services; therefore, litigation was begun and a Expert Witness was hired to perform the required analysis. In addition, consultants could be exceedingly beneficial in the review of complex preclearance submission under Section 5 of the VRA. They could assist by analyzing election data to determine estimates of potential political participation by minorities. In addition, census data is available by race but election data is not always so maintained. Therefore, much staff time in Section 5 review and litigation is spent developing a workable election data base to permit racial bloc voting analysis and census population data to be used interchangably. Consultants would be invaluable in setting up such data bases. Given the extensive need for consultants in this area, a request for $280,000 is reasonable. Denial of this request would result in a status quo in productivity and the continued filing of cases which may not have required court involvement if consultant services were available.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Employment litigation.....	63	64	$3,625	63	64	$4,090	63	64	$4,490	...	...	$400

Long-Range Goal: To reduce discrimination in employment by state and local governmental units and private federal contractors.

Major Objectives:

To eradicate unlawful employment discrimination.
To develop the legal principles necessary to create a nationwide climate where voluntary compliance with laws and orders against discriminatory employment practices can be achieved.
To monitor and enforce existing court orders to ensure compliance so that the results sought by litigation are obtained.
To enforce, through Division-initiated litigation, Title VII in the public sector.
To issue right-to-sue notices to persons who have filed public sector charges with from the Equal Employment Opportunity Commission (EEOC).
To litigate in both the public and private sectors based on referrals from the EEOC and the Office of Federal Contract Compliance Programs (OFCCP).
To cooperate with attorneys and private litigants by intervening or by participating as amicus curiae in private suits when the Federal Government's position is important to the development of case law.

Base Program Description: This program addresses the problems of discriminatory employment practices of state and local governments and private federal contractors. The failure to remedy discriminatory conduct against those persons will be reflected not only in immediate disadvantages, but also in a perpetuation of the effects of past discriminatory practices.

The program enforces federal laws which prohibit discriminatory employment practices which result in the denial of equal employment opportunities because of race, color, religion, sex, national origin or handicap. Approximately 10 million jobs involved in the public sector and upwards of 30 million jobs in the private sector are subject to Executive Order 11246.

This program investigates and, when necessary, initiates litigation with respect to problems peculiar to employment discrimination. Litigation is used only when negotiation does not result in voluntary compliance. All suits, whether in the public or private sector, seek to remedy all forms of purposeful discrimination and practices having a discriminatory impact such as those that result from the use of unvalidated tests and other selection and promotional practices and standards which have disproportionate adverse impact upon racial, ethnic, and religious minorities and upon females; abuses of managerial discretion; and, discriminatory training systems and programs. Major elements of relief sought include: reformation of seniority and transfer systems, restructuring of lines of promotion, numerical recruitment goals for minorities and females, validation of tests and other selection and promotional practices, elimination or change of other employment practices having unnecessary discriminatory effects and back pay. The Division is currently seeking new and innovative methods to remedy the problem of employment discrimination. Litigation conducted by the program is concluded by consent or litigated decrees. Preparation time for trial has, in some instances, increased dramatically because of resistance to the Division's enforcement efforts by intractable defendants.

The centralization of this effort within this Division provides national coordination of activities among EEOC, OFCCP, the Office of Justice Programs, and the Office of Revenue Sharing.

The program is charged with enforcing the following statutes and Executive Orders:

-- Title VII of the Civil Rights Act of 1964, as amended by the Equal Employment Opportunity Act of 1972, 42 U.S.C. 2000e, et seq.
-- Title IX of the Education Amendments of 1972, 20 U.S.C. 1681, et seq., in matters involving discriminatory employment practices.
-- Title I of the State and Local Fiscal Assistance Act of 1972, as amended by the State and Local Assistance Amendments of 1976, 31 U.S.C. 1221, et seq.
-- Title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended through the Crime Control Act of 1976, 42 U.S.C. 3701, et seq.
-- Executive Order No. 11246, as amended, which prohibits employment discrimination by federal contractors or subcontractors or on federally funded projects.
-- Sections 503 and 504 of the Rehabilitation Act of 1973, 29 U.S.C. 793, et seq.

The degree of this program's success will be measured both by statistical analysis of changes in employment patterns and by a reduction in the number of complaints of discrimination filed with the EEOC and other agencies. Hopefully, the program's litigation effort will have the desired impact on not only those employers and administrative units sued by this Department, but also on other units in the form of the development and meaningful implementation of appropriate affirmative action plans.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Agency Referrals	263	122	225	300
Investigative Matters Received	15	34	20	25
Cases Commenced	9	29	15	25
Cases Terminated	5	6	10	10
Right-to-Sue Notice Requests Received	1,190	1,300	1,300	1,300
Right-to-Sue Notices Issued	1,368	1,471	1,400	1,400
Decrees Enforced	154	147	175	225
Decrees Obtained	11	24	20	25

During the year, the program filed 23 new suits pursuant to Title VII of the Civil Rights Act of 1964, as amended, and other provisions of federal law prohibiting discriminatory employment practices. Twenty-four decrees were obtained in 23 cases. Nineteen of these decrees were in full resolution of cases filed, four decrees and orders were filed in three suits to resolve the remaining issues in suits that had previously been partially resolved, and one order was entered in partial resolution of a motion for supplemental relief. The decrees and orders provided for the payment of over $1,900,000 in back pay to persons identified as having been harmed by the defendants' prior practices. The decrees and orders also provided for priority job offers to such persons, the elimination of unlawfully discriminatory practices, and the enhanced recruitment of the group(s) previously excluded. In another case, a court ruling was obtained holding the use of a promotional fire captain examination, which was developed and administered by a state civil service agency for municipal fire departments in the state, as unlawful and a violation of an earlier decree.

Consistent with the policy of seeking to vindicate rights of individual victims and of supporting efforts of the EEOC to obtain voluntary compliance with Title VII, nine of the new suits filed during the year were based in whole or in part on referrals from that agency which involved allegations of discriminatory practices made by individuals. While these suits are usually small in scope, the cases are designed to enhance the Commission's ability to obtain relief through negotiations with other employers.

During the year, two decrees which were more than four years old were dissolved with program agreement and a third decree of that age was extended with program agreement. Highlights of the program's litigation efforts are: Implementation of a program to eliminate durational residency requirements for application for municipal employment and related practices by Cook County towns. These requirements operate to exclude non-residents from employment with the towns. Because the residents of the towns are all or substantially all white, the requirements operate to exclude all or substantially all black applicants from competing for jobs with the towns. During the year, the program prosecuted an appeal from the district court's denial of our motion for a preliminary injunction on this issue and obtained a favorable appellate ruling. Thirteen additional suits and four motions for summary judgement were filed by the program. Satisfactory decrees were obtained in the Cicero case and in eight of the newly filed cases. The five remaining cases involve: two of which are pending on our motions for summary judgements and, in the alternative, for preliminary injunction; the first suit alleging sexual harassment of female employees by a superior, which was successfully resolved; the entry of a consent decree in a suit alleging systemic discrimination against American Indians by a municipal employer, (The decree calls for $750,000 in back pay and priority job offers to at least 225 American Indians and three non-Indian women with retroactive seniority. Program staff think that this decree provides the most thorough relief and the greatest amount of back pay for American Indians in any employment discrimination case.); and, the entry of a consent decree with a major police department which calls for the development and validation with Division cooperation of an examination for entry level police officer. Other police departments have already joined in this effort which is the Division's first to help fill the void caused by the absence of lawful objective selection devices for entry level police officer.

The program continued to make extensive use of the Division's growing computer resources in the prosecution of suits and in the identification of persons harmed by the discriminatory practices of defendants both in contested litigation and pursuant to consent decrees. For example, the program's adverse impact proof in one major suit has been analyzed from the defendants' own machine readable records; and the data contained in more than 4,000 claims filed in four other cases have been matched by computer against the job openings and the competing candidates who received the jobs.

Program Changes. The request of $400,000 will enable the program to hire nongovernment consultants to perform statistical and computer services to permit the program to conduct Title VII of the Civil Rights Act of 1964 investigations and litigation in a manner conducive to settlement pre-suit or by consent decree, allowing for an increase in the program's productivity.

In pattern and practice cases against state and local governments, the staff often confronts employment selection devices, such as tests, that have an adverse impact on minorities or women. To verify the validity of these tests, industrial psychologists are hired as expert witnesses to examine the tests and any accompanying validity studies performed by the employer to determine whether the tests are job-related as required by Title VII of the Civil Rights Act of 1964. The examination of the validity studies must include analysis and review of the statistical methodology and statistical results presented in these studies to ensure that the methodology is sound and the statistics accurate and complete. Outside personnel skilled in computer programming and statistical analysis, working in coordination with the industrial psychologists, are retained to

perform this statistical work. In pattern and practice cases that allege discriminatory hiring, there are often issues as to the employer's relevant labor market from which applicants should be drawn, percentages of qualified minorities or women in that labor market, numbers and percentages of qualified minorities or women who have applied for work with the employer, and the employer's hiring patterns with respect to minorities and women. Labor economists and/or statisticians hired as expert witnesses, necessitating early filing of suits and providing defendants in cases with the advantage of having access to our evidence prior to trial, must perform extensive statistical studies and, if necessary, the preparation of data bases. This too requires the type of outside personnel used by industrial psychologists. All of these tasks are massive and complex and most have a very tight timeframe. Based on the amount of work involved in these projects, a request of $400,000 is modest. Denial of this request would result in a status quo in productivity and the continued filing of cases which may not have required court involvement if consultant services were available.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Coordination and review.....	39	42	$2,329	39	42	$2,557	39	42	$2,557	...	...	...

Long-Range Goal: To achieve consistent and effective enforcement of various laws and regulations prohibiting discriminatory practices in federal programs and programs receiving federal financial assistance; maximize use of existing federal, state, and local civil rights enforcement resources; and, minimize the costs associated with federal civil rights programs while maintaining the level of responsiveness to citizens who feel that their civil rights have been violated.

Major Objectives:

To maintain continuing oversight and control of all Executive agencies covered by Executive Order 12250.
To maintain a continuing liaison with other legal divisions, the U.S. Attorneys' offices, other programs of the Civil Rights Division, and other federal agencies regarding civil rights litigation.
To review, evaluate, and monitor, on an annual basis, all implementation plans submitted by Executive agencies.
To review those proposed or final agency regulations or substantive amendments to existing regulations which are promulgated under a statute subject to Executive Order 12250.
To provide agencies with guidance in the form of prototype regulations for implementation of Section 504 of the Rehabilitation Act of 1973, as amended, as it concerns federally conducted programs.
To provide staff support to the Assistant Attorney General for Civil Rights as Chairman of the Interagency Coordinating Council (ICC) and as a member of the Architectural and Transportation Barriers Compliance Board (ATBCB).
To provide assistance to Department of Justice (DOJ) organizations in the development and implementation of a Section 504 regulation covering the Department's federally conducted programs and activities.

Base Program Description: This program ensures that all federal Executive agencies effectively and consistently implement Title VI of the 1964 Civil Rights Act, Title IX of the Education Amendments of 1972, Section 504 of the Rehabilitation Act of 1973, and the nondiscrimination provisions of other federal grant statutes prohibiting discrimination on the basis of race, color, national origin, handicap, religion or sex. Under Executive Order 12250, the program undertakes a diverse array of

regulatory and administrative initiatives. The program reviews all new civil rights regulations for consistency, adequacy, and clarity; assists agencies on new civil rights plans; offers agencies training and technical assistance to improve their civil rights enforcement procedures and programs; and, promotes interagency information sharing and cooperation.

In addition, the program provides litigation support to the Office of the Solicitor General, the Civil Division, and other federal agencies in various lawsuits. This assistance takes many forms including providing advice on the strategy of a case or on particular motions or briefs, writing pleadings and affidavits, preparing court requested status reports, answering interrogatories, and furnishing testimony. Finally, the program provides staff support to the Assistant Attorney General for his roles on the ICC and on the ATBCB.

At this level of funding, this program will be able to adequately address the responsibilities assigned to the Attorney General by Executive Order 12250. The program will be able to handle the growing demand from agencies for legal guidance and continue to provide staff support to the ICC and ATBCB. In addition, some discretionary objectives (e.g., provision of technical assistance, training sessions and conducting in-depth reviews of agency programs) will be possible. Also, the program will be able to assist the DOJ organizations in implementing its Section 504 federally conducted regulation.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Non-Regulatory Documents Reviewed	547	327	437	454

Technical Assistance Provided	945	850	897	933
Regulations Reviewed	59	93	76	79

In 1986, the program continued to assist federal agencies in developing and publishing regulations implementing the amendments to Section 504, which prohibit discrimination on the basis of handicap in the programs and activities conducted by the agencies.

Comments on proposal or final regulations of 12 agencies, including (1) a final Section 504 regulation published by the Federal Deposit Insurance Corporation, and (2) publication by the Farm Credit Administration and the Panama Canal Commission of Notices of Proposed Rulemaking. As a result of prior arrangements made with the Office of the Federal Register to coordinate joint publications of proposed Section 504 regulations, the first and second joint publication of proposed

regulations for 39 agencies were published. To carry out the requirements of the DOJ's Section 504 regulations, the program has continued working with the component agencies within the Department in the writing of a transition plan and in the conducting of self-evaluation of compliance with Section 504. Additionally, the program continued to provide staff support to the ATBCB and the Assistant Attorney General for Civil Rights, in his capacity as Chairperson of the ICC.

Under Executive Order 12250, the program reviews the civil rights programs of covered agencies in order to identify programs, provide for technical assistance needs, and to assess compliance with existing Department standards and policies. In its clearinghouse role, the program handled a variety of citizen, agency and congressional inquiries and complaints, including referring matters to the appropriate agencies. The program also reviewed the civil rights implementation plans and Office of Management and Budget Circular A-11 responses of 25 agencies. Finally, the program reviewed and commented upon numerous revisions or amendments to agencies' regulations that prohibit discrimination in programs and activities receiving federal financial assistance.

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Housing and civil enforcement.....	33	34	$1,973	33	34	$2,062	33	34	$2,062	...	...	...

Long-Range Goal: To eliminate a significant portion of the illegal discrimination on the basis of race, color, sex, religion or national origin in housing opportunities and credit transactions related thereto; secure general compliance with the Equal Credit Opportunity Act (ECOA) and its implementing regulations which make it illegal for a creditor to deny credit on the basis of race, color, national origin, sex, marital status, religion or age; secure general compliance with federal statutes requiring nondiscrimination on the basis of race, color, religion or national origin in the provision of municipal services and coordinate the U.S. Attorneys' enforcement of federal laws prohibiting discrimination in places of public accommodation on the basis of race, color, religion or national origin.

Major Objectives:

To investigate compliance with and initiate litigation to enforce the Fair Housing Act and the ECOA, and bring such litigation to successful completion.
To initiate litigation, upon referral from the Department of Housing and Urban Development (HUD), to remedy local government bodies' noncompliance with their housing-related obligations under the 1974 Housing and Community Development Act.
To monitor final court orders resulting from suits under the Fair Housing Act and the ECOA, and move for contempt of court or other relief where the facts warrant.
To communicate equal housing and equal credit opportunity information to the public by liaison with federal, state and local enforcement agencies.
To investigate compliance with and initiate litigation to enforce the provisions of the Revenue Sharing Act, 31 U.S.C. 1242, and the 1974 Housing and Community Development Act, 42 U.S.C. 5309, relating to municipal services.
To direct and generally supervise the U.S. Attorneys' in the enforcement of Title II of the Civil Rights Act of 1964 (Public Accommodations) and, in appropriate circumstances, initiate lawsuits under this statute.

Base Program Description: In November 1985, the Housing and Civil Enforcement Program was established to carry out the Division's enforcement program related to the Fair Housing Act, the 1974 Housing and Community Development Act, the ECOA, Title II (public accommodations) of the Civil Rights Act of 1964 and those statutes prohibiting discrimination in the provision of municipal services under federally funded programs. The program has placed increased emphasis on the Division's Fair Housing Act enforcement activity and on working with HUD to identify and bring to court persons and corporations operating in violation of that statute. It also provides any necessary support for legislative initiatives relating to fair housing which the administration may propose or support.

The major objectives of the program are accomplished with assistance from local U.S. Attorney offices and the Federal Bureau of Investigation. The housing and credit program activities must be coordinated with HUD, the Federal Reserve Board, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Federal Home Loan Bank Board, the Federal Trade Commission, and the National Credit Union Administration. HUD's responsibilities under the Fair Housing Act include the investigation and conciliation of individual complaints alleging prohibited discrimination. HUD also refers certain matters to this program that it thinks merit consideration under the Division's pattern and practice jurisdiction. Coordination with HUD is thus required so that a sound and consistent policy may be developed in the interpretation of the Fair Housing Act and in the types of relief that are appropriate for victims of prohibited discrimination. Coordination with the agencies responsible for overseeing the operations of creditors is necessary to obtain information about patterns and practices of discrimination and to avoid duplication of enforcement effort. Coordination is further required with those state and local civil rights agencies that have jurisdiction under local law to seek to prevent the types of prohibited discrimination covered by federal law. Current and planned mechanisms include an exchange of information among program staff at HUD and other agencies that have Fair Housing Act and ECOA responsibilities.

At the proposed level of funding the program will be able to continue an effective litigation program to enforce the Fair Housing Act and the ECOA. The program will initiate a significant number of standard suits and a few of the more complex cases involving racial redlining by lenders or actions against municipalities for housing or services violations. The program will conduct investigations of municipalities for possible action relating to services and bring one or two cases pursuant to the revenue sharing statute.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Cases/Matters Received	250	204	250	250
Investigations Conducted	180	184	185	210
Matters Closed	200	155	120	120
Cases Filed	25	20	25	30
Cases Closed	10	12	15	19
Judgments/Decrees Obtained	21	17	20	22

Program staff represent the United States in suits alleging a pattern or practice of violations of the Fair Housing Act. Suits involve such prohibited actions as refusal to sell or rent a dwelling to a person on the basis of race, color, national

origin, sex or religion; zoning and other exclusionary practices, such as the withdrawal from programs intended to provide housing for minority persons because of the race of the potential residents; and, failure to count the income of women on the same basis as men in determining whether to make housing available to an applicant. During 1986, the program filed 12 Fair Housing Act cases and successfully negotiated consent decrees in 11 suits. The cases initiated include suits against apartment owners, rental agencies, real estate firms, resort developments and the publishers of a state-wide daily newspaper. One suit involved a race discrimination claim against a 1,200 unit apartment complex and another sought to undo the racial preference scheme of a public housing authority. A significant settlement was reached with a Chicago suburb that had acted to exclude blacks from living in town.

Since the passage of the ECOA, program personnel have worked closely with federal regulatory agencies and have filed significant suits challenging the nonhousing lending practices of banks, credit unions, small loan companies and retail creditors. Similar suits have been brought under both the ECOA and the Fair Housing Act to correct the unlawful practices of mortgage lenders. During 1986, the program commenced four cases under the ECOA and resolved, through consent decrees, four suits. Two of the cases involved creditors with offices in a number of California cities: a thrift institution with 17 offices and a lender with 72 offices. Another case alleged that a North Dakota bank, in making loans, discriminated against Indians living on a nearby reservation.

After responsibility for coordinating the Title II enforcement efforts of the U.S. Attorney Offices was transferred to the program in 1985, additional steps were taken to uncover violations in this area. As a result, six new cases were filed in 1986 alleging Title II violations, four by the Section and two by U.S. Attorneys, and six were resolved through decrees. In three of the cases, nightclubs were accused of discriminating against blacks by refusing them admittance or service or by imposing different terms or conditions upon admittance or service than were imposed on white patrons. Two other cases involved swim clubs which allegedly discriminated against blacks by denying them admission or membership on the same conditions admission or membership was made available to whites.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Educational opportunities.....	33	33	$1,902	31	31	$2,033	51	31	2,033	...	...	...

Long-Range Goal: To eliminate segregation in districts formerly operating dual school systems and reduce, in substantial measure, the need for court supervision of public elementary and secondary school desegregation in these districts; make substantial progress in eliminating unlawful segregation and discrimination in public schools in districts where there is no history of a statutorily required dual system; eliminate continuing denials of equal educational opportunities in public school systems; eliminate discrimination in and/or denial of educational opportunities to Native Americans; eliminate the vestiges of unlawful, racially dual systems of higher education; and, assist the Department of Education (ED) in enforcing assurance of compliance with civil rights laws, such as Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973, as amended.

Major Objectives:

To initiate, or participate in, litigation designed to bring about the orderly desegregation of schools pursuant to Title IV of the 1964 Civil Rights Act and the Equal Educational Opportunities Act of 1974.
To seek supplemental relief designed to eliminate the vestiges of racially dual school systems and to achieve compliance with constitutional requirements. Such relief in southern school districts will lead to the elimination of the need for judicial supervision of many of these school districts.
To participate in litigation, involving educational institutions, designed to eliminate denial of equal protection of the laws on account of sex.
To file lawsuits, upon referral from ED, to enforce nondiscrimination assurances made by educational institutions receiving federal funds.
To defend ED against court challenges to its authority to enforce civil rights assurances by federal recipients through the administrative process.
To initiate litigation to secure equal educational opportunities for students in public school systems and educational institutions receiving federal financial assistance without regard to race, color, national origin or sex.

Base Program Description: The major objectives of the program are accomplished with assistance from local U.S. Attorney's offices and the Federal Bureau of Investigation. The work of the program regarding school desegregtion requires coordination with the Office for Civil Rights (OCR), ED. In defensive cases, coordination includes securing litigation reports from the client agency, joint planning of litigation strategy, mutual review of pleadings and other papers, and supervision of agency personnel with respect to the preparation of such cases for trial.

The program devotes a significant amount of resources to a project of reviewing longstanding school cases to determine those school districts which have fully complied with court orders issued against them and therefore should be released from further court supervision. Finally, the program implements a compliance monitoring sub-unit which is responsible for monitoring defendants' compliance with outstanding court orders. Coordination with the Civil Division is necessary from time to time to ensure uniformity in defensive cases handled by both divisions. When education matters might be referred to the program, alvance planning with OCR is undertaken to ensure that cases referred are worthy of litigation. Direct and ongoing coordination with OCR is also necessary to ensure nonduplication of investigative efforts since complaints are frequently filed with the Division and OCR simultaneously.

Program resources will be expended primarily to litigate existing cases and, when necessary, to move for supplemental relief in cases previously decided. Other activities will be limited because higher education cases place such heavy demands on resources. However, the program will continue to institute cases to eliminate denials of equal educational opportunities. As resources permit, field surveys and investigations will be conducted in the expectation of generating new suits and/or enforcement motions in existing cases and the project of closing old school cases will continue.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

74-166 O—87—19

Item	1985	1986	Estimates 1987	1988
Cases/Matters Received	306	290	300	350
Investigations Conducted	292	290	300	325
Matters Closed	256	200	280	300
Cases Filed	2	8	12	15
Cases Closed	...	50	60	74
Defensive Cases in Progress	4	5	5	5
Judgments/Decrees Obtained	36	30	35	40

Significant actions during the year include an order entered by the court finding the State of Alabama liable for continuing racial vestiges in its public system of higher education. Four Alabama public institutions, which opted to sign consent decrees rather than litigate the issues, completed their first year under those decrees and reported some very positive results. One of the most significant accomplishments of the program was the final resolution of the Yonkers, New York, housing and school case, where the court entered a 600 page opinion finding the defendants guilty of racial discrimination in the areas of housing and schools; subsequently, the court approved remedial plans covering both areas. A lawsuit was filed against Oktibbeha County, Mississippi, alleging that the school system is engaging in discriminatory practices with respect to students and teachers. A suit initiated against Richland Parish, Louisiana, was resolved following extensive negotiations. The settlement resolves student assignments, hiring and equal educational issues. A third suit was filed, pursuant to Section 504 of the Rehabilitation Act of 1973, against the University of Alabama at Birmingham, following the breakdown of presuit negotiations.

In addition, the program significantly increased its expenditure of resources in defending ED in several suits. Fort Wayne, Indiana, school officials sued the ED in federal district court in an attempt to stop the Department from proceeding with an administrative proceeding against Fort Wayne schools. The Justice Department was successful in obtaining a dismissal of the suit and allowing the administrative proceeding to continue.

In another defensive suit, ED was successfully defended in a suit filed by Morris County (New Jersey) Junior College, and again obtained a dismissal of the case. A longstanding defensive case involving the Cincinnati, Ohio, school district's entitlement to Emergency School Aid Act funds was resolved; the Court found that the school district was entitled to receive funds previously withheld by the then Department of Health, Education and Welfare.

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration	54	66	$5,524	54	66	$3,911	54	66	$3,911	...	...	...

Long-range Goal: To reduce the incidence of illegal discrimination in the nation through provision of guidance and definition of the Civil Rights Division's mission and priorities and provide to the public such access to Division records as is

permissible under controlling law; provide to the enforcement and regulatory activities of the Division all the necessary executive direction, administrative support, training, and operational support required to enable the programs to substantially reduce discrimination in all subject areas enforced; and, improve and maintain more cost-effective systems support and equipment to allow increased efficiency and work per employee.

Major Objectives:

To coordinate the Division's enforcement activities appropriately with related activities of other components of the Department and other enforcement agencies.
To participate effectively in Departmental, Executive Branch and government-wide efforts to clarify or strengthen jurisdiction and authority and to establish or improve policies and procedures which govern litigation, administrative enforcement and program operation.
To evaluate policies, procedures and systems; anticipate the workload, as well as resource and time expenditures of the programs; and, to develop and implement plans for changes which would render them more efficient, effective and responsive to constituent concerns.
To establish and maintain relationships with public interest groups, members of Congress and other constituent representatives which permit constituent concerns to be communicated to the Division and Division activities to be explained to constituents' representatives.
To answer Freedom of Information Act (FOIA) requests within 10 days and Privacy Act (PA) requests within 20 days; minimize the number of appeals from denials of records requests by adhering to a standard of maximum disclosure permissible under controlling law; and, assist the Civil Division and U.S. Attorneys defending the Department in litigation arising from the denials of FOIA requests and out of cases and matters of historic interest on which the Department file is closed.
To provide cost-effective and responsive management and automation systems capabilities to address management, administrative and litigative requirements.
To review, analyze and respond (on behalf of the Assistant Attorney General) to letters, memoranda and other communications directed to the Division by the White House, Congress, other federal departments, private corporations and citizens; and issue Criminal Non-prosecution Notices to government and private sector organizations and to citizens as appropriate.
To provide all of the general administrative support necessary to enable Division personnel to enforce federal civil rights laws, including the following administrative activities: budget formulation and execution; personnel services and training; outside contracts and procurement; mail distribution; space management; supply, equipment and reproduction services; and, other support services not specifically defined in other programs.

Base Program Description: The first four objectives reflect the direct responsibilities of the Assistant Attorney General for Civil Rights, the Division's three Deputy Assistant Attorneys General, the Executive Officer and their immediate staffs. As a rule, supervisory responsibility over matters involving investigative and litigative strategy, relations with the FBI, and preclearance of changes in localities' voting practices and procedures is divided among two of the Deputy Assistant Attorneys General for action or oversight; matters involving long-range program planning and evaluation or relations with U.S. Attorneys, other components of the Department, other agencies, the Congress and some public interest groups are generally assigned to the third Deputy Assistant Attorney General; and, matters involving finance, personnel, and support services are assigned to the Executive Officer who is the manager of the Administrative Management Unit of the Program.

The Assistant Attorney General also represents the Attorney General on interagency councils concerned with civil rights issues. In that connection, he serves as chair of the Interagency Coordinating Council established by Section 507 of the Rehabilitation Act of 1973, as amended, and as a member of the Architectural and Transportation Barriers Compliance Board established by Section 502 of that Act. The Assistant Attorney General personally approves case filings, interventions and amicus participations, major investigative undertakings, major enforcement motions, novel legal positions, major consent decrees, and closings of investigations of death cases. Personnel matters are considered jointly with the Deputies or are assigned on an ad hoc basis.

The fifth objective is assigned to the FOIA/PA Unit, which reports to a Deputy Assistant Attorney General on legal matters and to the Executive Officer on operational matters. The Executive Direction and Control Unit of the program is organized to handle responsibilities which cut across the responsibilities of all of the other programs of the Division. Through this structure, the Division is able to use consistent standards and procedures in responding to FOIA/PA requests, to ensure that the most sensitive, complex or massive cases are handled by the most senior trial attorneys, and to weigh and balance personnel, resource and support needs of the Division's programs. Coordination and interaction with other components of the Department, other agencies, the Congress and public interest groups are handled either by Division officials directly or are delegated to personnel in other programs and reported to Division officials to ensure consistency and effective coordination on program and operational issues.

The remaining objectives are handled by the Administrative Management Unit of this program. The administrative and training functions are conducted through a centralized operation rather than by having individual programs furnish their own services. This avoids position duplication, permits flexibility for the use of resources, and provides greater management control.

At this level of funding, the staff that provides planning, evaluation, direction and control initiatives; coordination of other offices; participation in policy groups; maintaining liaison with constituent representatives; and, administrative and operational support will perform at an effective level. The FOIA/PA Unit will be able to handle approximately 40 percent of the FOIA/PA requests pending and received.

The Division remains committed to the most effective use of its Automated Data Processing (ADP) systems as a means of developing and implementing systems which will enhance the productivity of the entire staff. Management and other key personnel have completed specially designed computer courses and have become familiarized with the innovative litigation systems capable of being developed within each program. In keeping with the trend toward decentralized information systems, programs are now able to meet their own particular needs with the introduction of the personal computer. The Division's plans for automation were delayed due to insufficient resources. Complaints from attorneys required the reprogramming of funds originally slated for other projects to enable the Division to expand decentralization and thereby increase its litigation support systems. Division attorneys must have litigative systems at their disposal which will enable them to deal with opponents who have access to the latest state-of-the-art technology for litigative purposes. The implementation of AMICUS II (see Accomplishments and Workload) will supply the information support required by Division personnel.

Accomplishments and Workload: The accomplishments of this program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Legislative Comment and Testimony	60	60	70	70

Litigation Support Reports	675	825	900	1,150

There is no meaningful way by which the workload of program and operational planning, direction, control and evaluation activities can be measured. These management activities are by nature non-quantifiable and are best measured by the performance of the other programs which are managed by this one. However, the Division is developing a Work Measurement System within AMICUS II which will assist Division managers in measuring, in a more efficient statistical fashion, the inputs, outputs and performance of the other programs, as well as the resources required by each program. The system will be in direct support of the Department's case management system.

The program has several direct mission responsibilities in the law enforcement area which are in addition to the usual support activities. These include the direct handling of thousands of citizen complaints and requests for information concerning their rights and the handling of Criminal Non-prosecution Notices. Correspondence received has included requests involving the Civil Rights Restoration Act of 1986, status of affirmative action legislation pending before Congress (Executive Order No. 11246) and the Vincent Chin case.

A major goal for the Administrative Management Unit of the program continues to be increasing productivity within the Division through the development and use of modern information technology. The focus of this initiative is: (1) the continued acquisition of microcomputers coupled with the elimination of less efficient dedicated word processors; and, (2) the adoption and expansion of networked office automation combined with the phasing out of the Division's seven-year-old

minicomputer. The Division has been using approximately 81 microcomputers for a variety of purposes ranging from word and data processing to legal research and litigation support. The word processing package used on microcomputers is superior to the outmoded dedicated word processors and access by attorneys and paralegals has improved the quality of the Division's work product and the time required to complete assignments. Desktop access to legal databases such as JURIS, LEXIS and WESTLAW has enabled lawyers and others to rededicate their time to more productive activities. The use of automated databases for docketing, scheduling, record-keeping and direct litigation support has made the Division more efficient and placed its most essential information at the fingertips of its personnel.

In the last quarter of the 1986, the Division established a prototype network office automation system, AMICUS II, developed by the Civil Division and used by other divisions in the Department. Preliminary results of the Division's 64 users, combined with evaluations elsewhere in the Department, show significant productivity improvements over dedicated word processors as well as benefits over stand-alone microcomputers derived from networked communications and document transmission. In a fully configured AMICUS II environment, operating with a mixture of microcomputers and non-intelligent terminals, the Division expects a productivity gain in the range of twelve to eighteen percent.

When the program began negotiating a contract with another company for less expensive copying equipment, the current contractor lowered its prices, provided three months of free supplies and an upgrade on one copier at no cost. Additionally, the program replaced two copiers with one that would accommodate the workload of two programs within the Division. These efforts resulted in a cost savings of $56,136.

To improve the efficiency and effectiveness of the Records Management Unit and as a result of A-76 staffing reductions, the program is currently in the process of contracting these services to a private source. Three contract employees will be retained to provide records management support on a full-time basis. Assessments of contracts will be conducted on a recurring basis. Emphasis will be placed on contracting out other administrative functions in accordance with the Office of Management and Budget's Circular A-123.

Long Range Goal. To stem the growth of international crime by providing efficient communications and exchange of information among the National Central Bureaus of INTERPOL member countries and the INTERPOL General Secretariat (headquarters), as well as the law enforcement agencies within the United States.

Major Objectives

1. To represent the United States as the U. S. member of INTERPOL.

2. To provide timely responses to requests for information from domestic and international law enforcement agencies and other appropriate organizations, institutions, and individuals, in accordance with the INTERPOL Constitution and Department of Justice regulations.

3. To identify and analyze patterns and trends in international criminal activities.

4. To support INTERPOL initiatives to combat international terrorism, such as establishing guidelines to encourage and enhance police cooperation and the creation of a specialized anti-terrorism group at the General Secretariat.

5. To coordinate with other Federal law enforcement agencies programs addressing particular areas of international crime, e.g., drug trafficking, terrorism, financial crime and fraud, international fugitives and border protection operations to maximize resources and prevent program duplication.

6. To ensure the effectiveness of INTERPOL through improvements in its information technology systems capabilities and incorporation of all INTERPOL member countries into its telecommunications network.

7. To solidify as an institution the INTERPOL-USNCB and to increase awareness of its functions in combatting international crime to make it a truly effective law enforcement tool, responsive to the needs of the domestic and international law enforcement communities.

Base Program Description. The INTERPOL-USNCB is the United States' representative to the International Criminal Police Organization (INTERPOL). Created in 1923 to promote mutual assistance among the European community, the organization has grown from less than ten members to a worldwide consortium of 142 countries. A General Secretariat headquartered in St. Cloud, France, serves as INTERPOL's administrator, and each member country maintains a National Central Bureau (NCB) to act as its INTERPOL liaison within the guidelines of its own national laws and the INTERPOL Constitution.

INTERPOL is governed by a General Assembly of delegates from each member country that convenes annually to formulate policies and initiatives addressing international crime. Each participating member country has one vote regardless of size or financial contribution to the organization.

The INTERPOL-USNCB maintains telecommunications channels with more than 20,000 domestic law enforcement agencies, the NCBs of the other 141 INTERPOL member countries, and the INTERPOL General Secretariat through such means as the National Law Enforcement Telecommunications Systems (NLETS), the INTERPOL radio network centralized in INTERPOL headquarters, telex/cable facility for contacting INTERPOL member countries not connected to the centralized radio network, as well as photofacsimile equipment for international transmission of photographs, fingerprint records, and documents. These capabilities are essential for responding to emergency criminal situations, court proceedings, border protection operations, or prevention of release or flight of international fugitives.

Requests for information received by the USNCB cover a broad range of criminal offenses including crimes of murder, robbery, large-scale narcotics violations, financial fraud, off-shore banking, and counterfeit investigations, as well as the location and apprehension of international fugitives, often involving extradition. Information is also requested for criminal history backgrounds, license checks and humanitarian efforts. Foreign and domestic police organizations use INTERPOL-USNCB resources to trace weapons or locate witnesses. Such requests are representative of the range of investigations with which this organization is involved.

Investigative functions are maintained at INTERPOL-USNCB through the collaborative efforts of 13 participating Federal law enforcement agencies that assign agents to the INTERPOL-USNCB. Justice Department representatives participate from the Federal Bureau of Investigation, the Drug Enforcement Administration, Immigration and Naturalization Service, the Criminal Division, and the U. S. Marshals Service. Treasury Department representatives include the U. S. Secret Service, the U. S. Customs Service, the Internal Revenue Service, the Bureau of Alcohol, Tobacco and Firearms, and the Office of the Comptroller of the Currency. Other Federal agencies represented are the Diplomatic Security Service of the Department of State, the Department of Agriculture Office of the Inspector General, and the U.S. Postal Inspection Service. This multi-agency partcipation in the INTERPOL-USNCB program fosters interagency cooperation in addressing law enforcement matters and avoids duplication of programs and initiatives.

Strict criteria and guidelines established by the INTERPOL General Secretariat and the INTERPOL-USNCB are used to qualify requests for information or investigative assistance. Compliance with INTERPOL-USNCB and INTERPOL regulations as well as Department of Justice regulations and U.S. Federal laws is verified by a Quality Control Unit, and the

following criteria are applied: (1) the request must come from a legitimate domestic law enforcement agency or an INTERPOL member country; (2) it must be an international investigation; (3) the crime must be a violation of law in the country where committed; (4) the request cannot violate the accepted interpretation of Article 3 of the INTERPOL Constitution, which excludes matters military, religious, racial or political; (5) a specific criminal link must exist between the crime and the subject of the case; (6) the request must clearly state the type of investigation and the fullest possible identifying details of the subject. If not provided, the requestor is contacted for addition information. Written verification of all requests is required before any information is released.

As a final control to preclude unauthorized use of information, the Third Agency Rule is applied and extends to all Federal, State and local law enforcement agencies. This means that information exchanged between the INTERPOL-USNCB and another Federal, state or local law enforcement agency cannot be provided to a third party without the approval of the source of such data. These stringent controls work to ensure responsible management of this organization's investigative workload and preserve the integrity of its information.

Accomplishments and Workload

The INTERPOL-USNCB investigative caseload and message traffic for 1986 increased by more than 30 percent over the previous year. Largely due to heightened awareness at the state and local levels of the investigative channels the INTERPOL-USNCB can open, domestic use has risen steadily, and significant accomplishments were realized to the benefit of law enforcement here and abroad.

An example of the kind of assistance afforded domestic law enforcement agencies is found in a recent case originating in Illinois, where state police used the USNCB to apprehend a murder suspect in Italy. The suspect was charged in a Federal arrest warrant with kidnapping, holding his victim for $15,000 ransom, and then murdering the victim and her husband. Additional warrants were issued against the suspect for rape and kidnapping. As a result of information passed to Italian police through the USNCB, the suspect was arrested and extradited. A similar request involved identification of a man arrested in New York for possession of stolen credentials and credit cards. Through the USNCB, an International Wanted Notice was issued; INTERPOL-Ottawa located the man and an arrest was made by the Montreal police. Arrested under an alias, he was returned to also face rape charges in Boston as well as a prison term from which he had escaped in California.

Significant accomplishments have also been realized as a result of the creation of the Economic and Financial Fraud Unit at the INTERPOL-USNCB. Through this unit investigative resources are channelled into tracking and seizing assets of criminal organizations. It is recognized that most narcotics and organized crime leaders insulate themselves from traditional criminal investigative techniques, but stay close to their financial network and the money. This special unit concentrates efforts in that area, which is often the only means of identifying

those leaders. Such a case was that of a Cleveland businessman who was indicted for defrauding the government and evading $3 million in income tax. A producer and distributor of pornography, the suspect used fictitious names, sham financial transactions, and phony corporations to launder money and establish Swiss bank accounts through which more than $7 million was funnelled. As a result of a six-year grand jury investigation conducted by the Cleveland Organized Crime Strike Force assisted by Departments of Justice and Treasury, he was indicted on 16 counts and faces up to 75 years imprisonment and $10 million in fines. The INTERPOL-USNCB facilitated coordination on this case with the governments of Switzerland and Great Britain, New Scotland Yard, Swiss Federal Police, Royal Canadian Mounted Police, and the police departments of four major U. S. cities. The Economic and Financial Unit was also recently part of an INTERPOL working party that drafted model legislation for investigation and forfeiture of assets in shell banks and off-shore banking. As a result of their efforts, three Caribbean countries are using the INTERPOL product as a model for their own legislation.

A serious problem INTERPOL-USNCB has been successful in addressing through its Alien/Fugitive Enforcement Unit is that of illegal aliens and foreign fugitives. Political unrest in the Middle East and Africa and in countries such as Afghanistan and Pakistan has resulted in more and more attempts to illegally enter this country. Stowaways on vessels or commercial aircraft bound for the U. S. destroy their identity documents and passports enroute and ask for asylum on arrival. The Immigration and Naturalization Service faces great difficulty in ascertaining the nationality of subjects in these cases and cannot deport without a country of origin. On request, the USNCB distributes fingerprints of such individuals throughout the INTERPOL network, resolving such identity problems. Another major facet of INTERPOL-USNCB program support to INS will be in processing overseas credentials verifications in INS' efforts to administer the recently passed Immigration Reform Act. The INTERPOL-USNCB expects to process as many as a half million requests for information and verifications in the one year commencing in May 1987 for alien amnesty applications.

An important function of the Alien/Fugitive Enforcement Unit is the identification and investigation of international fugitives. By entering fugitive lookout records into several automated systems available at U. S. border entry points, INTERPOL-USNCB is able to identify foreign fugitives as they attempt to enter this country. Conversely, the INTERPOL international notice system may facilitate the location and arrest of fugitives from the United States. In one instance, as a result of an International Wanted Notice issued by INTERPOL-Wiesbaden, a German national who had escaped while serving a prison term for attempted arson and insurance fraud was identified and arrested at the Miami, Florida, airport in possession of a suitcase of cocaine. The subject was turned over to the U. S. Marshals Service for extradition. Similarly, two Canadian nationals, wanted on twenty-five warrants involving several millions of dollars in bad checks, fraud, and forgery, were returned to Canada following a three month search covering Canada, the Caribbean, New York, and Texas. These efforts not only deny foreign criminals safe haven in the United States, but protect our population from their crimes.

A great stride made in the USNCB's efforts to deliver the most efficient law-enforcement support possible is institution of 24-hour operations. With the enthusiastic support of the Federal law enforcement community, this office began operating three round-the-clock shifts with interim funds from the USNCB participating agencies, allowing it to meet important demands such as immediate response on NCIC and INS border hits and critical terrorist and hostage situations, and eliminate potential operational weaknesses such as the need for Justice Department night operators to handle international messages received after normal daytime hours. The success of this initiative is evident thus far, even in its relatively short lifespan, and its critical need is substantiated by the success and support it enjoys throughout the federal law enforcement agencies.

One major advancement in the international struggle to respond to the escalation of terrorism is its definition by INTERPOL outside the realm of political activity alone. Terrorism was a problem heretofore excluded from INTERPOL's attention due to the provision of Article III of the its constitution, which forbids involvement or intervention in matters ". . . of a political, military, religious, or racial character." The 53rd General Assembly reasoned that even though an act of violence may be politically motivated, if the target, person or property was not directly or indirectly connected with the objectives of the offenders, the act could not be interpreted as political and must be regarded as a criminal act. This was a first and major step in addressing what has come to be a critical world concern. Subsequent resolutions have further defined the police role in combatting international terrorism, have encouraged cooperation among NCB's in responding to this problem, and initiated preparation of guidelines and practices to facilitate the rapid exchange of information vital in such situations. Further, a special unit has been established within the General Secretariat to study this issue and to coordinate the exchange of anti-terrorist information. In addition, progress of the anti-terrorism program is a priority at Executive Committee and regional meetings, and the organization participates annually in international terrorism symposia.

INTERPOL-USNCB's investigative workload continues to increase largely due to heightened awareness among the domestic law enforcement community of the services it provides. State and local law enforcement agencies have become the greatest users of the INTERPOL-USNCB telecommunications network, and INTERPOL-USNCB investigative agents are often called upon to make appearances across the nation explaining the INTERPOL program and services available through the USNCB.

In addition to Federal agencies who participate in the INTERPOL-USNCB program providing information to their respective field offices, greater awareness of the operational assistance available through the INTERPOL-USNCB has also resulted from increased visibility in the press. As an interim means of addressing this problem until resources could be pursued through appropriations, and with temporary funding from other federal agencies, in 1986 the INTERPOL-USNCB moved to 24-hour operations. While not the complete answer to the problem of a burgeoning caseload, it nevertheless allowed the USNCB to respond more effectively to a situation that was becoming out of control by maximizing the office's static resources and infrastructure.

A new dimension has been added to the impact INTERPOL can have on international lawlessness by its adoption of resolutions addressing terrorism. This has made it incumbent upon the INTERPOL-USNCB to respond. Never has a single category of crime so threatened world safety as does the terrorist act, and all our resources must be garnered against it. By limiting those resources, efforts to analyze and thwart terrorism are severely hampered, making the lessons learned sporatic at best. In summary, every effort is being made to maximize INTERPOL-USNCB resources to meet an ever-increasing workload and expanded sphere of responsibility.

Includes new, pending, & reopened cases

Program Change. The INTERPOL-USNCB requests an increase of 12 positions, 9 FTE's, and $400,000 to institute operations 24 hours per day.

As a processor of tens of thousands of pieces of investigative information each year between international and domestic law enforcement agencies, the USNCB recognizes its opportunity through 24-hour operations to not only address its own critical service delivery needs, but support the Administration's publicly declared war on drug trafficking and terrorism. Twenty-four hour operations will not only speed the processing of the more than one hundred thousand messages the USNCB will receive in 1987, but offer the potential for broadening the scope of criminal investigations worldwide.

At its current level, the USNCB faces an unending escalation in its backlog, as well as lengthy delays in processing messages for pending cases. A case in point recently occurred when a radio message concerning fraud and possible extradition received in January 1986 from INTERPOL-Wiesbaden, West Germany, was not assigned to an agent until April 1986 due to the existing backlog.

Without 24-hour operations, there exists processing delays on urgent/critical cases of up to three days, a situation intolerable in terrorism cases where immediate response is vital to detection, prevention, and apprehension. Similarly under a one eight-hour shift per day schedule, foreign fugitive queries, which stipulate a specific response time of as little as ten minutes, and INS entry/border point inquiries suffer the consequences of a response lag that seriously hampers opportunities to detain or apprehend drug traffickers and fugitives entering and leaving the country. Vital information in both these areas of criminal activity is delayed in backlogs that cannot be addressed without 24-hour operations at the USNCB; and, given the Administration's commitment to anti-terrorism and drug enforcement, the USNCB caseload is expected to continue to increase as it has so dramatically in the past.

Currently at the USNCB, a case classified "urgent/critical" requires nine workhours for processing, with routine to complex cases ranging from an average of eight workhours to fifteen. Even using a static workload base of 1985 case numbers of 14,000, it would require a minimum of 56 workyears to process the annual caseload if every case were routine. Based on complex cases, 102 workyears would be required to dissove the backlog. At the current staff level of 35 workyears, the mounting backlog goes virtually unchecked. The immediate impact of 24-hour operation is not only provision of critical quick responses, but a long-term solution to the problem that greater visibility and effectiveness has created: greater user demand and increased workload.

By increasing its workforce by 12 positions and 9 FTEs, the USNCB will be able to provide two additional shifts per day and full weekend coverage. Such a move will address the backlog by not only providing more workhours in which to process cases, but decreasing the average time and cost required for processing. Gains will be realized by utilizing less expensive "off peak" telecommunications time, and faster data center service can be expected since demand from other Department of Justice users will be greatly reduced during evening hours. Workflow will be charted to take advantage of these conditions, and international traffic can be classified and processed as it is received. Existing office infrastructure is more efficiently utilized through round-the-clock operations as opposed to simply bringing additional staff on a daytime shift.

Another continuing concern resolved through 24-hour operation is the burden placed on Department of Justice night operators to make judgments as to whether international messages received after hours are urgent, requiring immediate attention. This risky and unfair practice of placing untrained personnel in the delicate position of determining criticality of information is eliminated by operations spanning 24 hours.

Just as important as the speed with which messages are processed is the increased quality of service derived from this initative. In this age when terrorists' attacks occur literally across the globe, it is imperative that accurate and concise information and identification be available without regard to office hours. Often the transmission of a single piece of information means the difference between detaining a fugitive or allowing his escape. When so much of the federal justice system (intelligence, investigation, prosecution) depends on viable, accurate information, it seems a false economy to limit resources for its efficient transmission.

The benefits of this initiative cut across agency lines and extend to virtually every federal investigative entity, as well as state, local and international law enforcement entitities that utilize the INTERPOL network. It will decrease the escalating case backlog at the USNCB, more efficiently utilize current USNCB software and hardware resources, provide immediate responses on urgent and critical terrorism and drug enforcement investigations, and stimulate greater analysis of information compiled from unrelated cases in those areas. A $20,000 reduction in current overtime costs is also anticipated, which has been applied to the new resources needed for this initiative.

Long Range Goal. To improve the productivity of administering the legal activities programs through modernization and enhancement of office automation systems by the Department's litigating components.

Major Objectives.

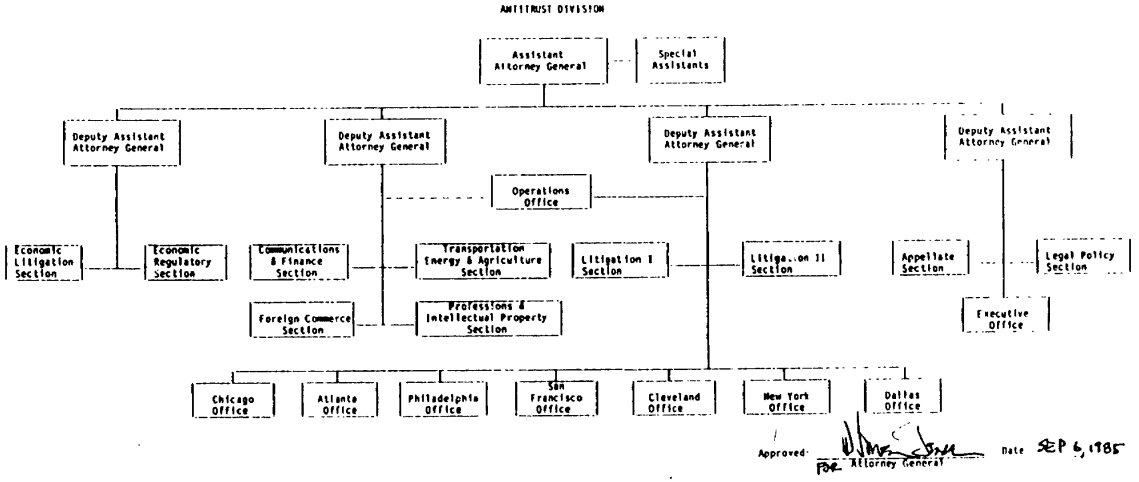
To develop system designs which meet the central requirements of the litigating organizations and the needs of the Department's management officials for information and which allow reliable interfaces with Department-wide data collection and reporting systems.

To implement cost-effective ways for electronic exchange of documents and messages among Departmental organizations.

To systematize the planning and acquisition processes for office automation resources to:

- build on the installed base of office automation systems in the litigating organizations;
- build cooperative processing systems where possible; and
- ensure installation of compatible hardware and software in all future acquisitions;

Base Program Description. The Department Resources Board has established the Litigating Office Automation Steering Committee under the direction of the Deputy Attorney General. The Steering Committee, composed of the Department's senior management, is tasked with developing a comprehensive policy and a strategy for the design and acquisition of automated systems for the six legal divisions, the offices of the U.S. Attorneys and offices of senior departmental management. The mandate to achieve Department management efficiencies and productivity gains in systems and operations requires the Department to move toward a more coordinated and unified approach in the area of office automation for litigating components. The Committee has a formal Project Team and charged it with responsibility for attaining Department office automation goals for the litigating organizations as well as uniform case management goals. The Project Team consists of personnel from the litigating components and the Justice Management Division.



During 1986, the Department completed Phase I of this project which consisted of the development and integration of project plans for all of the litigating components and senior management offices. At the conclusion of this first phase, it was recommended that the Department proceed immediately to implement office automation systems throughout the litigating organizations and proceed with an acquisition strategy which envisions uniformity in office automation systems in the long term and operational compatibility in the short term.

During 1987, this joint planning initiative is building upon existing accomplishments to achieve the desired compatibility at potential savings to the Department. In essence, this approach involves the adoption of the AMICUS II system by the senior management offices and the Civil Rights and Lands Divisions and the issuance of a single RFP which addresses, in a single acquisition, the office automation needs of the Criminal and Tax Divisions and U.S. Attorneys.

Program Changes. An increase of $23,181,000 in budget authority is requested for 1988 for the Legal Activities Office Automation Fund. This amount will allow the Department to fund office automation enhancements for the litigating organizations and senior management offices as determined through the analyses conducted in 1987. A major portion of the requested funding will be committed to the joint procurement involving the Tax and Criminal Divisions and the U.S. Attorneys. This procurement provides for the acquisition of nearly 5,000 terminals in 1988-89 with an option for a further 7,000 terminals.

Implementation of this joint office automation acquisition program will end the proliferation of incompatible systems which now preclude the rapid and efficient transfer of information, documents, and work products among the litigating components. Also, this initiative will markedly expand the availability and use of automated legal research and litigation support. Joint planning and acquisition strategies will be developed by the Steering Committee. Major planning and funding decisions will be made by the Department Resources Board.

One of the benefits of this proposal is that it will enable the litigating organizations to integrate their individual efforts, thereby eliminating each division "re-inventing the wheel" for common functional solutions. Most important, it enhances the ability for system interaction among the divisions in 1987, and in 1988, it will provide the critical technological links to the U.S. Attorneys' offices with which each legal division must work. By consolidating procurements, the Department may realize even greater economies of scale through larger purchase orders. Also, additional savings are anticipated through the development and maintenance of common core software and, as appropriate, integrated systems maintenance contracts.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

The conference agreed that the allowance should be built from the sequestration base of $42,586,000, that $407,000 be deducted for non-recurring expenses, and that $821,000 in uncontrollable increases be allowed.

Supplementals Requested

1. The program supplemental request provides $215,000 for the Antitrust Division's share of increased rent for the Bond building and $84,000 for FTS increases.
2. The pay and FERS request provides for $315,000 to meet the increased pay requirements pursuant to P.L. 99-500 and $430,000 for contribution to the new federal retirement system.

Long-Range Goal: To provide effective representation before courts of appeals and the U.S. Supreme Court for antitrust cases and in proceedings to review orders of certain regulatory agencies.

Major Objectives:

To support sound and consistent development and enforcement of antitrust laws through the expert prosecution and defense of appeals in cases brought by the United States.

To protect the interests of the United States in the development of antitrust law through participation as amicus curiae in private antitrust appeals.

To advocate competition in appeals taken from regulatory proceedings.

Base Program Description: To provide effective representation, the Division acts on antitrust cases before the Supreme Court as authorized by the Solicitor General; represents the interests of the United States in the courts of appeals in all civil and criminal cases brought by the United States under the federal antitrust laws; reviews certain decisions of the Interstate Commerce Commission, the Federal Communications Commission, the Federal Maritime Commission and the Nuclear Regulatory Commission, and prepares an appeal position for the United States; and prepares and files amicus briefs in the district courts, the courts of appeals and the Supreme Court in selected private antitrust cases. The Division's responsibility for appeals from decisions by district courts in antitrust cases and for participation as amicus curiae is defined by 28 C.F.R. §0.20 and 28 C.F.R. §0.40(a). Authority to represent the Interstate Commerce Commission, Federal Communications Commission, Federal Maritime Commission and the Nuclear Regulatory Commission in proceedings to review orders is contained in 28 U.S.C. §§2341-2350.

Appellate activity continued to be heavy in 1986. The Division has participated in important court of appeals and Supreme Court cases to eliminate antitrust rules that hinder rather than promote competition. A representative sample of appellate activity follows:

In the courts of appeal, the Division was very successful in persuading courts to reject legal defenses advanced by bid riggers in an attempt to avoid prosecution for their crimes. For example, in United States v. Modern Electric Co. (No. 85-5070) and United States v. A-A-A Electrical Co. (No. 85-5116), the defendants argued that they could not be prosecuted for bid rigging because the bids had been rigged outside of the period of the statute of limitations. The Fourth Circuit rejected this argument and affirmed defendants' convictions holding that a Sherman Act conspiracy continues--hence the statute of limitations does not begin to run--until all the payments on the rigged contract are received and any agreed-on payoffs are made to co-conspirators. The court also held that the federal prosecution was not barred by a settlement agreement between the defendants and the State of North Carolina, since the federal government was not a party to the settlement and the double jeopardy clause does not bar successive state and federal prosecutions.

Two courts of appeal also rejected double jeopardy defenses to indictments charging electrical contractors with bid rigging. On March 14, 1986, the Third Circuit reversed a district court decision dismissing an indictment charging a conspiracy to rig bids on electrical construction work at the Fairless Hills plant of the United States Steel Corporation in violation of section 1 of the Sherman Act, United States v. Sargent Electric Co., et al. (Nos. 85-1262, 85-1263, 85-1264, and 85-1265). The defendants in the

Sargent case previously had been convicted of bid rigging on other electrical construction contracts. The district court concluded that all of the defendants bid-rigging activity was part of a single conspiracy to rig bids; therefore, the double jeopardy clause precluded this indictment. The Third Circuit rejected the district court's conclusion and held that the evidence established the existence of multiple conspiracies. Similarly, the Sixth Circuit in In Re: Grand Jury Proceedings (No. 85-6155), rejected defendants' contention that prior prosecutions against them for bid rigging on other electrical construction projects barred an indictment charging them with conspiring to rig bids on the electrical work at the Spurlock Generating Station in Marysville, Kentucky. The court of appeals found that the conspiracy charged in this indictment was not part of the same offense charged in a prior indictment and the double jeopardy clause did not preclude this prosecution.

On February 21, 1986, the Fourth Circuit affirmed convictions for rigging bids on a portion of the Pasquotank River Supply Project in Elizabeth City, North Carolina. United States v. W.F. Brinkley & Son Construction Co., Inc., et al. (No 84-5355). The court rejected defendants' contention that there was insufficient evidence of an agreement to rig bids because one of the alleged co-conspirators allegedly had decided not to compete for the project prior to contacting the defendants and obtaining a safe number to bid.

The Division was also very active in the Supreme Court in 1986. It successfully petitioned the Court to review two adverse court of appeals decisions, (United States v. Ben M. Hogan Company, Inc., No. 85-1067; United States v. John Doe, Inc. I, No. 85-1613) and participated as amicus curiae in several important private antitrust cases. In Hogan, the court of appeals held that a jury instruction containing an unconstitutional conclusive presumption that the conspiracy affected interstate commerce compelled it to reverse a Sherman Act bid rigging conviction although the alleged error was harmless. The Division petitioned for certiorari and argued that the error found by the court of appeals should be subject to harmless error analysis. The Division asked that its petition be held pending the Supreme Court's decision in Rose v. Clark in which the Court was expected to resolve the harmless error question presented in the Hogan case. After the Supreme Court held in Rose v. Clark, 106 S.Ct. 3101 (1986), that the harmless error standard applied, the Court granted the government's petition in Hogan and remanded the case to the court of appeals for reconsideration in view of its decision in Rose v. Clark. The Doe case involved an issue left unresolved by the Supreme Court's decision in United States v. Sells Engineering, Inc., 463 U.S. 418 (1983): whether a Department of Justice attorney who participated in grand jury proceedings may make continued use of the grand jury materials in preparing and litigating a subsequent civil case without obtaining a Fed.R.Crim.P. 6(e) order, so long as he does not disclose the materials to another person. The court of appeals held that a Rule 6(e) order is required in this situation and the Division successfully petitioned the Supreme Court to review this decision. A final decision by the Supreme Court is expected in 1987.

On May 6, 1986, the Division filed an amicus brief with the Supreme Court in 324 Liquor Corp. v. Duffy, urging the Court to reverse the New York Court of Appeals decision. The case involves a complex statutory and regulatory scheme designed to promote the maintenance of minimum resale prices in liquor retailing in New York State. The appellant, a retail liquor store, was found guilty by the State Liquor Authority (SLA) of violating the New York Alcoholic Beverage Control Law by selling at a price lower then the statutorily defined minimum price. Appellant sought to annul this determination on the ground that the statutory scheme is inconsistent with the federal antitrust laws. The SLA argued that the statutes at issue do not compel concerted anticompetitive activity and are otherwise immune from Sherman Act challenge under the "state action" doctrine. The New York Court of Appeals rejected the state action claim -- wisely, since the New York scheme is virtually indistinguishable from the California liquor pricing system reviewed in California Retail Liquor Dealers Ass'n v. Midcal Aluminum, Inc., 445 U.S. 97 (1980), and found not to constitute state action for lack of active state supervison. However, the New York court upheld the challenged statutes on the grounds that they were shielded from challenged by the Twenty-first Amendment and, incredibly, that they were not inconsistent with he federal antitrust statutes. The Division brief agreed that the challenged state mechanism does not qualify for state action immunity and further argued that the New York scheme is clearly in conflict with the Sherman Act: its avowed purpose of protecting small retailers from price competiton is directly contrary to the antitrust laws' goal of protecting "competition, not competitors." Brunswick v. Pueblo Bowl-O-Mat, Inc., 429 U.S. 477, 488 (1977) (emphasis in original). The Division also argued that the protection of small liquor retailers does not rise to the level of a "core" state interest, which the Twenty-first Amendment protects from federal scrutiny.

On June 23, 1986, the Supreme Court refused to hear Kaiser Aluminum & Chemical Corp. v. Joseph A. Bonjorno (No. 84-1907). In Kaiser, the court of appeals concluded that there was sufficient evidence to support the jury's determination that Kaiser had attempted to control its competition by requiring the plaintiff to purchase all of its raw materials from Kaiser and, to the extent that Kaiser was unable to control competition, Kaiser tried to destroy it. In its amicus brief, the Division contended that the court of appeals had erred in concluding that the jury could find that Kaiser controlled the price of the raw materials, a necessary element of a price squeeze, on the basis of evidence that Kaiser was a price leader with respect to the price of those raw materials. Nevertheless, the Division argued that the Court should deny certiorari because there was other conduct independent of the price squeeze that the court of appeals had also relied on to support the verdict.

On June 6, 1986, the Supreme Court unanimously affirmed the decision of the Ninth Circuit in City of Los Angeles v. Preferred Communications, Inc., thus reinstating that company's First Amendment challenge to the City's policy of granting a single cable television franchise in each area of the city to be served. Preferred's complaint alleged a violation of its rights under the First and Fourteenth Amendments and under the Sherman Act by reason of the City's refusal to grant Preferred a cable television franchise and access to public utility poles and conduits that could be used to provide cable services. The district court dismissed the complaint for failure to state a claim upon which relief could be granted. The Ninth Circuit affirmed with respect to the Sherman Act claims, but reversed with respect to the First Amendment claims. The appeals court strongly suggested that the City's refusal to issue a franchise to more than one company when there is sufficient physical and economic capacity to accommodate more than one might violate the First Amendment. The Supreme Court, in affirming, declined to express a view on the correctness of the court of appeals' reasoning, agreeing with the position of the United States that further development of the factual record was required before the city's interests could be balanced against the First Amendment rights at issue.

On March 28, 1986, the Division and the Federal Trade Commission jointly filed an amicus brief with the Supreme Court in Cargill, Inc. v. Monfort of Colorado, Inc. In 1983, Excel Corporation, a wholly-owned subsidiary of Cargill, announced its intention to acquire the Spencer Beef Division of Land O'Lakes, Inc. The Division reviewed the acquisition, and declined to challenge it. However, Monfort filed to enjoin the transaction. Monfort's theory of antitrust injury -- a necessary element of standing to sue under the Clayton Act -- depended on a highly tenuous argument as to future predation in the industry. In the joint brief with the FTC, the Division took the position that competitors should never have standing to challenge a proposed acquisition on predatory pricing grounds because such claims are nearly impossible to distinguish from predictions that the acquisition will lead to intensified competition, a result competitors have a strong incentive to try to prevent. The Division noted that the Sherman Act provides a remedy if predatory pricing does occur. On December 9, 1986, the Supreme Court held that Monfort had failed to demonstrate a threat of antitrust injury.

On March 26, 1986, the Supreme Court established that plaintiffs alleging economically "implausible claims -- like predatory pricing -- must meet an especially high standard when they respond to a defendant's summary judgment motion. (Matsushita Electric Industrial Co. v. Zenith Radio Corp., No. 83-2004.) The Court held that in cases where the defendant's claim does not make economic sense, they "must come forward with more persuasive evidence to support their claim than would otherwise be necessary." Slip Op. at 11-12. Thus, the Court agreed with the position of the Government that the evidence relied upon by the court of appeals was insufficient to justify a finding that the antitrust laws had been violated.

Program Changes: The Antitrust Division is requesting a decrease of 7 positions, 6 FTE workyears, and $128,000 for federal appellate activity. Increasing use of automation for case tracking and use of the JURIS system make this reduction possible without a loss of effectiveness. The appellate activity is a necessary component of the Division's antitrust enforcement efforts at the district court level. It is essential to the enforcement of antitrust laws that the appeal alternative be available. At this funding level, the Division will be able to continue its representation of regulatory agencies and to defend decisions in the lower courts in favor of the federal government against appeals by opposing parties. Private antitrust cases in the Supreme Court and in the courts of appeal that present issues of interest to the government will be closely monitored to ensure the sound development of antitrust law.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Termination and prevention of private cartel behavior.....	222	202	$15,462	222	202	$16,622	215	196	$16,475	-7	-6	-$147

Long-Range Goal: To promote and maintain competition in the American economy by reducing private cartel behavior which restrains trade or commerce.

Major Objectives:

To promote and maintain competition, economic efficiency, and the enhancement of consumer welfare by using criminal and civil enforcement of Section 1 of the Sherman Act to terminate and prevent agreements that restrain competition.

To limit cartel behavior in industries subject to state or federal regulation to appropriately approved conduct where such approval has been authorized by statute; to prevent the continuation of cartel behavior once statutes authorizing the approval of such behavior have been repealed.

To educate the public, business, and legal professions with respect to the principles of antitrust laws and enforcement policies.

To maximize competition among those bidding under the government procurement program by coordination with and advice to other executive agencies on their property acquisition policies.

To operate a system for monitoring compliance with the affirmative obligations imposed on defendants by antitrust judgments.

To identify decrees or decree provisions that have become unnecessary or anticompetitive over time and seek modification or termination by court action.

Base Program Description: The purpose of this program is to deter private cartel-like behavior by investigating and litigating violations of Section 1 of the Sherman Act. A wide range of investigatory techniques are used, including staff and FBI investigations, civil investigative demands, and grand jury investigations to detect collusion and bid rigging. In addition, the Division monitors private activity and market performance through its litigating sections and field offices and employs professional economists to collect and analyze regional and national market data, with special emphasis on highly concentrated industries. Once the government detects and successfully prosecutes, it must obtain appropriate relief and monitor the injunctive provisions of such relief to ensure that firms are abiding by those provisions. The Division's responsibility for this program is set forth in 28 C.F.R. §0.40(a).

The Division's vigorous prosecution of private horizontal restraints is essential. Cartel-type behavior has no redeeming economic virtues. Agreements among competitors entered into for the purpose of artificially restricting output and raising prices do not yield organizational efficiencies or economies of scale. Such agreements increase transaction costs and are dealt with severely. State and local law enforcement efforts, while contributing to the prevention of locally-oriented cartel behavior, cannot cope with the complex interstate nature of the conspiracies investigated and prosecuted by the Division. Intense nationwide enforcement of the federal antitrust laws serves to prevent the serious drain on the nation's economy that cartel behavior causes.

NOTE: Since the exact nature of the violation is often unclear during the early stages of an investigation, Preliminary Inquiries and Civil Investigative Demands are consolidated for Termination and Prevention of Private Cartel Behavior and Preservation of Competitive Market Structure.

In the recent past, increasing emphasis has been directed toward the criminal prosecution of price fixing, bid rigging, market division, and other covert, unambiguously anticompetitive economic crimes that amount to a fraud on the public. Division effectiveness in this area has increased despite an overall 30 percent decrease in Division personnel. An intense effort to prosecute bid-rigging violations in the highway construction and electrical contracting industries resulted in the discovery of industry-wide corruption and an unprecedented number of cases which peaked in 1984 and are now beginning to subside. The Division's efforts will serve as a powerful deterrent to future price fixing in these industries; violators know that they will be prosecuted to the limits of the law. The fines paid by defendants in criminal cases, over $10,000,000 in 1986, were minor in comparison with the hundreds of millions of dollars saved for taxpayers and consumers in deterrence of the underlying economic crimes and recovered by injured parties in follow-on private suits.

Currently, the Division is engaged in an intensive probe of bid-rigging and price-fixing activities in connection with federal procurement. Senior Division attorneys met with the U.S. Department of Defense officials including procurement officers, audit commands, and the Inspector General's Office to improve joint detection of collusive military contracting. The Division expanded its educational program to help procurement personnel throughout the federal government detect bid rigging and marshall evidence of collusion. During the year, about 25 informal sessions were conducted to instruct employees of the Defense Department, FBI, Army Corps of Engineers and other federal agencies on methods of detecting and preventing collusion in public procurement.

On March 21, 1986, the Division released the 1985 annual supplement and revised indexes to the "Digest of Business Reviews." The original Digest, published in 1983, contained summaries of letters issued by the Antitrust Division from 1968 to 1982 under the Business Review procedure. Supplements are issued each year to update the Digest. Under the Business Review procedure, a firm may submit a proposed business activity to the Division and receive a statement as to whether the action would be challenged as a violation of the federal antitrust laws. The updated indexes permit research of all the letters according to topic, commodity or service involved and name of the requesting party.

Under this program, the Division is increasing its activity in more consumer-oriented markets. A representative selection of matters includes the following:

On October 28, 1986, a federal grand jury in Norfolk, Virginia, returned a four-count felony indictment charging Armand Gravely, vice president and division manager of the Richmond Division of Allegheny Pepsi-Cola Bottling Company, with conspiring to fix the prices of soft drinks sold in the Norfolk and Richmond areas of Virginia and with obstruction of justice. The indictment charged that, beginning in or about February 1983 and continuing into at least the last quarter of 1984, Gravely and co-conspirators violated Section 1 of the Sherman Act by agreeing to fix prices of soft drinks sold by Allegheny Pepsi-Cola Bottling Company and a co-conspirator soft drink bottling company in the Norfolk and Richmond areas. Three additional counts charged the defendant with endeavoring to obstruct justice by causing the destruction or concealment of memoranda and tape recordings and by attempting to persuade an individual to testify falsely before a federal grand jury. The maximum penalty for an individual convicted under the Sherman Act is three years imprisonment and a $100,000 fine. The maximum penalty upon conviction for each count of obstruction of justice is five years in prison and a $5,000 fine.

On October 15, 1986, the Division filed a one-count felony information in the U.S. District Court in Washington, D.C., charging General Cinema Beverages of Washington, D.C., Inc. with conspiring to fix the prices of certain Pepsi-Cola and Coca-Cola cola soft drink products. The charges were the result of a continuing grand jury investigation into allegations of price fixing among soft drink bottlers in Washington and other areas. The information, which charged a violation of section 1 of the Sherman Act, alleged that beginning about October 1984 and continuing until August 31, 1985, the defendant engaged in a combination and conspiracy with others to fix certain cola soft drink prices by agreeing to adhere to prices published in promotional letters that described prices and discounts offered for certain time periods to customers. The defendant also conspired to raise the wholesale price for certain 12-ounce cans that became effective in July 1985, according to the information. General Cinema has been cooperating with the investigation and as part of a plea agreement has agreed to pay a fine of $1 million.

On October 2, 1986, a federal grand jury in Cleveland returned a one-count felony indictment charging two companies and three individuals with conspiring to allocate customers in the market for motion picture booking in Ohio and West Virginia. Co-Operative Theatres of Ohio, Inc. and Tri-State Theatre Service, Inc. are independent film booking and buying agencies which represent motion picture exhibitors in obtaining licenses from film distributors for the exhibition of motion pictures. The indictment, which was filed in U.S. District Court in Cleveland, charged that the defendants and co-conspirators allocated customers between the two film booking and buying agencies, in violation of section 1 of the Sherman Act, from November 1981 to the present.

On July 10, 1986, a federal grand jury in Tyler, Texas, returned two one-count felony indictments charging seven individuals with fixing prices for the retail sale of alcoholic beverages in Nacogdoches, Texas. The indictments charged that the defendants conspired to fix prices on alcoholic beverages from as early as December 1983 and continuing until December 2, 1985.

On July 11, 1986, the Division filed a one-count felony information in the U.S. District Court in Tyler, Texas, charging Ronnie Lynn Temple with fixing prices for the retail sale of alcoholic beverages in Nacogdoches. The information charged that the defendant conspired with other alcoholic beverage retailers to fix prices on alcoholic beverages as early as November 1, 1985, and continuing until December 2, 1985.

On April 21, 1986, a federal grand jury in Oklahoma City, Oklahoma, returned a three-count felony indictment charging Evans & Associates Construction Co., Inc. and its president, Lloyd I. Evans, also known as Jerry Evans, with bid rigging, mail fraud and racketeering. The charges involve supplying highway construction materials, equipment and services to city, county, and state governments in Oklahoma. One of the counts charged that, beginning at least as early as September 1979 and continuing until at least April 1981, the defendants conspired, in violation of section 1 of the Sherman Act, to rig bids on a federally funded highway construction project let by the Oklahoma Department of Transportation. A second count charged mail fraud in furtherance of the scheme to defraud the state. The third count charged that from January 1968, through September 1981, the defendants engaged in a pattern of racketeering involving bribery and fraud, in violation of the Racketeer Influenced and Corrupt Organizations (RICO) statute. That count charged that the defendants and others acting with them constituted a criminal enterprise, which engaged in the bribery of various state and county officials involved in the purchase of highway construction services, materials and equipment. The indictment seeks forfeiture of all stock and ownership interests of defendant Jerry Evans in Evans & Associates Enterprises, Inc., and in related companies that were allegedly part of the criminal enterprise. The indictment also seeks the proceeds from the alleged racketeering activity, including the proceeds from certain highway construction projects, sales of asphalt, and the sale or rental of highway equipment. There was no value cited for the stock and other holdings, but the proceeds from the highway projects and equipment totalled more than $850,000.

On April 16, 1986, a federal grand jury in Honolulu returned a one-count felony indictment charging a Honolulu-based trade association with conspiring to fix prices for the sale of fresh fruits and vegetables in Hawaii, in violation of section 1 of the Sherman Act. The indictment charged that, beginning at least as early as 1969 and continuing until at least 1982, the Wholesale Produce Dealers Association of Hawaii and co-conspirators conspired to fix prices charged by wholesalers on certain items of produce, and to establish suggested or guideline markups for determining the wholesale price of produce. The association consists of 30 wholesale dealers who sell both mainland and Hawaii-grown produce. In 1984, their total sales of fresh fruits and vegetables exceeded $75 million. The defendant trade association pled guilty to fixing prices charged by wholesalers on certain items of produce and establishing suggested or guideline markups for determining the wholesale price of produce. On April 17, 1986, the Wholesale Produce Dealers Association of Hawaii was fined $125,000.

On March 13, 1986, a federal grand jury in Boston returned a felony indictment charging two U.S. corporations associated with European firms and five individuals with conspiring to fix prices of metallized polypropylene dielectrics. Named as defendants in the indictment were Steinerfilm, Inc. of Williamstown, Massachusetts; Bolmet, Inc., of Dayville, Connecticut; Holger Steiner, manager of Steiner KG, of Erndtebruck, Federal Republic of Germany; Ernst Steiner, of Williamstown, president and part owner of Steinerfilm, Inc., and part owner of Steiner KG; Horst Bechtolf, an executive with Steiner KG; Vincent Bollore, a director of Bolmet, Inc., and chief executive of Bollore S.A., of Paris, the parent company of Bolmet, Inc.; and Francois Dubot, an executive with Bollore S.A. The indictment charged that, beginning at least as early as the spring of 1983 and continuing until at least the fall of 1984, the defendants and co-conspirators engaged in a conspiracy, in violation of section 1 of the Sherman Act, to raise and fix the prices of dielectrics sold in the United States. Total sales of dielectrics by the defendant corporations in the United

States exceeded $15 million during the alleged conspiracy and represented about 85 percent of all dielectric sales in the United States. Metallized polypropylene dielectrics are insulating materials used in the manufacture of capacitors for alternating current applications such as flourescent lighting and air conditioning. They consist of an insulating material, polypropylene film, coated with metal, often aluminum. Capacitors are devices that can block or store energy and correct or change power factors. The defendants pled guilty or nolo contendere and were fined a total of $1,450,000.

Program Changes: A decrease of 7 positions, 6 FTE workyears, and $147,000 is requested for the Termination and Prevention of Private Cartel Behavior program. The use of computer assisted methods of organizing and managing case materials and early allocation of scarce resources to maximize benefits make this decrease possible without jeopardizing the goals and objectives of this program. The Division's efforts have been very successful and are vital to the enforcement of the Sherman Act. Investigatory efforts have uncovered numerous cases of flagrant violations of section 1 of the Sherman Act. Prosecution of violators has resulted in large fines and jail sentences. Recovery of damages, injunctions against the continuation or renewal of illegal conduct, and the awareness of the general public and businesses that violation of the Sherman Act will not be tolerated can continue at this funding level.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Preservation of competitive market structure	164	161	$15,763	164	161	$16,687	157	155	$16,566	-7	-6	-$121

Long-Range Goal: To enhance the ability of markets to function efficiently by preventing mergers and acquisitions that may lessen competition and by preventing and dissipating monopoly power acquired or maintained by purposeful conduct inconsistent with competition on the merits.

Major Objectives:

To implement a coherent merger enforcement program which prevents mergers that threaten to reduce competition in specific markets while minimizing governmental interference with transactions having no significant potential for harm.

To enforce effectively the premerger notification requirements of the Hart-Scott-Rodino Antitrust Improvements Act of 1976 and propose changes where requirements are too burdensome and could be relaxed with no loss to the efficacy of the Division's merger screening program.

To utilize fully the expanded statutory authority provided the Division in the Antitrust Procedural Improvements Act of 1980.

To develop and implement managerial and procedural reforms that will allow complex cases to be brought to conclusion more expeditiously.

To operate a system for monitoring compliance with the affirmative obligations imposed on defendants by antitrust judgments.

To identify decrees or decree provisions that have become unnecessary or anticompetitive over time and seek modification or termination by court action.

Base Program Description: The purpose of the Preservation of Competitive Market Structure program is to prevent or dissipate unlawfully acquired or maintained market power, and to enjoin mergers that may lessen competition. Economists are in general agreement that the potential economic benefits of preventing monopolization of, and undue concentration in, particular markets are substantial. The Division promotes and maintains the competitive structure of the national economy through investigation and litigation of instances in which market power is sought, attained, or maintained through noncompetitive conduct and by seeking injunctive relief against mergers and acquisitions that may tend to eliminate competition. The principal statutes enforced under this program are section 2 of the Sherman Act and section 7 of the Clayton Act. The Division's responsibility for this enforcement program is found in 28 C.F.R. §0.40(a).

To realize maximum benefits from the Division's civil enforcement efforts, antitrust litigation resolved in favor of the government must be given full effect through appropriate injunctive relief, and firms subject to antitrust judgments must be monitored to assure that injunctive provisions are met. The Division has also established a program to review existing decrees and to seek the elimination of those that have become anticompetitive or that otherwise no longer serve the public interest.

Accomplishments and Workload:

Item	1985	1986	Estimates 1987	Estimates 1988
Premerger Notifications	1,604	1,949	3,000	1,900

Divestitures	2	2	2	2
Compliance Reports	144	111	111	111
Judgment Modifications/Terminations	8	10	10	10

NOTE: Since the exact nature of the violation is often unclear during the early stages of an investigation, Preliminary Inquiries and Civil Investigative Demands are consolidated for Termination and Prevention of Private Cartel Behavior and Preservation of Competitive Market Structure.

Between October 1, 1985, and September 30, 1986, the Division reviewed 1,949 reports of mergers and acquisitions filed under the Hart-Scott-Rodino Act. It has investigated 85 of those matters to determine whether they might lead to any lessening of competition in the affected markets.

A representative selection of matters to preserve competitive market structure includes the following:

On December 31, 1986, the Division announced that it intended to file suit to block the acquisition of Bradford-White Corporation by Rheem Manufacturing Co. Rheem is the third largest manufacturer of residential water heaters with a 20 percent market share and Bradford-White is the fifth largest with an 8 percent market share. Total sales of residential water heaters in the United States in 1985 were $915 million. The Division had previously indicted and convicted most of the companies in the water heater industry for price fixing.

On December 10, 1986, the Division filed suit challenging the acquisition of Metrocolor Laboratories by MacAndrews and Forbes Group, Inc. MacAndrews and Forbes, which is owned by investor Ronald O. Perelman, is the owner of Technicolor, Inc., one of Metrocolor's chief competitors in the production of 35 millimeter and 70 millimeter release prints for major motion pictures. The acquisition would have combined two of the three primary film laboratories capable of providing these release print services. Total 1985 sales of 35mm release prints were over $100 million and total 1985 sales of 70mm release prints were over $10 million. As a result of the Division's suit, the parties abandoned the transaction.

On November 10, 1986, the Division announced it had filed an antitrust suit challenging the acquisition by Rohm and Haas Company of the ion exchange resins business and assets of Duolite International, Inc., alleging that the acquisition may lessen competition in the production of ion exchange resins for sale in the United States. In 1983, total sales of such resins in the United States were approximately $112 million. Rohm and Haas accounted for approximately 35 percent of those sales, and Duolite accounted for approximately 16 percent. Rohm and Haas has agreed to divest the Duolite ion exchange resin plant which is located in Redwood City, California, and a non-exclusive technology license for the manufacture and sale of Duolite ion exchange resins.

On August 22, 1986, the Division filed suit against Data Card Corporation of Minneapolis, Minnesota, challenging its acquisition of DBS, Incorporated, of Randolph, Massachusetts. A consent decree settling the suit was filed simultaneously. The suit alleged that the proposed acquisition would lessen competition in the market for automatically fed, low-volume embossers. In 1985, total sales of such embossers in the United States amounted to approximately $10 million. DBS accounted for approximately 59 percent of the market, Data Card, approximately 12 percent. The consent decree settling the suit embodies an agreement under which Data Card will sell the AFI 1500/1600 embosser product line, which constitutes part of the DBS assets that it will acquire.

On June 6, 1986, the Division filed a complaint alleging that the combination of the vidicon tube businesses of General Electric Company and RCA Corporation would eliminate competition between the only two domestic firms that produce silicon target vidicon tubes for U.S. military applications and between two of only five domestic producers of antimony trisulfide target vidicon tubes for U.S. military applications. The two firms together accounted for approximately 99 percent of all silicon target vidicon tube sales for military applications in 1985 and about 90 percent of all antimony trisulfide target vidicon tube sales for such applications. Annual sales of vidicon tubes for military applications are approximately $7 million--$2 million for silicon target vidicon tubes and $5 million for antimony trisulfide target vidicon tubes. A consent decree settling the suit was filed simultaneously. Under the consent decree, General Electric must sell its vidicon tube business.

On June 6, 1986, the Division filed a civil antitrust suit against Syufy Enterprises, a motion picture theater circuit headquartered in San Francisco, and its general partner Raymond J. Syufy. The suit alleges that, since at least 1982, Syufy has attempted to monopolize, and since at least October 1984, has monopolized the business of first-run motion picture exhibition in Las Vegas, Nevada, in violation of section 2 of the Sherman Act. The suit also alleges that Syufy's acquisition in October 1984 of the Red

Rock Theatre in Las Vegas violated section 7 of the Clayton Act. The suit seeks as relief, among other things, the divestiture by Syufy of sufficient theaters to restore effective competition in the Las Vegas first-run exhibition market.

Program Changes: The Division is requesting a decrease of 7 positions, 6 FTE workyears, and $121,000 in the Preservation of Competitive Market Structure program. Use of innovative computer assisted methods to accelerate document handling and the earlier evaluation of actions which could result in competitive problems permit this decrease. The Division will continue to refine its analysis to limit the intrusion into the market and to encourage transactions with competitive problems to be abandoned or restructured without resort to judicial or administrative proceedings wherever possible.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Policy analysis, legislation and training	92	91	$4,957	92	91	$5,479	60	64	$4,751	-32	-27	-$728

Long-Range Goal: To enhance the quality of litigation and investigative activities through economic and statistical analysis, to ensure that the objective of increased competition in the marketplace is vigorously promoted in new legislation, and to improve training for Division attorneys and economists.

Major Objectives:

To develop sound economic bases for investigations and litigation to ensure that the enforcement program is beneficial to the economy.

To encourage the submission and passage of legislation promoting a competitive economy and discourage legislation granting unjustified exemptions from the antitrust laws or hampering their enforcement.

To promote substantive and long-range planning in the allocation of resources among competing programs and the development of new or modified program initiatives.

To enhance the litigation skills of Division attorneys through continuing education and career development. The Division's goal is to have 50 percent of the attorneys participate in some form of training or continuing legal education each year to stay abreast of defense counsel in highly complex legal and economic matters.

Base Program Description: Enforcement of the antitrust laws is unique in that precisely what conduct and particularly which mergers and acquisitions are prohibited by those laws can often be determined only after careful economic analysis. Errors in antitrust enforcement can have profound consequences for the affected industries and for the public at large. Thus, professional economists are a key adjunct to the Division's legal staff. Equally important is careful economic attention to relief issues, as evidenced by the intricacies of the recent restructuring of the Bell system. Finally, hundreds of legislative proposals must be considered by the Department each year; many of these issues have serious economic and competitive implications. The Division is the Department's sole resource for dealing with such issues and significantly contributes to Administration policy. General authority for these programs is found in 28 C.F.R. §0.40.

Accomplishments and Workload:

Item	1985	1986	Estimates 1987	Estimates 1988
Congressional Appearances	14	18	18	18
White House Correspondence Referrals	169	151	150	150

Congressional and OMB Requests for Comments	235	374	300	300
Economic Policy Office Special Studies	71	71	45	30

Economists provide early evaluation of the economic significance of business activities proposed for investigation and preliminary analysis of proposed mergers and acquisitions, thus determining at an early stage the desirability of using limited resources to conduct such investigations. Economists identify and focus the economic issues involved in an investigation or case, assist in the development of the theory of the case, identify and present data necessary to support the Division's position, and assist in development of trial strategy relating to the economic issues. Specifically, economists evaluate the competitive effects of business activities proposed for investigation; analyze proposed mergers and acquisitions by determining product and geographic markets, identifying potential entrants, and isolating competitive effects; define relevant markets for studying the structure, conduct, and performance of industries and analyze the economic significance of such structure, conduct, and performance; estimate damages sustained by the federal government in its procurement of goods and services because of price fixing and other illegal activities; participate in the preparation of relief necessary to restore competition; and analyze the economic effect of proposed consent decree modifications.

Division economists also use large data bases, requiring sophisticated management systems, to monitor cases, and research and analyze policy issues. Data bases provide market share and financial information on individual companies and industries. Special software packages are used to perform complex statistical studies of the data. Queries are written against these data bases to generate routine management reports and to analyze policy issues. Economists use data bases which provide large amounts of market share and financial information on individual companies and industries. Computers are used to access these data bases and special software packages are used to perform complex statistical studies of the data. A computer program prepares microfiche reports directly from these tapes. Computers are also used for modeling studies based on simple theoretical models while others realistically simulate entire industries. When graphs or charts are needed for a formal presentation, they are drawn by a computer. A project to integrate systems has resulted in instruction manuals for the economists which will facilitate the use of the systems and make them available "on line" for ready access.

Economists play a significant role in assisting and improving the Division's criminal antitrust enforcement. Economists work with attorneys conducting grand jury investigations to determine the identity of conspirators, the scope of conspiracies, and how conspiracies functioned. Defendants in bid rigging and price fixing cases frequently use economic testimony in their defenses, and economists work to anticipate these defenses and rebut them at trial. Economists have been working to improve and extend the Division's role in prosecuting bid rigging in government procurement in two ways. First, they have been developing methods for analyzing procurement data to detect rigged bids. Second, they have been studying the economic literature on auctions to evaluate and, if possible, improve the procedures used by the government. In addition, economists are working with the Bureau of the Census to compile a new data bank measuring changes in market shares in various industries. Economists in the Division also have worked closely with the U.S. Sentencing Commission to develop the economic analysis of criminal deterrence and formulate guidelines for the sentencing of federal criminal offenders--particularly antitrust offenders.

Beginning in 1985, economists used a list prepared at the beginning of each Congressional session of the main issues likely to arise during the year. Such a list allows staff to develop analyses of major issues on the current legislative agenda. As specific queries and requests come in, they will be answered with a well-developed analysis already on hand. This program assists in linking the legislative agenda to the competition advocacy process which generates substantial policy analysis of legislative issues. A number of legislative issues which normally arise in non-antitrust policy areas now benefit from more extensive economic analysis. Economists play a useful role in describing the welfare effects of, for example, changes in civil procedure, changes in techniques for the detection of various criminal activities, and changes in rules for the compensation of plaintiffs, all of which have implications for antitrust policy. Even rule changes that are strictly procedural often have significant economic implications.

Responsibility for the Division's legislative program entails drafting and supporting legislative proposals to amend the antitrust laws or other statutes affecting competition; analyzing proposed legislation, draft reports, and testimony prepared by other agencies; and submitting comments on such materials to other divisions, the Office of Management and Budget, and Congress. It also includes preparing testimony to be given on behalf of the Department and the Administration, and coordinating responses to correspondence or other inquiries received from Congress or forwarded from the White House for reply.

Among the most important ongoing legislative efforts of the Division is support of the Administration's antitrust reform proposals. Changes have been proposed in merger law, treble damage remedy, law on interlocking directorates, and exercise of jurisdiction in foreign commerce cases. The results will be timely and crucial modifications of antitrust law that will help U.S. firms remain competitive in world-wide markets. The Division also is pursuing procompetitive changes in intellectual property protection and other legislation to improve American competitiveness. The Administration's proposed "Intellectual Property Rights Improvement Act" will greatly benefit American industries and American consumers by encouraging creativity and innovation. Enactment of this bill will help to ensure that creators of intellectual property--patents, copyrights, trademarks--receive adequate protection and opportunity to realize the benefits of their investments. The Administration's bill will close gaps in that protection under current law and ensure that intellectual property rights, which stimulate innovation that benefits consumers, are not unduly restricted.

Other examples of Division involvement in the legislative process include its support of the proposed Federal Telecommunications Policy Act of 1986, that would require the Federal Communications Commission to promulgate and enforce new federal regulations identical in substance to the AT&T and GTE antitrust consent decrees. This legislation will have the effect--after appropriate judicial proceedings--of consolidating federal telecommunications regulation, including the regulation now embodied in those decrees, under the authority of the FCC.

On June 12, 1986, the Division testified before the Subcommittee on Telecommunications, Consumer Protection, and Finance of the House Energy and Commerce Committee, concerning "Signal Scrambling in the Cable Television Industry." Comments were directed to the importance of competition among alternative distribution technologies in the provision of video programming services, and also briefly described the investigation that the Department currently is conducting in this area. The Division stated that scrambling of video programming can serve to facilitate, rather than to frustrate, the operation of competitive market forces. By scrambling their video signals and then selling the right to "descramble" the signals to potential retransmitters, such as cable operators, and directly to potential viewers, such as earth station owners, satellite programmers can earn an economic reward for their investment. Because scrambling may prevent "free riding," it is generally procompetitive and should not be condemned, at least when undertaken unilaterally by a satellite programmer.

On May 1, 1986, the Division testified before the Subcommittee on Monopolies and Commercial Law of the House Judiciary Committee concerning the Department's role in reviewing proposed airline mergers. The Division's role in evaluating mergers in the airline industry was described in general terms. The Division examines airline mergers as it would mergers in any other industry to determine whether they are likely to have anticompetitive effects prohibited by law. For each merger, the Division considers whether substantial competition between the merging parties will be eliminated and whether that elimination will increase the

likelihood of anticompetitive conduct, using the approach outlined in the Merger Guidelines. In airline mergers, the Division has generally defined the relevant markets to be city-pair routes on which the merging carriers are competitors.

Division attorneys and economists enhanced litigation skills by participating in the Attorney General's Advocacy Institute, the National Institute for Trial Advocacy, and other training courses to assist in continuing education and career development.

Program Changes: A program decrease of 32 positions, 27 FTE workyears, and $728,000 is requested for the Policy Analysis, Legislation and Training program. This decrease can be absorbed because the Division stresses the importance of applying economic analysis to all investigations and cases to ensure that the enforcement program is beneficial to the economy. Ongoing economic analyses of market structures and the economy provide an opportunity for the Division to encourage the submission and passage of legislation promoting a competitive economy. In addition, the use of a computerized data and tracking management system for congressional and White House correspondence and a system for managing reports on proposed legislation will make resource savings possible. These systems eliminate the need for several manual entries of the same data, permit certain types of information (such as workload statistics) to be collected more rapidly and accurately, and facilitate responding to Freedom of Information Act requests.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Competition advocacy program.....	59	59	$2,762	75	75	$3,944	50	54	$3,373	-25	-21	-$571

Long-Range Goal: To eliminate unnecessary or counterproductive governmental interference with free market forces and seek adoption of the least anticompetitive means of achieving overriding social purposes.

Major Objectives:

To achieve greater competition in federally regulated industries.

To protect and promote competition in industries which have recently been deregulated.

To minimize the prohibitions against and restrictions of competition under State regulation.

To stimulate competition in the delivery of professional services.

To reduce or eliminate antitrust immunities enjoyed by particular industries.

To encourage competition as new technologies are developed.

To prevent or minimize protectionist restrictions on free and fair international competition.

Base Program Description: As an advocate of competition, the Antitrust Division seeks the elimination of unnecessary regulation and adoption of the least anticompetitive means of achieving a sound national economy through participation in proceedings before regulatory agencies and in executive branch deliberations relating to competition policy. Authority for these various activities is found in 28 C.F.R. §0.40; the Federal Coal Leasing Amendments Act of 1976; the Deepwater Port Act of 1974, 33 U.S.C. §1506(a); the Atomic Energy Act of 1954, 42 U.S.C. §2135; the Federal Aviation Act, 49 U.S.C. §§1378-84; the 1966 Bank Merger Act, 12 U.S.C. §1828; the Bank Holding Company Act, 12 U.S.C. §1842; the National Housing Act, 12 U.S.C. §1730a; the Outer Continental Shelf Lands Act, 43 U.S.C. §1331, et seq. Resources transferred from the Interstate Commerce Commission will be used in these activities.

Accomplishments and Workload:

Item	1985	1986	Estimates 1987	Estimates 1988
PARTICIPATION IN BANK MERGER PROCEEDINGS

1/ Total screenings include review of bank holding company activities in addition to savings and loan letters, bank holding letters, and merger letters.
2/ Other includes case filings with the Commodity Futures Trading Commission, the Bureau of Alcohol, Tobacco and Firearms, the Postal Service Governors, the Nuclear Regulatory Commission, and the Environmental Protection Agency.
3/ The Division cannot estimate by particular agency where intervention will prove fruitful in 1987 and 1988.

A representative selection of significant matters in which the Division has been recently involved to enhance competition follows:

On October 23, 1986, the Division stated its views on three topics relating to the regulation of takeovers and contests for corporate control before the Securities and Exchange Commission (SEC). Comments filed with the SEC urged (1) that the provisions of the William Act should not be extended to apply whenever a person acquires a substantial percentage of a target company's shares during or shortly after a tender offer; (2) that there is no need at this time for federal governmental regulation of the adoption by corporations of poison pills; and (3) that the Commission should adopt a self-goverance exemption for its "all-holders" and other tender offer rules, unless the Commission finds clear evidence that permitting companies to exempt themselves from these rules will have a significant adverse effect on other participants in the markets for securities and corporate control. These comments were filed in response to a recent Commission Concept Release soliciting the views of interested parties on possible changes in the regulation of takeovers and contests for corporate control.

In comments filed with the Federal Home Loan Bank Board on September 29, 1986, the Division strongly opposed proposed regulations that would place more stringent restrictions on acquisitions of certain federally insured thrifts. The proposal's impact would be virtually to prohibit takeovers of thrifts during a three-year period following their conversion from a mutual institution to a stock institution, and the proposal also would have the potential for providing a government-created sanctuary from takeovers for

certain thrifts formed by the merger of an insolvent mutual institution into a stock institution. The proposals likely would raise the cost of capital to the affected thrifts while providing management with job security at the expense of the shareholders, and the Bank Board failed to demonstrate that the expected public benefits exceed the expected costs of the proposed change. The Bank Board proposal, made in August, would among other things require prospective purchasers to show a beneficial effect of an acquisition.

On June 29, 1986, the Division filed comments with the Environmental Protection Agency (EPA) regarding the latter's proposal to phase out and, ultimately, to prohibit, over a ten-year period, the importation and domestic mining of asbestos. EPA is proposing to issue transferable permits that would allow current miners and importers of asbestos to mine or import a decreasing fraction of base-period (1982-1984) volumes. Lawfully mined or imported asbestos could be used for any nonbanned use, regardless of how much pollution it caused. At the end of the ten-year period, mining and importing of asbestos would be banned entirely, except for certain exempt uses that EPA finds are essential and for which substitutes are not available. The Division's comments identified several major problems which would be alleviated by adoption of a series of auctions for use-specific permits. By making the permits use-specific, EPA can ensure that those particularly hazardous uses are more tightly restricted. Auctions would eliminate windfall gains because competitive bidding would result in a price being paid to the U.S. Treasury equal to additional profits the supplier expects to gain.

On June 12, 1986, the Division filed comments with the Department of Transportation (DOT) in response to two proposed revisions in DOT's procedures for reviewing airline mergers. The first would allow DOT to grant expedited preliminary approval for airline mergers that previously have been reviewed and approved by the Department of Justice. The second would allow an airline to acquire 25 percent or more of the voting securities of another airline, without prior governmental review, on condition that the stock is placed in a voting trust. The Division supported the adoption of an expedited review process for airline mergers, but opposed the use of voting trust arrangements. The support for the expedited approval proposal is based on the expectation that it would streamline regulatory review of airline mergers, particularly those that do not raise serious competitive concerns, and would bring merger procedures in the airline industry closer to those used in nonregulated industries. This should result in a significant improvement over current practice. On the other hand, the Division opposed the proposed rule on voting trusts because it would allow air carriers to make stock purchases without prior governmental review in circumstances in which those purchases could have anticompetitive consequences. However, the filing indicated a willingness to support a more restrictive version of the voting trust rule that would limit purchases without prior approval to 15 percent of the target company's voting securities, since such a modification would bring the proposed rule more in line with the standards applied to acquisitions in nonregulated industries.

On June 9, 1986, the Division filed comments with the Department of Agriculture urging the rejection of a proposed federal egg marketing order. The comments focused solely on one aspect of the proposed order: a surplus removal provision that would authorize an Egg Board to restrict the egg supply by removing laying hens from production. The program would be funded by mandatory assessments levied on egg handlers. The Division argued that the proposal to allow an Egg Board artificially to restrict the egg supply is an unwarranted and unwise attempt to substitute regulation for market mechanisms. The egg industry is a well-functioning market with many producers, relatively easy entry, and high-quality, readily available information. The record shows that there is no reason to believe that this industry has experienced the kind of market failure that would justify regulation. Furthermore, the proposal would be ineffective and costly at best, and would more likely be counterproductive and destabilizing. Such regulation would permit producers to restrict egg production and raise prices above competitive levels, harming consumers and society without promoting the long-term interests of producers. Thus, the Division argued that the record in this proceeding demonstrates that surplus removal is inconsistent with sound economic policy and the policies of the Agriculture Marketing Agreement Act. Moreover, once surplus removal is put in place, the stage would be set for additional regulation. Approval of a surplus removal program thus might well be the first step on the road to absolute production controls--a federally sanctioned egg cartel.

On May 29, 1986, the Division issued a report recommending immediate deregulation of all oil pipelines except 11 that carry refined petroleum products, such as gasoline, in the 48 contiguous states and the Trans Alaska Pipeline System. The report further concluded that six of the 11 pipelines may prove to be good candidates for deregulation after further study; however, the other five should remain under federal regulation because they clearly can exercise significant market power. However, most oil pipelines,

including all crude oil pipelines in the contiguous 48 states, can safely be deregulated at once. The pipelines recommended for immediate deregulation represent more than 100 pipeline companies and 71 percent of 1983 pipeline output--measured in barrel-miles--in the contiguous 48 states. The report recommended that all new crude oil and refined petroleum product pipelines be federally deregulated but did not indicate whether existing state regulation should be modified or eliminated. The report did not make any recommendation regarding any liquefied petroleum gas, natural gas liquids and anhydrous ammonia pipelines. The Division is prepared to analyze these pipelines, if necessary, at a later time. The report is an outgrowth of the Department's May 1984 preliminary report on competition in the oil pipeline industry, which presented the methodology and data for analyzing the need for pipeline regulation.

On May 23, 1986, the Division filed comments with the Federal Reserve Board, taking the position that adjusting minimum capital reserves for banks based on the risk involved in the bank's investments would improve bank regulation. Similar comments were filed on May 21, 1986, with the Federal Deposit Insurance Corporation (FDIC). Both agencies are considering a change for the banks they regulate that would introduce a "supplemental adjusted capital measure" to be used in tandem with current minimum capital requirements. The Board's current requirements are based on a comparison of a bank's capital to its balance sheet assets. The proposed standards would compare capital to a risk-weighted total of all assets and off-balance sheet commitments. The new ratio would be used for banks with assets of $1 billion or more, and used on a case-by-case basis for smaller banks. In the comments to the Board and the FDIC, the Division acknowledged that risk-adjusted capital requirements can diminish the artificial competitive advantages created by the current system of flat-rate federal deposit insurance premiums. The Division pointed out in both filings, however, that a better alternative should be considered: the adoption of risk-adjusted federal deposit insurance premiums that would be a more efficient and less restrictive solution to the problems addressed by risk-adjusted capital requirements. By prohibiting banks from making certain capital structure and investment decisions, risk-adjusted capital requirements can prevent banks from taking advantage of valuable opportunities. In contrast, risk-adjusted deposit insurance premiums offer a more market-oriented approach, tending to eliminate the inefficiencies of the current system without prohibiting business activities that contribute to consumer welfare.

On April 25, 1986, the Division filed supplemental comments with the Federal Communications Commission (FCC) opposing FCC adoption of rules that would, with certain limitations, require cable operators to carry "qualified" local television broadcast stations. The proposed rules were the result of an agreement among representatives of the cable and broadcasting industries. The Commission's previous must-carry rules--which required cable systems to carry most local signals as defined by Commission rules--were vacated as unconstitutional in July 1985 by the U.S. Court of Appeals for the District of Columbia Circuit in Quincy Cable Television v. F.C.C. The newly proposed rules define a "qualified" local station as one within a 50-mile radius of the cable facility and one which has a certain circulation in noncable homes. This standard is identical to the "significantly viewed" standard included in the vacated must-carry rules. The Division commented that the existence of the compulsory copyright license for cable systems, which permits cable operators to carry local and distant broadcast signals, does not justify reimposing must-carry rules. Both must-carry rules and the compulsory license are unjustified forms of governmental intervention that serve the public poorly, and the public interest would be better served if the Commission refused to reimpose must-carry rules and worked with Congress to repeal the compulsory copyright license for cable systems.

On April 30, 1986, the Division filed a memorandum with the Federal Maritime Commission (FMC) in a proceeding instituted by the FMC to determine whether three shipping conference agreements violate the section of the Shipping Act of 1984 that provides for the right of independent action. Under the Shipping Act, each member of a conference has the absolute right to take independent action on any rate or service provision in a tariff. A tariff is a statement by the conference of how much it will charge to carry cargo between two points. The FMC's proceeding involves a show cause order concerning two disputed provisions contained in all three of the conferences' agreements. One provision prohibits conference members from taking independent action on any tariff rate associated with the conference's negotiation or provision of a service contract. The other provision states that if at any time prior to its effective date a conference member's independent action is withdrawn or modified by the member that originally proposed it, the independent action will automatically be withdrawn for any other member that elected to adopt it. The Division stated that

both disputed provisions violate the right of independent action. The Division emphasized that in passing the Act, the Congress intended that "a strong requirement of independent action" serve as the central procompetitive balance against the collective conference rate-setting permitted under the Act.

On March 31, 1986, the Division filed reply comments with the Federal Energy Regulatory Commission (FERC) dealing with price regulation of "old" natural gas. The initial comments filed with FERC in late February urged FERC to adopt a market-based system of regulation. The adoption of such a regulatory scheme is within FERC's statutory authority and is the best way to eliminate current and future distortions in the natural gas market. Such a rule would achieve the goal of the Department of Energy's original proposal to establish market-based prices for old gas, but would do so more simply and effectively, and at a lower regulatory cost. Over 125 additional parties filed comments, addressing a multitude of procedural, factual, legal, and policy issues. While there is a consensus among the parties that prices for natural gas should be established by competitive market forces, the comments reveal that there is considerable controversy over the best way to achieve that goal. The Division argued that the controversy only serves to illustrate the superiority of the proposal to let the market set old gas prices. The proposal requires FERC to make only one factual finding (that the natural gas market is competitive at the well-head) and reach only one legal conclusion (that FERC has the authority under the Natural Gas Act to rely on market forces to set just and reasonable rates). Nothing in any of the comments raises serious doubt that FERC has the authority to make both of those findings, and the Division urged it to do so.

Also, consistent with the principles of federalism, the states will be encouraged to deregulate sectors that historically have been subject to their police powers. Health care is one promising target of such efforts. Another is local telecommunications services, an area that the Chairman of the FCC has identified as the next frontier of telecommunications deregulation. Because of the nature of deregulated transportation industries, new projects can be anticipated. The Division will continue to help stem the tide of support for reregulation in the transportation sectors. The Division will continue to argue that agencies should rely on private, marketplace competition to the maximum extent possible and should interfere in the market only when the benefits of that intervention outweigh its cost.

Program Changes: A decrease of 25 positions, 21 FTE workyears, and $571,000 is requested for the Competition Advocacy program. An essential part of Division activities is continued evaluation of federal regulatory rules in order to advise other departments and agencies on the competitive issues involved, and to develop proposals for restructuring legislative mandates or procedures to eliminate unnecessary or counterproductive governmental interference with free market forces. This evaluation has been accelerated in response to a growing public awareness of inadequacies in a system of direct economic regulation. As a result, unnecessary regulation will be eliminated and competition will be encouraged. The funding level of this program is vital to the economy of the nation and the continued promotion of competition in many types of industries.

Long-Range Goal: To provide effective and efficient management and policy direction of all Antitrust Division activities.

Major Objectives:

To provide policy direction and leadership for antitrust enforcement personnel.

To develop and maintain a working climate for Division personnel that fosters interest in, enthusiasm for, and dedication to the Division's programs.

To serve as articulate and persuasive spokespersons for competition policy within the Administration, before regulatory agencies and the Congress, and before the general public.

To allocate resources and control current and future workload and output of the Division to produce results beneficial to the public.

To improve the Division's capability to meet the requirements of the Freedom of Information and Privacy Acts.

To provide effective and efficient administrative support for all Antitrust Division activities.

To support the Division's professional staff with modern tools for information processing.

Base Program Description: Policy guidance is essential to the successful functioning of the Antitrust Division. Top management provides controls and direction for the full range of Division activities. In addition to specific case direction, the Assistant Attorney General, Deputy Assistant Attorneys General, Office of Operations, and section and field office chiefs make significant contributions to overall administration and management. The responsibility for enforcing antitrust statutes requires reaction to complaints and to identifiable economic conditions, and a more sophisticated initiative designed to develop enforcement programs for long range problems such as preservation of competitive market structure. The Division also has the responsibility for serving as the federal government's primary spokesman and analyst on competition policy and its impact on legislative and governmental actions. The staff determines the allocation of a finite amount of resources among competing programs to meet the varied responsibilities of the Division as effectively as possible. Support encompasses a wide number of tasks to be performed to provide the resources and tools needed by the attorneys and economists to do their jobs. As the complexity of the Antitrust Division has increased, so has the need for administrative services.

Accomplishments: The Antitrust Division reorganization in October 1985 increased the efficiency and effectiveness of the central law enforcement mission and realigned the commodity and industry responsibilities of the Washington sections to ensure optimal deployment of both civil and criminal litigation resources. The nine Washington sections responsible for litigation have been consolidated into five litigating sections and one section responsible for foreign commerce matters other than litigation. Consolidation was necessary to maintain an appropriate ratio of attorneys to supervisory personnel, and to give the section chiefs adequate management flexibility and control. The requested resource level is necessary to continue the advantages of the flexibility and the increased familiarity with the new commodity assignments. The organization structure reflects the fact that the Division is a law enforcement agency that will continue to give priority to the detection, investigation, and criminal prosecution of price fixing and related agreements that are per se antitrust violations, and to thorough analysis of mergers. There will be an adequate number of attorneys within each litigating section to allow for flexible and effective staffing of litigation matters. The Division's important role as an advocate of competition has been enhanced as the efficacy of the Competition Advocacy Program has increased.

Despite staffing reductions, a series of management initiatives and the utilization of sophisticated computer support have enabled the Division to increase its overall efficiency. In the area of litigation support, the Division has expanded both the number and the scope of investigations and cases receiving automated support through minicomputer-based systems and computer-generated graphics. During the past year, the Division has continued its extensive use of statistical analysis methods in support of important program initiatives to detect and prosecute anticompetitive, conspiratorial behavior such as price fixing and bid rigging. In several instances, computer products such as graphic representations of complex pricing patterns have been introduced into evidence and have played a key part in the outcome of the case. The Division continues to expand the use of these products and enhance existing data analysis procedures to ensure accurate and timely information for its attorneys. The Division has also been successful in obtaining and processing machine-readable materials from businesses and from federal and state bidding authorities to provide cost effective analyis of bidding, pricing and market shares. In order to provide a continued high level of support to the Division's sections and field offices, the Division has moved aggressively in the use of its on-site minicomputer network for litigation support by implementing a software package called the Antitrust Information Retrieval System (AIRS). AIRS was designed,

developed and implemented "in-house" to operate on existing Division equipment and to provide automated capabilities to the matters which now comprise the bulk of the Division's workload. Additionally, the Division has made use of portable professional computers for remote trial support to increase the quality of offsite support. In summary, the Division has continued to expand the availability of litigation support services to its attorneys through improvements in minicomputer-based systems as well as judicious use of mainframe software systems.

Program Changes: A program decrease of 22 positions, 19 FTE workyears, and $414,000 for the Management and Administration program can be absorbed. All Division managers are sensitive to the need for economy in all operations and will continue to evaluate operations and new developments to make maximum use of resources. The Division will continue to engage in a systematic review of all administrative procedures and controls so that efficiency and cost effectiveness are accorded sufficient weight in all Division procedural requirements. However, for changes to continue to be made in a manner that preserves the quality and responsiveness of support provided to the Division's operating staff and, at the same time, provides adequate safeguards against waste, fraud, and abuse of government resources, the requested resource level is essential.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

The President's Budget request for 1987 included $13,837,000 which would have restored funding that had been deleted from the account as a result of the Gramm-Rudman-Hollings Balanced Budget and Emergency Deficit Control Act of 1985. As a result of Congressional actions, only $5,019,000 of this the requested amount was restored.

Supplementals Requested

1. A supplemental request for $2,818,000 will provide for increased salaries and benefits resulting from the January 1987 pay increase for General Schedule employees.

2. A supplemental request for $3,510,000 is necessary to cover increased costs resulting from the new Federal Employees Retirement System.

3. A supplemental request for $887,000 will cover the increased cost of the Federal Telecommunications System.

Total	5,958	5,858	358,215	6,089	5,945	385,431	6,631	6,352	413,555	542	407	28,124

This budget activity includes resources for the prosecutorial and litigative mission of the United States Attorneys. Funds requested for this activity support the personnel responsible for the prosecution of criminal offenses against the United States, the representation of the Government in civil actions when the United States is concerned, and the initiation of proceedings for the collection of fines, penalties and forfeitures owed the United States.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal litigation	3,242	3,167	$196,439	3,317	3,239	$212,583	3,735	3,552	$233,728	418	313	$21,145

Long Range Goal: To promote compliance with the criminal laws of the United States by individuals within its jurisdiction.

Major Objectives:

To identify, investigate, prosecute and convict those persons and legal entities who have committed offenses against the laws of the United States.

To increase federal law enforcement response in the areas of white collar crime and narcotics and dangerous drugs.

To maintain a secure workplace that provides proper safeguards for employee safety and for the protection of sensitive or classified materials.

Base Program Description: The federal law provides criminal penalties for a wide range of proscribed behavior. Many of these laws are designed to protect the integrity of government operations -- e.g., laws regarding counterfeiting, tax evasion, perjury and fraud against the U.S. Government, while others protect important social institutions and citizen safety -- e.g., laws regarding financial practices, interstate commerce and kidnapping. Obtaining convictions against the violators of federal criminal law is intended not only to punish individual offenders, but to deter prospective criminal behavior and to reinforce general respect for the efficacy of law.

Most alleged violators of federal criminal laws are reported to the U.S. Attorneys by one of the several federal investigative agencies. A few violators are reported to U.S. Attorneys by citizens, and others come to the attention of U.S. Attorneys in the course of prosecuting related criminal conduct. After considering such factors as the sufficiency of available evidence, the condition of the prospective defendant, the applicability of Department of Justice priorities, and the availability of alternatives to federal prosecution, a decision is reached on the appropriateness of federal prosecution. The U.S. Attorneys then become responsible for engaging in the established legal procedures for the purpose of obtaining a guilty judgment against alleged violators of federal crime laws, with the ultimate purpose of invoking against such violators the penalties provided by law.

Except for misdemeanor offenses and in instances in which the defendant waives his right to a grand jury indictment, the evidence against an alleged offender is presented to a grand jury, and the jurors make the final decision for prosecution by voting on an indictment proposed by the U.S. Attorney. Following the delivery of an indictment, the U.S. Attorney is responsible for presenting the charges at the arraignment of the defendant and for participating in preliminary hearings concerning such issues as defendant's bail status, the propriety of the indictment, the forfeiture of the defendant's property, the competency of the defendant, and the admissibility of evidence. In addition to the formal proceedings at which U.S. Attorneys represent the U.S. Government, they are constantly negotiating with defense counsel, witnesses, court officials, and investigators to keep the case progressing within the statutorily defined limits for speedy trial. Although barely ten percent of all criminal prosecutions are concluded by a trial, the U.S. Attorneys always must be prepared to go to trial to avoid the risk of dismissal for noncompliance with Speedy Trial Act time limits and to negotiate effectively with defense counsel for a guilty plea by the defendant. Whenever the defendant is unwilling to admit guilt and a trial becomes necessary, the U.S. Attorneys then are responsible for presenting the factual evidence which will convince the jury of the defendant's guilt and for advocating legal arguments.

Accomplishments and Workload: The criminal litigation workload of the U.S. Attorneys is presented below. Data on matters include workload performed by the Organized Crime Drug Enforcement Task Forces (OCDE) which is not reported elsewhere.

ITEM	1985	1986	Estimates 1987	1988
Matters received	90,740	96,968	101,800	106,900
Matters closed	83,890	91,949	93,790	106,600
Matters pending, EOY	54,795	57,043	65,053	65,353

			Estimates	
Cases filed	29,689	34,208	34,900	39,680
Cases terminated	26,633	30,607	31,200	35,480
Cases pending, EOY	27,467	30,848	34,548	38,748
Grand Jury proceedings	17,094	20,111	20,860	23,170
Trials	3,028	3,485	3,560	4,040

The Criminal Litigation program objectives are accomplished through the work of 94 U.S. Attorneys' offices, each of which has responsibility for the investigation and prosecution of a wide range of proscribed criminal behavior. Actual and estimated accomplishments are reflected in the above workload data. Criminal filings for all U.S. Attorneys' offices in 1986 included 1,196 criminal appeals filed. The greatest volume of filings were for controlled substances (6,156), fraud against Government (2,258), weapons control (1,942), immigration (1,728), mail & wire fraud (1,379) and tax evasion (1,219) offenses. Of the total 30,607 cases closed, 29,096 defendants made pleas of guilty; 4,655 defendants were found guilty after trial; and 934 defendants were found not guilty. Grand jury proceedings included 20,045 indictments and 66 No True Bills, for a total of 20,111 actions.

A total of 57,741 complaints were closed without reaching the district courts. Of this number, 27,154 referrals involving 33,865 defendants were closed by immediate declination of prosecutions. Another 15,246 matters were declined after further investigations, and 9,693 were disposed of by Federal magistrates.

Program Changes: Increases of 418 positions, 313 full-time equivalent (FTE) workyears and $21,145,000 are requested for 1988 in the Criminal Litigation program. These resources are necessary to accomplish the following program initiatives:

Drug Enforcement - To remove the profit motive for those engaged in illicit narcotics trafficking and to aggressively prosecute the criminals involved, the U.S. Attorneys are requesting an increase of 371 positions, 279 FTE workyears and $18,562,000.

The recent legislation (Omnibus Drug Supplemental Act of 1987) recognized the seriousness of the drug problem and established numerous initiatives to combat drug abuse and narcotics trafficking. Significant resources, including investigative personnel, were included in this legislation which cross a variety of issues and organizations that will be involved in the struggle for a drug-free America. Not the least of this effort is that involving prosecutorial activities necessary to ensure the convictions of guilty parties and the ultimate incarceration of them. It is anticipated that significant increases in referrals from investigative agencies will occur in 1988 and require litigative resources to handle the increased workload.

The Administration's emphasis on and commitment to drug law enforcement has met with considerable success to date. Unavoidably, however, such initial success, when coupled with the FBI's increasing emphasis on major drug networks, brings with it a series of expensive and labor-intensive by-products: (1) The need for ever greater attorney involvement at the earlier investigative stage, e.g., coordinating undercover operations, supervising Title III applications and preparing search warrants; (2) Greater preparation for grand jury presentation including document review, compulsion orders, witness debriefings and relocation and cross-district travel to coordinate multi-district investigations; (3) Extensive pre-trial litigation caused by voluminous defense motions, lengthy pre-trial detention hearings at the magistrate, district court and even appellate levels, litigation of issues involving multiple representation, suppression and severance motions; and (4) Lengthy and complicated trials involving multiple defendants followed by extensive post-trial motions and appellate litigation.

White Collar Crime - In concert with the objectives of both the President's Council on Integrity and Efficiency (PCIE) as well as the Economic Crime Council, the U.S. Attorneys are requesting an increase of 28 positions, 22 FTE workyears and $1,961,000 to prosecute white collar crime (WCC) violators. Specifically, the requested resources would be applied in the areas of defense procurement fraud, money laundering, government program fraud (e.g., medicaid/medicare), "boiler-room" operations, bankruptcy fraud, and bank fraud and embezzlement.

Between 1982 and 1985, the PCIE's figures reflect a 100 percent increase in the number of WCC prosecutions with a correspondingly increase of 500 percent in the dollar size of the cases involved. According to projections provided by a number of investigative agencies, this trend is likely to continue well beyond 1988. For example, the FBI anticipates an increase of 1,000 related investigative matters between 1987 and 1988 alone. The number of bank frauds, which has already doubled since 1981, will accelerate with increased application of the new Bank Fraud Statute included in the Comprehensive Crime Control Act. Referrals involving defense procurement fraud are expected to mushroom given recent Congressional and public attention and the Defense Contract Audit Agency's addition of over 200 plant-based auditors.

Law Enforcement Coordinating Committee (LECC)/Victim-Witness program - The addition of the 47 authorized LECC/Victim-Witness coordinators authorized by Congress in 1985 has greatly improved the quality of these programs in the districts that received the positions. The coordinators serve as the focal point in implementing several critical Department of Justice programs including its drug education activities. The coordinators have helped to bring together federal, state and local law enforcement personnel to receive training or carry out operations on several Departmental priorities such as child pornography, white collar crime, including fraud against the federal government, terrorism and drug prosecutions. The Department has also used the LECCs as the main method for distributing information on the Comprehensive Crime Control Act of 1984 and its asset forfeiture program. In addition, the coordinators are responsible for providing direct client services to victims and witnesses in the federal system and administering all assistance activities including preparation of impact statements; provision of referrals for victim-witness counseling; and, assisting with witness protection, victim compensation and restitution arrangements. Many mid-size offices which do not have an individual solely dedicated to this task are at a significant disadvantage in performing these functions. Accordingly, an increase of 17 positions, 12 FTE workyears and $522,000 is requested.

Physical/Personal Security To cope effectively with the threats of reprisal/intimidation attacks by criminal elements and to protect both employees and ever increasingly sensitive/classified material in the U.S. Attorney and OCDE offices, an increase of $500,000 is requested. Investigations of large-scale narcotics trafficking and other highly international criminal activities have made OCDE and U.S. Attorney personnel and facilities targets for reprisal/intimidation attacks. In addition, the investigations' information collected become very valuable to the investigations' targets. In several instances, investigatory information has included national security classified information from foreign counter-intelligence units within the intelligence community.

Security standards, approved by former Deputy Attorney General Jensen, have been established for the OCDE offices. The Department of Justice Security Staff has conducted surveys of some OCDE and U.S. Attorneys' offices and has provided recommendations for enhanced security. Specific structural security deficiencies within various buildings that house U.S. Attorney offices have been identified.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Civil litigation.....	2,024	1,989	$113,282	2,099	2,040	$121,987	2,179	2,100	$125,957	80	60	$3,970

Long Range Goal: To protect and to advance the interests of the United States through the conduct of civil litigation.

Major Objectives:

To improve productivity and cost effectiveness through maximum use of paralegal resources to meet expanding litigation requirements.

To respond promptly and professionally to all suits brought against the United States, its officers and employees.

To conduct affirmative litigation professionally to recover for the United States all possible monetary losses and compensation for damages suffered by the United States.

To support federal programs, as necessary, by litigation and negotiation.

To collect monies owed to the United States and to increase the effective rate of recovery.

To articulate completely and forcefully the positions of the United States on issues presented by the Courts of Appeals.

Base Program Description: Although the civil litigation activities of the U.S. Attorneys are less visible and publicized than those of the criminal program, civil matters and cases consume a significant portion of the U.S. Attorney resources. An estimated measure of this can be seen from the following figures taken from 1986 data. Excluding appeals, collections and management hours, the U.S. Attorneys expended 32 percent of all attorney workyear resources in support of civil litigation, 44 percent of the paralegal workyears, and 40 percent of the clerical workyears.

To an ever-increasing extent, controversies between the U.S. Government and private parties have become the subject of civil litigation. Except for collections cases, there are almost twice as many suits initiated by private parties against the U.S. Government as there are suits initiated by the U.S. Government itself. The litigation brought against the government covers a range of causes of action including torts (damage suffered as a result of government action--e.g., collision with a postal service vehicle, malpractice by a government physician, invasion of privacy by a government agent), the determination of social security benefits, tax refunds, contract violations, racial/sexual/age discrimination, and habeas corpus. The U.S. Government, on the other hand, initiates civil litigation against private parties for a wide range of purposes of its own. These purposes include the recovery of money obtained from the government by fraud, the acquisition of interests in land by eminent domain proceedings, the enforcement of administrative summonses, the enforcement of environmental, admiralty, civil rights and other laws for which there are civil law penalties, and the recovery of debts owed to the U.S. Government.

The representation of the U.S. Government in civil litigation has a very tangible effect on government assets. A thorough, well-developed defense will operate to minimize the exposure of the government to claims against it. Similarly, an aggressive advocate on behalf of the government will maximize the amounts recovered in plaintiff actions. Furthermore, the effectiveness of the U.S. Government's representation often has an impact beyond the individual case which is the subject of litigation. Precedents set in particular cases may affect the ability of the U.S. Government to protect itself against future claims as well as its ability to pursue future claims of its own.

Few civil cases are actually resolved by trial. In 1986, for instance, only 1,019 cases were concluded by trial compared with 81,107 which were either withdrawn, dismissed, disposed of on review of an administrative record, or settled prior to trial. Nonetheless, many pre-trial hours are spent in court by civil attorneys. In 1986, civil attorneys spent 54,588 hours before the district courts, 17,885 hours before the bankruptcy courts, and more than 26,352 hours in special masters hearings or other similar proceedings. Although few cases actually go to trial, the ability of the government to obtain favorable dispositions depends to a large extent on the opposing counsel's perception of the government's probability of success in the event of trial, and the success of the United States in preliminary motions practice. For this reason, even though a trial is unlikely, each case must be prepared as if a trial were imminent.

In conducting civil litigation, U.S. Attorneys work closely with the legal divisions of the Department of Justice and the affected agencies to ensure that the government's interests are fully represented to opposing counsel and to the court. The U.S. Attorneys participate in negotiations with opposing parties, file appropriate motions and memoranda with the court, present the government's position in hearings before the court, take depositions, organize evidence, and conduct trials as necessary. The U.S. Attorney has authority to settle matters under $200,000.

Court proceedings are governed by many complex rules of law which are applied to actual situations. During the course of litigation, a trial judge is required to apply procedural rules and/or substantive legal theories to situations which are presented by the litigants. Either party can appeal the rulings. At the conclusion of the lower court proceedings, the losing party may petition a higher court to overturn the lower court judgment. As the U.S. Government generally prevails in civil cases, a significant amount of appellate activity involves the U.S. Government defending the trial judge's ruling. As a result, the level of appellate activity required by the U.S. Attorneys is directly related to their rate of success in the district courts. Appellate activity may flow from either trial or preliminary motions practice.

A majority of the civil appeals are handled by the U.S. Attorneys' offices. After considering the pertinent case law, the transcript, and any other information which bears on the issue, the Assistant U.S. Attorney formulates a written argument supporting the position of the U.S. Government. After filing the brief, the Assistant U.S. Attorney may be required to participate in oral argument before the court. If further appellate proceedings are required, the Assistant U.S. Attorney may be called upon to assist the Department's legal divisions and the Solicitor General in preparing the case for review by the U.S. Supreme Court. To ensure that a national perspective and consistency are attained, the preparation of appellate cases is coordinated with the appropriate legal division of the Department of Justice. All appeals brought by the U.S. Attorneys to overturn a lower court ruling are individually authorized by the Solicitor General.

72-165 O—87——21

Accomplishments and Workload: The civil litigation workload of the U.S. Attorneys follows:

Item	1985	1986	Estimated 1987	Estimated 1988
Matters received	118,249	95,475	96,000	98,800
Matters terminated	117,230	99,767	101,760	104,800
Matters pending EOY	40,420	34,729	24,169	23,447
Cases filed	103,877	88,720	90,500	93,200
Cases terminated	87,963	84,709	86,400	89,000
Cases pending EOY	162,554	162,017	166,117	161,133
Appeals filed	2,973	2,721	2,774	2,854
Appeals terminated	2,553	2,583	2,633	2,709
Trials	2,918	1,019	1,039	1,069

During 1986, there were several factors contributing to temporary reductions in the civil litigation workload. The effects of the budget reductions imposed by the Gramm-Rudman-Hollings Balanced Budget Amendment caused deferrals of civil litigation activity in 1986 since criminal caseloads were a priority while severe funding shortages were being experienced. Concurrently, there were less client agency referrals during the year from Health and Human Services, Department of Education, and the Veterans Administration. Also, as a result of the implementation of the Internal Revenue Service Tax Return Offset Program, client agencies such as the Department of Education, Veterans Administration, Small Business Administration, Housing and Urban Development and the Department of Agriculture redirected efforts toward this initiative which caused the reduction of potential referrals to the U.S. Attorney. When comparing civil litigation workload statistics from 1985 to 1986, it should be noted that some referrals in 1985 were extraordinarily high. Specifically during 1985, the Department of Education, alone, referred over 14,000 additional matters compared to previous years. Therefore, 1986 is lower because 1985 contained an unusually high referral rate. It is estimated that rates of referrals will begin to increase during the latter part of 1987 and during 1988, but not to a level as high as 1985.

During 1986, U.S. Attorneys' offices collected over $216.7 million in cash from civil cases alone. The collections were obtained from civil mortgage foreclosures for $45.8 million, $10.7 million from civil penalities and foreitures, $63.6 million for civil judgments and $74.4 million for other civil cash collections. These amounts do not include non-cash amounts recovered, e.g., airplanes, houses and other personal property acquired by the government.

Program Change: Increases of 80 positions, 60 FTE workyears and $3,970,000 are requested for the Civil Litigation program in 1988 to pursue affirmative civil litigation aggressively ensuring maximum recovery of monies by the U.S. Government.

The Affirmative Civil Enforcement initiative seeks to reach untapped sources of cash recoveries by the U.S. Government in civil prosecutions for fraud against the government, abuse of government programs and defaults on government obligations. This initiative will identify civil recoveries of significant dollar value and obtain those recoveries promptly, thereby making more effective use of civil litigation to enforce program objectives of client agencies. This program is expected to increase recoveries to the U.S. Government by approximately $60 million in the first full fiscal year after implementation. The anticipated sources of these recoveries are litigation in the areas of fraud and abuse of government programs; forfeiture in drug cases; matters having a significant potential for substantial civil recoveries to the U.S. Government that advance or support program objectives of client agencies; and, an increasing number of cases referred to the U.S. Attorneys' offices in the areas of bankruptcy, real estate foreclosures, and debt collection. The estimates of potential recoveries in this program are premised upon the experience of the Affirmative Civil Litigation Unit in the Eastern District of Pennsylvania where cash recoveries increased from $3 million in 1983 to $28 million in 1985. By applying the same rate of return per Assistant U.S. Attorney, it is estimated that each attorney workyear devoted to this program will result in an additional $2 million in civil recoveries.

Each of the litigation areas named above represents significant recovery potential. A review of several associated statistics underscores their magnitude:

- The GAO referring to the need for greater fraud prevention efforts in its 1987 report,* quotes an annual fraud pricetag of $200 billion.

- Civil penalties and forfeitures collected by U.S. Attorneys totalled over $82 million in 1985 (as contrasted with the $6.5 million collected for criminal penalties and forfeitures -- a difference which emphasized the efficacy of proceeding civilly.)

- For evidence of burgeoning referrals and dollars associated with bankruptcy, real estate foreclosures and debt collection, one need only look at the Farmers Home Administration's (FmHA's) loan portfolio. According to GAO,** between 1975-1984 FmHA farm debt increased over 400 percent growing from $5 billion to $26 billion. Compounding the bleak situation in the farm belt is the recent surge of bankruptcies and foreclosures in the energy belt. According to recent figures compiled by the Administrative Office of U.S. Courts, the number of bankruptcy petitions filed in the most affected states (Texas, Louisiana and Oklahoma) rose a startling 32 percent between March and December, 1985. No diminition in this trend is foreseen in the near future. In February, The Wall Street Journal reported*** that "... a new wave of bankruptcy filings is expected and some of these could be major." Those most likely to be affected include not only independent producers and rig operators but real estate developers and banks as well. Even more recently The Washington Post cited court officials who project that, nationwide, "... the number (of bankruptcies) is expected to mushroom to 520,000 in fiscal year 1987, far above any previous year."****

Apart from the beneficial financial implications accruing from such an enforcement effort, the qualitative returns on investment in this program include: strengthening the fiscal integrity of government programs through aggressive litigation in cases where those programs are subject to fraud and abuse; increasing the cash flow realized from narcotics forfeitures thus increasing the forfeiture assets shared between state and federal narcotics law enforcement agencies--enhancing federal, state and local law enforcement cooperation; and increasing the productivity of existing resources devoted to bankruptcy, real estate foreclosures and debt collection by increasing the paralegal to attorney ratio.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Legal education.....	25	24	$2,721	20	19	$2,833	20	19	$3,285	...	...	$452

Long-Range Goal: To improve the quality of Government legal representation.

Major Objectives:

To provide effective, quality continuing legal education to an increasing percentage of the federal attorneys and other legal personnel.

To provide special training to meet policy priorities and special problems such as victim and witness protection and the Organized Crime Drug Enforcement Task Forces, which cross department and agency lines.

To offer video and audio tapes and other materials as a means of reaching a greater percentage of the federal attorneys in district and regional offices of the U.S. Government, and to reduce the travel costs associated with Washington-base continuing legal education.

Base Program Description: The Office of Legal Education administers two institutes that provide continuing legal education to federal attorneys. The potential audience for continuing legal education includes more than 17,000 attorneys and several thousand other legal personnel, mostly paralegal specialists. The primary vehicle for providing instruction to Department attorneys is the Attorney General's Advocacy Institute (AGAI). The AGAI utilizes experienced trial attorneys and federal district court judges as instructors for lecture, discussion, and performance exercise sessions. Through the use of video tape facilities, student performances are recorded and played back for analysis and critique. By conducting courses in Washington, D.C., the AGAI also offers a means of introducing new Assistant U.S. Attorneys, as well as the Department's legal division attorneys, to the operational practices of the Department headquarters. Specialized topics are covered in lecture and problem-solving workshop sessions; these short seminars are held in Washington, D.C., and in locations around the country.

While the Advocacy Institute focuses on teaching courtroom technique, discovery and negotiation skills to Department attorneys, the Legal Education Institute (LEI) teaches administrative advocacy and a wide variety of substantive subjects to attorneys and other legal personnel employed throughout the Executive Branch. The federal perspective on topics practiced by legal personnel are presented in lecture and problem-solving workshop sessions; administrative and courtroom advocacy skills are taught through workshops during which exercises are videotaped for critical analysis by experienced practitioners. Federal attorneys and other legal personnel are not only participants but are also advisors, curriculum developers, and teachers of the LEI program. The programs are held primarily in Washington, D.C., and in other cities that have concentrations of federal employees.

Accomplishments and Workload: The legal education workload of the U.S. Attorneys is presented below:

			Estimates	
1980	1985	1986	1987	1988
Advocacy Institute (AGAI)				
Criminal sessions offered	5	5	6	10
Advanced criminal law sessions	3	2	4	4
Civil law sessions offered	6	5	6	6
Paralegal sessions offered	...	...	...	4
Appellate sessions offered	4	3	4	4
Total courses offered AGAI	18	15	20	25
Students receiving AGAI instruction	728	832	840	1,320
Specialized seminars conducted	18	8	25	25
Students participating in specialized seminars	2,080	800	2,120	2,120

			Estimates	
	1985	1986	1987	1988
Legal Education Institute (LEI)				
Total courses offered LEI	109	77	107	100
Students receiving LEI instruction	6,168	4,789	6,168	6,500
Students receiving private sector training sponsored by OLE	400	200	500	500
Total students receiving AGAI and LEI instruction	9,376	6,621	9,628	10,440

The AGAI and LEI continue to increase the types of courses offered and the number of attorneys covered. In 1986, approximately 6,421 Executive Branch attorneys and other legal personnel attended courses with approximately 4,789 of these in LEI programs. The continuing legal education instruction hours were distributed as follows: AGAI 730, LEI 921. Participants represented every federal executive department and agency and 52 of the 53 independent government establishments. During 1986, LEI refined its newly developed courses and updated all its offerings.

The AGAI, in addition to the continued improvement in the basic courses, introduced a number of new subjects to the seminar series. For example, in response to requests from the litigating divisions, the Advocacy Institute has offered seminars in public corruption, economic crime and forfeitures, and federal tort claims. Special sessions have been held to meet special problems, such as the new Advanced Appellate Course, and the Drug Prevention conference for U.S. Attorneys.

In some instances, there have been joint responses by the two institutes. For example, the continuing confusion and complexity in bankruptcy law as a result of the Supreme Court's decision several years ago have made it necessary to increase the number of offerings in the Bankruptcy Law series for agencies as well as for the Department of Justice. Each institute added a slightly different version of the Freedom of Information Act for Attorneys and Access Professional Seminar to meet different needs. Also, in both institutes, there has been an attempt to make better use of video beyond the taping and playback of exercises. The institutes announce and administer the programs from Washington, D.C., but the agency regional offices provide federal space and equipment for videotape viewing of some courses by federal personnel in each city. Showings were held in eleven different regional cities in 1986. NJI provides federal personnel outside Washington, D.C., with easy, inexpensive access to courses through its videotape program and out-of-town offerings.

Program Change: An increase of $452,000 is requested for the Legal Education Program in 1988.

This increase of $452,000 is requested for the Attorney General's Advocacy Institute Program in 1988 to accommodate the training requirements of new attorney and paralegal positions requested in the U.S. Attorneys' program. Funds will cover the travel and tuition costs of a greater number of personnel to attend a greater number of course offerings. New courses will be developed for paralegals as a means to facilitate their expanded role in the operations of U.S. Attorney offices.

	1987 Appropriation Enacted			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Organized crime drug enforcement...	519	502	$29,857	519	502	332,376	563	536	$34,933	44	34	$2,557

Long-Range Goal: Through the coordination of federal, State, and local law enforcement, identify, investigate and prosecute members of high-level drug trafficking enterprises, and to destroy the operations of those organizations.

Major Objectives:

To prosecute individuals who organize, direct, finance or are otherwise engaged in high-level illegal drug trafficking enterprises, including large scale money laundering organizations.

To promote a coordinated drug enforcement effort in each Task Force area, and to encourage maximum cooperation among all drug enforcement agencies.

To work fully and effectively with State and local drug enforcement agencies.

To make full use of financial investigative techniques, including tax law enforcement and forfeiture actions, to make possible government seizure of assets and profits derived from high-level drug trafficking.

Base Program Description: The Organized Crime Drug Enforcement (OCDE) program implements a major Administration initiative to combat organized crime and drug abuse. Drug trafficking and organized crime remain among the most serious crime problems facing the nation. According to a March 1986 report issued by the President's Commission on Organized Crime: "Drug trafficking is the most widespread and lucrative organized crime operation in the United States, accounting for nearly 40 percent of this country's organized crime activity and generating an annual income estimated to be as high as $110 billion." The proceeds from drug sales further enable organized crime to implement an array of serious crimes, including bribery of public officials, infiltration and take over of legitimate business firms, and money laundering and bank fraud which weaken key elements of the nations economy.

The OCDE program represents the utmost degree of cooperation and coordination among federal, State and local law enforcement agencies. One of the key elements of the program is the establishment of the thirteen regional task forces to fight drug trafficking. The regions identify, investigate and prosecute members of high-level drug trafficking enterprises to destroy the operation of those organizations. The range and nature of the investigative techniques requires continuing and intensive participation by Assistant U.S Attorneys in the development of investigative strategy and in the provision of continuing counsel to ensure that evidence growing out of investigations will be complete, conclusive, proper and admissable.

Accomplishments and Workloads: The Organized Crime Drug Enforcement workload of the U.S. Attorneys follows:

ITEM	1985	1986	Estimates 1987	Estimates 1988
Cases initiated	370	455	554	592
Cases in which indictments are returned	250	389	494	526
Indictments returned	889	1,241	1,385	1,480
Defendants indicted	3,157	4,418	4,986	5,328
Defendants charged with Racketeer Influenced and Corruption Organization	138	164	199	213
Defendants charged with Continuing Criminal Enterprise	144	198	224	240
Defendants convicted	1,482	2,184	2,393	2,557

In accomplishing program goals, the thirteen Task Forces have focused on cases involving members of major drug trafficking organizations, particularly traditional organized crime figures; other organized criminals and professionals who are importing and/or distributing large amounts of controlled substances or are financing them; and physicians or pharmacists illegally dispensing substantial quantities of prescription drugs. As of December 1985, the thirteen Task Forces had convicted 2,453 individuals, including 271 convictions under statutes aimed at heads of criminal organizations; fines, seizures and forfeitures of property and cash exceeding $440 million; and large quantities of drugs being removed from the market. For example, over 29 kilograms of heroin, 1,350 kilograms of cocaine, 4,957 kilograms of cannabis, and 693,065 dosage units of dangerous drugs were removed through OCDETF cases in 1985 alone. Additionally, during the first nine months of calendar year 1986, cash seizures amounted to $71,664,669 and property seizures amounted to $87,061,609. During the same period of time, cash forfeitures amounted to $13,987,154 and property forfeitures amounted to $22,371,148.

As a result of the September 1985 OCDETF coordinator's conference, the OCDETF Administrative Unit presented the coordinators' issues and ideas to the OCDETF Washington Agency Representative Group in November 1985, and members of that group were asked to conduct further analysis from their respective agency perspectives. The group is to prepare a comprehensive report for the Working Group -- the report will address both the coordinators' concerns and the Aurora Associates, Inc., caseload study. The Working Group plans to use the information to refine the OCDETF program.

In June 1986, the General Accounting Office (GAO) prepared a fact sheet for the Chairman, Subcommittee on Criminal Law, Senate Committee on the Judiciary, with information on the dollar amounts of criminal fines which (1) could have been imposed by the courts at sentencing, (2) were imposed by the courts, and (3) had been collected as of December 31, 1985, for defendants prosecuted as a result of the OCDETF Program. It was found that criminal fines totalling $8 million were imposed by the courts for 315 of the 1,440 offenders and 1,127 offenders had no fine imposed. Only $509,000 (7 percent) had been collected by the government as of December 31, 1985. This information should be considered during congressional deliberations on a proposed amendment to the Comprehensive Crime Control Act of 1984, expanding the Sentencing Commission's authority over the imposition, modification, and remission of criminal fines.

During the period June 10-12, 1986, an Assistant U.S. Attorney Task Force coordinators' meeting was held to assist the National Drug Enforcement Policy Board (NDEPB) in the formulation of its U.S. Government statement of strategy for drug investigation and prosecution. A final paper was submitted to the NDEPB on behalf of the coordinators, including their recommended changes. Also, as a result of this meeting, it was proposed that the Immigration and Naturalization Service (INS) be included as a full partner in the OCDETF program. Accordingly, the Deputy Attorney General signed an implementation plan in December 1986, which authorized INS to assign 13 coordinators, one to each Task Force and designate a number of field agents as dedicated Task Force Agents.

In July 1986, a study was published by the GAO which reported that of the 48 Task Force coordinators: (1) 35 indicated that the Task Force program has enhanced attorney involvement in investigations; (2) 47 said it helped improve the full use of investigative techniques; and (3) 44 indicated that the program had achieved positive results, such as a greater number of RICO and CCE cases.

A caseload study conducted by Aurora Associates, Inc., in August 1985 revealed that the data contained in the Case Monitoring System does not capture essential operational variables as personnel allocation per case phase or overal utilization of attorney time. As a result, the system is planned to be upgraded in 1987 which should improve case monitoring and attorney time utilization.

Program Change: An increase of 44 positions, 34 FTE workyears and $2,557,000 is requested for the Organized Crime Drug Enforcement program in 1988.

This increase is requested to support adequately the Administration's initiative in the war on drugs. To not lose the initiative gained with other law enforcement agencies, existing resources must be fully utilized to maintain full pressure on drug dealers. At the same time, new cases must be handled. In 1986, the Internal Revenue Service nearly doubled its tax cases over the 1985 level. This increase plus joint investigations with other agencies will result in more OCDETF cases being filed in 1986 through 1988. Normally, an OCDETF case which contains counts against tax laws nearly doubles the trial time necessary to present the case to a jury.

As noted earlier, in 1987, the Immigration and Naturalization Service (INS) will become a formal participant in the OCDETF program. This represents an increase of 80 agents. A caseload study of the Organized Crime Drug Enforcement Task Force Program published in August 1985 found that "good cases" utilized the services of four Federal agents for each Assistant U.S. Attorney. With the increase in INS agents, the ratio will increase to 5:1. At the same time, as a result of the U.S. Attorneys' Law Enforcement Coordinating Committees initiatives, it is anticipated that the Drug Enforcement Administration and state and local agencies will continue to bring substantial drug cases which will require a full range of attorney attention.

The number of task force cases increases annually as federal agencies become more effective in developing intelligence about drug organizations. Each new case indicted leads ultimately to additional suspects. Also, local law enforcement is increasingly coming to the task force with large potential cases. As more cases lead to conviction at trial, the number of appellate matters handled by each Assistant U. S. Attorney increases proportionately. If new cases are to be worked, additional resources will be needed merely to keep pace with the appellate workload.

In addition to continuing to handle the volume of multi-defendant cases which are presented to the task forces and maintaining the cooperation between federal, State and local agencies in the prosecution of individuals, the OCDETF plans to continue to focus on the forfeiture aspect of investigations and prosecutions to realize more monies recovered to the U. S. Treasury.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration...	148	176	$15,916	134	145	$15,652	134	145	$15,652	...	...	...

Long-Range Goal: To provide consistent direction and appropriate distribution of resources to the U.S. Attorneys and to respond promptly and efficiently to the administrative and management needs of the 94 U.S. Attorneys' offices.

Major Objectives:

To provide management, leadership and direction to the Executive Office for U.S. Attorneys and the U.S. Attorneys' offices.

To coordinate the successful implementation of all 94 district Law Enforcement Coordinating Committee plans.

To represent the interests of all U.S. Attorneys in the development of Department of Justice policy and to support system-wide consistency in the conduct of federal litigation.

To conduct field review, management audit and performance evaluations of each U.S. Attorney's office.

To formulate and execute an operating budget to satisfy the operational needs of U.S. Attorneys' offices.

To formulate and implement Equal Employment Opportunity plans.

To formulate and exercise personnel management policy and authority in order to obtain the most qualified individuals for positions in the U.S. Attorneys' offices.

To provide all administrative support necessary to obtain adequate space and equipment.

To complete the design and implementation of a caseload management system and to make available optimal office technology for the U.S. Attorneys.

To provide policy direction and resources that will result in optimal efficiency in the collection of debts owed the U.S. Government.

Base Program Description: The Management and Administration program encompasses all of the Executive Office for U.S. Attorneys (EOUSA) with the exception of the Office of Legal Education. The EOUSA provides general assistance and supervision to the 94 U.S. Attorneys' offices, and coordinates and directs the relationship of other organizational units of the Department with these offices. Through the Office of Information Management, the EOUSA provides U.S. Attorneys' offices with the information and automated information systems necessary to achieve Department objectives and to ensure efficient use of resources. The Evaluation and Review Staff of the EOUSA assists U.S. Attorneys in recognizing improvements that can be made in the use of professional personnel while reducing the cost of operating a U.S. Attorneys' office. The EOUSA, through its legal counsel unit, provides legal interpretations and advice to U.S. Attorneys on concerns such as legislation, regulations and departmental guidelines. In addition, the EOUSA has responsibility for implementing affirmative action programs within the U.S. Attorneys' offices while managing a discrimination complaint program through its Equal Employment Opportunity unit. The Debt Collection staff of the EOUSA provides direction and oversight to U.S. Attorneys in the conduct of their debt collection activities. One of the more critical responsibilities of the EOUSA is the oversight of each U.S. Attorneys' office Law Enforcement Coordinating Committee (LECC) program. Each office is responsible for the formulation and implementation of an LECC plan. These plans are the backbone of the Administration's efforts to join with State and local authorities in conducting law enforcement functions. Another important responsibility of the EOUSA is the exercise of personnel management authority within the EOUSA and the U.S. Attorneys' offices. The personnel authority includes all phases of personnel operations such as recruiting, classification, training, adverse action and employee relations. The acquisition and renovation of space as well as procurement of all equipment, furniture, supplies and material are program function of the EOUSA. Finally, through its Financial Management Staff, the EOUSA formulates and executes a budget for all 94 U.S. Attorneys' offices and itself. The formulation process includes any need for amendments, supplementals, reimbursements and transfers.

Accomplishments and Workload: Accomplishments of the Management and Administration program follow:

Item	1985	1986	Estimates 1987	Estimates 1988
1. EEO Unit				
a. Briefings on EEO activities and accomplishments	465	478	500	500
b. Technical assistance/Speaker Bureau contacts	275	1,014	1,000	1,000
2. Personnel:				
a. A&A appointments	785	1,968	2,025	2,204
b. Non-attorney appointments	1,133	2,187	5,262	5,882
c. Position classifications completed	612	2,432	1,998	2,528
d. Other Personnel actions processed	18,459	43,062	38,106	39,152
e. Security actions processed	N/A	5,684	8,743	10,857
3. Equal Employment Opportunity Unit				
a. Informal complaints received	12	33	20	20
b. Informal complaints terminated	12	29	15	15
4. Legal Counsel				
a. Freedom of Information requests received	1,847	1,536	1,700	1,750
b. Freedom of Information requests completed	1,118	3,076	2,500	1,750
5. Space renovations	905	126	967	1,048
6. Requisitions for services and goods processed	4,421	2,947	4,891	5,304
7. Purchase orders completed by EOSA	1,630	657	1,816	1,969
8. Office evaluation reports	70	21	54	95
9. Financial transactions recorded	8,584	6,320	7,000	7,500
10. U.S. Attorney cash collections ($000)	$338,218	$235,951	$248,000	$308,000

11. Office of Information Management

a. PROMIS and USACTS II computer based systems	23	28	46	46
b. USACTS word processing based systems	13	27	47	47
c. PROMIS/USACTS data base submissions to EOUSA	416	744	1,055	1,320
d. L&R input transactions	540,000	425,000	224,000	3,500

The Law Enforcement Coordinating Committee (LECC) Staff of EOUSA in conjunction with the Office of Justice Programs conducted a three day training conference for U.S. Attorney staff assigned LECC or Victim-Witness responsibility. The LECCs have since then held over 100 full committee meetings and numerous subcommittee meetings. A later conference was held on drug abuse awareness, education and prevention for U.S. Attorneys. National experts addressed the scope and societal impact of the drug problem, drug pharmacology, drug screening, and school prevention programs.

The Equal Employment Opportunity Office (EEO) received 33 new matters during 1986, 29 of which were closed either informally by resolution or failure of complaintant to follow through on the complaint. Five cases were referred to Legal Services for resolution purposes. One was resolved. Four proposed dispositions were rendered by the EEO office. Two hearings were requested by complaintants.

The Office of Legal Counsel received 1,536 and processed 3,076 Freedom of Information/Privacy Act (FOIA/PA) requests. A FOIA/PA Task Force was created to reduce the request backlog. The Attorney General's Advisory Committee of the United States Attorneys approved 18 "Bluesheet" policy statements submitted for inclusion in the United States Attorneys' Manual. A total of 76 Transmittals including 20 Bluesheets were issued, the majority of which has resulted from passage of the Comprehensive Crime Control Act of 1984.

One of the most significant accomplishments of the Financial Management Staff (FMS) was the formulation of 1988 budget estimates for the U.S. Attorneys' offices. Following the budget formulation process, the initial estimate was submitted for departmental review and a subsequent submission was formulated and forwarded to the Office of Management and Budget for its review. In addition to the budget formulation process, the FMS monitored and provided status of funds reports for use of EOUSA and Department policy level officials. The FMS added one additional district (Eastern District of New York) to its pilot project to place U.S. Attorneys' offices on individual operating plans. There are now three offices given responsibilities for monitoring all fund expenditures. Operating plans are now developed and monitored for the following units: Organized Crime Drug Enforcement Task Forces; Office of Information Management; Office of Legal Education; District of New Jersey; Southern District of New York and Eastern District of New York. Operating instructions for the establishment of Imprest Funds have also been distributed to all U.S. Attorney's offices. Ten districts have applied for this authority, which will expedite change-making for fine collections and enable offices to reimburse employees for out-of-pocket expenditures for miscellaneous small purchases i.e., money order fees and local transportation expenses.

Accomplishments for the Facilities Management and Support Staff were as follows: coordinated the second phase of the District of Columbia U.S. Attorney's office relocation for both the Superior Court and District Court operations; coordinated relocation of the U.S. Attorney's Office in Houston, Texas; acquired new space and submitted floor plans for the expansion and

consolidation of the Boston, Massachusetts office; acquired and renovated new space in Jackson, Mississippi; acquired new space in Tampa, Florida; Jacksonville, Florida; and Alexandria, Virginia; and upgraded the security of the Salt Lake City, Utah office. A facsimile network for the Executive Office staff and all but two U.S. Attorneys' offices was completed in 1986 enabling expeditious transmission of documents. With the addition of two new offices in 1986, there is now a total of seven offices with Grand Jury Court Reporter contracts. Five other offices have solicited bids for reporting services, and evaluations of two of the bids are presently underway.

In 1986, the Personnel Management Staff implemented the findings of studies conducted in 1985 to find means to improve personnel management services for over 150 staffed offices. The overall timeliness in processing transactions for over 5,000 employees has improved. The staff is near completion of two major projects on standards for the legal administrator and legal secretary professions. Personnel authority has been granted to a limited number of districts. The Personnel Management Staff is in the process of delegating similar authority to several more of the larger district offices.

The Evaluation and Review Staff (EARS) within EOUSA visits U.S. Attorneys' offices and conducts on-going evaluations as frequently as budget and time permits to ensure uniform quality of review, and to provide assistance to evaluators when reviewing very large offices. In 1986, 10 legal management reviews, 2 administrative reviews; and 9 collection reviews were completed. In 1986, EARS expanded the practice of acquiring workload data from client agencies and the Administrative Office for U.S. Courts. Client agency workload projections are used to project resource requirements (both personnel and other expenses) in the U.S. Attorneys' offices in the future. Related activities, the conduct of legislative and policy cost impact analyses, also provide resource projection data.

In late 1985, EARS was assigned the responsibility for allocating full-time equival TE) workyears to the U.S. Attorneys' offices. The management of FTEs was critical to maintaining operations during the severe 1986 funding restrictions mandated by Gramm-Rudman-Hollings reductions. In 1986 and 1987, each U.S. Attorney has been given an allocation of full-time permanent positions and FTE workyears as well as assistance in understanding their associated management implications.

The Office of Information Management (OIM) within the EOUSA provides direction and oversight to U.S. Attorneys in the conduct of their debt collection and general caseload management activities. They assure that Department objectives are being met and provide offices with the automated information systems necessary to support their litigating activities and to assure efficient use of resources. OIM is responsible for a multi-year project to provide modern word processing equipment to all U.S. Attorneys' offices and to implement caseload and collection management systems on word processors or computers in all districts. These systems bring modern word processing facilities to the smaller U.S. Attorneys' offices and provide hardware on which to operate a caseload and collection management system. Since the end of 1986, Lanier equipment has been operational in 108 locations in 67 districts and all U.S. Attorneys' offices have the ability to electronically communicate revisable documents to their staffed branch offices.

Contractor resources have been used for the implementation of the Prosecutors Management Information System (PROMIS) for caseload and collection management on Prime computers in the largest 20 districts. OIM personnel developed the United States Attorneys' Caseload Tracking System (USACTS) for use on Lanier equipment in the smaller offices. OIM personnel started USACTS implementations in January 1985 and began to direct PROMIS implementations when the implementation contract ended in March 1985. At the end of 1986, USACTS was operational in 27 districts and PROMIS was operational in 28 districts. During 1986, the OIM staff refined and modified PROMIS software to make it run on small PRIME computers. That system, called USACTSII, is now operational in two medium sized U.S. Attorney offices. It will be installed in 13 additional sites in 1987.

During 1986, the EOUSA joined forces with the Tax and Criminal Divisions to jointly acquire state-of-the-art office automation equipment which is compatible between the divisions and the U.S. Attorneys' offices. The equipment will increase the productivity of attorneys in litigating on behalf of the government.

Changes in caseload have dictated the use of computers instead of word processors for caseload and collection management in a number of mid-size offices. Eight optional computers from the original Prime contract and 15 additional small Prime computers have now been acquired, thus providing machines on which to implement PROMIS or USACTSII in a total of 46 districts. USACTS will be used on Lanier equipment in the remaining 47 districts. EOUSA will continue to implement PROMIS, USACTS and USACTSII at the rate of three districts per month assuming that wiring can be accomplished.

During 1986, OIM continued its efforts to enhance the automated legal research capabilities of the U.S. Attorneys' offices. At the end of the fiscal year, 153 JURIS custom terminals were installed in U.S. Attorneys' offices and their branches. Late in the fiscal year, communications software, which allows Prime terminals normally used for caseload management to be used as JURIS research terminals, was acquired for installation on all Prime computers. Over 1,000 individuals received JURIS training. The addition of the text of the U.S. Attorneys' Manual, and selected briefs written by the Office of the Solicitor General, Civil Division, and U.S. Attorneys themselves have made JURIS more useful. The U.S. Attorneys' offices continued to use JURIS terminals to access selected data bases provided by WESTLAW and LEXIS which are not a part of JURIS.

In 1986, computerized litigation support was funded for four highly publicized cases with complicated evidentiary problems. During the year, computer system managers in U.S. Attorneys' offices played a greater role in providing litigation support using individual districts' Prime computer facilities. However, the ability of local computer system managers to provide this support has been limited somewhat, due to the lack of easy-to-use litigation support software.

U.S. Attorney collections efforts continue to be severely affected by the transfer of the responsibility from the Courts for physically processing fine/assessments payments. Significant effort was expended implementing certain aspects of the crime control and fine enforcement acts and developing systems for handling significantly more payments than the Courts ever processed.

A new two page Claims Collection Litigation Report (CCLR) was implemented in 1986. It provides core information for claims for smaller amounts which almost never go to trial. Use of this form means less preparation work for the referring agencies.

Long Range Goal: To reduce and deter national origin and citizenship status discrimination to the point where Congress can properly determine that there is no need for these provisions.

Major Objectives:

To remedy discrimination based on national origin or citizenship status caused by the implementation of the Immigration Reform and Control Act of 1986.

To review charges of discrimination and to initiate and file complaints with administrative law judges in appropriate cases.

Base Program Description: The Immigration Reform and Control Act of 1986 makes it an "unfair immigration related practice" to discriminate in hiring, recruiting, discharging, or referring an individual for a fee, because of such individual's national origin, or in the case of a citizen or intending citizen, because of that individual's citizenship status. The Act exempts from these prohibitions (a) employers of three or fewer employees, (b) claims which are enforceable under Title VII of the 1964 Civil Rights Act, 42 U.S.C. 2000e, and (c) employment actions based on citizenship status where the employer must discriminate based on citizenship in order to comply with requirements imposed by statutes, regulations, executive orders, government contracts, or where the Attorney General determines citizenship status is essential for an employer to do business with a federal, state of local government agency or department. In order to enforce the prohibitions in the Act, the position of "Special Counsel for Immigration-Related Unfair Employment Practices", has been created in the Department.

The Special Counsel will receive and investigate charges of discrimination filed by private individuals or those filing on their behalf, or Immigration and Naturalization Service Officers, and determine whether the charges warrant filing an administrative complaint. When the Special Counsel determines that such action is justified, he or she may file a complaint with an administrative law judge seeking injunctive relief and, where appropriate, back pay or civil monetary penalties or both. Once the administrative law judge finds a violation and issues relief, the Special Counsel may file an action in federal court to enforce such relief. Where the Special Counsel does not file an administrative action, the Act provides the individual the right to file his or her own aciton before an administrative law judge.

Accomplishments and Workload: Because this is a newly-established program, there are no accomplishments or workload data to report.

Program Change: For 1988, the Department is requesting an additional 30 positions, 23 FTE workyears and $2,315,000 to continue the efforts initiated in 1987. Since 1987 is the first year of operation for this office, it is difficult to estimate specific workload. However, based on general workload data obtained from the Immigration and Naturalization Service and on cost estimates provided by the Civil Rights Division, it appears that this request will be adequate to handle the responsibilities as set forth in P.L. 99-603.

OPENING STATEMENT

Mr. EARLY. The Committee is pleased to welcome Deputy Attorney General Arnold I. Burns. Mr. Burns, you may proceed with your statement. I understand you are going to make a statement that will include that of the other witnesses.

Mr. BURNS. Yes. I have a statement for the record, and I will try to give a brief summary.

Mr. EARLY. We will include your statement in its entirety into the record at this point, and your summation will be fine.

[Statement follows:]

DEPARTMENT OF JUSTICE

GENERAL LEGAL ACTIVITIES

STATEMENT OF THE DEPUTY ATTORNEY GENERAL

ARNOLD I. BURNS

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE, THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and members of the Subcommittee:

I am pleased to appear before you in support of the 1988 budget request for the General Legal Activities appropriation. The Department is requesting $763,441,000 to fund 10,696 positions and 10,354 full-time equivalent (FTE) workyears. The 1988 GLA budget request includes $46,401,000 and 565 positions for the Antitrust Division, and $413,555,000 and 6,631 positions for the U.S. Attorneys. For 1988, we propose to transfer these litigating components into the appropriation. This year's request represents an increase of 864 positions, 698 FTE workyears and $140,603,000 over the comparable 1987 appropriation anticipated level.

The request includes uncontrollable increases of 111 FTE workyears and $59,591,000 and nonrecurring decreases of $4,179,000. Also included are increases of 109 positions and 35 FTE workyears and decreases of $4,471,000 associated with management savings initiatives and a program decrease of 100 positions, 85 FTE workyears and $2,109,000 for the Antitrust

Division. In addition, the request includes a transfer of $244,000 from the financial and administrative systems support group and 16 positions, 16 FTE workyears and $843,000 from the Interstate Commerce Commission. Our program increases total 839 positions, 621 FTE workyears and $90,684,000.

Please allow me to summarize for the Subcommittee the program changes we are proposing for 1988.

For the Criminal Division, we seek a program increase of $4,469,000 to fund 45 positions and 33 FTE workyears to combat organized crime, terrorism and procurement fraud. More specifically, 24 positions, 18 FTE workyears and $2,312,000 will be devoted to increasing organized crime prosecutions and addressing the recommendations of the President's Commission on Organized Crime. The Commission, in its report, noted organized crime's increasing involvement in drug trafficking and the emergence of new organized criminal groups. The Commission has recommended that the Department develop new initiatives against organized crime activity in labor unions and the market place, more specifically, to apply all of the remedies available under the Racketeer Influenced and Corrupt Organization (RICO) laws in an attempt to expand our efforts to decertify hoodlum unions.

In addition, $1,106,000 to fund 15 positions and 11 FTE workyears is being requested to provide legal advice to representatives and policy-makers responsible for responding to international terrorist incidents and other matters. As you

know, the Criminal Division is very involved in the extradition of terrorists for trial in the United States.

We are also requesting an increase of $708,000 for six positions, and four FTE workyears in the Defense Department procurement fraud area. The Defense Procurement Fraud Unit was established in 1982 to overcome the numerous problems that had been encountered in the investigation of important cases, such as Litton and General Dynamics in the 1970s and the early 1980s. On July 24, 1986, Litton Systems, Incorporated, was sentenced, following a plea of guilty, to 320 counts of false claims and mail fraud. This case, which involved mischarging material cost on contracts to the Army, Navy and Air Force, resulted in $15.7 million being paid back to the U.S. Government. The additional six positions will allow us to intensify our efforts, not only in the well-publicized cases but in the less well-known prosecutions as well. These false claims and fraud cases require thousands of work hours sorting through millions of pieces of documentation.

Finally, resources totaling $343,000 are also sought for litigation support, travel and overtime in the Criminal Division's public integrity, narcotics, and internal security programs.

The U.S. Attorneys are requesting a program increase totaling $28,124,000 for 542 positions and 407 FTE workyears for 1988. The major focus of this request is to beef up prosecution in the areas of narcotics and dangerous drugs, white collar

crime, affirmative civil litigation and defense of claims against the Treasury. Of the total program increase requested, $21,439,000 to fund 417 positions and 313 FTE workyears will be devoted to strengthening the prosecutorial posture in drug abuse and narcotics trafficking. Included are $2,557,000 to support 44 positions and 34 FTE workyears for the Organized Crime Drug Enforcement initiative and $320,000 for the Legal Education costs associated with the additional Assistant U.S. Attorneys in this request.

Enactment of the Omnibus Drug Supplemental Act of 1987 provided significant new resources for federal investigative agencies to create even greater momentum in our overall drug enforcement efforts. By 1988, U.S. Attorney personnel will be called upon to play an even greater role in the many and varied steps that must be taken to achieve successful prosecution, not only of high-level drug cartel members, but also of the leaders of mid-level trafficking organizations.

This includes becoming involved early in the investigative process by coordinating undercover operations or supervising Title III applications; coordinating and preparing for often lengthy grand jury presentations; handling sensitive witnesses who require special security protection; reviewing voluminous documentary material to track illicit assets and more. This challenge is not new to the U.S. Attorneys for they are in the front lines every day in virtually every federal court fighting the war against drugs. The drug-related resources we are

requesting are necessary if the new resources provided to the investigative agencies are to have a meaningful effect upon those engaged in illicit narcotics trafficking. Without additional staff for the U.S. Attorneys, a large portion of the additional referrals for prosecution will be declined.

For white collar crime prosecutions, we are requesting 28 positions, 22 FTE workyears and $1,561,000 to support the President's Council on Integrity and Efficiency by expanding even further our efforts to prosecute defense procurement fraud, government program fraud, money laundering schemes, bankruptcy fraud, and bank fraud and embezzlement.

Under our affirmative civil enforcement initiative, we are requesting $3,970,000 for 80 positions and 60 FTE workyears to generate additional revenue to the U.S. Government, using civil remedies, within the context of proceedings involving fraud and abuse of government programs, drug forfeitures, bankruptcy, real estate foreclosures and debt collection. Based upon our recent experience with this concept, we expect to generate an additional $60 million in income annually by 1989, of which a significant portion will be cash. The U.S. Attorneys' cash collections are expected to reach $270 million in 1988. Finally, we are seeking $522,000 to support 17 positions and 12 FTE workyears to improve cooperation between Federal, State and local law enforcement agencies by placing coordinators in selected mid-size districts,

and $500,000 for improvements to personal and physical security in various locations nationwide.

We request $13.6 million to support 114 positions and 72 FTE workyears for increases in the Civil Division. These increases will allow us to handle increased litigation workload in the Appellate, Torts, Commercial Litigation and Federal Programs areas and provide additional resources to meet our litigation responsibilities under the Immigration Reform and Control Act and the civil frauds legislation. In the Division's appellate litigation program, we have experienced increases in workload of more than 80 percent over the past five years while staffing has remained constant. The requested increase of $2,331,000 to support 34 positions and 21 FTE workyears will redress this imbalance and allow the Appellate staff to handle a greater share of this litigation.

The explosion in torts caseload continues to strain the Division's ability to defend the United States in cases where the government's exposure exceeds $125 billion. In view of this we are seeking an increase of $3,953,000 to support 20 positions and 13 FTE workyears for the Torts program. Our efforts in the conduct of torts litigation have generally resulted in a success rate of 98 percent in claims defeated or settled at a reduced level. In 1988, we estimate that at the base level of funding, net savings to the government in claims defeated or settled at lower amounts will be approximately $4.0 billion. At the request

level, we anticipate those savings to grow to $4.8 billion--an increase of 20 percent. This contrasts with growth in requested resources of only six percent in workyears and 14 percent in total litigation costs. For each dollar spent on defensive litigation in 1986, we defeated $121 in claims.

In order to defend government programs and avoid concomitant raids on the Treasury, we are asking for an additional $1,413,000 for 20 positions and 13 FTE workyears for the Federal Programs activity. Currently, we are defending programs where the exposure to the Treasury can reach billions of dollars.

In the area of affirmative litigation, especially with respect to false and fraudulent claims against the government, we request $4,492,000 to support 29 positions and 18 FTE workyears for the Commercial Litigation program. These resources will allow the Division to provide adequate support to the Administration's goal of achieving substantial reductions in money lost through waste fraud and abuse. While the increase represents an enhancement of 16 percent in funding and six percent in workyears over the base level of resources, our recoveries of money in fines, penalties and judgments are expected to increase by over 18 percent from an estimated $88 million to $104 million. During the past five years, the Commercial Litigation Branch has returned over six dollars for every dollar invested in litigation for the recovery of money.

At this rate, recoveries in 1988 could reach $166 million at the base level and $193 million at the request level.

Finally, we are seeking $1,390,000 for 11 additional positions and seven FTE workyears for the Office of Immigration Litigation to handle increases in litigation brought about by the passage of the Immigration Reform and Control Act. These resources, including two positions and $156,000 reflected under the appellate area, are required to handle additional workload arising from its provisions.

For the Tax Division, we request an increase of $10,977,000 to fund 70 positions and 54 FTE workyears. Of that amount, 10 positions, seven FTE and $2,151,000 will be required to address the additional workload generated by the Tax Reform Act of 1986. The tax appellate program's caseload will increase by at least forty new cases as a result of numerous suits contesting the technical provisions of the Act. In addition, the Division's civil tax litigation program caseload will increase by six hundred cases dealing with refund claims. The potential amount of judgments and fines as a result of civil tax litigation may reach $1.8 billion in 1988 and may increase to $2.0 billion with our resource increase. There is also a savings of 18 positions, 17 FTE workyears and $193,000 resulting from management initiatives.

72-165 O—87——22

The remaining 60 positions, 47 FTE workyears and $8,826,000 will be devoted to the additional workload generated as a result of program increases provided to the Internal Revenue Service by Congress in 1987. The Tax Division's request includes litigation increases in three areas: (1) refund and appellate litigation as a result of the IRS initiative to reduce backlogs; (2) collection-related litigation to support the increased IRS collection activity; and, (3) organized crime and drug enforcement prosecutions to support the efforts of additional IRS special agents.

For the Antitrust Division, we request a program decrease of $2,109,000 which funds 100 permanent positions and 85 FTE workyears. The reduction reflects a realignment of policy and support functions and will not in any way diminish our enforcement efforts. Specifically, the Department expects to continue the efforts of its primary enforcement activities, which include the vigorous prosecution of hard-core horizontal antitrust violations, such as price fixing, bid-rigging and market allocations among competitors. These are areas that we believe are the most essential among antitrust enforcement. The proposed savings in resources are possible because of improved efficiency, better use of staff and automated resources and streamlined reporting, economic analysis, management, and support functions.

We are requesting an increase of $158,000 for the Office of Solicitor General, allowing it to buy existing computer equipment and expand the existing case-tracking system. The Office will be able to do away with the last remnants of its manual case-tracking system. As you know, the Office conducts and supervises all aspects of government litigation in the U.S. Supreme Court and approves federal appellate actions brought by the United States.

Mr. Chairman, I point with pride to this Administration's civil rights enforcement record. In the past six years we have brought more cases involving acts of racial violence than ever before in our history. More than twice as many Klansmen have been arrested and convicted than in the previous administration. We have obtained more convictions of members of other hate groups, and our success rate in the prosecution of criminal civil rights cases stands today at an all-time high of 82 percent. In most areas of the country the Klan and its splinter groups have been significantly weakened or entirely eliminated in large measure because of this effort. And there are many, many more criminal investigations underway.

Nor does our criminal enforcement record begin to tell the whole story. In every other area of our civil rights responsibility -- housing, education, voting, employment, institutionalized persons -- we have compiled an impressive record of accomplishment. To vigorously continue our efforts we

seek an additional $800,000, to allow the Division to hire outside consultants. These consultants, who will primarily be used in three program areas, will perform a number of various analyses for the Division. The use of consultants is also vital to the development of complex statistical data bases.

Specifically, the consultants will perform on-site inspections of public facilities as mandated by the Civil Rights of Institutionalized Persons Act (CRIPA) for the Special Litigation program. They will also develop and maintain large data bases and analyze election data to determine the existence and degree of racially polarized voting. Finally, they will perform statistical and computer services to permit the program to conduct title VII investigations in a manner conducive to pre-suit settlement or settlement by consent decree.

We are also requesting an increase of $2,315,000 to fund 30 positions and 13 FTE workyears to complete setting up the Special Counsel for discrimination, initiated in 1987 pursuant to the Immigration Reform and Control Act. The Special Counsel will receive and investigate charges of discrimination filed by private individuals or those filing on their behalf, or Immigration and Naturalization Service officers, and determine whether the charges warrant filing an administrative complaint.

For the Land and Natural Resources Division, we request program increases of $6,499,000 for 26 permanent positions and 23 FTE workyears. Of the total, $4,779,000 for 14 positions, and 12

FTE workyears are requested to address the expected growth in caseload that will result from new programs under the Resource Conservation and Recovery Act, the Safe Drinking Water Act and the Clean Air and Water Acts. In addition, $1,720,000 for 12 positions, and 9 FTE workyears are requested for the general litigation program to fund increased new activity under the National Forest Management Act; federal water rights litigation in several western states; and, the Navy Port Dispersal Plan for major new construction at ten nationwide sites.

Over the past five years, the Land and Natural Resources Division has returned over four dollars for every dollar spent on environmental enforcement litigation. At this rate, recoveries in 1988 could exceed $23 million at the base level of funding and $35 million at the request level. Similarly, in defensive litigation, the Division has protected revenues and provided cost avoidances of twice the rate of expenditures. In 1988, these benefits will top $12 million at the base level and $14 million at the request level.

An increase of $42,000 is requested for the Office of Legal Counsel's Presidential Emergency Action Document (PEAD) program. The goal for the PEAD project is to develop an entirely new portfolio of easily understood, legally sufficient and programmatically sound PEADs. A PEAD is a draft Executive Order, legislation or proclamation which may be required in order to perform essential functions more efficiently during a national security emergency.

The Department also seeks $23,181,000 in 1988 for the development and acquisition of office automation systems for the Washington-based legal divisions and U.S. Attorneys offices. A major portion of the requested funding will be committed to a joint procurement for the Criminal and Tax Divisions and the U.S. Attorneys. This procurement provides for nearly 5,000 terminals for these organizations in 1988 and 1989, and it envisions eventual expansion of the system to 12,000 terminals.

This increase allows the Department to proceed with enhancements to office automation systems supported by already completed system analyses and studies. A major investment in new technology is essential because much of the current equipment and associated systems software is outdated or will soon become obsolete. In addition to the problem of technological obsolescence, some organizations are using equipment which was purchased in 1980-82 and is reaching the end of its useful life.

The Department is requesting $540,000 to fund 12 positions, and 9 FTE workyears to enable the U.S. National Central Bureau-INTERPOL to operate on a 24-hour basis. This organization, which represents a critical link in the Department's international law enforcement effort, faces an unending escalation in the volume of international message traffic and continual increases in its backlog. Twenty-four hour operations are essential to world wide criminal investigations such as INTERPOL conducts for police

agencies all around the globe and will speed the processing of message traffic between organizations in all the world's time zones.

As I mentioned earlier, Mr. Chairman, the Department proposes to transfer the Antitrust Division and the U.S. Attorneys as new components of the GLA appropriation. Finding ways to deal with the federal budget deficit demands that all program managers within the executive branch seek innovative approaches to cost containment. In recent years, the Department's litigating organizations have made real improvements in cost containment. We believe more can be done.

In order to allow full consideration of more far reaching concepts for changes in the conduct of the government's litigation, we believe we must seek the maximum flexibility to pilot test innovative methods of containing costs which are common to most or all litigating organizations. This flexibility arises once all litigating organizations are consolidated within the same appropriation. An example of such a change might be the creation of a new budget activity within the GLA appropriation which will fund all litigation support expenses. Under such an approach, all costs for transcripts, would be funded by a single source instead of being budgeted and managed separately by seven or eight components. Other examples might entail the consolidation of selected administrative support functions or

consolidated funding of certain field activities. As an additional benef.t, consolidation will improve management responsiveness to litigation crises.

In fact, the Congress has already agreed to allow the Department to use resources from the GLA appropriation to fund office automation systems in, not only the legal divisions, but also the Antitrust Division and the U.S. Attorneys. It should be understood, that consolidating these accounts will provide maximum flexibility without usurping the Congress' legitimate program oversight prerogatives. Any significant changes of this nature fall within the well established reprogramming notification procedures which are applicable to the Department's appropriations. As in the past, the Department remains prepared to discuss, with the Congress, ways in which the conduct of the government's litigation can be improved.

In 1987, the Antitrust Division and the U.S. Attorneys are independent appropriations and, as such, a consolidation within the GLA appropriation would not affect any other Departmental organization. An opportunity exists to join the three activities because of the current appropriation structure. Consolidation of these accounts would emphasize the Administration's commitment to streamlining its operational processes and ultimately save the taxpayers money. The public benefits most by our efforts to provide legal services unencumbered by the rigors of a technical appropriation structure. Flexibility is the key if we are to be successful in combatting today's criminal element while finding new ways to contain costs. With appropriate oversight and guidance from the Congress, we can work together to maintain a safe and just society.

INTRODUCTION

Mr. BURNS. Thank you. Mr. Chairman and Members of the Subcommittee: A lot has happened since I testified here last week, Mr. Chairman, and the most significant in my life, I became a grandfather. Two days ago I welcomed my first grandson, "Brendan Harris Burns," into this world.

Mr. EARLY. I am glad you are putting things in perspective, because you are very lucky. I have eight kids and I cannot marry off any of them. [Laughter.]

Mr. BURNS. I am thoroughly delighted, but I did not want more time go by before recording him in the record of Congress. And, as far as the unmarried children are concerned, I think we can profitably discuss things afterwards.

1987 SUPPLEMENTAL APPROPRIATION

First off, I should like to express my appreciation for the favorable consideration that this Subcommittee gave to our Fiscal Year 1987 Supplemental Appropriation, and its markup Tuesday afternoon.

The Attorney General and I, and all of us at the Department of Justice, are very appreciative of the support that this Subcommittee has given us through the years.

1988 REQUEST

Now, our Fiscal Year 1988 request for the GLA account, as you said, Mr. Early, totals $763,441,000 which will fund 10,696 positions, including the Antitrust Division and the U.S. Attorneys, which we asked you to include as additional components of the General Legal Activities (GLA) account.

The request represents an increase of $140,603,000 and 864 positions over the total anticipated 1987 Appropriation level of $622,838,000 and 9,832 positions for the GLA, Antitrust, and U.S. Attorneys accounts.

Our request includes uncontrollables of $59,591,000. That includes $18.4 million for annualization of the Federal Employees Retirement System, and $8.7 million for annualization of pay.

It includes the transfer of $843,000 and 16 positions from the Interstate Commerce Commission.

It includes the transfer of $244,000 for the financial and administrative systems support group. And it includes program increases of $90,684,000 and 839 positions.

From these requested increases, we have subtracted savings from management initiatives which add up to $4,471,000, nonrecurring decreases totaling $4,179,000, and program decreases totaling $2,109,000 and 100 positions.

Therefore, our requested increases and transfers of $151,363,000, less our management savings, nonrecurring decreases, and program reductions, when added to our 1987 appropriation level, net to our total 1988 total request of $763,441,000.

INCREASES TO MEET LEGISLATED MANDATES

For the Department's litigating organizations we are requesting increases in several areas. Much of our proposed increases are the result of new responsibilities given to us by the Congress with the passage of recent legislation. This includes:

The 1986 Anti-Drug Abuse Act;
The Immigration Reform and Control Act of 1986;
The Tax Reform Act;
The False Claims Act Amendments of 1986;
The Program Fraud Civil Remedies Act of 1986;
The Anti-Kickback Act of 1986; and
The Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986.

Please permit me to highlight for the Subcommittee some of the programs we are proposing for 1988. Let me start, if I may, on the criminal side.

CRIMINAL DIVISION

More work must be done to eliminate organized criminal activity in labor unions and the market place. More must be done to eliminate white-collar crime. More must be done to stop drug traffickers from turning our cities into "Crack" houses and sapping the vitality right out of our greatest resource, our citizens, particularly our youngsters.

The future of this country is being decided out in our city streets, in our neighborhood playgrounds and in our schools. We must not become numb. The fight must continue and, as you can appreciate, we need more resources.

For the Criminal Division, we are requesting a program increase of approximately 8.7 percent, which represents an increase of $4,469,000 and 45 positions to combat organized crime, drugs, terrorism and procurement fraud.

And, more specifically, the Criminal Division will devote 24 positions and $2,312,000 to increasing organized crime prosecutions and addressing the recommendations of the President's Commission on Organized Crime.

The Commission, in its report, noted organized crime's increasing involvement in drug trafficking and the emergence of new organized criminal groups.

We are also requesting an increase of six positions and $708,000 for the Defense Department Procurement Fraud Unit. The unit was established to overcome the numerous problems that had been encountered in the investigation of important cases.

On July 24, 1986, Litton Systems, Incorporated, was sentenced, following a plea of guilty, to 320 counts of false claims and mail fraud. This case resulted in almost $16 million being paid back to the United States Government.

The additional six positions will allow us to intensify our efforts in this regard, not only in the well-publicized cases but in the many less well-known prosecutions.

In addition, 15 positions and $1,106,000 is being requested to provide legal advice to representatives and policy-makers responsible for responding to international terrorist incidents and other mat-

ters. As you know, the Criminal Division is very involved in the extradition of terrorists for trial in the United States.

Finally, resources totaling $343,000 are also sought for litigation support, travel and overtime in the Criminal Division's public integrity, narcotics, and internal security programs.

I would like now, with your permission, to turn to the civil side.

CIVIL DIVISION

For the Civil Division we are requesting an increase of approximately 15.9 percent, or $13,579,000 and 114 positions for the following programs:

34 positions and $2,331,000 for Federal Appellate;
20 positions and $3,953,000 for torts litigation;
29 positions and $4,492,000 for commercial litigation;
20 positions and $1,413,000 for Federal programs;
11 positions and $1,390,000 for immigration litigation.

The Division's appellate litigation program has experienced increases in workload of more than 80 percent over the past five years while staffing has remained constant. The requested increase of 34 positions and $2,331,000 will redress this imbalance and allow the Appellate staff to handle a greater share of this litigation.

Mr. Chairman, we are experiencing an explosion in the torts caseload which continues to strain our Civil Division's ability to defend the United States in cases where the Government's exposure, as we sit here talking, exceeds $125 billion.

We expect that in 1988, our success rate in defensive litigation will continue to exceed 98 percent. At this rate, we will suffer adverse judgments of less than $100 million compared to claims amounting to $5 billion. We seek 20 positions and $3,953,000 for the Civil Division's efforts to avoid or reduce the number and amount of tort judgments entered against the United States.

In order to defend Government programs adequately and to avoid unwarranted raids on our Treasury, we are asking for an additional 20 positions and $1,413,000 for Federal programs.

In the area of affirmative litigation, especially with respect to the enforcement of the laws against fraud, we are requesting 29 positions and $4,492,000 for the commercial litigation program.

Civil fraud has become a significant problem over the years. The Congress has addressed this growing problem by passing the False Claims Act of 1986, the Program Fraud Civil Remedies, and the Anti-Kickback Act of 1986.

Affirmative litigation returns six dollars for every one dollar invested. At this rate, recoveries in 1988 could reach $166 million at the base level and $193 million at our request level. The bottom line is that when the Government is the plaintiff, we recover 24 percent of the value of the claims that we make.

As you all know, the recently enacted Immigration Reform legislation will have a profound effect on our Nation and its citizens. While the Immigration and Naturalization Service is certainly the agency most affected by this legislation, the Department's litigating organizations will also be involved.

OFFICE OF SPECIAL COUNSEL

The Civil Division will require 11 additional positions and $1,390,000 to handle increases in litigation arising from this Act. The Act also calls for the establishment of an Office of Special Counsel to investigate charges of discrimination filed by private individuals. We are requesting an increase of 30 positions and $2,315,000 in 1988 to continue efforts initiated in 1987.

LAND AND NATURAL RESOURCES

We must also continue our efforts to maintain a clean and a safe environment for our people. This budget request includes an increase of approximately 24.6 percent, or $6,499,000 and 26 positions for the Land and Natural Resources Division to address the expected growth in caseload arising from amendments to the Resource Conservation and Recovery Act, the Safe Drinking Water Act, the Clean Air and Water Acts, and other activities.

Mr. Chairman, over the last five years, the Division has returned over four dollars for every dollar spent on environmental enforcement litigation. At this rate, recoveries in 1988 could exceed $23 million at the base level and $36 million at the request level. Incidentally, if we include Superfund litigation, the Division has returned over $19 for every dollar invested.

CIVIL RIGHTS DIVISION

I think we can be proud of this Administration's civil rights enforcement record. In the past six years we have brought more cases involving acts of racial violence than ever before in our history. More than twice as many klansmen have been arrested and convicted than in the previous Administration. We have obtained more convictions of members of other hate groups, and our success rate in the prosecution of criminal civil rights cases stands today at an all-time high of 82 percent.

In most areas of the country, the Klan and its splinter groups have been significantly weakened or entirely eliminated. In plain English, I think we have broken the back of the Ku Klux Klan, in large measure because of this effort. And there are many, many more criminal investigations underway.

Nor does our criminal enforcement record begin to tell the entire story. In every other area of our civil rights responsibility—housing, education, voting, employment, institutionalized persons—we have compiled an impressive record of accomplishment.

To vigorously continue our efforts, the Civil Rights Division seeks an increase of approximately 3.1 percent or an additional $800,000 to hire outside consultants. These consultants will perform a variety of analyses for the Division, the kind of analyses that are absolutely essential in developing complex statistical data bases, which we need in this kind of litigation.

ANTITRUST DIVISION

With regard to Antitrust, Mr. Chairman, we are requesting a reduction of approximately 4.4 percent or $2,109,000 and 100 positions.

The reduction reflects a realignment of policy and support functions and does not in any way diminish or change our underlying enforcement policy.

Specifically, the Department expects to continue the efforts of its primary enforcement activities, which include the vigorous prosecution of hard-core horizontal antitrust violations, such as price fixing, bid-rigging and market allocations among competitors. These are areas that we believe are the most essential among antitrust enforcement. Savings in resources are possible because of improved efficiency, better use of staff, and streamlined reporting, economic analysis, management and support functions.

TAX DIVISION

In the tax reform area, we must be prepared to handle the numerous suits contesting the technical provisions of the Act. An increase of 600 cases in the refund claims area is expected. We must also complement the increase of $622 million and over 5,000 work years that you have provided to the Internal Revenue Service (IRS) in 1987.

I also understand that the Administration is proposing an additional increase of $624 million and over 9,000 work years in 1988.

The IRS workload will generate litigation in the refund and appellate area, collection related area, and organized crime and drug enforcement areas. We must support the efforts of the IRS if we are to maintain the integrity of our voluntary tax system. To maintain the public trust in the integrity and fairness of our tax system, we request an increase of approximately 29.3 percent or $10,977,000 and 70 positions for the Tax Division.

UNITED STATES ATTORNEYS

As you well know, Mr. Chairman, the bulwark of our litigating force is out in the field in our 94 U.S. Attorneys offices. U.S. Attorneys are involved in every phase of an investigation. Our prosecutors are our first line of defense against organized crime, drug dealers, terrorists, white collar criminals and spies. They are also our chief civil litigators.

As I stated before, due to new legislation, we expect an explosion of civil litigation. To meet the added burden these responsibilities bring, we are requesting an increase of 7.3 percent or $28,124,000 and 542 positions. Resources are being requested in the following program areas:

417 positions and $21,439,000 to strengthen the prosecutorial posture in drug abuse and narcotics trafficking;

28 positions and $1,561,000 to support the President's Council on Integrity and Efficiency by expanding even further our efforts to prosecute Defense procurement fraud, Government program fraud, money laundering schemes, bankruptcy fraud, and bank fraud and embezzlement;

80 positions and $3,970,000 to generate additional revenue to the United States Government, using civil remedies, within the context of proceedings involving fraud and abuse of Government programs, drug forfeitures, bankruptcy, real estate foreclosures, and debt collection.

Based upon our recent experience with this concept, we expect to generate an additional $60 million in income annually by 1989, of which a significant portion will be cash. The U.S. Attorneys' cash collections are expected to reach $270 million in 1988.

OFFICE AUTOMATION IMPROVEMENTS

All of these enormous tasks, Mr. Chairman, require a substantial support structure. We have, over the years, examined many approaches to cost containment. Last year, Congress provided through the GLA Appropriation language, office automation funds for not only the Legal Divisions but the Antitrust Division and the U.S. Attorneys. With this language, the Congress appropriated $1,537,000 in 1987; however, the level of funding is not sufficient if we are to move many of these legal divisions ahead into the 21st Century and keep pace with the private sector. We cannot allow technological obsolescence to determine which cases we handle. The Department's litigating organizations will require an increase of $23,181,000 to invest in new technology.

CONSOLIDATION OF U.S. ATTORNEYS/ANTITRUST WITHIN GLA

In a continuing effort to look at cost containment, we are again this year proposing the consolidation of the Department's litigating organizations into a single appropriation. Merging the Antitrust Division and the U.S. Attorneys into the GLA appropriation, with all of our other litigating components, will allow us maximum flexibility in testing innovative methods of containing costs.

Our office automation approach, which you have already subscribed to, is but one example of what is possible if we are given the flexibility of maintaining our litigating organizations within the one appropriation.

It should be understood, and we understand it, that consolidating these accounts will provide great flexibility without usurping the Congress' legitimate program oversight prerogatives. Once these accounts are consolidated, any significant changes would fall within the well established reprogramming notification procedures which are applicable to the Department's appropriations.

Mr. Chairman, I have just highlighted our major program thrusts for 1988. Additional detail is provided in the more complete statement I have submitted for the record.

INTRODUCTION OF OTHER WITNESSES

At this point, I wish to note that I have with me Bill Weld, Assistant Attorney General in charge of our Criminal Division. I have Mr. Spears here today as Acting Assistant Attorney General of our Civil Division, in the absence of Richard Willard, who is out of town. Also with me is Mr. Rule, Acting Assistant Attorney General, of our Antitrust Division, and Hank Habicht, Assistant Attorney General in charge of our Lands Division. I have Roger Olsen, Assistant Attorney General in charge of our Tax Division here with us, and Jim Turner is here from the Civil Rights Division. I have Mike Roper and Bob Ford from our Management Division, and Larry McWhorter from our Executive Office for U.S. Attorneys

here, and probably all kinds of other support that I am not even aware of.

With that, we are at your disposal and prepared to answer questions.

LEGISLATIVE IMPACT

Mr. EARLY. Mr. Burns, I want to thank you for your statement. The statement almost frightens me with these tremendous increases—more and more and more. There is no more non-partisan politician in the Congress than myself, especially in dealing with Justice. This Committee has never been partisan and we would like to do the right thing. What scares me are these huge increases, especially when we both know that there is no way that we are going to resolve all the problems—we are just going to expand them.

You have got to expand upon what these new expenses are going to supplement or replace. I certainly also think that the Congress is partly to blame. It is almost pointless to say who to blame but the cost to the Justice Department to implement the Drug Bill, the Immigration Bill, the Tax Bill, the anti-fraud status and the Kick-Back Act of 1986. I want you to supply for the record an impact statement on the cost of implementing each one of those bills or any additional bills which Congress has thrust upon you. Also, with each of those particular bills, what the returns are. You suggest in three different places we are going to invest one and get four back. This Committee will be interested in the specifics.

Mr. BURNS. We will be very happy to provide that for you, Mr. Chairman. And may I comment on what you said? I can assure you that we approach this in exactly the same frame of mind, and with the same motivation.

[The information requested will be inserted at this point in the record:]

Legislative Impact Statement

Civil Division

The enactment of three anti-fraud statutes and immigration reform legislation will affect the work of the Civil Division substantially. With adequate resources to implement and defend these policies, sizable returns will be achieved.

The *False Claims Act Amendments of 1986* expands the ability of private citizens to initiate lawsuits on behalf of the United States and requires that initiating citizens provide the Civil Division with copies of material evidence. Division attorneys must review the allegations and supporting evidence and make decisions within 60 days as to whether the Government should take the case. The law authorizes the Attorney General to compel the production of records and take sworn testimony before deciding whether or not a suit is warranted. It specifically requires the establishment of a secured central records depository. In instances where the Department does not take the case, we are required by the Act to approve dismissals and settlements by initiating citizens. This requirement necessitates extensive monitoring on the part of the Civil Division.

The *Program Fraud Civil Remedies Act of 1986* authorizes an administrative procedure for handling small dollar frauds cases. It requires the Civil Division to determine whether we should litigate the case or authorize the referring agency to proceed administratively. This clearance procedure will create significant workload increases for the Division. In addition, we will litigate the anticipated constitutional challenges to the statute as well as appeals to agency decisions.

The *Anti-Kickback Enforcement Act of 1986* substantially expands coverage of the existing statute by covering <u>all</u> contracts between the United States and its prime contractors and by redefining 'kickback' to prohibit a broader range of activities. It also provides for increased damage and civil penalties. These changes will raise the potential number of Civil Division cases markedly.

These laws provide potent weapons to fight the government's war on fraud. Approval of the Civil Division's 1987 supplemental increase of 21 positions and $640,000 and the 1988 request for $350,000 will provide the requisite resources to support citizen-initiated law suits, litigate agency referrals and prosecute illegal kickbacks. The potential returns to these activities translate into millions of dollars in recoveries for the U.S. Treasury and a formidable deterrence against future fraud.

Enactment of the *Immigration Reform and Control Act of 1986* greatly expands both the scope and volume of the cases handled by the Civil Division. The 1987 increases provide resources necessary to handle the initial cases growing out of immigration reform -- the most prominent of which are class actions. These suits seek to undermine the core of immigration reform by challenging the new statute and INS' procedures. Three class actions have been filed already consuming substantial staff resources.

Rather than precipitating an immediate explosion of new cases, the effect of immigration reform is likely to be staggered over the next few years. This likelihood is primarily due to the fact that the new provisions will be implemented over time. The bulk of the employer sanctions litigation must await the "education" period stipulated by the Act as well as the time allowed for INS to target enforcement efforts. Similarly, the legalization provisions will be phased with respect to granting benefits. Except for the class actions, most judicial review under the Act must be proceeded by administrative processes.

The return to approving the Civil Division's request for 13 positions and $936,000 for 1987 and 13 positions and $1,546,000 in 1988 is the ability to uphold immigration reform. If we do not have the resources to defend these suits successfully, the viability of immigration reform is in serious jeopardy.

Tax Division

The passage of the Tax Reform Act of 1986 and the approval of 1987 resource increases for the Internal Revenue Service (IRS) to implement the Tax Shelter and General Revenue Initiatives will cause a considerable increase in the litigation caseload of Tax Division attorneys.

With the enactment of the Tax Reform Act of 1986 the Division anticipates a substantial increase in the number of legal suits filed by taxpayers contesting the technical provisions of the new law. Similarly, the provision defining interest on most tax deficiencies of individual taxpayers as "personal interest" and not fully deductible after 1986 will result in more taxpayers prepaying and deducting interest on prospective deficiencies. They will then file for a refund in the U.S. Court of Claims or the U.S. District Court where Tax Division attorneys must conduct the litigation.

Congressional approval of additional resources to the IRS under the 1987 Continuing Resolution will also directly impact the workload of the Tax Division. The IRS was authorized an additional 5,504 positions and $298 million for its enforcement efforts in 1987 to implement the Tax Shelter and General Revenue Compliance Initiatives. An additional 6,425 positions and $324 million for these initiatives are included in the President's 1988 budget request for the IRS. These resources will enable the IRS to reduce the present backlog of more than 400,000 Tax Shelter returns under examination and more than 35,000 tax shelter cases docketed in the Tax Court. The IRS estimates that as a result of its intensified enforcement and collection activities, a direct and comparable impact on the workload of the Tax Division will be felt, because more taxpayers will file suits contesting IRS determinations.

The Tax Division urgently needs additional resources in 1988 if it is to manage existing caseload and the new increased caseload generated by the enactment of new legislation. Of significance, Tax Division attorneys are currently litigating tax shelter cases involving $485.4 million. Any case lost by the Government results in the loss of substantial revenues for the Federal Treasury. If the Tax Division's resources continue to be overburdened and no additional relief is provided in 1988, Division attorneys will be unable to litigate these and other tax matters thoroughly and effectively and millions of dollars in potential revenue for the Federal Treasury will remain uncollected.

Land and Natural Resources Division

Recent Congressional action on a number of environmental statutes has and will continue to affect the Land and Natural Resources Division's budget requirements. Statutorily mandated and scheduled regulatory programs under the Safe Drinking Water Act, the Superfund Amendments and Reauthorization Act and the Clean Water Act will give rise to deadline lawsuits if timetables slip, and to petitions for review when the regulations are issued.

These and other environmental statutes invite litigation by providing new causes of action for citizen suits, against the Environmental Protection Agency for failure to perform non-discretionary duties, against other federal agencies for violations of the Act, and against non-federal parties. Successful defense of the Environmental Protection Agency's decisionmaking is crucial if agency personnel are to promulgate well-reasoned regulations to implement environmental protection programs while balancing the potentially billion dollar regulatory impact of these regulations.

Defense of other federal agencies is vital to protect federal revenues against unnecessary outlays. And even though the government will not necessarily be involved in citizen suits against non-federal parties, it may be necessary to participate in such litigation to guard against improper interpretation of these statutes.

Compliance with these statutes and regulations must be enhanced through affirmative litigation. Under the 1984 amendments to the Resource Conservation and Recovery Act, over 30 new regulatory programs and numerous deadlines which fall during 1987 and 1988 will generate hundreds of cases in 1988.

Similarly, the December 1987 ozone compliance deadline in the Clean Air Act, unless it is extended by legislation, may be missed by as many as 27 municipalities, leading to a number of complex enforcement cases. The second round of permits under the Clean Water Act will be issued in 1987, requiring significantly more expensive "Best Available Technology" treatment. Enforcement of this provision is critical to safeguarding the $40 billion investment made by the Federal Government through grants for publicly owned treatment works. This enforcement litigation generates significant returns both from penalties collected and from avoidance of future costs.

In the latter category, keeping existing waste disposal facilities in compliance with RCRA is the only way to prevent bigger and more expensive superfund-type programs in the future.

Other legislation passed by the 99th Congress will put demands on the Land and Natural Resources Division. The amendments to the Quiet Title Act which lift the statute of limitations for certain actions against the Federal Government allow lawsuits which would otherwise be foreclosed. Also, we expect that the way the Columbia River Gorge National Scenic Area was established may lead to inverse condemnation claims.

U.S. Attorneys

The U.S. Attorneys anticipate significant workload increases as a result of recent legislation. The new laws will have an impact on all three litigation programs, namely: Criminal Litigation; Civil Litigation; and Organized Crime Drug Enforcement (OCDE). Since the U.S. Attorneys serve an intermediary role in the Criminal Justice System, the exact nature of the impact of all pieces of legislation depends largely on the number of referrals from investigative agencies. It suffices to say, however, that increased resources given to investigative agencies will directly affect the workload of the government's prosecuting arm.

In the areas of Criminal Litigation and OCDE, there are two pieces of legislation that will affect our workload. The Anti-Drug Abuse Act of 1986 included provisions for mandatory minimum sentences. This should generate an increase in the number of prosecutions going to trial by removing the incentives defendants previously had to plead guilty in return for lighter sentences. The U.S. Attorneys also anticipate significant caseload increases related to forfeiture (both civil and criminal) because the Act makes it easier to identify those defendants' assets which are susceptible to forfeiture.

The Omnibus Drug Supplemental Act of 1987 established numerous initiatives to combat drug abuse and narcotics trafficking. Significant resources, including investigative personnel, were provided in this legislation. It is projected that significant increases in referrals will occur in 1988 and require litigation resources to handle the increased workload.

The U.S. Attorneys request of 373 positions, 279 full-time-equivalent workyears and $18,562,000 in the Criminal Litigation area, and 44 positions and $2,557,000 for OCDE represents our estimate of what is required to meet the goals set by Congress in its legislation.

Under the new Bank Fraud Statute provided in the Comprehensive Crime Control Act of 1984, it is anticipated that the number of bank fraud violations will increase greatly. This workload, combined with referrals involving defense procurement fraud resulting from the Defense Contract Audit Agency's addition of 200 plant-based auditors are major reasons for requesting an additional 25 positions and $1,561,000.

In the area of Civil Litigation, the U.S. Attorneys workload will be affected by several new pieces of legislation, including The False Claims Act Amendments of 1986, The Program Fraud Civil Remedies Act of 1986, and The Anti-Kickback Act of 1986. For instance, The Program Fraud Civil Remedies Act provides for the imposition of a civil penalty for the submission of a false statement unrelated to a claim for payment. The Anti-Kickback Act

broadens the scope of the original law, 41 U.S.C. Sect. 51 from applying to "cost-plus" contracts to all contracts, and applies now to all forms of payment to obtain favorable contract action.

As a result of the Tax Reform Act, the Tax Division estimates that approximately 10 percent or 230 additional civil trials (refund cases) and 5 percent additional civil appeals may potentially be referred to the U.S. Attorneys during 1988 due to enacting stricter penalties and the non-deductability of interest.

To undertake the increased workload mentioned above as well as combatting defense procurement fraud, medicare/ medicaid fraud, forfeitures, program fraud and bankruptoy litigation, we are requesting 80 additional positions and $3,970,000 for the Affirmative Civil Enforcement initiative. In return for this investment we project approximately $60 million in increased recoveries for the U.S. Government in the first full fiscal year after implementation. Our estimates are based on the recoveries from five U.S. Attorney offices including one which formed an Affirmative Civil Litigation Unit.

Mr. BURNS. Our process in the Department of Justice is very thorough. This budget was put together by the Departmental Resources Board, which I am privileged to chair. We are very much aware of this concern, growth, growth and more growth. So we have got to understand, placing it on the Congress and saying we have all of these additional responsibilities is not intended to be a facile answer. The fact is that the Congress has added these responsibilities to the Justice Department because these responsibilities are clearly important.

In a sense, in thinking about this budget and developing this budget, it occurred to me that we ought to change the name of the Justice Department to the Domestic Defense Department. Because we are charged with the responsibility of protecting the very sovereignty of this Nation, protecting our borders, and protecting our streets and schools. I gave you statistics in my testimony. We are charged with the responsibility of protecting our Treasury. Billions and billions of dollars of claims that hit us, and we are like retail storekeepers, we are not out there looking for those cases. They come in uninvited. With respect to our affirmative civil litigation——

NEW APPROACHES

Mr. EARLY. Mr. Burns, let me irritate some people, okay? I agree with most everything you said but we have to try new approaches. We cannot just say we cannot solve it.

Passage of the Tax Reform Act of 1986, I understand, will greatly impact on your researches in several divisions.

In the area of prisons, with implementation of the new Drug Bill that we passed—it is going to incarcerate a lot of people. The public does not want to let anyone out but, we have got to let out some people. You know we have got a prison population that is going to go from about 44,000 to 62,000 or 68,000; by 1993; that is a 20,000 increase. Optimal building construction and size is about 500 beds—that means 40 new prisons. We cannot do that. I think the Justice Department has to let more people out.

I have a couple more places, items I would like to address. U.S. Attorneys. They are building up their own track record. I have discussed this with the Attorney General before. You cannot have trials, where we have a hung jury that was 11 to 1. Before he walked out the U.S. Attorney said we are going to re-try him. They retried again and when it was hung up the second time the defense said, "It looks like it might be a hung jury." The U.S. Attorney said, "We will try him again." You cannot do that. The Justice Department has to tell these U.S. Attorneys that it can't be all their way. They just want to build up their own track record.

The area of new technology is where I think we should consider expanding some of our resources. When the Democrats were in charge, they did not make enough tough decisions in Justice. And you people have to make a lot of tough decisions as we, this Committee do. I know that on this committee, with Mr. Smith and Mr. Rogers, that we will make it non-partisan, but we will do the right thing. We are really looking to cooperate.

INCARCERATION VS. EARLY RELEASE

Mr. BURNS. I would like to address that and say that you and I could never irritate one another because we are approaching this problem with the same frame of mind. And we are going to address the problem.

On the subject of our prisons, on March 25th, I will be visiting the Marion maximum security Corrections Institution in Marion, Illinois, and I would invite you to come with me, and you and I will go up and down and we will select together the people we wish to let out.

Mr. EARLY. No, let us go to Massachusetts. [Laughter.]

Mr. BURNS. The problem, and we cannot sweep this one under the carpet—it just cannot be swept under the carpet—the people that we have incarcerated, by keeping them there, we are keeping our streets and our people, and my new grandson and your children——

Mr. EARLY. That is a political speech.

Mr. BURNS. You have got to see it with your own eyes.

Mr. EARLY. You are going to a tough maximum security prison. I agree that we should not be looking to let those people out. Are you familiar with what Florida just did? It is totally unpopular down there. When the prisons reach a certain capacity, Florida is going to let certain people out six months or 30 days early to prevent overcrowding. Justice has to look at these things.

Mr. BURNS. Let me tell you what we are looking at. You will see, as we experiment and as we address this problem, you will see experimentation with programs for letting people out of our prisons, and having them, in effect, under house arrest, electronically monitored.

PRIVATIZATION OF PRISONS

Mr. EARLY. And I think you will be criticized for that.

Mr. BURNS. We are, you know, attending to this. You will see continued experimentation with respect to the privatization of some of our prisons. But you have got to understand where we start from. We start from a situation where we have 41,500 inmates in our 47 Federal institutions, that were designed to house 28,000 people. That is where we are today.

So we are under the crunch. Talk about mixed messages, there is no doubt that this Administration believes that we have got to have greater resources for investigation, prosecution, conviction and incarceration.

Mr. EARLY. Those are all easy political subjects.

Mr. BURNS. No, what happens is we are getting the resources on the investigation end, on the prosecution end, but we have got to have a place to put these people.

So we are starting—from talking turkey—we are starting from behind the 8 ball. That is where we are today.

EARLY RELEASE

Mr. EARLY. When Mr. Guiliani was number 2 or number 3 man in the Justice Department, he talked about doing what I just suggested we have to do. I would absolutely be the first one to ac-

knowledge it is not going to solve the problem, but we have got to empty some beds. It is easy to fill the beds, and justify it to your constituency—as long as we are filling prisons, it is a great sell. But if you want to talk about what we have to do to face the deficit crisis, to face the over-crowding, and to face what is going to happen with implementation of the new drug bill—those are the decisions that are not too popular.

We have discussed house arrest for so long. For example, white collar crime—when you put the Haldeman's and the white collar criminals away, once that door slams in back of them, they have paid a big, big price. I do not think they are security risks or dangerus.

Mr. BURNS. That is why we have our minimum security prisons for them.

Mr. EARLY. We have got to make major changes. You keep asking for more and more people and money, and that is not the solution.

Mr. BURNS. You understand that we have an excellent system for sorting out these folks. Everytime you come down from a maximum security prison, the costs of keeping people become significantly reduced. There are also very significant costs contained in the design of prisons. In the design of prisons today, you will have a minimum need for personnel to guard them.

FEDERAL PRISONS-U.S. PAROLE COMMISSION

Mr. EARLY. In my opinion, the Federal Prison System is the best run Federal agency in the United States. The Parole Commission, although they will be abolished, is also a very constructive, and very productive Commission. So Congress changed the law and sunsetted them.

I want to stay within my ten minutes.

U.S. ATTORNEYS

Mr. BURNS. I would like to add just one thing, and that is the suggestion you made about the ego of United States Attorneys. I just want to tell you that the Attorney General and I are charged with responsibility of supervising these 93 people. And if they were not, each and every one of them, people with a healthy respect and a healthy self-image, they could not do the wonderful job that they do.

We just returned from our U.S. Attorneys Conference in Tucson, Arizona, a very meaningful shirt sleeve kind of exchange, exchanging our views, and I just want to say to you that this group has some of the finest men and women that could be put together.

Mr. EARLY. You sound like us. Everybody is great.

The number 2 guy in the Justice Department, Giuliani, he went to New York and he has done more as a U.S. Attorney than the other 93 did in 20 years. But we say they are all wonderful. They are not all wonderful.

Mr. BURNS. I just had to defend people like Giuliani and others like him against that charge.

Mr. EARLY. No, I am not charging. They have done a fine, fine job—but not as good as Giuliani. [Laughter.]

I have used my ten minutes. I will yield to Mr. Rogers.

OFFICE AUTOMATION

Mr. ROGERS. After that, I am tempted to yield back. [Laughter.]

General Burns, it is good to see you here again. I enjoyed your presentation as well as appreciating the facts that you gave us.

Let me say that I think it is about time to try to streamline and modernize this crusty old agency.

You marched into almost the 21st Century, and you are using 19th Century tools, and have been for years. I am amazed that your track record, your litigation track record is as good as it is, considering the fact that you are out-gunned. You have good manpower there, but they do not have good equipment.

You cannot beat an army armed with laser weapons if you are armed with bows and arrows, which you are at this moment.

So I am very interested in your initiative to streamline the agency and also equip it with the state of the art equipment.

I wonder if I could ask you to elaborate. You are asking for $23.1 million in automation equipment and the like. I wonder if you could give us a little bit of laymen's comparison between what your lawyers go into court equipped with and the lawyers who you are opposing, and especially how they are equipped mechanically.

Mr. BURNS. I just want to say that I have been in the Department of Justice for 14 months. Before that, I spent 33 years in the practice of law, practicing in a law firm which I built. And I just want to say, first of all, a new boy coming in with some pre-conceived notions and prejudices that we have developed in the private sector, that people I see litigating in the Department of Justice, with exceptions, weigh in at 120 pounds and whip big brutes out there in private practice. They are facing major law firms in major litigation, with state of the art, word processing equipment, record-keeping equipment, truck loads and truck loads, warehouses full of documents in some of the massive, massive cases. And, unless we want our folks to enter that race with a burlap bag tied around their legs and their hands tied behind their backs, they have got to have this equipment. One thing we want to achieve is to keep up with the state of the art equipment, and this technology keeps increasing, for our in-house litigators, and we want to bring our Department of Justice together so that we can communicate with our field lawyers, because our 94 offices, we have 93 U.S. Attorneys, have got to be in the same network.

That is how you avoid duplication of effort, re-inventing wheels time and time again. The opposite of that is to use the same research, the same briefs in the same kinds of cases around the country.

So what we intend is to unify our word processing and data processing equipment, and it is absolutely essential for the reasons that you pointed out, sir.

CONTRAST WITH PRIVATE FIRMS IN AUTOMATED SUPPORT

Mr. ROGERS. Let me ask you, to be a little more graphic than that. One of your lawyers goes into court in one of the civil cases, let us say. You are up against a high-powered law firm; with hun-

dreds of people as back-up and computer systems and data processing equipment, word processors and so on. One of your lawyers files a motion that he and his assistant or two or three others have researched for maybe a month or two. What happens to you. Tell me the other side of that coin? How is the real world out there in terms of keeping up with the craft?

Mr. BURNS. I have to tell you, in all candor, that from my own observations, that notwithstanding the disadvantages that we encounter, I have not yet seen a case where we have not been able to hold our own. The basic difference is, that if you track, and this may be of interest, if you track the work hours of people in our Civil Division, they are working around the clock, and they are putting in hours and hours and hours and hours, and that is where we are different. And, as a consequence, of course, we run out of manpower. We need to relieve our manpower with machinery, with equipment.

Mr. ROGERS. I guess what I was driving at, one of your lawyers files a hand-prepared motion, with customized research that has taken lots of time. Your competition comes into court with a computer-generated, word-processed motion or brief that is part of a data system centralized in Chicago, where the research has been ready made, and there is no human way you are going to keep up with that. I do not care how good you are or what kind of people you have, you cannot keep up with that kind of thing.

Mr. BURNS. That is the problem we want to solve.

Mr. ROGERS. Is that what you are asking for?

Mr. BURNS. That is the problem we want to solve.

Mr. ROGERS. And you are going to link them all up together so they can use the same research countrywide on the same issues, the same briefs, the same motions, the same responses?

Mr. BURNS. That is correct.

INCARCERATION POLICY

Mr. ROGERS. Back to the prisoners, let me just say to you, my good friend Mr. Early has given you one point of view. Let me just say to you that for every Member of Congress that represents that point of view, I suspect there are two or three, including myself, who represent the opposite point of view. And that is, for every professional criminal kept away from the society, society is that much better off. And, for the most part, our prisons, those beds, are occupied by not the first termers or the joy riders, so to speak, it is more or less the hardened criminal. They are there for the second or third time. And the savings to society by not having that theft occur, or that fraud occur, or that mugging or killing or whatever else it is, the savings there are more than the cost of keeping that criminal from performing those acts, not even mentioning the harm to individuals and families and generations of children in society in general.

So, I just want to encourage you that the answer to our problems is not opening up the prison doors. The answer is putting the proper criminals behind bars and keeping them there for the duration of what a jury found or a judge found; trying to rehabilitate

them, but releasing them only when their terms expire. And if it takes more prisons, it takes more prisons.

If you hold the view that we cannot put more prisoners in prison because we are out of room, irrespective of the crime they committed, or the danger they pose for society, then we would have stopped building prisons after the first one.

So the answer to our problem is not some magic formula that there are only 13,183 criminals in the U.S.A. at any given time and no more; therefore, that is all the beds we need.

PRISON POPULATION—DRUG RELATED

Mr. BURNS. Just to comment on that. There is no doubt that crime causes tremendous economic losses to society. Today we are approaching a situation where 37 percent of the people who are inmates in our penitentiaries are drug traffickers or drug-related offenders. And there is no doubt that the drug epidemic is a scourge on our country today, that costs our economy some $300 billion. That is just one small aspect of it. I think and I hope, and there are no guarantees and no crystal balls, but I hope that with increased investigation and prosecution and with education and tremendous efforts of prevention on the demand side of the question, we can finally shut that problem down and really cut it back. That is the way of solving the problem of prison space. Clean up our society, in the first place. People who transgress our laws, who are involved in this bloody path that leads from Colombia to Mexico to our Southwestern border, to Boston, Massachusetts and to Washington, D.C., and to our country, that path of death, corruption and economic impact on our society has got to stop.

Mr. ROGERS. Well, you are not going to stop it with putting those people under house arrest. You have got to make them pay a price, a bad price, where there is some form of deterrence where they think, okay, I am not going to get involved in this because I am afraid of what they will do to me. And if you make that revolving door to the prison house, you have answered that question.

Thank you, Mr. Chairman.

Mr. EARLY. Before I yield to Mr. Kolbe, I want to make one thing crystal clear, I am not suggesting you open the doors. I think you have to take the least offensive, the ones that are the least threat to society out to free up prison space.

Mr. ROGERS. I understood that, sir.

Mr. EARLY. One other thing, did you say 37 percent of our Federal——

Mr. ROGERS. Drug or drug-related.

Mr. EARLY. That seems awfully high, but it is very interesting. Mr. Kolbe?

FEDERAL CORRECTIONS RESPONSIBILITY

Mr. KOLBE. Thank you, Mr. Chairman.

General, I appreciate your being here.

Let me ask you a few questions. I am really following up on some of the things I have just heard. With regard to prisons, I think, regardless of what our philosophy is, we are passing the laws, and we are creating the laws that say these are criminal activities and we

provide the sentences for that and say they should go to prison. I think we have got a responsibility to provide the prisons as long as we do that. If we think it is not correct, we ought to change the laws, and make it clear to you that that is not the policy that we want to adhere to.

In your testimony you say you have 41,500 inmates in the 28,000 spaces. What is the rate that that 41,500 is growing?

Mr. BURNS. I will provide that for you.

PRISON POPULATION GROWTH

Mr. KOLBE. Do you know what the increase is over, say, five years ago?

Mr. ROPER. My name is Michael Roper, the Deputy Comptroller for Budget. When this Administration began, the population was about 23,000. Today it is closer to 42,000.

Mr. KOLBE. From 23,000 to 42,000 since 1981, almost double.

Mr. BURNS. In 1990, we estimate 67,000. Does that help you?

Mr. KOLBE. Yes. With 28,000 spaces, we are not keeping up, are we? What is in our budget for building?

Mr. BURNS. In our budget for 1987, let me see if I can find it.

Mr. EARLY. Mr. Kolbe, will you yield?

Mr. KOLBE. Yes.

Mr. EARLY. I apologize. I shifted over to some other things earlier. The Federal Prison System will testify here next Tuesday. I apologize.

Mr. KOLBE. My apologies also.

PRISON CONSTRUCTION

Mr. BURNS. Let me just put this in the record. It will take a second. In 1988, we will begin construction on 2,400 additional beds in the Federal Prison System.

With the new sentencing guidelines, I just wanted to say the problem is going to get worse.

RETURN ON JUSTICE INVESTMENTS

Mr. KOLBE. You said something about the return we get, the amount of recovery in fines and civil penalties on say the Drinking Water Act, environmental legislation, for each dollar invested. When you describe the dollar return for dollar invested, you are referring only to the investment in the Justice Department?

Mr. BURNS. Yes, sir.

Mr. KOLBE. I think it is important to keep that in mind. It is like a Clerk in the Court who says, "Look, my salary is only $60,000; look at all the checks I collect each year." That really does not describe the cost, because there really is a larger cost.

Mr. BURNS. There is no question about it, but I am here as the collector. As long as you tell me to do that job, I want to be in a position to say that as we get the resources, that aspect of this thing will yield a profit to the Federal Treasury.

ANTITRUST REDUCTION

Mr. KOLBE. I need some clarification of your comments, more particularly your comments on antitrust. You refer to a reduction

of 4.4 percent, 100 positions, which you say reflects a realignment of support functions, not a diminution or change in your enforcement policy. Would you describe a little bit more what you are referring to?

Mr. BURNS. I will tell you just a couple of things and then I will ask our Acting Assistant Attorney General, Antitrust Division to give us some further details.

Well, number one, we have got our merger guidelines out, and I think there has been a greater degree of precision and understanding among the members of the Bar as to what this is all about with respect to antitrust. And I think, as a consequence, with lawyers understanding what the rules are, we are able to deal with these cases more effectively.

Number two, we have made some gains with respect to the kind of automation that we were speaking of. And that is very helpful. When I was in private practice, everytime someone came to sell me data processing equipment, they told me how much money I would save, how many people I would save and, invariably, I wound up hiring more and more people. This is a case where we are actually seeing some savings.

Mr. RULE. I think both of those points are important. We have a down side in the Antitrust Division over the last six years. Part of that has been made possible by putting out guidelines. People understand what the rules are in the merger game. The number of mergers has gone up but people know what areas to stay away from. Our people are better able to deal with mergers much more quickly and identify those with trouble, and focus in on the various problem areas as a result of our experience with the guidelines.

In the criminal area, again that is where we have focused and I think we have witnessed the greatest returns for our investment. In the last six or seven years, we have had unprecedented success in the criminal enforcement area. When we came in, there were 51 grand juries; today there are 137 grand juries. We are on an incline in terms of the number of indictments we have been able to hand down.

Our people are becoming more familiar I think with prosecuting criminal cases, better able to investigate matters. They are using other things than the grand jury to develop these cases, which has enabled us to do it at a lower cost.

Overall, that as well as automation and being able to centralize some of our research functions, and share some of our information, not only in Washington but in our various field offices, has made us much more efficient prosecutors. And we view that role as being very important, and we want to increase our activity in those areas, not decrease it, but we think we can do it with less resources.

ADMINISTRATION'S ANTITRUST POLICY

Mr. KOLBE. Would you describe for me what this Administration's antitrust philosophy or policy is?

Mr. RULE. I think it is the recognition of the importance of continuing a competitive economy which is free from public and private restraints; one that enforces the law as it has evolved over the

last 15 years; and that is a recognition that what the law has to protect is the consumer from higher prices and not competitors from increased competition. And a recognition that at times in the past antitrust forays have caused more problems than they solved in misguided attempts to improve competition.

We have focused in on those areas that protect consumers. We have focused our effort there.

Mr. KOLBE. Give me an example of where you are focusing in on that, where you say you are protecting consumers, because—I certainly agree with that statement. If antitrust philosophy works at all it ought to be protecting consumers not protecting companies from competition. Give me an example of where you are focusing in on that.

BID RIGGING

Mr. RULE. The areas that we view as most important are, and I will give you one example, bid-rigging. The Federal Government is, in many instances, a consumer, obviously, with the money you appropriate up here. We have witnessed contractors getting together and deciding who is going to get a bid, and agreeing not to compete with one another. The effect of competition is to drive down the prices to the government and enable us to use our tax dollars to buy more. And we have witnessed this in Federal Government Procurement and at the State and local level. We have taken vigorous action to follow up those leads and go after those bidders and stick them in jail, so that the United States receives full value for the dollars it spends. We have got something like 30 grand juries I think right now looking at federal government procurement and the various aspects of it.

Other examples might be when competitors get together on soft drinks, where bottlers in a local town get together and decide we are not going to discount to retailers this week, because they are competing a little too much. So they agree not to provide a discount to retailers and as a result soft drinks are priced higher than they would be if competition was allowed.

Mr. KOLBE. I agree with what you are saying. Taking bid-rigging as an example, to the extent that competition is reduced, the easier it is to rig bids? The less competition there is, it is easier for the few that are left to get together to do it.

Mr. RULE. Sure. Our experience has been, again, generally, we do not engage in, we are not the ones who make the decisions, we participate with the Department of Defense and others. When we bring a case, that by no means indicates that the companies will not be there to compete again. Hopefully, they have learned their lesson. They have paid the price up to a million dollars per count, and they can go back out and be responsible people who do not engage in bid-rigging. So, the fact we are putting these people in jail and fining companies does not mean we are necessarily reducing the number of competitors.

And I think, if you look, for example, at local and State levels, after we have gone through and prosecuted a number of these cases, the bids that have come in to various States have been substantially lower than they were before. And those States and local-

ities and the federal government also benefit from our prosecutions.

EXPLOSION OF LITIGATION

Mr. KOLBE. Thank you. The last question, General Burns, throughout the statement here, with the exception of antitrust, you refer to increases in a whole variety of things. Let us leave aside criminal proceedings for a moment. In the tax area, in environmental litigation, all of these areas we are seeing tremendous increases, substantial increases here. I guess you are hearing bias from a non-attorney here. Is that a result of Congress and the actions that we have taken, or is it just something that is happening that is a never ending process of increasing litigation?

Mr. BURNS. I think it is a combination of both and they are different phenomenon. Congress is addressing some very serious problems and they have made decisions that these problems have to be addressed, and there will be new rules of the road. They have got to deal with it. There are new responsibilities placed on us. That is one aspect of it. We have got to do it. We are not going to default.

With respect to the litigation explosion in this country, it is horrendous. The Department of Justice has taken the lead in going around the Nation and speaking to Bar associations, speaking to plaintiffs' lawyers. I have given speeches on the subject of plaintiffs' lawyers——

Mr. KOLBE. You got out of line?

Mr. BURNS. Well, a little tar here and there. But the point of the matter is that our courts are overburdened. This is the most litigious society in the history of the world. And what compounds the problem is that our legislators around the country continue to provide additional rights of action, and where they do not do so, courts can imply rights of action. And our tort judgments are going completely off the charts. And it is frightening and it is something that has got to be addressed, and there are actions among the States to try to do it. But this is, indeed, a very litigious society.

I just want to say that I view my role in coming and appearing before you as not a role of going through the timeless or repetitive motion of laying this before you, and coming in with a green eye shade. My role here is to try and explain to you that this is not just an accounting exercise. We need these resources.

This is not a game where we ask for more and settle for less, which is a page you take out of the book of the litigation game. We come here in all sincerity and, as you said, sir, it is not a partisan game. We need these resources to do the job.

I think that with respect to the monies we ask for, the United States taxpayer is going to get a bang for his buck. He is going to get full value.

I also want to say there is room for improvement, and we are continually trying to do that; to improve the process; to improve procedure; improve the way we handle something that matters. We are very, very much aware of it.

I want you to also understand that when our components come before the Departmental Resources Board, we are tough. It is a tough, tough grilling. We are trying to pare this to the bone. The

resources we ask for, we need. We will put them to good use. We will bring home the bacon.

And thank you very much, all of you, for your attention and the cooperative spirit with which we work.

Thank you.

Mr. KOLBE. That completes my questions. Thank you, Mr. Chairman.

Mr. EARLY. Mr. Burns, we know you have some other divisions here. You have brought all of your high powered, underpaid——

Mr. BURNS. Let us not go too far now.

Mr. EARLY. I think your real role is to delegate authority. We will ask the people who are responsible for the U.S. Attorneys and Antitrust Divisions, a few specific questions. So you are excused.

U.S. ATTORNEY'S REQUEST

With regard to the United States Attorneys, the request is for 373 positions—$18,562,000 for drug enforcement. How many positions did you receive in 1987, and why do you believe you will require this many more in 1988?

Mr. MCWHORTER. Yesterday, several U.S. Attorneys testified with me before the House Authorization Subcommittee.

In Fiscal 1987, this year, the Operation Alliance in the Southwest Border initiative against drugs, the United States Attorneys had approximately 90 positions, 60 Assistant U.S. Attorneys and 30 support, about $6 million for drugs.

The drug war is exploding. The Anti-Drug Abuse Act provided a lot of tools for prosecutors. There were significant investments in the investigative agencies that will produce arrests that U.S. Attorneys will have to prosecute.

Our need for prosecutors for the drug law is basically to respond to the increased number of arrests that will be generated by the new equipment in the Customs Service, the Drug Enforcement Administration, the FBI and the Immigration Service. The number of new border patrol agents on the Southwest Border particularly are expected to produce a number of new arrestees that U.S. Attorneys will have to deal with.

FEDERAL DRUG PROBLEM

Mr. EARLY. Excuse me, Mr. McWhorter. I would like to ask Mr. Weld a question about drugs in Massachusetts.

The Police Chief in our largest city, whom I think you probably know, Tommy Leahy, told me that they cannot do anything without DEA, FBI, and the other federal people that have got all the money and resources. Would increased personnel in this offset some of the problems. What I am really asking is if the Federal Drug Program and money is going back to the States? Or will the Federal area be absolved of what has to be done in the States?

Mr. WELD. Mr. Chairman, if I may, the reports about cuts in the drug area I do not think are on the enforcement side of the house. I tend to agree with Chief Leahy that there are things the Feds can do in the drug area that are much harder for local law enforcement to do. One of the reasons for that is the Federal Electronics Surveillance law, which, as you know, is considerably more liberal,

permissive than State laws. In other words, just having the far flung system of agents around the country, you can go after the trafficking organizations that are international or national in scope more easily.

I think the 1988 request for the United States Attorneys contains a number of positions all around the country. My horseback guess is that maybe 40, 50, maybe even 60 percent of those positions might wind up participating in narcotics enforcement. That was the number one law enforcement priority of 91 out of the 93 U.S. Attorneys who were polled, who had filed their own District Plans back in 1981 and 1982. So it really is number one. I am really invading Mr. McWhorter's sphere here. But I think the 1988 request for the U.S. Attorneys, including the increases that you are giving them, will be applied very directly back in the drug area, and that goes well beyond the designated resources for Operation Alliance in our Southwest. The distribution of resources will vary all around the country, and Mr. McWhorter can correct my horseback guess on the percentage, but the biggest single item that those resources would address will be narcotics.

Mr. EARLY. Mr. McWhorter, would the additional money help to supplement things that will not be going back to the locals, in your opinion?

Mr. MCWHORTER. The U.S. Attorneys work very closely with the locals too, primarily through the law enforcement coordinating committees, which the Attorney General has directed each of them to form. And they seek to coordinate prosecutions in the local district, and eliminate waste and duplication of effort and work together cooperatively.

The United States Attorney and the U.S. Government is particularly well-suited to address large organizations. The local sheriffs and police do not have the long arm and the reach that the Federal prosecutor and the Federal investigators have. The major trafficking organizations that are international in scope are within the reach of the U.S. Attorney almost exclusively, but not within the capability of most local law enforcement agencies.

ENHANCED SECURITY FOR U.S. ATTORNEYS

Mr. EARLY. I agree with that, Mr. McWhorter. Again we get back to egos of local U.S. District Attorneys and U.S. Attorneys. I want them to play their role and cooperate. I think you have to be selective.

On one of these items—only a $500,000 item for security for U.S. Attorney offices. First of all, $500,000 cannot do too much. Why that amount?

Mr. MCWHORTER. Well, sir, the security needs of the U.S. Attorneys, both physically and for personal protection, are increasing. We are experiencing a number of new threats from organized crime, and particularly from the drug trafficking organizations, international in scope. This amount of money we are asking for is to address some of the problems that have been identified in surveys by the Security Office in the Department, to better physically protect U.S. Attorneys.

We did not ask for everything that would be possible, but this is a step in the right direction.

CIVIL LITIGATION

Mr. EARLY. For the record, on civil litigation, Mr. McWhorter, you are requesting 80 positions and $2,970,000 for the civil litigation programs in 1988 in order, you claim, to maximize recovery of money by the U.S. Government. I want, for the record, an estimate of the additional recovery these provisions will provide.

Mr. MCWHORTER. Yes, sir.

Mr. EARLY. And also for the record, in your budget justifications, you request increases based on projected workload increases.

For each of these workload displays, please provide the actual experience to date of Fiscal Year 1987, and explain whether you believe you will still achieve the Fiscal Year 1987 projections that you estimate in your request.

With that I am going to yield to Mr. Rogers.

U.S. ATTORNEY'S AUTOMATION

Mr. ROGERS. Briefly, I wonder if you could describe for us the situation with U.S. Attorneys, as to whether or not they are outgunned, in terms of equipment, and information in the modern world.

Mr. MCWHORTER. Well, sir, in 1981 there were U.S. Attorneys offices in the country that did not have word-processing equipment. Every U.S. Attorneys office now has word-processing programs. We are seeking to procure additional equipment with the Criminal and Tax Divisions. At the present time, we have a procurement effort underway to enable U.S. Attorneys to communicate with each other and with the Department, so that we can share the research information that is available in one place. We do not presently have that capability easily.

Mr. ROGERS. How will that translate in the courtrooms? I am trying to get somebody to tell me the courtroom experience. I have heard it privately, but let us get it in the record. Would you tell me the problem you are up against in the courtroom without the equipment.

Mr. MCWHORTER. In the courtroom, the Assistant U.S. Attorneys are often asked by the judge to respond to a particular position, and to provide research or an opinion or argument on a particular point. And, frequently, within a very short recess, the Assistant U.S. Attorney has to go back and do legal research and come back and argue in the courtroom. This effort will enable each Assistant——

Mr. ROGERS. Stop right there. What does the other side do in that respect, compared to what you are equipped to do?

Mr. MCWHORTER. The other side is the one that files most of the motions that the Government has to respond to. They have the luxury usually of being ready when they come in there. They know many times what the motion is going to be, and the U.S. Attorneys have to respond to reams of paper in particular kinds of cases. And high paid and talented lawyers with a lot of paralegal support in the courtroom and in the office.

LEGAL ACTIVITIES OFFICE AUTOMATION

Mr. ROGERS. Well, you are staggering at it.

My understanding is that you go to court, and you will be faced with a motion that thick, with back-up material that thick, generated off of a word processor, a computer data system, and you have to respond to it like that. You go out and you say, "Judge, give me 24 hours" or "give me 7 days", what have you, and you spend those 7 days and you finally struggle through the research with two or three assistants and you come up with an answer and you go back into court. And there is another motion that thick that has been generated by the computers, in a matter of minutes or hours. Is that not the situation in the courtroom these days with the modern machinery that the opposition has in your cases?

Mr. MCWHORTER. It is in some instances. Perhaps Mr. Weld can provide a better answer.

Mr. ROGERS. Please, I am looking for a graphic description.

Mr. WELD. Mr. Congressman, I think the picture you painted is an accurate one in major cases. The advantage of preparation shifts at various stages of the case. In the indictment phase, it is the Government that has the benefit of lengthy preparation and the defendant does not control the timing. So a great deal of work has gone into the case, from the Government's point of view, before the defendant is formally brought to the bar of justice. But once that case is filed, the major white collar case, for example, or even narcotics cases, certainly organized crime cases, the defense team is often five or six lawyers, the top firms, as you suggest, who are very well equipped with the latest in technology. Everything has been researched down to the ground.

It is not uncommon to have a 40-page brief in support of a motion to dismiss an indictment filed several times a week, different motions. And the Assistant U.S. Attorney, or the prosecutorial team which may number two or three attorneys in a very large case, has to respond to these motions as well as to prepare witnesses together with the investigative agents for the next day's trial session. Without technological assistance he or she will be ill-equipped to respond to the motion which may call for action by the judge before court convenes the next day.

The attraction of hooking up the 93 U.S. Attorneys offices to the system that is being established for the Criminal and Tax Divisions is that then you could have a support function exercised partially out of main Justice. If it is a motion that has been litigated 15 minutes ago in the Seventh Circuit, the person in main Justice is going to know that, and if they can transmit electronically or by typing into an automated system the proper response, then the availability of such a system will enable the Assistant U.S. Attorney to prepare his witnesses for the next day. So that is the advantage I see.

AUTONOMY OF LOCAL U.S. ATTORNEYS

Mr. ROGERS. What is that going to do to the local autonomy of the local U.S. Attorney? Is he going to become a McDonald's outlet?

Mr. WELD. We worried about that, Mr. Congressman, a little bit last year when I was Chairman of the U.S. Attorneys Committee.

We were a little nervous about having this direct electronic communication. But the more we thought about it, the more we thought the answer is if you are a U.S. Attorney and you do not like what you are getting from Main Justice, you just turn off the machine. The U.S. Attorneys really do have a great deal of autonomy.

Mr. ROGERS. Well, you are not expecting that U.S. Attorney to get by with that, are you? If he turns you off, you are not going to be too happy about it.

Mr. WELD. If I am a U.S. Attorney and I am in court and someone in Main Justice wants to send me a 90-page brief on why this new motion should not lie, it is not very likely I am going to turn off my machine, but that bureaucrat in Washington is not going to be able to make me file a brief I do not want to file. Certainly the philosophy of Mr. Jensen, Mr. Trott and myself in the Criminal Division has been that it would be a cold day in July before we would tell a U.S. Attorney, or purport to tell a U.S. Attorney to do something in court the U.S. Attorney did not want to do or thought was unwarranted.

Mr. ROGERS. He is going to want to please the higher ups. So is he not going to feel compelled, everything else being even, to do what Main Justice recommends or feels?

Mr. WELD. I suppose I would say that is a possible danger, Mr. Congressman. It is one we discussed last year. We first discussed this I believe in January or February of 1986. That did come up and we kicked it around. I think part of the reason we think this is a survivable danger, the whole attitude of the Department of Justice is away from that type of Washington control.

Mr. ROGERS. I just wanted to bring that up just to let us be mindful that with the new technology which is needed in order to fight the opposition who is so armed, that there is that other side of the coin. We could turn the U.S. Attorneys into local outlets for the Washington line, and take away his entrepreneurship in fighting a case.

Thank you, Mr. Chairman.

OPERATION ALLIANCE

Mr. EARLY. Mr. Kolbe?

Mr. KOLBE. Thank you, Mr. Chairman. I want to ask a couple of questions on Operation Alliance. You referred to the fact there are 90 positions. Are those yet filled or are those 90 positions you are requesting?

Mr. MCWHORTER. They were authorized.

Mr. KOLBE. They were authorized in 1987.

Mr. MCWHORTER. They have all been allocated to six districts along the Southwest border, and they were funded for approximately nine months. They are in the process of being filled.

Mr. KOLBE. Could you supply for the record where those allocations are, and which ones are on board at this time? It helps the Committee to know that. Does the 1988 budget request other additional positions for this project?

[The information requested follows:]

ALLOCATION OF ATTORNEY POSITIONS

The six districts receiving Operation Alliance position allocations, and the status of the allocations as of March 16, 1987, are as follows:

District	Attorneys			Support		
	Allocated	Filled	Committed	Allocated	Filled	Committed
Arizona	11	0	10	6	0	1
California, Central	5	0	0	2	0	0
California, Southern	13	7	3	6	6	0
New Mexico	5	1	2	2	0	0
Texas, Western	13	1	6	7	0	1
Texas, Southern	13	0	7	7	0	7
Total	60	9	28	30	6	9

Mr. MCWHORTER. 1988 narcotics enhancement requests positions of general narcotics enhancement and for the organized crime and drug enforcement task force, some of which may go to the Southwest Border.

Mr. KOLBE. One of the interesting aspects of this project to me is the coordination efforts between Customs, U.S. Attorneys, local law enforcement, DEA, et cetera, et cetera. One of the things that struck me the most forcefully in the years that I was in the Arizona State Legislature and Chairman of the Judiciary Committee there was the incredible diversity and sometimes lack of coordination among our law enforcement agencies. And there at the local level, obviously, we were interested in coordination with the Federal Government.

In your view, is this project working in the sense that it is providing that kind of coordination?

Mr. MCWHORTER. I think coordination is in place and it is becoming more effective. Obviously, the operation is building up, and personnel are added to, and the structures are put in place.

The Attorney General met with representatives of all of the management structure of Operation Alliance in Tucson several weeks ago to ensure that it included representatives of local law enforcement, sheriffs and local prosecutors as well, to ensure that the effort is being coordinated properly and that it is going to do its job.

Mr. KOLBE. Easy to say but harder, of course, to put into practice. Is there an answer to how we avoid the concern about turf and protection of ones own turf. You are dealing with people in a lot of cases who are local, elected law enforcement officials. They have a need to protect themselves. I have been continually discouraged at our ability to get over parochial interest and turf fights. I was just interested in your observations whether or not this operation is succeeding in doing that, or whether there is something we need to do in order to avoid the conflicts.

Mr. MCWHORTER. I think this operation is succeeding, and that it will continue to do so. The U.S. Attorneys in the last several years have had a lot of experience with law enforcement cooperation, through their committees primarily, and it has been remarkable the successes of the operation in just communications that have been achieved throughout the country. I think in my experience in

the Department, the cooperation between State, local and Federal officials is as great as it has ever been. I think it is going to continue at the Southwest Border.

FEDERAL, STATE AND LOCAL COOPERATION

Mr. KOLBE. What do you attribute that better cooperation to? Is there some mechanism that we have put in place administratively, statutorily, or is it simply a change in attitude?

Mr. MCWHORTER. In the Department of Justice it is a change in attitude, I think. The Attorney General expects each U.S. Attorney to cooperate with his State or local counterpart. I think statutorily, the asset forfeiture sharing provisions that were enacted by the Congress is convincing local and State law enforcement agencies that they can benefit financially from cooperation. I think that is a positive step.

Mr. KOLBE. Thank you. Mr. Chairman, I am sure I can think of other questions. I am worried about the state of U.S. law enforcement in this country with all of these attorneys sitting in this room, so I think I will let them get back to work.

Thank you, Mr. Chairman.

Mr. EARLY. Mr. Kolbe, I could not agree with you more. This is one of the few times right now with two non-attorneys, we could really serve——

Mr. KOLBE. If you have a motion, Mr. Chairman, I am ready to second it.

ANTITRUST DIVISION REQUEST

Mr. EARLY. Mr. McWhorter, I want to thank you.

Next we are going to hear from the Antitrust Division. Mr. Burns made a statement that covered all of their activities. But your agency is requesting a four percent reduction. My question, that I will insert in the record, because I have reservations about across the board cuts and personally do not think it is the way to do anything, is how you budgeted for most of your reductions that way?

Your name is?

Mr. RULE. Rick Rule.

Mr. EARLY. How come you are the only one in the Department that got cut? Everybody else gets more. You are not a Democrat, are you? [Laughter.]

Mr. RULE. No, I am a Republican. We looked very, very carefully at what we were doing. We felt we could maintain our law enforcement activities, and improve them with cuts. We also felt there are some areas, for example, we have a project where we intervene in private actions to promote the law. We are probably going to cut that back a little bit.

We have a competition advocacy program, where we get involved in regulatory proceedings. We are talking about cutting that a little bit. And we are also talking about cutting some of our general analysis.

We are cutting in some areas.

Mr. EARLY. You did not get any new additional responsibilities from new legislation?

Mr. RULE. We did not get any.

Mr. EARLY. I will yield.

Mr. ROGERS. I have no further questions, Mr. Chairman.

Mr. EARLY. Mr. Kolbe got into a discussion with Mr. Burns on antitrust enoforcement. We just want to make sure that you will at least have the tools to do what you have to do.

Mr. RULE. We believe we do, and if there is ever a question of that, as I said before in the authorization hearings, we will go back to the Attorney General and let him know that we do not have the resources to do our job.

[The questions for the record and the answers submitted thereto, follow:]

QUESTIONS FROM MR. EARLY

GENERAL LEGAL ACTIVITIES

Automated Litigation Support

Question:

Throughout these activities, you are requesting increases for Automated Litigation Support. Please describe the need for this support.

Answer:

Civil Division - The Civil Division is requesting an increase of $5,388,000 for Automated Litigation Support (ALS) services in 1988 as follows:

$2,141,000 of the Civil Division's 1988 request is required to defend the mammoth asbestos litigation where the U.S. Treasury is exposed to losses exceeding $35 billion. With the most crucial trials approaching, this funding is critical to complete the processing of nearly 300 million pages of evidentiary documents and to provide adequate trial support.

$1,900,000 is required for the Washington Public Power Supply System (WPPSS) litigation, in which the Government is defending against $7.4 billion in claims. Effective defense depends on our ability to retrieve evidentiary information from a 240 million page document collection which has been growing by 1,000 pages of depositions each day.

$533,000 is required to provide the ALS tools essential to defend the large number of cases arising from the recently passed *Immigration Reform and Control Act of 1986*. By 1988 an additional 748 new trial and appellate cases are expected. ALS funding is needed to develop special data bases to track individual litigants and members of class action suits during the various stages of litigation. A document center is also needed to organize documents and support the attorneys in preparing for the large number of expected trials and appeals.

$814,000 is required to support the Government's war on fraud. Part of this increase is necessary to comply with the stringent record keeping requirements of the recently passed *False Claims Reform Act of 1986*. Funds will be used to establish a central, secure records depository, as required by this law. Additional ALS funding is needed to support a growing number of civil fraud cases where success is dependent upon the ability to pinpoint pieces of evidence.

Land and Natural Resources Division - Automated Litigation Support is used primarily in two areas of Land and Natural Resources Division litigation, hazardous waste cases and Indian claims/land management cases. Of the $4.8 million increase requested for automated litigation support, over $3 million will be used for two linked

cases: U.S. v. Shell Oil Co. and Colorado v. U.S. and Shell Oil Co. Over the last four decades, Army operations and Shell pesticide manufacturing have caused extensive contamination at the Rocky Mountain Arsenal in Colorado, and preliminary estimates suggest that $2 billion may be needed for the clean-up effort. During the discovery and pre-trial phase of this case, the Army has provided reimbursable funding for automated litigation support in order to review, organize and manage the massive documentary and other case materials in a manner useful to the Division's attorneys. However, as the case moves closer to and into trial, the Department of Justice properly must assume litigation support expenses.

The remaining funds are sought for support of over a dozen Indian claims cases; for preparation of on-line legislative histories of key environmental and land management statutes; for hazardous waste cases involving both Federal and non-Federal parties; and for selected environmental crimes cases and grand jury investigations.

Tax Division - The Tax Division's 1988 budget requests $1 million for the Federal Appellate Activity and $2 million for Civil Tax Litigation in automated litigation support. Automated litigation support funding allows Tax Division attorneys to compete on a more equal footing with the large opposing automated law firms the Division often encounters. The reasons for the current urgency for automated litigation support in the 1988 request are the trend toward more complex cases with voluminous amounts of documentation and anticipated workload increases resulting from Internal Revenue Service (I.R.S.) Revenue and Tax Shelter Initiatives supported by Congress in the 1987 Treasury Department Appropriations Act and the Administration in I.R.S.'s 1988 Budget Request.

The Tax Division has, in the last few years, experienced a significant increase in the number of large and complex cases that contest a variety of tax issues in the U.S. Claims Court and U.S. District Courts. For example, we have found that litigation involving efforts to enjoin abusive tax shelters, as well as civil penalty and substantive controversies arising out of tax shelter schemes, are often extremely data intensive and technically complex. Such cases frequently involve extensive discovery, including the taking of a large number of depositions, and the review and analysis of thousands of pages of documents. It is essential to devise ways of assisting our attorneys in controlling and accessing the vast amounts of information in these cases, and it has recently become apparent that these information demands could, to a large extent, be alleviated through greater availability of automated litigation support.

The need for this automation capability cannot be understated in the complex tax shelter cases we encounter. The United States is either seeking essentially to put promoters out of business or to sustain substantial penalties which many times run into the millions of dollars and may well have the effect of closing down someone's business. As a consequence, we can expect vigorous resistance to our efforts to enjoin tax shelter schemes or to sustain penalty

assessments involving them. Therefore, instituting and defending these suits cannot be undertaken lightly, especially since the Government, in both instances, bears the burden of proof. Moreover, many times tax shelter promoters have segregated hundreds of thousands of dollars to be used to defend against anticipated Government action. These litigation "war chests" allow promoters to retain large law firms that more often have access to computer litigation support and a host of paralegals and other support personnel.

Question:

Will the presence of this Automated Litigation Support result in some staff reductions since it will free up personnel from time consuming, manual work? If so, how many personnel can be reduced and when?

Answer:

ALS is not a substitute for lawyers needed to litigate the Department's growing caseload. We have found that the only successful way to defend cases involving mammoth collections of evidentiary documents and voluminous deposition testimony (e.g., the asbestos, radiation and WPPSS cases) is to provide attorneys with contractor support to screen, organize, microfilm, index and automate the evidence and relevant information and computer support to manipulate and retrieve the information. Without ALS services a virtual army of experienced paralegals would be required to manually organize the documents in such cases and no amount of staff would ever be able to recall and retrieve the information with the precision and speed available from automation.

In cases of lesser size (i.e., up to 200,000 pages of evidentiary material or 20 deponents) ALS has proven to be the most effective and cost efficient method of handling information. Our experience is that it costs 42 percent less to provide the superior document and information processing services available through ALS contractors.

A contractor can provide a staff of 20 today, 100 next week, and cut back to 50 the following week, based entirely on the Government's case needs and deadlines. Moreover, the contract staff can be ordered with experience in full-text data bases one week, strong backgrounds in document indexing next week, and years of trial support experience another time. In contrast, Government employees must be hired and retained under less flexible standards.

In order to provide attorneys with these indispensable services, it would be necessary to employ over 500 additional paralegals at a cost in excess of $24 million. As long as our caseload continues to grow and the need to master large collections of evidentiary information remains, we do not expect that ALS funding will reduce our needs for attorney and secretarial positions or for paralegal positions to assist with cases which do not warrant ALS contractor assistance.

Question:

What would the impact be if funds are denied?

Answer:

Aside from the substantial efficiency losses that would result if funding is denied, key litigative efforts will be severely hampered without additional ALS:

With $35 billion at stake in asbestos litigation and major trials imminent, failure to provide ALS funding could be catastrophic. The extent of the potential jeopardy was poignantly reflected by Judge Nettesheim during a recent Claims Court hearing involving asbestos litigation. In response to the Government's assertion that litigation support and attorney resources were not available to prepare for trial as ordered, she stated:

> I am not so much concerned about the government's difficulty in preparing for trial, with all due sympathy to the government in terms of its own resource problems. **The government can either pay judgments or pay attorneys,** and it makes its choices. And if plaintiffs are ready to go, especially with the time periods that have been involved in this case, **there is no reason the government can't muster the requisite resources to avoid suffering enormous judgments.** So that will not be a factor. [Emphasis added.]

With $7.4 billion at stake in WPPSS litigation and a document collection of huge proportions, denial of the needed ALS support will put our attorneys at a distinct disadvantage, damaging the Government's entire defense. They will be unable to meet the court-imposed schedules for depositions, risking adverse judicial sanctions. Unable to access crucial evidentiary information, our attorneys will be forced to go to trial ill-prepared, risking enormous losses to the Treasury.

In extraordinary litigation such as the case against Shell Oil at the Rocky Mountain Arsenal, the sheer volume of evidentiary material is overwhelming. Over three million pages have been collected from several dozen Army and Shell sites nationwide so far. These would fill 1,000 file drawers; it is difficult to imagine working with this material without automation. In cases such as this, defendants are also using litigation support to manage their preparation. Loss of litigation support would unnecessarily place the Government at a severe disadvantage.

The massive number of new cases triggered by the *Immigration Reform and Control Act of 1986* necessitates additional ALS services. Without the requisite services to track the cases and prepare for upcoming trials, our defense will be hamstrung, risking dangerous precedents, which could undermine the entire Immigration Reform initiative.

Denial of additional ALS funds would also be extremely detrimental to the Government's efforts to combat fraud. Funds for ALS services currently available for our largest fraud cases would have to be diverted to meet stringent recordkeeping requirements of the *False Claims Reform Act of 1986*. In addition to the deleterious impact on ongoing cases, support would not be available for new cases, which are expected to double by 1988. The resulting lost parity with our powerful courtroom opponents would stymie our ability to recover millions of dollars and deter future fraud.

Question:

For the record provide the amounts required for ALS by activity, by fiscal year.

Answer:

	(In thousands of dollars)		
	1986	1987	1988
Tax Division	...	...	$3,000
Civil Division	$12,234	$8,456	13,844
Lands Division	1,320	1,795	6,650
Total	13,554	10,251	23,494

Tax Division

Question:

You request an increase of 12 positions and $2,348,000 in 1988 for the Tax Division's Federal Appellate Activity. You indicate that the increased workload in this request results from anticipated legal suits concerning tax reform. As you will only be involved in appeals to legal suits resulting from tax reform and those suits must first be handled by the Civil Trial Section, why do you believe the resources are required in 1988?

Answer:

The Tax Division anticipates a substantial increase in the number of legal suits filed by taxpayers contesting the technical provisions of the Tax Reform Act of 1986. Initially these suits will be litigated by the Division's civil trial attorneys. However, this litigation will result in more appeals being filed, as taxpayers will appeal judicial determinations regarding their claims. These cases must then be handled by Federal Appellate attorneys. The limited staff in the Tax Division's Federal Appellate Section have, thus far, managed to keep abreast of pending caseload, despite a 10 percent annual increase in case receipts for the past several years. However, a continuation of this normal trend of caseload growth, in conjunction with the impact of the Tax Reform Act on appellate litigation, will prevent Federal Appellate attorneys from effectively litigating all appeals under consideration. As a result, the Government stands to lose a substantial source of revenue which could otherwise be

obtained with the additional three positions requested for this program as a result of the impact of the Tax Reform Act.

In addition, the nine positions requested in 1988 for the Federal Appellate Activity include positions to address the workload which will result from the implementation of the Internal Revenue Service (I.R.S.) Tax Shelter and General Revenue Compliance Initiatives. Congress authorized 500 additional positions to the I.R.S. to expedite resolution of disputed tax audits under the 1987 Treasury Department Appropriations Act. An additional 717 positions and $30.7 million are included in the President's 1988 budget for the Appeals and Tax Litigation Unit of the I.R.S. These resources will be used to close 26,000 of an ever growing backlog of cases that has reached 84,000 and to accelerate collection of over $470 million in tax receipts. These intensified enforcement efforts will have a direct and comparable impact on the Division's Federal Appellate workload as many more taxpayers will file suits appealing I.R.S. determinations. The present staff in the Division's Federal Appellate Section is insufficient to manage this increased caseload and also be responsive to the I.R.S. need for additional legal support in its tax law enforcement efforts.

Question:

You have been able to handle a slow but steady increase in criminal tax prosecutions with no growth in personnel for the past several years. Why does the Division now require an additional six positions and $771,000 for 1988?

Answer:

The Division requires an additional six positions and $771,000 for its criminal tax prosecution program as a direct result of the approval of additional resources under the Treasury Department Appropriations Act, 1987, for the I.R.S. to implement the Tax Shelter and General Revenue Initiatives, with further increases in resources for these initiatives anticipated in 1988.

The Division's criminal tax prosecution attorneys will be required to provide additional legal advice and assistance to the I.R.S. in conjunction with their intensified criminal enforcement efforts. Congress increased the number of I.R.S. special agents by eight percent and provided the I.R.S. Criminal Investigation Unit an additional $5 million in 1987. An additional 77 positions and $23.5 million for I.R.S. tax fraud investigations and enforcement litigation programs are included in the President's 1988 budget request for the I.R.S. With these additional resources, the I.R.S. estimates an increase of 46 tax fraud investigations being initiated in 1987 and an additional 57 tax fraud investigations being initiated in 1988.

The I.R.S's additional workload estimates and enhanced criminal tax enforcement program will have a direct and immediate impact on the workload of the Division's criminal tax attorneys. I.R.S. special

agents will be seeking more and more legal guidance and assistance from Division personnel to investigate and prosecute criminal tax evaders aggressively. If the Division's criminal tax prosecution attorneys are to provide timely and effective support to the I.R.S. special agents for their criminal tax enforcement program, additional personnel and funding in 1988 are absolutely essential. Billions of dollars could remain untapped as a source of Federal revenue if the Division's 1988 request for its Criminal Tax Prosecution program is not approved.

Question:

A 15 percent increase of 46 positions is requested for civil trial tax litigation as a result of enactment of the Tax Reform Act of 1986. The Tax Reform Act of 1986 was designed to simplify the tax codes. Why does the Division require more attorneys to interpret a simplified tax code?

Answer:

The Tax Division is requesting an additional 46 positions and $7.2 million in 1988 to address the civil caseload increases which will be generated by both the new Tax Reform Act of 1986 and the I.R.S. Tax Shelter and General Revenue Initiatives. The Division's civil tax litigation program is the largest and most comprehensive of the Division's tax law enforcement activities. As a result, civil tax litigation attorneys assume the greatest role in serving as primary counsel to the I.R.S. and other client agencies.

As with the enactment of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), the enactment of the Tax Reform Act of 1986 will add substantially to the Civil Trial Section's already burdensome workload. The Division anticipates an immediate and substantial workload impact as a result of the Tax Reform Act's provision treating interest on most tax deficiencies of individual taxpayers as "personal interest" and not fully deductible after 1986. New I.R.S. regulations issued in Announcement 86-108 on October 23, 1986 explain the procedures for taxpayers to prepay and deduct interest on prospective tax payment deficiencies. As a result, more taxpayers will pay their tax deficiencies and interest liabilities in 1986 to retain the full deduction for interest paid. They will then file for a refund. Under Revenue Procedure 84-58, 1984-2 C.B. 501, a taxpayer will be able to obtain a refund only by successfully suing in the Claims Court or U.S. District Court, where the Division's civil trial attorneys are the Government's litigators. Taxpayers will no longer have the right to petition the Tax Court for redetermination of deficiency in the event that they have paid his or her entire potential tax liability before receiving a Statutory Notice of Deficiency. This new procedure alone, whereby refund claims will have to be filed in the Claims Court or the U.S. District Court, will cause at least a five percent increase in civil trial litigation caseload in 1988.

In addition, the enactment of this legislation represents the first major transformation of the United States tax system in thirty years and it is inevitable that legal suits will be initiated contesting its technical provisions. The Division's civil trial attorneys will be responsible for handling this litigation. Civil trial attorneys will also be called upon extensively by the I.R.S. and other client agencies to provide legal interpretations of the new provisions of the Act. If the additional seven positions requested as a result of the impact of the Tax Reform Act are not provided in 1988 for this program, the Division will be unable to provide timely, uniform, and equitable interpretations of this new legislation.

The I.R.S. has also predicted that the severe penalties included in the Tax Reform Act for noncompliance may in fact cause a decline in taxpayer faith in the United States voluntary system of individual self-assessment. This in turn, may actually encourage taxpayer noncompliance. If the I.R.S.'s prediction materializes, civil trial attorneys will be tasked with an additional burden to ensure that the nation's tax laws are, in fact, enforced.

Additional workload will also result from the implementation of the I.R.S. Tax Shelter and General Revenue Initiatives. The I.R.S. was provided with an additional 500 appeals officers, auditors, and attorneys, and 1,000 collections personnel to expedite resolution of disputed tax audits and reduce the enormous inventory of unpaid accounts in 1987. An additional 3,325 positions for appeals officers, auditors, and attorneys, and 3,055 positions for collection personnel are included in the President's 1988 request for the I.R.S. With these additional resources, the I.R.S. estimates they will be able to close an additional 20,000 cases and accelerate collection, of $470 million in tax receipts. As a result, the civil trial litigation workload of the Tax Division will be increased significantly because more taxpayers will file suits contesting I.R.S. determinations.

If the additional 37 positions and funding needed to deal with the impact of the I.R.S. increases are not provided in 1988, the Division will be unable to maintain a successful and effective civil tax litigation program. At a time when there is great concern over the size of the Federal deficit, the United States cannot afford to allow the deterioration of the Division's civil litigation program, a program which has the potential to produce substantial revenues for the Federal Treasury.

Question:

In 1987, the Division was authorized an additional five positions and approximately $300,000 for its Organized Crime Drug Enforcement (OCDE) program. Why are an additional six positions and $689,000 required in 1988? Why do you require more than the already approved 50 percent increase in personnel in order to manage the projected five percent increase in caseload?

Answer:

The Tax Division's OCDE program was developed initially with the establishment of a small, separate unit within the Division's Criminal Section. Attorneys in the OCDE unit initially were responsible for serving as the direct liaison with the 13 OCDE regional Task Forces, as well as handling other tax-related litigation. As the OCDE Task Force program developed, and investigations and prosecutions of major drug traffickers expanded, Division attorneys were increasingly relied upon for litigation support, advice, and consultation, by the 13 regional Task Forces. The Division was required to expand its OCDE program in order to provide timely and effective legal assistance to the regional OCDE Task Forces.

The expansion of the Division's OCDE program in 1987, however, was merely in direct response to the increasing number of requests for legal assistance made by the regional OCDE Task Forces. It did not consider the impact that recent legislation would have on the workload of the Division's OCDE program attorneys. Under the Treasury Department Appropriations Act, 1987, the Congress authorized an eight percent increase in the number of I.R.S. special agents and provided I.R.S.'s criminal investigation function an additional $5 million for criminal and drug/tax related law enforcement initiatives. An additional 29 positions and $17.5 million is included in the President's 1988 budget request for the I.R.S. to further enhance drug/tax related enforcement efforts.

The additional resources devoted by the I.R.S. to pursue criminal tax violations involving narcotics trafficking will directly, and immediately, affect the workload of the Division's OCDE program attorneys. The I.R.S' intensified enforcement efforts in this area will result in their seeking more legal advice from Division attorneys in major drug/tax related cases. Present staffing levels are inadequate to address this additional workload and Division attorneys will be unable to respond to I.R.S. requests for legal assistance. As a result, millions of dollars in unreported and untaxed income, which is in some way connected to narcotics trafficking, will remain uncollected.

Criminal Division

Question:

You request an increase of 24 positions and $2,312,000 for Organized Crime Prosecution. Why are you requesting an almost 30 percent increase over 1986 when your workload displayed on page C-10 does not change appreciably and is, in some cases, down?

Answer:

The workload table on page C-10 projects an almost thirty percent increase in criminal investigations to be initiated in 1988, a rate roughly comparable to the increase in authorized positions. As many

investigations require months, sometimes years, to bring to a satisfactory conclusion, the increase in the estimated numbers of investigations closed in 1988 is only slightly more than twenty percent. To institute legal proceedings takes still longer, on the average, so the increase in cases opened is also only about twenty percent over the estimated 1987 level. The increase in cases closed is only half the rate of the proposed increase in authorized positions; however, we believe that increasing the number of cases closed by fifteen, in the first year of the program increase, will be a substantial accomplishment.

Question:

Your justification for Organized Crime program growth describes the need for $95,000 for overtime and awards, and $565,000 for automated litigation support, but fails to justify the remaining increase of $1,652,000. What is this for?

Answer:

The increase of $1,652,000 will provide for the compensation and benefits of the additional staff and the travel expenses, space and equipment rents, litigation services, supplies, and materials associated with their activities.

Question:

You received an increase in 1987 for white collar crime programs. Why do you require an additional six positions and $708,000 in 1988?

Answer:

Although a program increase of six positions and $191,000 was approved in 1987, funding cutbacks in the base level made it impossible, from an operational standpoint, to hire additional staff.

Question:

Can you give us an idea of the payback to the Government of adding these positions for white-collar crime?

Answer:

The fines imposed in the cases that are the subject of this program increase have, in the past, been very substantial. As a result, the Division estimates that this increase should yield at least $1 million annually from the criminal fines imposed on convicted defendants. Among the less tangible returns, the increase will deter criminal behavior of massive financial proportions and strengthen the message from this Administration that white-collar crime will be prosecuted vigorously.

Civil Division

Question:

You request an increase of 34 positions and $2,331,000 for Federal Appellate Activities, which you claim results from an 80-percent growth in appellate actions. What is driving this growth in actions?

Answer:

As our society has become increasingly litigious, we have experienced an explosive growth in suits against the Government. The tremendous volume of cases brought over the past decade has progressed through the trial court system and now threatens to overwhelm the appellate courts. As the Division's trial workload has skyrocketed, the Appellate Staff's workload has increased by over 80 percent in the last five years. Over the next two years, the growth in the Appellate Staff's caseload is expected to more than match the growth of the past five years. Although the outcome of most appeals turn on legal issues, the potential financial losses in cases on appeal in 1988 will be over $58 billion.

Question:

What is driving the increased workload of the Torts Litigation Branch?

Answer:

Nationally, there has been an explosion in tort liability litigation. Further, the courts have shown a tendency to compensate plaintiffs at the expense of those most likely to pay - the "deep pocket" defendant. As the ultimate "deep pocket", the Federal Government has been the target of an alarming number of such civil suits.

Reflective of this trend, the Civil Division's Torts Branch has experienced a dramatic growth in torts cases which poses an enormous threat to the Treasury. At the end of 1986, the Branch was defending the Government in more than 5,000 suits, seeking $97 billion. Between 1986 and 1988, new case receipts are expected to increase by nearly 40 percent. More than $192 billion will be at stake in these cases in 1988.

Through 1988, Torts Branch attorneys will have to defend against the massive litigation and claims arising from airline disasters. Recent cases involving the Delta 191 accident at Dallas/Ft. Worth and the 1986 Aeromexico mid-air collision, coupled with annual increases in aviation accidents portend sizeable growth in aviation litigation. Moreover, as much as $45 billion will be sought in this litigation by 1988.

Additionally, constitutional tort cases are expected to increase by as much as a third through 1988. The suits defended by the Torts Branch challenge actions of important Government officials and law

enforcement agencies and agents. They have the greatest potential impact on Government operations and its ability to combat crime and reduce illegal drug use.

The highly complex areas of medical malpractice and employee negligence suits will also increase. In addition, the Branch will have to continue defending against radiation claims. This litigation, involving several thousand claimants, poses a potential liability to the Government of nearly $10 billion.

Question:

You received an increase of 70 positions for Commercial Litigation in 1987. Why do you require an additional 29 positions in 1988?

Answer:

The Civil Division's request for a 1987 increase of 58 positions for Commercial Litigation was based on a rapidly growing caseload involving billions of dollars in potential losses to the Treasury. Congress approved 29 positions -- half of the requested increase. In assessing our 1988 needs, we found no abatement in caseload trends, necessitating that we re-seek the increase of 29 positions denied by Congress in 1987. These caseload growth projections did not include the additional 21 positions which we subsequently sought in a 1987 supplemental appropriation to implement the newly enacted anti-fraud statutes.

By 1988, we will be facing an estimated workload of 13,106 cases involving claims of over $27 billion. The majority of these cases will be defensive. We must have the resources to resist this growing challenge to the Treasury in such areas as contracting, patent infringement and international trade. In addition to these high growth areas, Commercial Branch attorneys also handle more than half of the burgeoning caseload of the Claims Court and the Court of Appeals for the Federal Circuit.

We must be able to continue to assert the Government's creditor rights in loan defaults and bankruptcies. In the utilities field, we will expand our representation of the Rural Electrification Administration interest in litigation involving over $3 billion in defaulted loans.

Question:

In 1987, you reduced your Federal Programs positions from 172 down to 157, and now in 1988 you request an increase back up to 171 positions. What is causing these variations?

Answer:

In 1987, the Federal Programs Branch staffing level declined by 21 positions from 172 to 151. This reduction was due to a reprogramming of responsibility for the Washington Public Power Supply System

(WPPSS) litigation from the Federal Programs Branch to the Commercial Litigation Branch. While the WPPSS litigation has not lessened in magnitude, the scope of legal issues has shifted. This litigation which previously focused on securities issues that were within the expertise of the Federal Programs Branch now concentrates on financial and monetary issues similar to those handled by our Commercial Litigation Branch. Reassignment of the WPPSS cases (and the associated personnel and funds) was essential to their continued successful litigation. This reprogramming of resources was reflected in our 1988 budget request and confirmed in a formal reprogramming notification sent to your Committee on March 16.

The 1988 request for an increase of 20 positions for the Federal Programs Branch is needed to handle the Branch's caseload (exclusive of WPPSS) which is expected to increase by more than 45 percent from 1986 to 1988. With increasing frequency, litigants are carrying the debate over policy into the courtrooms, rather than allowing it to remain in the Legislative and Executive Branches.

The Federal Programs Branch must continue to have the staff necessary to safeguard the Government's interests in challenges to Congressional and Presidential authorities in such areas as national security, fiscal and budget issues, regulatory policy and personnel actions. The ability to present a strong defense in these cases is essential to the continued viability of virtually all Federal policies and entitlement programs. While monetary claims are not a primary issue in most of this litigation, the dollars at stake could exceed $10 billion in 1988.

Question:

You received a healthy 33 percent increase in 1987 for immigration litigation. Why do you require an additional 11 positions in 1988?

Answer:

Enactment of the *Immigration Reform and Control Act of 1986* greatly expands both the scope and volume of the cases handled by the Civil Division. The 1987 increases provide resources necessary to handle the initial cases growing out of immigration reform -- the most prominent of which are class actions. These suits seek to undermine the core of immigration reform by challenging the new statute and INS' procedures. Three class actions have been filed already consuming substantial staff resources.

Rather than precipitating an immediate explosion of new cases, the effect of immigration reform is likely to be staggered over the next few years. This likelihood is primarily due to the fact that the new provisions will be implemented over time. The bulk of the employer sanctions litigation must await the "education" period stipulated by the Act as well as the time allowed for INS to target enforcement efforts. Similarly, the legalization provisions will be phased with respect to granting benefits. Except for the class actions, mostjudicial review under the Act must be preceded by administrative processes.

The Civil Division's resource requests for 1987 and 1988 reflect our best estimates with respect to the timing of new litigation which we must handle. The positions requested for 1987 should be sufficient to defend the class action suits expected this year as well as suits challenging the denial of interim relief. The 1988 request of 13 additional positions will provide the staffing needed to handle next year's immigration reform related workload which is estimated to be over 900 cases. This workload will be composed largely of suits brought by individual aliens which must each be separately litigated.

Also beginning in 1988, we anticipate major growth in the number of asylum cases as a result of the recent Supreme Court decision, INS v. Cardoza-Fonseca. Over 100 of these cases will be brought before the court of appeals. Both the asylum caseload and the immigration reform caseload will continue to grow through the remainder of this decade and into the 1990's.

Based on INS' projections of their enforcement and examination activities, further resource increases in 1989 and 1990 will be necessary for the Division to handle a massively growing caseload. By the close of 1989, our Appellate caseload will approach 2,400 -- up over 250 percent from the close of 1986. Our trial caseload will nearly double in this period of time.

If we do not have the resources to defend these suits successfully, it will be extremely difficult to attain the goals as envisioned in enacting the Immigration Reform Act.

Land and Natural Resources Division

Question:

In reading your justification on page E-15 for program increases for environmental protection litigation, it appears that your plans to use these resources are required more to protect or defend Federal agencies who are not fully complying with the new environmental laws, than in helping to enforce the law. Please explain.

Answer:

The majority of the program increases requested for 1988 will be applied to enforcement of new compliance deadlines and other provisions of the Resource Conservation and Recovery Act, Clean Air Act, Clean Water Act, and Safe Drinking Water Act, and to defense of Environmental Protection Agency (EPA) rules under these statutes. Moreover, we note that the Land and Natural Resources Division will be receiving from the EPA over $13 million in reimbursable authority for affirmative and defensive litigation (representing EPA) under the Comprehensive Environmental Response, Compensation, and Liability Act.

We do expect an increase in defensive environmental litigation involving Federal agencies. This expected increase results at least in part from the recent expansion of citizen suit authorities and from increased Federal enforcement. (In the latter instance, particularly in Superfund cases, defendants in Federal enforcement

cases frequently implead Federal agencies as potentially responsible parties.) Whenever a Federal agency is sued under one of the environmental laws, the Land and Natural Resources Division is responsible for defending that suit and protecting the Treasury from unwarranted or excessive claims. But our defensive interests do not take precedence over the goal of achieving Federal facility compliance with the environmental laws.

Question:

Please explain the specifics on why you require the additional 26 positions and $6,499,000. I understand you project increased workload due to projected new cases, but won't this be offset by reduced workload as you complete ongoing cases?

Answer:

The Land and Natural Resources Division is requesting increases in two areas, environmental litigation and defensive litigation. This increase involves new positions and increased automated litigation support funding, and is required because litigation is expected in new areas, and cases are coming in at a faster rate than old cases are being concluded.

Entirely new and unprecedented environmental programs and causes of action will foster hundreds of new, complex cases during 1988. These include defensive and affirmative litigation concerning:

- Deadlines set by the 1984 Hazardous Waste Amendments to the Resource Conservation and Recovery Act which fall during 1987 and 1988;
- Newly regulated areas addressed by the 1986 amendments to the Safe Drinking Water Act;
- The December 1987 ozone compliance deadline in the Clean Air Act;
- The "Best Available Technology" compliance deadline in the Clean Water Act; and
- Defense of EPA and other Federal agency decisions about hazardous waste cleanup at Federal facilities.

Defensive litigation increases are needed for a myriad of new programs, including:

- Water adjudications in Montana and Arizona;
- Forest Service long-range timber plan implementation;
- Advances in bio-technology experimentation;
- Sales of excess Federal property; and
- Navy home porting plans.

All of these represent new areas of litigation, and not simply the steadily rising stream of case referrals handled with base level funding. Moreover, this first generation litigation requires a greater commitment of time and initiative since case law has not yet

been developed. Because of scientific uncertainty in areas such as permanent waste disposal techniques or genetic engineering, the cases handled by the Land and Natural Resources Division have become increasingly more complex during the 1980s: the average duration of Division cases has jumped from 2.5 years in 1980 to over 3.5 years at the end of 1986. Thus, the new cases expected during 1988 will not be offset by reduced workload.

Because of the changing nature of the Division's litigation, we have turned to automation to increase attorney productivity. Of the requested increase, over 70 percent will be used for automated litigation support, and of this, over $3 million is needed for two related cases involving hazardous waste contamination at the Army's Rocky Mountain Arsenal in Colorado. Here, cleanup costs have been estimated to be as high as $2 billion, and the 1988 trial will involve over three million pages of evidence spanning 40 years of activity at the site. Since 1983, the Army has provided reimbursable funding for automated litigation support in this case, but as we enter the trial phase, the Department of Justice should provide funding. The remainder of the automation request will be used to support over a dozen Indian claims cases, several of which will be in trial in 1988; to create on-line legislative histories for key new environmental statutes; and to support hazardous waste enforcement cases.

Civil Rights Division

Question:

You essentially request no growth in 1988 for the Civil Rights Division. Considering all the recent high visibility incidents, such as those occurring in New York City, Tampa, and Forsythe County, Georgia, don't you believe you should be adding additional resources for Civil Rights litigation?

Answer:

In conjunction with the Governmentwide effort to control budget increases and improve productivity, the Civil Rights Division (CRD) requested only a modest increase in resources for 1988 to hire outside consultants to perform a variety of analyses including the development of large, complex statistical data bases. In addition, it is expected that AMICUS II, the office automation system now in use in the Civil Division, will be fully operational in the CRD by the early part of 1988. (Funding for AMICUS II will be provided by the Legal Activities Office Automation budget). The utilization of outside consultants and AMICUS II will result in more efficient and cost-effective use of current resources. These initiatives should allow CRD to handle its responsibilities, including increased activity resulting from any "high visibility" incidents in a viable manner through 1988. However, an increase may be necessary by 1989.

Question:

Have recent events resulted in workload increases for 1987 above your projections and, if so, how will this affect 1988?

Answer:

To date, recent events have not prompted any workload increases above our projections for 1987. However, we think that the added efficiencies anticipated as a result of the use of outside consultants and AMICUS II will enable us to handle any such increases should they occur in 1988.

INTERPOL-USNCB

Question:

You request an increase of 12 positions and $400,000 to allow the U.S. National Central Bureau (USNCB) of INTERPOL to operate 24 hours per day. Please explain the need for this requirement.

Answer:

The INTERPOL-USNCB provides the means through which 141 countries, located in every time zone around the world, exchange investigative information with the Federal, State, and local law enforcement community. With 24-hour operations, the U.S. National Central Bureau can improve the quality and quantity of service it affords U.S. and foreign law enforcement. The following program demands will be met through 24-hour operations:

- Immediate response and confirmation required by the National Crime Information Center Foreign Fugitive File:
- Immediate response an/or relay of information required in cases of international terrorism where critical decisions demand up-to-the minute facts;
- Immediate confirmation of INS entry/border point inquiries;
- Immediate response to the National Law Enforcement Telecommunications System message traffic;
- Support of the 30-nation Caribbean/Central American Telecommunications Network; and
- Immediate and improved responses to police departments nationwide.

Question:

What would be the impact if it was denied?

Answer:

A test of 24-hour operations has resulted in a substantial reduction of a case-processing backlog that has continued to escalate yearly, and in elimination of delays in responding to urgent message traffic, with a corresponding reduction in delays for other-than-urgent

message traffic. Productivity increases have been achieved through implementation of continuous case processing and maximum utilization of USNCB telecommunications resources. The impact of eliminating 24-hour operations would negate these benefits and limit the ability of USNCB to address workload increases that are anticipated.

Independent Counsel

Question:

What do you anticipate to be your total obligations for Independent Counsel in 1987?

Answer:

Based on discussions with the Administrative Office of the U.S. Courts (AOUSC), which is providing the direct administrative and logistical support for the several Independent Counsel investigations, total obligations in 1987 could exceed $3.5 million and may reach $4 million.

Question:

Do you now know whether any Independent Counsel will be operating in 1988 and, if so, do you have any cost projections?

Answer:

It is expected that at least one, and perhaps several, Independent Counsel investigations will continue through 1988. Because of the way in which these investigations are administered, the Department is unable to provide detailed cost projections, but discussions with AOUSC have indicated that potential costs in 1988 could reach $6 million.

Legal Activities Office Automation

Question:

Please provide a cost break out for this office automation project by type of expense by fiscal year.

Answer:

Projected costs for office automation, based on leasing the system, are broken out into the following three major categories: site preparation and installation; hardware and software; training and systems support.

Site preparation and installation are projected to constitute approximately 25 percent of the first-year systems cost and 5 percent of the second-year costs. Training and systems support are projected to constitute 10 percent of each year's systems cost. The remaining costs, 65 percent in the first year, 85 percent in the second year, and 90 percent in each following years will be for hardware and software-related systems expenses.

Question:

Are there any off-setting cost savings to be derived if we fund this more efficient office system?

Answer:

The Department projects significant cost savings that will be reflected through a variety of measurable performance factors including:

- Enhanced productivity and product quality;
- Rapid and efficient electronic transfer of information, documents, and work products among the litigating components;
- Expanded availability and use of automated legal research and litigation support;
- Economies of scale for integrated systems acquisition and support and;
- Improved compatibility among systems and litigating components;

For example, preliminary cost/benefit analysis indicates that the cumulative cost of the Land and Natural Resources Division system will exceed savings for the first three fiscal years, but thereafter the benefits will exceed the cost. The Lands Division cumulative summary of savings for the system for the next five years (1987 through 1991) reflects a cumulative cost avoidance of $5,855,000.

Question:

Why is it that in General Legal Activities funds are requested for automated systems, but no reductions in positions are called for?

Answer:

It is inappropriate to request position reductions based upon an expectation of future events. Once Congress appropriates the requested funding, the systems are put into place and the expected efficiencies materialize, the Department will require that the resultant staff savings be offset against current program requirements.

Immigration-Related Unfair Employment Practices

Question:

You are setting up a brand new office to handle immigration-related discrimination cases. Why is it necessary to set up a whole new bureaucracy for this program, including an Executive level chief and associated administrative costs?

Answer:

Section 102 of the Immigration Reform and Control Act of 1986 requires the appointment of a Special Counsel for Immigration-Related Unfair Employment Practices within the Department of Justice for a term of four years. The Special Counsel's compensation is set by statute to be "at a rate not to exceed the rate now or hereafter provided for grade GS-17 of the general schedule . . . ."

Question:

Why couldn't this program be handled as a section under the Civil Rights Division?

Answer:

Establishing the Special Counsel and his/her staff as a section under the Civil Rights Division or as a component of the Civil Rights Division is one option that appears to be available under the Act. It is equally permissible, in our view, to have the Special Counsel operating from a separate component within the Department of Justice which focuses solely on enforcement of the anti-discrimination provisions of the Act. Indeed, those provisions contemplate the possibility of regional offices of the Special Counsel to be established, if necessary, to carry out the Special Counsel's duties.

Question:

What savings could be made if this program was brought under the Civil Rights Division?

Answer:

We do not anticipate that either option offers much in the way of savings over the other. At the present time, we are continuing to review both alternatives, and no final decision has yet been made on this point.

Workload

Question:

Throughout your justification, you request increases based on projected workload increases. For the record, for each of these workload displays, please provide the actual experience to date for 1987 and explain whether you believe you will still achieve the 1987 projection you estimate in the request.

Answer:

Revised workload data is available for a select number of organizations:

Tax Division. The Tax Division's monthly case management report for February, 1987 provides year-to-date actual, our estimate as contained in our budget request, and a straight line projection. The following figures are provided for case receipts and closings as of February, 1987.

	FY 1987 Cases Received		
	Actual	Estimate	Projection
Federal Appellate Activity	334	1,100	802
Civil Tax Litigation			
. Defense of Monetary Claims	875	2,500	2,100
. Recovery of Money	2,508	6,000	6,019
. Federal Civil Programs	1,175	3,550	2,820
SUBTOTAL	4,558	12,050	10,939
Criminal Tax Prosecution			
. Number of Defendants	969	2,500	2,326
. Grand Jury Investigations	22	25	53
SUBTOTAL	991	2,525	2,379
OCDE			
. Grand Jury Receipts	201	200	482

	FY 1987 Cases Closed		
	Actual	Estimate	Projection
Federal Appellate Activity	237	1,200	569
Civil Tax Litigation			
. Defense of Monetary Claims	764	2,100	1,834
. Recovery of Money	2,306	4,700	5,534.
. Federal Civil Programs	1,203	3,800	2,887
SUBTOTAL	4,273	10,600	10,255
Criminal Tax Prosecution			
. Number of Defendants	1,124	2,500	2,698
. Grand Jury Investigations	11	100	26
SUBTOTAL	1,135	2,600	2,724
OCDE			
. Grand Jury Receipts	103	370	247

Land and Natural Resources Division. Traditionally, case referrals for the Land Acquisition and Environmental Protection programs of the Land and Natural Resources Division are concentrated in the last quarter of the fiscal year due to the operating procedures of

statistics bear out this theory. Case receipts in 1987 are higher through February than in 1986 or 1985 in the two programs for which increases are requested, General Litigation and Environmental Protection. The Lands Division's overall workload receipts through mid-February are lagging slightly behind the pace we had expected. Case closings also lag at this time though not significantly based upon the past two years statistics for the same period.

	February 1987		Budget Projections	
	Received	Closed	Receipts	Closings
Federal Appellate	116	59	420	400
Land Acquisition	318	176	1,000	1,700
Environmental Protection	532	218	1,745	1,252
General Litigation	1,272	1,152	2,005	1,525
Total	2,238	1,605	5,170	4,877

Civil Division. Currently, there are 22,543 cases personally handled by Civil Division lawyers; up from 22,174 at the beginning of the year. Thus far in 1987, 3,457 new cases have been received. This rate of receipt confirms our projection of a workload of 23,204 at the end of 1987.

At this point, immigration litigation is the only major area which is relatively low in comparison to the total projected receipts for the year. However, in developing our workload projections under the new Immigration Reform and Control Act, we anticipated that the greatest volume of cases will be received in the last quarter of 1987 when INS begins to implement major provisions of the Act. As expected, the first group of immigration receipts has been class action cases. The three major class action suits filed so far, while small in number, are already requiring an enormous dedication of staff resources.

The Department, at the Committee's request, will be happy to provide additional workload data as it becomes available.

QUESTIONS FROM MR. EARLY

Antitrust Division

Question:

Your 1988 request for both positions and funding reflects decreases across the board for all activities. In almost every instance you state that these reductions will not affect your goals and objectives because of the use of computer-assisted methods for case materials. Please explain how these automated systems will make your case work more efficient thus allowing you to save positions.

Answer:

The Antitrust Division has increased its use of automated computer support in investigations and cases. The use of computer-based statistical analysis and graphics has proven particularly valuable in price-fixing and bid-rigging investigations. By loading relevant data regarding pricing, sales, or shipments into the computer and applying analysis techniques, large volumes of data may be rapidly understood and evaluated by Division attorneys and economists without burdensome hours of screening and reading of documents. Further, the products of these analyses are introduced into pretrial negotiations or in evidence in the form of computer-generated graphics, enabling the court to grasp quickly the impact of complex price-fixing schemes or the results of bid-rigging conspiracies.

Question:

In examining your workload displays, it appears that you are estimating either no change or decreases in almost every instance. Do you not foresee any new major antitrust efforts ahead?

Answer:

The Antitrust Division will continue to concentrate on its core mission which is to uncover and prosecute unambiguously harmful conduct and to review mergers. This task includes recent initiatives that focus on uncovering and prosecuting collusion in government contracts, including Defense procurement. At present, thirty-six grand juries, as well as several other preliminary investigations, are looking into possible antitrust violations in this area. These efforts have been successful thus far. They have resulted in nineteen cases that have produced $6.5 million in fines or damages, as well as considerable jail sentences. The Division intends further to increase our efforts to uncover and prosecute criminal antitrust violations. We intend to do so with our current resources. If more resources are needed, the Division will not hesitate to bring that fact to the Department's attention.

Question:

Have you considered the impact of the Chrysler buy-out of American Motors? What will be the impact of this action?

Answer:

As the Committee is aware, the Department of Justice shares antitrust enforcement responsibility with the Federal Trade Commission. Pursuant to the long-standing liaison agreement between the two agencies, the proposed Chrysler/American Motors transaction will be reviewed by the Commission rather than the Antitrust Division. Accordingly, we have no comment on any impact this transaction may have, except to state that it will have no impact on the Division's resources.

Question:

Management and Administration is reduced by twenty-two positions and $414,000 for no apparent programmatic reasons. What is the rationale? Is this reduction a result of "management improvements" directed by OMB?

Answer:

These reductions were made possible through increased automation and management improvements, which the Antitrust Division has initiated on its own. The Division has undertaken an ambitious office automation program and virtually all employees will have access to an ADP terminal by 1988. These terminals, linked by minicomputers, will make computer, legal research, and word processing support directly available to professional staff, resulting in savings of support personnel. In addition, the Division has recently consolidated its Washington-based personnel into two building locations rather than three, permitting increased logistical efficiencies. In the area of office management, automated correspondence and case tracking will also produce substantial savings.

Question:

It appears from your chart on page K-30 that a disproportionate share of the reduction comes from lower-graded administration and clerical positions. Why is that?

Answer:

Increased efficiency in the use of word processing equipment and automation of other procedures will reduce the need for lower-graded support staff.

Question:

We did observe one unique feature that might set you apart from almost every other agency of the Federal government. You propose a fifteen percent reduction in positions and they are all from the Washington headquarters, none from field activities. Were there no savings in the field?

Answer:

The Division's field offices have absorbed reductions in previous years so that they have reached the size appropriate to performing their law enforcement functions efficiently. Further reductions in the field would result in insufficient resource flexibility. Moreover, the field offices have been on the front-lines of our criminal enforcement initiatives, and, as we have stated on numerous occasions, we do not intend to decrease, but rather to expand, our criminal enforcement efforts.

QUESTIONS FROM MR. EARLY

U.S. Attorneys

Criminal Litigation

Question:

You request $500,000 for Security for U.S. Attorneys offices. Aren't these offices generally tenants in Federal buildings already protected by security personnel? What exactly will these funds provide?

Answer:

Although guard service is provided for most buildings housing U.S. Attorneys' offices, the primary function being performed is the screening of non-authorized visitors from entrance onto the premises. In many districts, there is minimal control over the movement of authorized visitors, such as witnesses, after entry has been gained. Such visitors, as well as employees of other agencies who work in these buildings, constitute a threat to the security of sensitive files and other repositories of information, evidence, and cash collections.

The Justice Management Division's Security Staff conducted compliance reviews on personal and physical security in the U.S. Attorneys' offices and identified many deficiencies. The recommendations made by that office have been incorporated into this request. Among the measures planned to restrict movement of non-employees is the installation of receptionist work stations.

The funding requested will also be used extensively to protect information resources. Funds will be used to upgrade cabinets for sensitive files, install intrusion alarm devices to detect break-ins to locked offices, install television monitors and cameras to watch over entrances to offices, and purchase "card-key" systems. Funds may also be used for the securing of telephones, facsimile machines, word processing equipment, and personal computers with devices that prevent unauthorized personnel from intercepting messages or accessing data bases.

Question:

What has been the growth in positions in past years for white-collar crimes? Why do you request additional positions in 1988?

Answer:

The only specific increase in the white collar crime area appropriated in the last five years provided 22 Assistant U.S. Attorneys (AUSAs) and 22 support personnel for tax enforcement in 1985. Other increases in recent years have been targeted at combatting drugs and keeping pace with workload created by new legislation such as the Comprehensive Crime Control Act (CCCA) and

the Federal Judgeships and Bankruptcy Act. The 28 positions requested for 1988 would be applied in the areas of defense procurement fraud, money laundering, government program fraud, bankruptcy fraud, bank fraud and embezzlement.

The Federal Bureau of Investigation projects an increase of 1,000 investigative matters in this area in 1988 over their 1987 figures. Likewise, bank frauds have increased well over 100 percent since 1981. This trend will accelerate with added use of the new bank fraud statute included in the CCCA. Referrals involving defense procurement fraud are expected to mushroom given the Defense Contract Audit Agency's addition of over 200 plant-based auditors.

Civil Litigation

Question:

You are requesting 80 positions and $3,970,000 for the Civil Litigation program in 1988 in order, you claim, to maximize recovery of monies by the U.S. Government. What estimates of additional recoveries will these positions provide?

Answer:

The Affirmative Civil Enforcement initiative is expected to increase recoveries to the U.S. Government by approximately $60 million in the first full fiscal year after implementation. Our estimates of potential recoveries in this program are premised upon the experience of the Affirmative Civil Litigation Unit in the Eastern District of Pennsylvania which has had recoveries of $25 and $23 million in the past two fiscal years, based upon a commitment of five workyears to affirmative litigation. This result is unusual, but we believe that $2 million per Assistant United States Attorney workyear, based on the Eastern District of Pennsylvania and similar numbers in the Southern District of Florida, the Northern District of Alabama and the Eastern District of Virginia can be conservatively projected in other offices, given existing and potential caseloads in such complex and labor-intensive areas as:

1. defense procurement fraud,
2. medicare/medicaid fraud,
3. forfeitures (including drug cases),
4. program fraud, and
5. bankruptcy litigation

Question:

You discussed on page L-12 why the number of referrals decreased from 1985 to 1986, but you fail to justify why you believe referrals will begin to rise during the latter part of 1987 and during 1988. Please explain why they will increase?

Answer:

In the past couple of years, we have solicited our principal client agencies, requesting litigation referral estimates for upcoming budget cycles. We then combine these survey results with our historical data and our knowledge of principal program initiatives, developments and workforce and project future workloads accordingly.

Even so, our projections, particularly in the civil litigation area, have been known to require significant and immediate revision on occasion such as when Congress enacts new legislation, when the courts issue rulings on salient program areas, or when the Administration undertakes new initiatives. Examples of such occurrences would include the 5,000+ drop in Social Security disability litigation referrals experienced in 1985 as a result of statutory amendments contained in P.L. 98-460 passed in 1984. An example of a court decision significantly affecting referrals to the U.S. Attorney offices would be Coleman v. Block (D.N. Dak. 1984) which created a backlog of unreferred Farmers Home Administration (FmHA) cases; we now expect a surge of 5,000 to 6,000 foreclosure referrals in 1987 over the level of 1985 due to the outcome of this one case. A final example of workload variation entails this Administration's 1986 implementation of the IRS tax-offset program. This initiative caused five of our principal client agencies to defer a significant number of referrals to us as they awaited the results of the pilot run involving hundreds of thousands of accounts. Our estimates for 1987 and 1988 still appear to be realistic approximations despite all the variables, primarily due to the influx of FmHA cases referred to previously.

Question:

You state that one of the major civil litigation objectives is to collect monies owed to the United States and to increase the effective rate of return. What was the amount sought, settled, and collected by U.S. Attorneys on delinquent debt cases handled in 1986?

Answer:

The United States Attorneys began fiscal year 1986 with 72,464 delinquent civil debt cases and matters valued at $905,655,120 on their books. At the end of the fiscal year that inventory was 69,441 debt cases and matters valued at $961,044,489.

During the fiscal year, the United States Attorneys opened 34,709 new debt cases and matters valued at $1,077,203,022 and closed 37,732 debt cases and matters.

During the fiscal year, the United States Attorneys recovered $472,224,840 in cash, property, and the like; while $549,588,813 worth of debt was written off as uncollectible.

Question:

What is the status of Justice efforts to develop a Uniform Federal Debt Collection Bill that would among other things minimize state law restrictions on the Federal Government's debt collection efforts?

Answer:

The draft legislation has been reviewed by U.S. Attorneys across the country and is now being circulated elsewhere within the Department for comment. A proposed bill will be forwarded to the Office of Management and Budget when all comments have been received, and any pertinent suggestions have been addressed in the bill's language.

Question:

Does Justice plan to use the IRS tax refund offset program to collect delinquent debts referred to the Department for litigation?

Answer:

In tax year 1986, criminal fines/assessments were referred under the IRS Refund Offset program by the United States Attorneys. They served as a "pilot" entry into the program. We hope to add civil claims at a later date after a management review is made of the existing system. At this time, the system and procedures are still being refined. Until all the "glitches" are worked out for the limited system, it would be imprudent to expand the system to include all referrals. When the management review is completed, a cost/benefit analysis will be done on 1986 data to determine the merits of this expansion. Data is too preliminary right now to make such an assessment since only now are 1986 tax returns being filed.

Question:

Has Justice entered into contracts with private attorneys to litigate outstanding debt collection cases as authorized by the Federal Debt Recovery Act of 1986 (Public Law 99-578)? If not, what is the status of using private attorneys and what types of cases will they be handling?

Answer:

Within the Department, the Justice Management Division is responsible for contracting with private attorneys to litigate outstanding debt collection cases. A number of important steps have already been undertaken to ensure that this newly-authorized program begins on sound footing. Critical among these steps is the selection of five "pilot" districts which have especially large backlogs of debt collection cases. These districts are: the Eastern District of New York, the Southern District of Florida, the Southern District of Texas, the Eastern District of Michigan and the Central District of California. A working group of Assistant U.S. Attorneys from these districts has been established, both to solicit their advice and to

initiate an inventory of these backlogged cases for eventual referral to private counsel. Another important organizational step already accomplished at the local level is the formal mailing of notices to all Bar Associations and legal publications in these districts to advise them of this program's opportunity. These actions will contribute toward a smooth and effective conduct of the later formal bidding process.

Highlighted below are a number of other steps which we have undertaken to expedite program implementation and ensure proper management controls:

- written requests to every federal agency asking for an inventory of the kind and amount of debts which each expects to refer to the five pilot districts over the next three years;
- completion and internal circulation of draft regulations which, upon revision, will be published in the Federal Register for comment and later transmittal to Congress;
- meetings with debt collection officials at the Department of Education to assess options for designing a central intake system for debts being readied for litigation;
- preparation of synopses for both the central intake and the private counsel contracts for publication in the Commerce Business Daily.

Beyond these specific efforts, we have met with other government and private organizations, including the Federal Deposit Insurance Corporation and the Commercial Law League, to solicit their suggestions for conducting this program. In summary, we are pursuing every avenue available to tap into existing expertise in this relatively new area so that the Department's debt collection program proceeds in an effective manner.

Compensation

Question:

On page L-26 you identify program changes for Criminal Litigation which shows compensation increases of $11,190,000 for 194 positions. Using a 25 percent lapse rate, this equates to an increase of approximately 150 workyears at an average annual salary of almost $75,000. How is this average salary derived?

Answer:

The amount of $11,190,000 cited in the "Financial analysis-program changes" exhibit is the amount necessary to pay the compensation for a full year of 194 Assistant United States Attorneys. The average salary for these positions is $57,680. After applying a slightly lower lapse rate to these attorney positions than to other new

positions in the request, the result was a total of 159 workyears. The cost of compensation for these workyears is $9,171,000.

Question:

Since these added positions are primarily new lawyers, how can you justify such a high salary?

Answer:

As noted above, the annual salary for attorneys in the criminal litigation request is $57,680 per attorney, not $75,000. This rate is less than the average amount computed for the existing attorney workforce in 1988 (approximately $60,000). It is anticipated that most of the attorneys hired to encumber the new positions requested will have significant levels of experience in government or in the private sector, and that it will be necessary to provide compensation commensurate with that experience.

Workload

Question:

Throughout your justification, you request increases based on projected workload increases. For the record, for each of these workload displays, please provide the actual experience to date for 1987 and explain whether you believe you will still achieve the 1987 projection you estimate in the request.

Answer:

Below are workload statistics for all litigative decision units as of January 1987 for Criminal and Civil Litigation, and as of February 1987 for Organized Crime Drug Enforcement.

Criminal Litigation

Item	1987 Actual January
Matters received	24,730
Matters closed	14,385
Matters pending	58,702
Cases filed	9,575
Cases terminated	8,895
Cases pending	24,916
Grand Jury proceedings	5,204
Cases closed by trial	971

Civil Litigation

Item	1987 Actual January
Matters received	27,627
Matters closed	28,017
Matters pending	33,723
Cases filed	25,856
Cases terminated	23,189
Cases pending	157,416
Appeals filed	622
Appeals terminated	827
Cases closed by trial	341

Organized Crime Drug Enforcement	1987 Actual February
Cases initiated	117
Cases in which indictments are returned	180
Indictments returned	495
Defendants indicted	1,417
Defendants charged with Racketeer Influenced and Corrupt Organization	60
Defendants charged with Continuing Criminal Enterprise	59
Defendants convicted	729

In some instances, the actual data displayed above may appear to indicate that end-of-year projections for 1987 are overstated. Such a conclusion is premature because of several factors. First, due to the holiday season, productivity in the first quarter appears low regularly because client agency personnel use much of their vacation time during this period. This affects the referral rate. Second, many offices experience backlogs in the entering of data into the various information systems at the beginning of the fiscal year. As the year progresses, data entry becomes a higher priority. This problem of delayed data entry is compounded further by a high vacancy rate among clerical staff, including data entry personnel. The high vacancy rate is a carryover from a hiring freeze imposed in 1986 to comply with the Gramm-Rudman-Hollings Deficit Reduction Act. This hiring freeze also significantly reduced the number of attorneys on-board. When the attorney vacancy rate declines to more normal levels (which a survey of United States Attorney offices indicates will happen fairly quickly), it is expected that workload indicators will rise significantly. Some of the vacancies involve attorney positions for the Southwest Border Drug Interdiction program which were funded for three-fourths of the year. When these positions are filled, it is expected that narcotics and dangerous drug case filings will begin climbing in the third and fourth quarters.

THURSDAY, MARCH 12, 1987.

FOREIGN CLAIMS SETTLEMENT COMMISSION

WITNESSES

BOHDAN A. FUTEY, CHAIRMAN
MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

Mr. SMITH. Next, we will hear testimony on the fiscal year 1988 request of the Foreign Claims Settlement Commission. Your request is for $510,000, a decrease of 11 percent, from fiscal year 1987 amounts.

FOREIGN CLAIMS SETTLEMENT COMMISSION
OF THE
UNITED STATES

BOHDAN A. FUTEY, CHAIRMAN

Foreign Claims Settlement Commission

Salaries and expenses

Summary Statement

Fiscal Year 1988

The Foreign Claims Settlement Commission is requesting a total of $510,000, nine permanent positions and nine FTE workyears for 1988. This request represents a net decrease of $61,000 from the 1987 appropriation anticipated of $571,000, nine positions and nine FTE workyears.

The principal mission of the Commission is to settle the claims of American citizens arising out of the nationalization, expropriation or other takings of their properties and interests by certain foreign governments. The Commission has compiled and evaluated such claims against 14 countries under the International Claims Settlement Act of 1949, involving Yugoslavia, Panama, Poland, Bulgaria, Hungary, Rumania, Italy, the Soviet Union, Czechoslovakia, Cuba, China, East Germany (GDR), the Socialist Republic of Vietnam, and the Provisional Military Government of Socialist Ethiopia. The Commission and its predecessor agency, the War Claims Commission, have also undertaken and completed numerous programs arising out of World War II under the War Claims Act of 1948.

The Foreign Claims Settlement Commission functions with one budget activity covering the adjudication of international claims as well as the salaries and other costs of the three Presidentially appointed members of the Commission, a legal office and an administrative support operation.

The Commission consists of a Chairman and two part-time Commissioners, all of whom are appointed by the President with the advice and consent of the Senate. The part-time Commissioners receive compensation at the Executive Level V rate of pay for performance of official business of the Commission at the direction of the Chairman.

The Commission will certify all final awards for payment to the Department of the Treasury on the Ethiopian Claims Program. It will also prepare and issue a final report to the Congress on this program.

The Commission will assist the Department of the Treasury in the payment processing of claims for losses on which the Commission has issued awards payable from existing claims funds such as the Czechoslovakian claims fund and the Ethiopian claims fund.

We will assist the Department of State in ongoing negotiations between the United States and East Germany.

The Commission will continue its advisory function to the Congress, and the Departments of State and Treasury concerning claims before the United States-Iran Claims Tribunal at The Hague.

Under the War Claims Act of 1948, as amended, the Commission will authorize payments to American military prisoners of war captured by hostile forces in Southeast Asia during the Vietnam conflict.

The Commission will update a volume entitled "Decisions and Annotations of the Foreign Claims Settlement Commission" for the period covering 1968 to 1988. Such a volume will complete the documentation of the history of the Commission and its determinations on claims for losses of American citizens in foreign countries. This volume will include information on programs involving losses in Cuba, China, East Germany, the Socialist Republic of Vietnam, Czechoslovakia and Ethiopia.

Also, during 1988, the Commission will provide continuing service to former and prospective claimants on a total of 35 completed international and war claims related programs. This staff will also be providing advice on policy determinations, preliminary planning, evaluation of pending claims legislation and liaison with Congressional committees considering legislation intended to provide compensation to new categories of claimants.

The decrease in the Commission's appropriation results from the completion of a program under the International Claims Settlement Act of 1949 against the Provisional Military Government of Socialist Ethiopia.

Foreign Claims Settlement Commission

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Foreign Claims Settlement Commission

For expenses necessary to carry out the activities of the Foreign Claims Settlement Commission, including services as authorized by 5 U.S.C. 3109; allowances and benefits similar to those allowed under the Foreign Service Act of 1980 as determined by the Commission; expenses of packing, shipping, and storing personal effects of personnel assigned abroad; rental or lease, for such periods as may be necessary, of office space and living quarters of personnel assigned abroad; maintenance, improvement, and repair of properties rented or leased abroad, and furnishing fuel, water, and utilities for such properties; insurance on official motor vehicles abroad; advances of funds abroad; advances or reimbursements to other Government agencies for use of their facilities and services in carrying out the functions of the Commission; hire of motor vehicles for field use only; and employment of aliens; [$564,000]$\Lambda$. $510,000

(94 Stat. 96-98; 22 U.S.C. 1621-1645; 50 U.S.C. App. 2001-2017; Department of Justice Appropriation Act, 1987.)

Explanation of changes:

No substantive changes proposed.

Long-Range Goal: To make effective determinations of all unsettled claims of American nationals against foreign governments within the framework of Congressional modifications to the International Claims Settlement Act of 1949 and other pertinent statutes and to provide assistance to former and prospective claimants on past international and war claims related programs.

Major Objectives:

- To provide assistance to the Department of State in the presentation of United States claims before the United States-Iran Claims Tribunal at The Hague.
- To provide general information concerning past programs and to respond to requests about specific decisions the Commission has made on past claims.
- To advise other agencies and the Congress concerning potential future programs and to comment on pending legislation.
- To assist the Department of State in ongoing negotiations for the settlement of claims against foreign governments including East Germany, the Socialist Republic of Vietnam and Cuba.
- To assist the Department of the Treasury in making distributions on past awards.
- To provide executive departments and private attorneys with legal precedents issued by the Commission.
- To conduct pre-program planning of pending new programs.
- To respond to requests for policy determinations on matters relating to the settlement of international claims.

Base Program Description:

During 1988, the Commission will provide continuing service to former and prospective claimants on a total of 39 completed international and war claims related programs. This staff will also be providing advice on policy determinations, preliminary planning, evaluation of pending claims legislation and liaison with congressional committees considering legislation intended to provide compensation to new categories of claimants. At present the Commission is authorized by Public Law 99-93 to conduct a program for American losses under $250,000 in Iran, pending a new settlement agreement. Other areas of potential claims include Albania and the U.S.S.R., as well as additional losses in East Germany.

The Commission will serve in an advisory capacity to other government agencies in matters of policy on claims of United States citizens against foreign governments. The planned staff for the budget year will provide advisory services to potential claimants and their attorneys concerning actual or possible claims agreements or legislation authorizing future programs. During 1988, the Commission will provide technical assistance to the Department of State in its efforts to negotiate claims settlement agreements with foreign governments. Under the provisions of Section 620(e) of the Foreign Assistance Act of 1961, the Foreign Claims Settlement Commission is authorized to evaluate expropriated property upon the instructions of the President.

Under the War Claims Act of 1948, as amended, the Commission authorizes payments to American military prisoners of war captured by hostile forces in Southeast Asia during the Vietnam conflict. The Commission to date has granted awards to 736 prisoners of war or their survivors in the amount of $5,347,773; $229,337 to 41 civilian internees; and $69,675 to members of the crew of the USS Pueblo for a total of $5,645,785. The status of a small number of MIA's with prisoner of war classification remains to be determined by the Department of Defense. Upon receipt of these final determinations, this program will be completed.

Accomplishments:

The Commission will have completed a program under the Ethiopian Compensation Agreement of 1985 and title I of the International Claims Settlement Act of 1949, reviewing and investigating 45 claims of nationals of the United States asserting losses of property in Ethiopia as a result of nationalization, expropriation or other taking by the Provisional Military Government of Socialist Ethiopia. To date, the Commission has issued 17 awards totaling $10,554,916.46.

Pursuant to its authority under the War Claims Act, the Commission continued to make determinations of claims of survivors of prisoners of war in the Vietnam conflict.

Foreign Claims Settlement Commission

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Uncontrollable increases:			
1. One additional compensable day	...	...	$1
The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $326 - 260 = $1,254 plus $138 for benefits.)			
2. Annualization of Federal Employees' Retirement System Costs	...	...	15
This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Total annualization required is $15,000.			
3. Annualization of 1987 pay increase	...	...	5
This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 68 paid days (October 1, 1986 through January 5, 1987) were not included in the pay raise amount of $9,000. Additionally, $4,500 of the 1987 pay requirement was absorbed. Total annualization required is $5,000.			
4. Within-grade increases	...	...	3
This request provides for an expected increase in the cost of within-grade increases and performance management and recognition system salary increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $2,700 and benefits $300 = $3,000.)			

	Perm. Pos.	Work-years	Amount
5. GSA rent	...	...	$11
In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $11,000 is required to meet our commitment to GSA.			
6. Federal Telecommunications System (FTS)	...	...	3
The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $3,000 over the 1987 based of $8,000 is requested.			
7. GPO printing costs	...	...	6
An additional $6,000 will be required in 1988.			
8. Employee data and payroll services	...	...	3
Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.			
Total uncontrollable increases	...	...	47

	Perm. Pos.	Work-years	Amount
Decreases (Automatic non-policy):			
1. Reduction for change in hourly rate	...	...	-$2
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
2. Reduction in Health Benefits	...	...	-1
The Federal Employees' Health Benefits Act (Public Law 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately six percent due primarily to reduced carrier rates.			
3. Nonrecurring costs for completed program	...	...	-105
The Commission completed a program under the International Claims Settlement Act of 1949 against the Provisional Military Government of Socialist Ethiopia.			
Total decreases	...	...	-108
Total, adjustments to base	...	...	-61

OPENING STATEMENT

Mr. SMITH. We have the Chairman of the Commission, Mr. Futey. Do you have a statement?

Mr. FUTEY. Yes, I do. Mr. Chairman, I am pleased to have the opportunity to appear before you in support of our 1988 budget request. If I may, I would like to summarize my previously prepared and submitted statement and ask that such prepared statement be made part of the record.

Mr. SMITH. Okay, we will do that at this point.

[The prepared statement of Mr. Futey follows:]

DEPARTMENT OF JUSTICE

STATEMENT OF CHAIRMAN BOHDAN A. FUTEY
FOREIGN CLAIMS SETTLEMENT COMMISSION
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON THE
DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you in support of our Fiscal Year 1988 budget request for $510,000; nine permanent positions and nine workyears. This is a decrease of $61,000 from the anticipated appropriation of $571,000 in Fiscal Year 1987. The $510,000 requested includes an amount of $383,000 for personnel costs and benefits and $127,000 for support costs.

The reduction in the Commission's 1988 budget request is the direct result of initiatives taken in 1987 to reduce the legal and clerical staff of the Commission and its office space.

During 1988, the Commission will be involved in determining claims related to prisoners of war in the Vietnam conflict under Public Law 91-289, certifying to the Secretary of the Treasury awards granted on claims for losses in Ethiopia and assisting the Department of State in ongoing negotiations for a settlement of American losses in East Germany (GDR) previously adjudicated by the Commission. The Commission will also continue to assist U.S. claimants and the Department of State with claims against Iran, presently pending before the Iran-U.S. Claims Tribunal at The Hague.

By the end of 1987, the Commission will have completed the adjudication of claims of American citizens for losses in Ethiopia. These claims are authorized under title I of the International Claims Settlement Act of 1949, as amended, and a lump sum compensation agreement between the United States and Ethiopia reached on December 19, 1985. The agreement provides that Ethiopia will pay $7 million between 1986 and 1991. To date, the Commission has acted on 39 claims and granted awards totalling over $11,000,000.

In 1988, the awards granted will be certified to the Secretary of the Treasury for pro rata payments out of the funds available.

The Commission will continue in 1988 to act on claims based on the internment of U.S. military and civilian personnel by hostile forces in Vietnam. Such claims still arise, from time to time, as information becomes available to the Department of Defense regarding prisoners of war.

The Commission has participated in and continues to assist in ongoing talks with representatives of the East German government in an effort to obtain a settlement for American losses in the GDR. The Commission has adjudicated claims against East Germany in the total principal amount of approximately $78 million, plus interest of 6% per year from the dates of the losses to the date of a future settlement agreement.

Should a settlement be obtained, as in the case of other settlements including the recent one with Ethiopia, 5 percent of the funds received would go to the U.S. Treasury to offset the

Commission's expenses. To date, the amount recovered in this manner has exceeded the Commission's expenses since its inception in 1954.

I would like to call to the Subcommittee's attention the fact that the Commission is unique in that its operating expenses are only partially, if at all, ultimately borne by the United States taxpayers. In most instances the authorizing statutes have provided for the payment of the Commission's awards from funds obtained either from the liquidation of foreign assets blocked in the United States or from foreign governments by negotiation of claims settlement agreements. The statutes have provided for the deduction of a certain percentage from such claims funds for deposit as miscellaneous receipts in the United States Treasury to defray the administrative expenses of the Commission and the Department of the Treasury in carrying out the programs. The total obligations of the Commission and its predecessors from the beginning of 1950 through the end of 1986 have amounted to approximately $27 million, whereas $32 million has been recouped.

As in the past, the Commission will continue to provide information to the Congress and other agencies on past program activities and will continue to assist in future negotiations and efforts to obtain legislation when required, and to provide compensation to U.S. citizens who have not yet received any payments for their losses caused by violations of international law.

Pursuant to Public Law 99-33 passed in August 1985, the Commission has been directed to adjudicate some 2,600 claims of U.S. nationals against Iran, contingent upon a lump sum settlement agreement between the United States and Iran. Such an agreement has not yet been achieved and therefore it is impossible at this time to project the time period when these claims will be adjudicated. Even without a settlement agreement, the Commission will continue to be in close contact with the Department of State in providing information and legal precedents to assist in the presentation of the claims which are presently before the United States-Iran Claims Tribunal.

The Commission and the Department of State are also aware of current efforts to obtain legislative relief for a small number of American citizens, who, through no fault of their own, were not able to present sufficient evidence to establish their losses in Czechoslovakia during the 3-year time frame established by Congress for the determination of such claims under Public Law 97-127. The Commission had requested information from the Government of Czechoslovakia on these claims, as provided for under a 1981 claims agreement. However, due to delays by the Government of Czechoslovakia in responding to these requests, evidence which now establishes a number of compensable claims was not received until the statutory deadline for completion of the program had expired. Should the efforts to obtain authority for the Commission to reconsider these claims be successful, the Commission would adjudicate them and certify awards to the

Treasury Department for payment, on an equal footing with previous awardees, out of residual funds remaining from the 1981 settlement of $81.5 million received from Czechoslovakia.

Finally, the Commission is aware of possible claims for property losses of U.S. nationals in the Soviet Union and Albania. However, at present, there is no imminent prospects of any settlement for these losses.

In addition to our other functions, in 1988 the Commission proposes to publish a second volume of its Decisions and Annotations, which would bring up to date its precedent decisions on international claims. The new publication will include information on some twelve claims programs since 1968, including the Cuban, China, East German (GDR), Czechoslovakian (Second), Vietnam and Ethiopian claims programs.

Mr. Chairman, this concludes my statement on behalf of the Foreign Claims Settlement Commission's approoriation request for Fiscal Year 1988. I will be happy to answer any questions you or the other Members of the Subcommittee may have.

Mr. FUTEY. We are requesting $510,000 for nine positions and nine work years in 1988. This is a decrease of $61,000 from the anticipated appropriation of $571,000 in 1987. The $510,000 requested includes an amount of $383,000 for personnel costs and benefits and $127,000 for support costs. The reduction in the Commission's 1988 budget request is the direct result of initiatives taken in 1987 to reduce the legal and clerical staff of the Commission and its office space.

During 1988 the Commission will be involved in determining claims related to prisoners of war in the Vietnam conflict under Public Law 91-289, certifying to the Secretary of the Treasury awards granted on claims for losses in Ethiopia, and assisting the Department of State in ongoing negotiations for a settlement of American losses in East Germany previously adjudicated by the Commission.

The Commission will also continue to assist U.S. claimants and the Department of State with claims against Iran presently pending before the Iran-U.S. Claims Tribunal at The Hague.

With respect to prisoners of war, the Commission, in addition to handling any new claims, will continue to provide information from our records to ex-prisoners of war, their families, and veterans organizations. This information, which is only available from Commission records, is used by veterans and their families to obtain benefits under State and Federal programs.

Since the Commission finished its adjudication of claims of American citizens for property losses in East Germany, the Department of State has conducted ongoing negotiations with representatives of the GDR for settlement of claims in the total principal amount of $78 million plus interest from the dates of loss to the date of the claims settlement agreement.

To assist the Department of State in these negotiations, the Commission staff has provided information on specific claims and has participated directly in the negotiations by explaining the reasoning behind its determinations under international law to the GDR representatives. In 1988 we will continue this vital function.

Finally, the Commission has been authorized by Public Law 99-33, enacted during the summer of 1985, to adjudicate some 2,600 claims of American citizens for losses in Iran. While this activity is contingent upon a lump-sum settlement agreement between the United States and Iran, the Commission staff is providing and will continue to provide technical support to the Department of State in formulating the terms of such an agreement so that the claims of U.S. citizens may be fairly and expeditiously determined by the Commission.

As you know, the settlement of American claims with foreign countries not only provides funds for the payment of Commission's awards, but also provides funds to defray the Commission's expenses. To date, the United States Government has recouped approximately $5 million more than the Commission's expenses since 1950. Additional settlements with East Germany and Iran will provide further offsetting funds. The adjudication of Ethiopian claims programs will bring $350,000 to the United States Treasury.

In addition to our other functions in 1988, the Commission proposes to publish a second volume of its decisions and annotations

which would bring its previous work up to date by including recent precedent decisions on international claims. This new publication will include information on some 12 claims programs since 1968, including the Cuban, Chinese, East German, Second Czechoslovakian, Vietnamese, and Ethiopian claims programs.

This volume will be immensely helpful to the Commission staff in future programs, claimants, scholars, and other Federal agencies seeking detailed information on the Commission's adjudications under international law.

Mr. Chairman, this concludes my statement. I will be happy to answer any questions.

ETHIOPIAN CLAIMS

Mr. SMITH. What is the nature of the claims in Ethiopia?

Mr. FUTEY. It is the settlement of American interests and American property taken right after the revolution. The agreement was concluded in December of 1985 for the sum of $[illegible] million.

VIETNAM CLAIMS

Mr. SMITH. Are you still receiving any Vietnam claims?

Mr. FUTEY. We concluded the program with Vietnam a year ago, and there haven't been any payments made yet because there are no assets. No settlement agreement has been concluded. However, there are blocked assets in the United States that can be used at some time to make the awards.

Mr. SMITH. What do they total, do you know?

Mr. FUTEY. I believe they are presently in the neighborhood of $170–$180 million. Are you talking about blocked assets in the United States?

Mr. SMITH. No, the amount of the claims.

Mr. FUTEY. The value of the claims is in the neighborhood of $100 million.

Mr. SMITH. And what is the amount of the assets, did you say?

Mr. FUTEY. Well, there are blocked assets in the total amount of about $175–$180 million.

IRANIAN CLAIMS

Mr. SMITH. What about Iran? What did you say about Iran?

Mr. FUTEY. Well, there has been a statute passed by Congress in the summer of 1985 authorizing the Foreign Claims Settlement Commission to adjudicate some 2,600 claims, the so-called small claims presently pending before the Iran-U.S. Claims Tribunal at The Hague. Congress has authorized the Foreign Claims Settlement Commission to adjudicate these claims whenever a settlement agreement is negotiated between the United States and Iran. That agreement has not been concluded yet.

Mr. SMITH. You don't know what these claims will total?

Mr. FUTEY. The small claims total about $200 million. The Department of State represents American claimants on claims below $250,000. For all claims above $250,000, the claimants have their own counsel at The Hague.

Mr. SMITH. Okay. Thank you very much.

Mr. FUTEY. Thank you.

[The questions for the record and answers submitted thereto, follow:]

72-165 O—87——25

QUESTIONS FROM MR.NEAL SMITH

Foreign Claims Settlement Commission

Question:

In 1987, the Commission reduced its staff from 16 positions down to nine. What was the workload impact on the staff of this reduction?

Answer:

The Commission closed out its Vietnam Claims Program in February of 1986. Because the current Ethiopian Claims Program is smaller, the remaining staff was able to absorb the additional workload without difficulty. Some of the 16 positions abolished to reach the nine current positions had not been filled during 1986. The reduction in force began in August of 1986 and ended in October of 1986, with two of three required terminations of employees taking place in 1986. One employee terminated was eligible for immediate retirement, another was able to transfer to a position in another division of the Justice Department and the remaining attorney took advantage of an opportunity for paid study in West Germany through a private fellowship program.

Question:

Has any backlog of claims developed due to the inability of the reduced staff to process them as quickly?

Answer:

No backlog of claims has developed and the Commission is on target to complete successfully the Ethiopian Claims Program by the deadline of September 30, 1987 as previously announced in the Federal Register.

Question:

Are there any more plans for staff reduction?

Answer:

There are no more planned reductions in staffing. We feel that, with the past reductions, the Commission has the minimum staff necessary to carry out its functions in 1988, if no additional programs are initiated during the coming fiscal year. However, should the Commission's workload decrease significantly after the completion of the Ethiopian Claims Program and should no new claims programs materialize, we will have to review our staffing requirements. Because the remaining Commission staff members have relatively long Federal service, it is not possible to effect large savings by reductions in force. Other means of dealing with a reduction in workload, such as transferring employees to other positions in the Justice Department, of course, would be given first consideration.

Question:

Do you foresee any large scale claims actions anywhere in the world which may impact on your program?

Answer:

There is a possibility that new programs for American losses in Albania, the Soviet Union or the Baltic States could be authorized in the not-too-distant future. Also, there have been a number of inquiries relating to claims for losses in Libya. We are living in an unstable world with a constant threat of governments coming into power which may well expropriate American owned property and require a mechanism to seek compensation for such losses.

THURSDAY, MARCH 12, 1987.

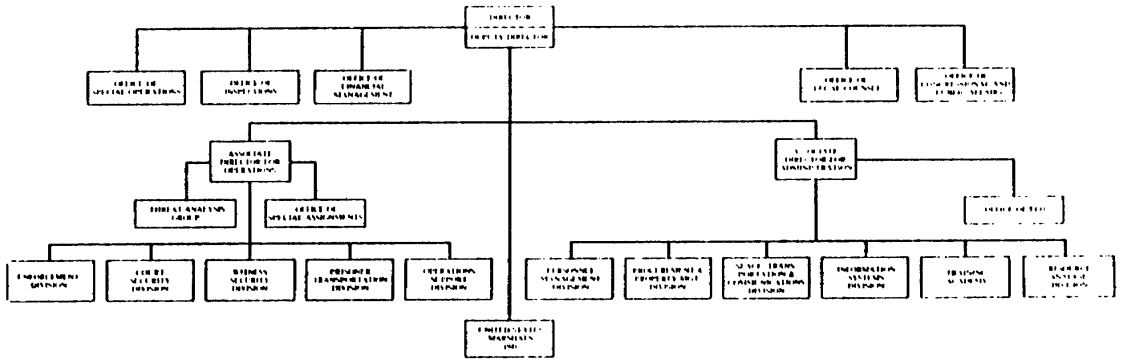
UNITED STATES MARSHALS SERVICE

WITNESSES

STANLEY E. MORRIS, DIRECTOR
ROBERT J. HAYES, BUDGET OFFICER
MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

Mr. DWYER [presiding]. Good morning.

Continuing with our review of the Department of Justice, we will now hear testimony from the United States Marshals Service. The Marshals Service requests $216,092,000 in fiscal year 1988, an increase of 31 percent over fiscal year 1987 amounts adjusted for proposed supplementals.



We will insert in the record at this point the Marshals Service fiscal year 1988 budget justification.

Summary Statement

Fiscal Year 1988

For 1988, $216,092,000, 2,948 permanent positions, and 2,933 full-time equivalent workyears are requested for the Marshals Service appropriation. This is a net increase of $51,242,000, 224 positions, and 139 FTE workyears above the 1987 appropriation anticipated.

The Marshals Service is charged with protecting basic Constitutional rights by maintaining the security and integrity of the judicial process. The primary responsibilities for protecting the federal judiciary and endangered witnesses, executing warrants and court orders, managing seized assets, and maintaining custody of unsentenced prisoners are central to this mission. Because of the Service's unique role in the administration of justice, it must respond to workload demands largely beyond its control. What the Service does, or fails to do, in response to these demands affects all facets of the judicial process.

It is primarily because of external factors that the Service requests an additional $18.2 million and 224 new positions for 1988 program increases. Ongoing concern for enhanced security and prisoner productions, as well as added responsibilities resulting from the government's drug initiative and mandated program changes all contribute to this need.

Mindful of the difficult economic situation confronting the nation, our request reflects reduced costs wherever possible and still allows us to perform our mandated functions in the competent, professional manner the public expects. The resources requested address these problems in a comprehensive and coordinated fashion. The major activities and resource requirements are summarized below.

Witness Security

The Marshals Service's Witness Security Program remains the government's most effective way to obtain testimony against members of organized crime and drug traffickers. In trials where protected witnesses testify, four out of five result in conviction. However, providing for the care and safekeeping of these individuals is extremely costly. By 1988, it is expected there will be over 5,900 witnesses in the program, a 14 percent increase above the 1986 level. Moreover, witnesses and family members must receive the support they need to survive in a protected environment. To ensure the continued safety of these witnesses and their family members, and to operate the new Washington, D.C. area safesite and assessment center requires 36 new positions and $1,141,000 in 1988.

Fugitive Investigations and Court Orders

As additional funds are appropriated each year to develop cases and try members of criminal organizations and narcotics violators, more resources are needed to apprehend those who flee the criminal justice system. Often those who escape return to their former practices. Marshals Service involvement in international extraditions continues to grow, and is projected to increase to 250 extraditions in 1988, 84 percent above the 1986 level. People we extradite are among the most publicized and dangerous in the world. To ensure adequate resources are available to meet these needs, the Marshals Service requests an additional $300,000.

Judicial Security

Protection of members of the federal judiciary and court facilities is the Marshals Service's highest priority. However, protecting the over 1,800 federal judges and magistrates and almost 500 federal court facilities is becoming more and more difficult. Not only does the time devoted to criminal proceedings continue to grow -- it is projected to rise 20 percent from 1986 to 1988 — the types of cases we now face are becoming increasingly dangerous and complex. Trials involving drug dealers and organized crime are now assuming international proportions. And the threats and violence displayed by groups such as the Macheteros, the Aryan Nation and the May 19th Communist organization demand extreme security be provided. Threats against the judiciary are projected to increase one-third from 1986 to 1988.

When placed in the context of more and longer court proceedings, and a growing number of threats and violence, the Marshals Service needs become obvious. To meet the increased responsibilities in this area the Marshals Service requests 160 positions and $8,126,000 for judicial security, including 42 positions and $2,263,000 for enhanced security as a direct result of the government's accelerated drug apprehension efforts.

ADP and Telecommunications

The data requirements placed on the Marshals Service are staggering. Each year 80,000 warrants are received, some 170,000 prisoners transported, over 250 threats analyzed, and about 250,000 checks issued and 170,000 vouchers certified. Yet, full automation is lacking. Presently, less than a third of the districts can use the Warrant Information Network, and only 12 have automated accounting. Moreover, enhanced management information is necessary to improve prisoner transportation and analyze threats in a timely fashion.

Only through improvements in automation and modernization are savings in time and effort realized. For 1988, four new positions and $1,341,000 will be required to improve the automated threat analysis capability; for enhanced automated ticketing and maintenance scheduling for NPTS; and for similar improvements in warrants information, prisoner data and accounting.

Field Support and Training

The Marshals Service has assembled the most comprehensive and sophisticated training program to develop the best operational deputies possible. Specialized classes in officers survival and protective services help prepare the workforce for the complex and dangerous Marshals Service missions. No increased resources are requested for 1988.

Handling of Federal Prisoners

The growing overcrowding of federal jails and the increased length of prisoner stays continue to present increased demands on the Marshals Service. Each prisoner is presented to court an average of three times while under Marshals Service custody. Given the surge in the prisoner population -- the Service has about a third more prisoners in its custody than it did just two or three years ago -- we now have prisoner transportation requirements which are increasing 10-15 percent annually. Arrests generated as a result of the government's new drug initiative will only accelerate this trend.

National Prisoner Transportation System (NPTS) improvements are a major component of the Marshals Service's 1988 budget submission. In that year, NPTS movements could easily reach 100,000. An average NPTS movement costs about $100, almost seven times less expensive than a commercial airflight. NPTS is also much safer and secure for the public, our personnel and the prisoners themselves.

The 1988 budget request includes an additional $4,047,000 and 10 positions for NPTS. This is for essential improvements including deployment of a second large aircraft, performance of major maintenance on existing aircraft, and introduction of efficiencies in ticketing and scheduling. Improvements such as these are necessary if the Service is to continue to meet the workload demand in this area and realize even greater efficiencies.

An additional 8 positions and $1,106,000 are required for prisoner handling requirements associated with the relocation U.S. attorney offices and grand jury rooms in Washington, D.C. These facilities are now located in the new Judiciary Center building, and require on-site Marshals Service presence to ensure appropriate safeguards are followed in transporting prisoners between this building and the D.C. District and Superior Courts, and for necessary detention facilities.

Organized Crime Drug Enforcement

The Marshals Service coordinates fugitive felon investigations, witness relocation and protection, prisoner transportation, judicial security, and asset forfeiture in support of the Task Forces. Service personnel also actively participate in drug, financial, and other Task Force investigations. The effect of the Task Forces on the workload of district office support personnel, and increases requested to support this workload, are described in the Fugitive Investigations and Court Orders, Judicial Security, and Handling of Federal Prisoners programs. No increased resources are requested for 1988.

Management and Administration

This program provides necessary services to support the complex and diverse missions of the Marshals Service. To improve administrative and program coordination, for 1988 the Service requests six new positions and $600,000. Also, an additional $1,540,000 is required in 1988 for renovations to holding cells and prisoner handling areas. These renovations are critically needed to improve security and safeguard public access areas.

Protection of Witnesses

For 1988, the Marshals Service again proposes that the "Protection of Witnesses Program" in the Fees and Expenses of Witnesses appropriation be transferred to the Marshals Service appropriation. Witness protection costs such as subsistence and travel for witness/family visits, and safesite construction are directly related to the Witness Security program operated by the Marshals Service. They are also distinctly different from the fact and expert witness costs typically associated with the Fees and Expenses appropriation. It makes more sense, both programmatically and administratively, to include both Protection of Witnesses and Witness Security functions under the Marshals Service appropriation. No increased resources are requested for 1988.

777

United States Marshals Service

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For necessary expenses of the United States Marshals Service; including acquisition, lease, maintenance, and operation of vehicles and aircraft, [$142,000,000] of which not to exceed $1,350,000 may be made available for planning, construction, renovation, maintenance, remodeling, and repair of buildings and the purchase of equipment incident thereto for protected witness safesites;	$216,092,000
	:Provided, That notwithstanding the provisions of the title 31 U.S.C. 3302, the Director of the United States Marshal Service may collect fees and expenses for the service of civil process, including: complaints, summonses, subpoenas and similar process; and seizures, levies, and sales associated with judicial orders of execution; and credit not to exceed $1,000,000 of such fees to the appropriation to be used for salaries and other expenses incurred in providing these services

(18 U.S.C. 1963, 3053, 3059, 3192, 4008, 3521-3528; 19 U.S.C. 1613; 21 U.S.C. 881; 28 U.S.C. 510, 524, 561-562, 565, 567, 569-572, 1921; 31 U.S.C. 3324; 48 U.S.C. 1424(b), 1614(c), 1694(b)(3); Federal Rules of Civil Procedure 4; Federal Rules of Criminal Procedure 4, 9; Supplemental Admiralty Rules; Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

(Omnibus Drug Supplemental Appropriations Act of 1987, as included in P.L. 99-500 and 99-591, Title II.)

Explanation of Changes:

1. The Protection of Witnesses program of the Fees and Expenses of Witnesses appropriation is proposed to be be transferred to the U.S. Marshals Service appropriation in 1988. The above provisions are identical to those proposed for the Marshals Service and the Protection of Witnesses program in 1987.

2. The second proposed language change would clarify the U.S. Marshals Service's authority to collect fees related to its service of civil process, admiralty seizures and similar functions as provided for in section 39 of Public Law 99-646. The change also would permit such fees to be credited to this appropriation to be used for salaries and other expenses incurred in providing these services.

Congressional Appropriation Actions

The 1987 Congressional appropriation closely approximated the President's budget. The principle difference was the disallowance of the transfer of Protection of Witnesses from the Fees and Expenses appropriation.

Supplementals

The supplemental request for $5,445,000 meets increased pay and retirement requirements pursuant to P. L. 99-500 and 99-335. The supplemental request for $405,000 provides for the additional costs of FTS service.

This budget activity provides vital support to the Federal Government's administration of the justice system in the areas of operational support and protection of the federal judiciary including court security; execution of fugitive investigations and court orders; seizure, management and disposal of assets subject to judicial forfeiture; protection of key government witnesses; custody and transportation of unsentenced federal prisoners; liaison with the OCDE Task Forces; contracting with local detention facilities for the housing of unsentenced prisoners; and enforcing federal law under the direction of the Attorney General.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Witness security.....	301	279	$23,794	301	279	$25,912	337	297	$27,053	36	18	$1,141

Long-Range Goal: To administer the Department of Justice's Witness Security program serving those witnesses, potential witnesses, and their dependents whose lives are in jeopardy as a result of testimony against organized crime, drug dealers, and other criminal elements.

Major Objectives:

To protect those endangered witnesses and their families who have been approved for program services by the Department of Justice's Office of Enforcement Operations, Criminal Division.

To ensure that endangered witnesses may testify against individuals being tried for organized crime, drug activity and other violent criminal activities without fear of retribution.

To assist the witnesses in becoming self-sustaining through relocation under new identities.

Base Program Description: Since its inception, the Witness Security program has been the government's most effective way to obtain testimony against and ultimately convict major organized crime members and drug dealers. This program encourages testimony by providing the secure environment and support services necessary to eliminate the fear that such testimony would jeopardize the safety of the witnesses and their families.

Authority is provided in Title 28, U.S. Code, Section 524, to use Department of Justice appropriations for the payment of compensation and expenses of witnesses and informants, at the rates authorized or approved by the Attorney General or the Assistant Attorney General for Administration. Department of Justice OBD Order 2110.42, dated July 19, 1983, prescribes the procedure for establishing a person as a protected witness and gives the United States Marshals Service the responsibility for the security and maintenance of witnesses and their dependents. The Comprehensive Crime Control Act of 1984 also commits program resources to provide physical security for secure child visitation between program children and non-program parents, and requires court-ordered child support for children not relocated under the Witness Security program.

Accomplishments and Workload: Accomplishments of the Witness Protection program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Newly accepted witnesses	189	217	342	390
Witnesses funded/maintained	847	781	1,500	1,560
Average months witnesses are funded	13 to 17	13 to 17	13 to 17	13 to 17
Total witness workload	4,961	5,181	5,523	5,913*
Total participant workload**	11,349	11,566	11,908	12,298

Note: 1987 and 1988 workload includes impact of the government's accelerated drug apprehension efforts. As many as 100 new witnesses will enter the program in 1987 and 1988 as a direct result of this effort.

*Updated since submission of President's budget.
**Includes principal witnesses and family members.

The Witness Security program continues to produce dramatic results; four out of five cases involving the testimony of protected witnesses have resulted in convictions. Criminal cases now pending underscore the importance of this program.

At present, a number of major drug dealers and organized crime members await trial. For example, the "Medellin Cartel," a Colombian drug organization said to be the largest cocaine smuggling organization in the world, is facing four separate prosecutions in which the most damaging testimony will be provided by two protected witnesses. Ten members of the "Banditos Motorcycle Club" will also be prosecuted on narcotics charges based on the testimony of a protected witness. Moreover, the Luchese, Gambino, and Bonnano organized crime families are under prosecutions which are expected to convict 86 career criminals. Important testimony provided by 27 protected witnesses will do much to determine the outcome. And in Boston, two protected witnesses will implicate seven members of the "Winter Hill Gang," a group of terrorists involved in a full-range of criminal activities, including supplying weapons to the Irish Republican Army.

It is estimated that in 1988, 5,913 witnesses will be in the program, a 14 percent increase above the 1986 level. This is a result of the government's continued efforts to fight organized crime and the accelerated efforts to convict major drug dealers. As the Administration dedicates more manpower and funds to counter these criminal organizations and vast narcotics enterprises, the value of the Witness Protection program becomes obvious. The recent murder of Barry Seals, a drug informer who testified against numerous drug traffickers and refused our offer of protection, demonstrates the measures criminal elements will take to prevent testimony. Had Seals accepted our protection, he would still be alive, and available to testify.

In 1986, the Marshals Service received 217 new witnesses, reactivated 96 witnesses for funding because of new threats or other reasons, and funded an average of 344 witnesses per month. Additionally, the Witness Security program provided protection and/or funding for 781 principal witnesses, or some 1,800 persons including family members. Since 1971, about 12,000 witnesses and family members have participated in the Witness Security program.

If witnesses are to survive the rigors of protected life, they must be prepared for such life. The Witness Security program provides extensive and ongoing support for protected witnesses. This includes a comprehensive orientation for both witnesses and family members explaining the hardships involved in relocating and assuming a new identity, and continued assistance in adapting to the precautions required once in the program.

Program Changes: New witnesses and those already on-board must be protected in a secure environment, and remain available and willing to testify against organized crime elements. The fact that these responsibilities are increasing in volume and complexity cannot be ignored. An additional 26 criminal investigators, one employment specialist, nine administrative support positions, and $1,141,000 are needed for 1988 to meet the complex and costly needs of protected witnesses and to operate the new assessment center and safesite in the Washington, D.C. area. This center removes the danger imposed by having prospective witnesses and family members processed in their district of residence. It will provide the safe atmosphere and maximum security needed for proper assessment and orientation.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Fugitive investigations and court orders.....	757	816	$44,193	757	826	$48,417	757	826	$48,717	...	...	$300

Long-Range Goal: To investigate and arrest fugitive felons, other federal violators, foreign fugitives in the United States, and U.S. fugitives living outside the U.S.; to carry out international extraditions; to provide a timely response to all major injunctions; to execute court orders effectively; and to improve the "net return" from departmental asset forfeitures by employing sound business practices.

Major Objectives:

To initiate criminal investigations to apprehend fugitive felons and other federal violators, and to produce prosecutive or arrest reports on all felony arrests.

To respond to requests from foreign countries for assistance in investigating and apprehending foreign fugitives in the United States.

To coordinate, fund, and implement the extradition of federal fugitives back to the United States, and in some instances, to return foreign fugitives to the requesting country.

To provide a highly trained civilian force, known as the Special Operations Group (SOG), which responds to emergency situations; to provide law enforcement and security assistance to other federal and State agencies designated by the Attorney General; and to enforce major injunctions of the U.S. Courts.

To provide timely service of process, court orders, and warrants in support of the federal judiciary.

To seize, maintain, manage, and properly dispose of assets seized by and forfeited to the Federal Government.

Base Program Description: Through this program, the Marshals Service conducts criminal investigations designed to locate and apprehend federal fugitive felons and execute arrest warrants on behalf of those federal agencies which lack the power of arrest. In coordination with INTERPOL-U.S. National Central Bureau, the Marshals Service also investigates and apprehends foreign fugitives in the United States and performs international extraditions.

The Comprehensive Crime Control Act of 1984 added a new dimension to the base fugitive workload. Now, investigative reports must be produced in increased quantities to meet the requirement which penalizes all who violate the conditions of pretrial release. The Act also permitted an increase in the number and complexity of government criminal forfeitures and seizures by codifying into the Controlled Substances Act and the Racketeer Influenced and Corrupt Organizations (RICO) statute many of the legal concepts recognized in civil forfeiture law. The change in criminal forfeiture law affects the payment of mortgages and liens incurred between the illegal act and seizure of the property by the government. This program ensures that court-ordered seizures, restraining orders, and trustee arrangements are carried out effectively. The Assets Forfeiture Fund has quickly become one of the most advanced and effective tools in the government's fight against organized crime and drug trafficking.

A 1984 Memorandum of Understanding among the FBI, DEA, INS, and Marshals Service established the National Asset Seizure and Forfeiture (NASAF) program. NASAF field units are located in each OCDE Task Force city, and in Seattle. Under the direction of Marshals Service headquarters staff, NASAF field offices provide support services and technical assistance to OCDE Task Force and Marshals Service district personnel, manage the Department's Assets Forfeiture Fund, and dispose of assets seized by other Department of Justice agencies.

Beyond the efforts required to secure, inventory, appraise, store, and manage properties, the Marshals Service participates in extensive pre-seizure planning with investigative, prosecutive and seizing agents, and the courts. NASAF pre-seizure guidelines emphasize that the investigative agency and U.S. Attorney must be careful in establishing the scope of the planned seizure, and that a comprehensive inventory and plan for post-seizure management be prepared, so that post-seizure management problems are minimized. The January 1985 seizure of assets of a multi-million dollar marijuana distribution operation in Leesburg, Virginia, demonstrates the need for, and benefits of, pre-seizure planning. Lessons learned from this case are now standard elements in pre-seizure planning, especially as these seizures continue to grow in volume and complexity. NASAF's efforts focus primarily on complicated seizures of real property and businesses, and on high volume categories of seized property. Also, the Marshals Service now accepts custody of all properties seized administratively by the FBI but not targeted for official use; cash and real property subject to administrative seizure by DEA; and a good portion of vehicles seized by INS along the southern border of the United States. At the end of 1986 the total value of property under seizure exceeded $385 million.

Along with the nationwide fugitive investigations, the Marshals Service places a special emphasis on the "15 Most Wanted" fugitive felons. Fugitive cases which make that list are given special funding, national attention, and mobilized task forces work to ensure quick apprehension.

Marshals Service Fugitive Investigation Strike Teams (FIST) continue to bring federal, State and/or municipal law enforcement officers together in a coordinated effort to apprehend fugitives. FIST remains the safest, most cost-effective way yet devised to apprehend large numbers of fugitives. Almost 20,000 fugitives have been apprehended through this program this program since 1981.

The Special Operations Group (SOG), a specially trained group of Deputy U.S. Marshals designed to respond to emergency situations, is also included in this program. Under such situations, this group can quickly mobilize and employ a variety of techniques including mass arrest, confrontation management, airborne operations, scuba, anti-sniper and explosive ordinance device operations. This permits rapid and safe control of a large number of critical situations from large-scale civil disturbances to terrorist incidents and hostage situations.

The Marshals Service is expanding its foreign liaison outside INTERPOL and utilizes law enforcement contacts made through the State Department to enhance cooperation with foreign governments in returning fugitives to our custody. The extradition of U.S. fugitives from foreign countries is a responsibility which has become especially dangerous in light of increasing foreign hostility towards U.S. agents.

This program is also responsible for the following: the service of the majority of process emanating from the federal courts and regulatory agencies; providing law enforcement assistance in nuclear weapons movement through reimbursable agreements with the Joint Cruise Missile Project Office of the Department of Defense and the U.S. Air Force; and providing specific assistance to State and local law enforcement agencies.

The principal authorities governing the activities of this program are found in the following: 11 U.S.C. 11; 28 U.S.C. 569 and 570; 18 U.S.C. 3193 and the Speedy Trial Act of 1974, which mandates due diligence in the prompt execution of warrants. The Comprehensive Forfeiture Act, as a part of the Comprehensive Crime Control Act of 1984, strengthens departmental authority to seize, manage, and dispose of assets subject to both administrative and judicial forfeiture.

Accomplishments and Workload: Fugitive Investigations and Court Orders program workload is presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Fugitive felon warrants received	10,945	11,645	12,200	12,800
USMS arrests/clears of fugitive felon cases	9,748	10,604	10,600	10,600
Warrants received (all categories)	76,447	77,120	78,600	82,530
USMS clears (all categories)	55,687	55,719	55,700	55,700
Felon arrests (all categories)	13,297	14,303	14,270	14,270
Warrants unexecuted end of year (all categories)	42,171	48,267	55,000	66,000
International extraditions*	112	136	200	250
Government property seizures (judicial only)	3,596	6,090**	7,500**	8,000**
Private property seizures	1,773	1,952**	2,000**	2,000**
Process handled	382,732	296,000	300,000	300,000

* Excludes FIST-related extraditions.
**Updated since submission of President's budget.

The Marshals Service continues to place special emphasis on the investigation and apprehension of these fugitives with histories of violence, organized crime and narcotics activities. In 1986, nearly 56,000 warrants--including over 20,000 felony warrants--were cleared by the Marshals Service. This resulted in the Service's arrest of over 14,000 felons. The use of $70,000 of informant funds led to 60 felony arrests.

The Marshals Service concluded its most successful FIST operation in 1986, capturing over 3,500 fugitive felons in the southwestern United States and Mexico. FIST operations remain the safest and most cost-effective way to apprehend large numbers of fugitives. The 1986 FIST was the lowest-cost FIST operation to date, costing only $495 per arrest. Last year, the Marshals Service also began mini-FIST operations in various cities, capturing another 5,000 felons. This brings the FIST felon arrest grand total to 19,770.

In 1986, 10 felons on the Marshals Service "15 Most Wanted" list were apprehended. Two of the most dangerous were bank-robbers/kidnappers William Dougherty and Terry Conner, who operated an incredible network of criminal enterprises while at-large. They were arrested in mid December. The Marshals Service also recaptured Samantha Lopez and Ronald McIntosh after they made a daring helicopter escape from a federal facility in Pleasanton, and arrested Eugene Gesuale, a member of the Genovese crime family responsible for operating a multi-million dollar narcotics ring.

Marshals Service extradition responsibilities are increasing not only in volume (from 136 in 1986 to 250 in 1988) and cost, but in the danger and complexity of the cases involved. People we extradite are among the most publicized and dangerous in the world. Among the criminals the Marshals Service recently extradited are several major drug traffickers operating throughout the Caribbean and apprehended in Colombia, including Jose Antonio Cabrera-Sarmiento and Severo Escobar. Requisite security, travel precautions and coordination with other federal agencies and foreign governments make this activity both dangerous and costly.

In a similar matter, the Marshals Service was contacted by the Internal Revenue Service (IRS) to assist in the apprehension and return to the United States of James Bryan, considered by IRS to be one of their most wanted fugitives. Bryan was responsible for a $40 million illegal tax shelter scheme. The USMS and IRS coordinated an effort to lure Bryan from Costa Rica into Belize where the USMS gained the cooperation of the Belize government in expelling Bryan to Miami. Upon his arrival in Miami, Bryan was arrested by USMS on his outstanding indictment.

Also in 1986, the Marshals Service quadrupled the number of districts using the new Warrant Information Network (WIN). This automated system, now fully operational in 28 locations around the country, assists in locating fugitive felons and will eventually provide a base of warrant information for Marshals Service investigators.

The process demands on the Marshals Service remain constant. Last year, the workload generated by paupers and court orders was received at a rate of approximately 7,000 per month. In addition, the Marshals Service receives an average 15,000 pieces of process per month from other government sources.

Section 39 of Public Law 99-646 permits the Marshals Service to collect fees related to the service of civil process, admiralty seizures and similar functions. These fees will be credited to the Salaries and expenses appropriation to be used for expenses incurred in providing these services. The proposed Marshals Service 1988 appropriation language has been amended to reflect this change.

During 1986, the Department's asset seizure and forfeiture initiative continued to prove its importance as a powerful tool for dealing with major criminal enterprises. The Department performed increasingly complex financial investigations,

multiple asset seizures, and faced difficult and time consuming asset management problems. Valuable operating businesses, such as the Plant Recording Studio in California; the Accurate Brass and Aluminum Foundry in Wisconsin; and Pardon My Garden, a florist and nursery in Massachusetts; were successfully managed under seizure and disposed of when forfeited. Major forfeitures and sales included the forfeiture of Certificates of Deposit worth more than $7 million in Houston, Texas; a consolidated auction of jewelry and other valuables in Chicago, Illinois, which earned $600,000; and the forfeiture of the Shelburne Glebe, an historic estate in Loudoun County, Virginia, whose sale by the Marshals Service brought $4.1 million, approximately $2 million more than the appraised value.

However, the largest single seizure took place as part of a major Organized Crime Drug Enforcement (OCDE) Task Force operation entitled "Operation Pedestal". This operation involved the simultaneous arrest of 31 persons for violations of drug statutes and the seizure of 16 properties in 8 locations in and around San Juan, Puerto Rico. These properties included houses, condominiums, stash houses, a farm, and a slum complex. Without the benefit of the Asset Forfeiture Fund to ensure adquate funds to inventory, secure and manage properties, the Department could not perform operations such as these.

In 1986 the number of real properties in custody again doubled. As of November 1986, 863 real properties were under seizure. The total value of these properties is in excess of $175 million.

Program Changes: As additional funds become available to develop cases and try members of criminal organizations and narcotics violators, more resources are needed to apprehend those who flee the criminal justice system. Often those who escape return to their former practices. Marshals Service involvement in international extraditions continues to grow, and is projected to increase to 250 extraditions in 1988, 84 percent above the 1986 level. To ensure adequate resources are available to meet these additional extraditions and meet the rising costs and security precautions required in performing this function, the Marshals Service requests an additional $300,000 in 1988.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Judicial security.....	396	399	$26,268	396	401	$28,396	556	492	$36,522	160	91	$8,126

Long-Range Goal: To ensure the integrity of the federal judicial system by providing security at all places in which federal judicial business is conducted, and to eliminate fear of intimidation, retribution, or physical harm on behalf of all judicial participants.

Major Objectives:

To establish a baseline assessment of existing security safeguards at the nearly 500 judicial facilities across the nation; to evaluate new and changing security requirements as they arise; to recommend security measures and provide technical security expertise and advice to U.S. marshals and the federal judiciary on security procedures; and to provide the latest state-of-the-art security equipment.

To provide personnel and security systems to protect all high-threat trials, other criminal proceedings, and certain civil proceedings, where warranted, through the ongoing assessment of the security requirements for all judicial proceedings.

To establish and maintain a threat assessment and risk management methodology and provide adequate and comprehensive 24 hour-a-day security services to members of the federal judiciary, including employees and families threatened as a result of performing their official duties, as well as for all sequestered juries, grand juries, judicial conferences, and judicial workshops.

To provide appropriate numbers of contract security officers and security equipment items to adequately secure all judicial facilities and those judicial proceedings not covered by deputy U.S. marshals.

Base Program Description: This program is designed to maintain the integrity of the judicial process by ensuring that each of the 480 federal judicial facilities are secure and that all federal judges, magistrates, prosecutors and participants are able to conduct judicial proceedings in an open and safe environment. Over the past few years, this responsibility has become increasingly difficult. The number of judges and magistrates has grown, and the proceedings they hold have not only increased in number, but last longer, and are more dangerous and complex. Moreover, the Administration's initiatives against organized and drug-related crime increases the chances of courtroom violence, threats, escapes and intimidation of judicial officials. These groups have demonstrated both the capability and willingness to commit acts of violence to meet their needs. Ensuring the continued safety of this process requires a comprehensive approach to judicial protection.

The Marshals Service uses four program elements in providing judicial security. The Technical Assistance element provides highly trained judicial security specialists to assist U.S. marshals, prosecutors, and judges in evaluating security risks and planning and implementing appropriate responses. Additionally, technical assistance is provided through coordinated planning with and training of other federal, State, and local law enforcement agencies.

The Court Security element uses personnel and proven systems and procedures to ensure the integrity of judicial process. Appropriate security measures include screening courtroom participants, packages, and spectators with x-ray equipment and metal detectors outside federal courtrooms; searching courtrooms for weapons or contraband prior to and after proceedings; controlling the seating of courtroom spectators and members of the press; isolating the criminal defendants from the public; and ensuring that an appropriate number of deputy U.S. marshals are assigned to the courtroom to preclude or minimize any disruption that could reasonably be anticipated.

The Protective Services element provides information concerning threats to Marshals Service personnel and to those who are under the protection of the Marshals Service. A centralized Threat Analysis Group supports operations involving judicial security, high-threat trials, witness security, and enforcement operations (especially the execution of warrants involving violence-prone groups), by preventing rather than allowing acts of violence and intimidation. This comprehensive threat analysis capability provides an indispensable tool in countering highly organized, dangerous groups which frequently rely on terrorism and violence to stop judicial proceedings against them.

When a threat emerges, the FBI is immediately contacted to investigate, and the Threat Analysis Group becomes involved. Notification of the threat is also given to other appropriate federal, State, and local law enforcement agencies. The following protective service precautions are also performed: access and admittance to the threatened individual's office is limited through the use of closed circuit television monitoring, buzz lock entry control systems, and controlled mail or package reception; information is gathered about the individual's medical history, personal physician, emergency hospital facilities and food restrictions; the individual is given a bulletproof vest, if warranted; and, the individual's travel patterns are analyzed and home security assessed to determine what precautions are needed. The extent and duration of protective services for individuals vary with the severity of the threat and the capability of its being carried out.

Personal security services are most effective through the close monitoring and controlling of the immediate environment of the threatened invdividual. A protective services assignment always involves at least two deputy U.S. marshals. If the assignment requires 24-hour coverage, the assignment may involve using six or more deputy U.S. marshals, depending upon the threat circumstances and whether family members must also be protected.

The Judicial Facility Security element utilizes authority delegated by the General Services Administration to contract with the private sector for highly qualified contract guards called Court Security Officers (CSOs) and for the installation and maintenance of physical security equipment. All direct costs for this program element are funded by the judiciary through a Memorandum of Understanding with the Administrative Office of the United States Courts (AOUSC). Under this arrangement, the Marshals Service provides an initial allocation of CSOs in 93 of the 94 judicial districts. These CSOs monitor both fixed and roving checkpoints throughout the court facilities. A limited special deputation is conferred upon CSOs which allows them to enforce federal laws and regulations at the duty site, including using X-ray machines and metal detectors to prevent illegal weapons and contraband from being taken into the judicial areas. Recently, the duties of CSOs were expanded to require their presence as security officers at judicial proceedings which do not warrant the presence of a deputy U.S. marshal.

The second vital aspect of this program element is contracting for the acquisition, installation, and maintenance of physical security equipment. The Judicial Security program has been designated by the Deputy Attorney General as falling under the purview of Office of Management and Budget Circular A-109. Under the Delegation of Procurement Authority issued by the GSA, the Marshals Service awarded the first part of a two-phase contract for national court security systems on September 21, 1984. This contract will lead to a single national contract to satisfy the judicial security systems requirement.

The effectiveness of the Marshals Service's management of the Court Security Officers program has been praised by Federal judges, who unanimously agree that the Judicial Facility Security program element has significantly increased the overall security of the U.S. Courts. A recent example illustrates this point. On August 20, 1986, a letter bomb addressed to Federal Judge Paul Benson was sent to the Federal Courthouse in Fargo, North Dakota. One of our Court Security Officers recognized something suspicious and took immediate steps to isolate the package and protect the judge. Only through the CSO's quick action was tragedy averted.

Principal statutory authority for judicial security is contained in 1-Stat 73-87-Judiciary Act of 1789; Title 28 U.S.C. Section 569, Powers and Duties Generally (of U.S. Marshals); and Title 28, C.F.R. Subpart T, Section 0.111, General Functions. These statutes authorize and empower the U.S. Marshals Service and make it principally responsible for security for the federal judiciary. Judicial security is enforced along guidelines established by the Attorney General and endorsed by the Chief Justice of the United States.

Accomplishments and Workload: The workload of the Judicial Security program is presented in the following table:

	1985	1986	Estimates 1987	1988
Criminal trial bench hours	95,462	106,882	117,097	128,290
Civil trial bench hours	174,845	169,219	176,225	176,964
Other proceedings bench hours	139,308	146,471	153,662	161,206
Magistrate proceedings	419,163	445,575	481,268	519,821
Security systems projects - required	751	731	700	560
Security systems projects - completed	501	731	700	560
Threats received	240	207	250	275
Protective services details performed	57	53	60	75
Judical conferences	39	42	45	49

Judicial security remains the Marshals Service's highest priority. The Marshals Service has had to provide more and higher levels of protection to ensure this safety. During the past year, extraordinary security measures were employed at proceedings involving the Macheteros, a Puerto Rican Independence/ Terrorist group; a Neo-Nazi group called The Order; the May 19 Communist group; and other similar organizations.

Federal court facilities and judges frequently are targets of violent threats, and destruction of court facilities has occurred and will continue. For example, the Macheteros are accused of using anti-tank weapons to attack the U.S. Federal Building in Hato Rey, Puerto Rico; damaging a U.S. Navy bus in Sabana Seca, Puerto Rico, killing nine U.S. military personnel in the process; and destroying U.S. military aircraft. The Service has already provided extraordinary protective service details for Puerto Rican magistrates threatened by this group and must maintain utmost security for their upcoming trial in Connecticut, where they are accused of attacking a Wells Fargo armored car depot. This group and others employ a new type of warfare, which means resources for new weapons and tactics are required. The recent bomb attempt against U.S. District Judge Paul Benson underscores this point.

The Comprehensive Crime Control Act and similar initiatives have had a profound effect on the Marshals Service's judicial security workload. Since passage of the CCCA in 1984, the number of criminal proceedings and their length of time have increased dramatically. The time devoted to such proceedings is projected to rise another 20 percent from 1986 to 1988. Bail Reform and other provisions mean that sensitive proceedings now last longer, are more dangerous and use a disproportionately high amount of resources.

Overall, for the 12-month period ending June 30, 1986, judicial security was provided for some 7,000 criminal proceedings. The number of criminal cases filed in the U.S. district courts rose from 39,500 in 1985 to 41,500 cases in 1986, an increase of 5 percent. This represents a workload of 72 cases for each authorized judgeship. Criminal case terminations rose 6 percent to 39,328 cases. Since filings were greater than terminations, the increase in pending caseload continued a six-year trend. On June 30, 1986, there were 24,000 pending criminal cases, almost 10 percent more than a year ago.

Drug Abuse Prevention and Control Act cases numbered 7,000 in 1986, up 18 percent from the previous year. AOUSC indicates one-third of all illicit drug trials last four days or more, largely because of the complexity in prosecuting these cases. Security is also more difficult because of the resources available to these people and their proven willingness to use violence and intimidation to accomplish their objectives.

cases for other serious offenses also increased. For example, weapons and firearms cases increased 15 percent, forgery and counterfeiting cases rose 12 percent, and fraud cases were up 9 percent.

It should be noted, however, that these figures fail to reflect the workload and accomplishments adequately. Because of this Administration's initiatives against organized crime and illegal drugs, the Marshals Service has had to provide more and higher levels of security than ever before.

The types of cases range from civil proceedings involving prisoner petitions, selected civil rights cases, tax suits, environmental impact cases, and political figures to the most dangerous of criminal proceedings involving motorcycle gangs, drug dealers and organized crime figures. In addition to maintaining security at all criminal trials, and some civil trials, the Marshals Service must provide security at U.S. magistrate hearings, bankruptcy proceedings and, as a result of recent changes in the U.S. Code, at U.S. tax trials and hearings before the U.S. Court of International Trade in the Southern and Eastern Districts of New York.

In addition, threats against the judiciary are projected to increase by one-third from 1986 to 1988. Of the 207 threats recorded in 1986, 170 were against judges and magistrates, 23 against U.S. Attorneys and 14 against other staff members. The Marshals Service must be prepared to encounter the increase and severity of threats against members of the judiciary and federal property. To fail to respond only encourages these groups to perpetuate violent activities to meet their goals.

Program Changes: When placed in the context of more and longer court proceedings, additional responsibilities such as the Tax Court and the Court of International Trade, as well as as a growing number of threats and violence, the Marshals Service judicial security needs become critical. To meet the increased responsibilities in this area requires appropriate resources. The 1988 budget includes a request for 160 positions and $8,126,000 for enhanced judicial security. Of this total, $5,863,000 and 118 positions are required to meet the increase in ongoing demands. Another $2,263,000 and 42 positions are requested to meet the new security requirements directly resulting from the government's accelerated effort to capture major drug criminals and bring them to trial.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
ADP and telecommunications....	8	8	$7,487	8	8	$8,099	12	10	$9,440	4	2	$1,341

Long-Range Goal: To develop and implement automated and telecommunications systems to support all operational, administrative, and managerial functions of the Marshals Service, and to continuously provide staff support for all automated systems.

Major Objectives:

To broaden implementation of the radio and telecommunications systems in order to strengthen operational law enforcement capabilities.

To implement and improve systems of automation including the District Automation Project, prisoner population management, warrant information network, district accounting, and office automation functions as well as various systems to support the numerous operational missions of the Marshals Service.

Base Program Description: The Marshals Service telecommunications systems provide rapid data/voice communications via the latest state-of-the-art equipment, including telephones, facsimile transceivers, and visual display terminal systems as well as radios and base stations to support all Marshals Service missions.

The ADP support function is designed to implement and maintain automated systems for the administrative and operational activities necessary to support the Marshals Service mission and permit field offices to perform in a cohesive and efficient manner. This is accomplished by systems development and hardware acquisition for all Marshals Service entities.

Accomplishments and Workload: The workload of the ADP and Telecommunications program is presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
JUST and NLETS teletype messages.....	1,110,100	1,122,286	1,130,300	1,138,200
NCIC clears and hits.....	4,946	5,847	6,432	6,818
Districts automated:				
District Accounting.....	8	12	33	76
Prisoner Population Management.....	8	9	33	76
Warrant Information Network.....	3	28	48	76

The Marshals Service telecommunications systems have been upgraded with new state-of-the-art visual display terminal equipment to provide full service to our field locations and support Marshals Service operations. Where permitted, every Marshals Service terminal user now has the capability to access State data banks via the National Law Enforcement Telecommunications System (NLETS). Other systems presently being accessed are: 1) National Crime Information Center (NCIC), 2) Treasury Enforcement Communications System (TECS), and 3) Warrants Information Network (WIN).

Installation of a number of secure telephone units has been completed within the Marshals Service. Various districts throughout the Marshals Service have received upgraded telephone systems, such as: 1) Eagle, 2) Merlin, and 3) 1A2.

The 1986 accomplishments of the ADP management program are: 1) completion of the management review of the District Automation Project including selection of distributed processing as the appropriate technical alternative and cost benefit justification; 2) implementation of the Warrant Information Network system in a total of 28 districts; 3) implementation of the District Accounting System in four additional districts for a total of 12; 4) development of automated procedures within the District Accounting System to capture financial data on seized property; 5) ongoing maintenance and enhancements to the Employee Skills Profile, Merit Promotion, Deputy Recruiting, and Jail Contracts Management Systems.

Program Changes: The continued success of Marshals Service operations depends on the availability and assessment of timely and accurate information. With more than two-thirds of the districts still lacking significant automation, delays affect every facet of field operations. Each year the Service receives over 80,000 warrants, transports 170,000 prisoners, analyzes 250 threats and issues over 250,000 checks and certifies another 170,000 vouchers. Not only does automation generate savings in time and effort, the continued safety and effectiveness of these operations depends on a significant commitment to automation. Life-threatening situations must be analyzed quickly and thoroughly.

A program increase of $1,341,000 and four positions will provide effective automation for increased timeliness and efficiency in intelligence analysis, accounting reports, prisoner management and managerial assessments. Specifically, $233,000 and one position are requested to develop and implement an automated system to support the Threat Analysis Group (TAG). Enhanced intelligence analysis is necessary to dispel threats by using a sophisticated data base capable of producing timely, accurate and complete data about threats and other criminal activities affecting Marshals Service activities. The Marshals Service also requests $701,000 and two positions for continued implementation of the District Automation Project including prisoner population management, warrant information systems and district accounting. It is expected that 33 districts will be automated by the end of 1987, and 76 by the end of 1988. Another $407,000 and one position are needed to enhance the existing ADP system for the National Prisoner Transportation System (NPTS) to realize improvements in ticket scheduling and maintenance tracking and to accommodate the increased workload of moving federal prisoners.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Field support and training...	173	167	$5,294	173	167	$5,966	173	167	$5,966	...	...	...

Long-Range Goal: To develop the most comprehensive and sophisticated training possible for all employees and to support the day-to-day operational mission of the Marshals Service in the area of financial management.

Major Objectives:

To develop and maintain the Marshals Service's human resources by providing an ongoing comprehensive set of internal and external training courses to achieve a level of excellence in the Marshals Service's personnel.

To collect and disburse funds in a timely and efficient manner.

Base Program Description: This program is responsible for providing financial support and developing, conducting and overseeing the training of Marshals Service personnel.

The Financial Support Services program area is responsible for the prompt payment of debts and for collection and deposit of funds due the government by law or court order.

In response to the ever-increasing demands placed on the Marshals Service by the judicial and executive branches, the Marshals Service Training program provides initial, refresher and specialized courses of instruction which produce a highly competent operational and administrative workforce.

Training is essential to the Marshals Service because all employees do many different jobs that must be done efficiently, professionally and safely. Marshals Service training focuses not only on the operational responsibilities of the deputy U.S. marshal, but also on the important management and administrative jobs that Service personnel perform each and every day.

Accomplishments and Workload: The workload of the Field Support and Training program is presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Check Issuances	242,783	254,922	268,100	268,000

Fed/State/Local Training Assistance	90	470	152	202
FIT Coordinators Training	130	65	100	100

* Cost is reimbursed by the Administrative Office of the U.S. Courts.

In the area of Financial Support Services, the Marshals Service issued various directives to improve the accounting and reporting system for the collection and disbursement of funds in the district offices. The district offices processed 162,961 vouchers and issued 254,922 checks amounting to $308 million during 1986. Collections for this period were approximately $148 million.

Training remains an essential ingredient in the quality of a law enforcement agency and the Marshals Service has developed the most effective, comprehensive, state-of-the-art, training program in its long history. A combination of high-tech equipment, dedicated instructors, and priority attention to the training mission make Marshals Service personnel among the best trained law enforcement officers in the world. During 1986, the Marshals Service Training Academy trained 1,741 agency and other law enforcement personnel in 53 separate schools and conferences. This consisted of 29,846 student training days at the Federal Law Enforcement Training Center (FLETC), a 38 percent increase over the 1985 level. In 1986, there were nine Criminal Investigator Schools and seven follow-up Basic Deputy Schools, compared to eight of each in 1985. Specialized advanced training conducted included the following: 1 Fugitive Investigation Course; 5 Advanced Deputy Training classes that incorporated Protective Services training; 2 Witness Security Inspector Basic classes; 1 Administrative and Financial Management Seminar; 5 State and Local Court Security Seminars; 2 State and Local Fugitive Investigators courses; 1 State and Local Protective Services seminar; 5 Court Security Officer Orientation classes; 1 Court Security Seminar; 1 Firearms Instructor Training program; 1 Prisoner Detention School; and 1 U.S. Marshal Orientation. The Training Academy also arranged for 10 Marshals Service personnel to attend the Federal Law Enforcement Training Center's Basic Instructor Training program, while five others attended the Drivers Instructor Training program and 22 Deputy U.S. Marshals attended the Law Enforcement Spanish Training Program. In addition to those 37 individuals, 16 Marshals Service personnel attended a Detention Officers Training program conducted by the Bureau of Prisons.

The average length of time for each course at the Academy was 16 days. The average cost per course was $17,092, and the average cost per student was $520.

The establishment of the Special Operations Group (SOG) Training Center at Camp Beauregard, Louisiana, in 1984, provided the Marshals Service with a facility to train operational personnel in Officer Survival Techniques and related advanced law enforcement training courses. The State Department has requested that SOG assist with the training of foreign law enforcement personnel through the Anti-Terrorism Assistance program. During 1986, SOG trained on a reimbursable basis the Federal Judicial police of Mexico, and the Costa Rican Rural Guard for the State Department. In cooperation with the Department of the Interior, SOG also trained the Virgin Islands and St. Croix Police and National Guard. SOG continues to receive requests seeking training assistance in such areas as officer survival tactics, marksmanship, organizing a tactical unit, assaults and barricades, and teaching operational planning. Such training not only produces tangible benefits for foreign law enforcement, it improves cooperation and goodwill, directly benefiting our international responsibilities, such as extraditions.

The Employee Development Division administers the Service's management and administrative training. In 1986, 61 managers and supervisors attended a one-week seminar on personnel and financial management techniques, and 30 first level supervisors attended a supervisory management seminar. Sixty-five Coordinators were trained to support the Fitness-in-Total Program (FIT) which was implemented in 1985. Currently, there are almost 200 FIT coordinators Service-wide who provide the physical conditioning training our personnel need to meet the demands of our law enforcement responsibilities.

Program Changes: No program changes are requested.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Handling of federal prisoners..	960	995	$49,100	960	997	$53,799	978	1,008	$58,952	18	11	$5,153

Long-Range Goal: To ensure expeditious, economical, and secure methods for the custody, receipt, processing, production and transportation of federal prisoners and to acquire and maintain sufficient and acceptable detention space for federal prisoners in non-federal facilities.

Major Objectives:

To obtain adequate and sufficient detention space in federal court cities to permit the efficient and cost-effective daily production of federal prisoners in accordance with court schedules.

To efficiently receive and process all federal prisoners remanded to custody and move and transport prisoners in a safe and secure manner within court-imposed deadlines.

To expand the National Prisoner Transportation System (NPTS) capabilities, further reduce costly commercial modes and increase transportation services for other agencies (such as the Bureau of Prisons and the Immigration and Naturalization Service) on a reimbursable and cost-effective basis.

To reduce staff time, both regular and overtime, travel costs and jail expenses associated with the production and transportation of prisoners by improving scheduling and processing techniques and maximizing the utilization of mass transportation systems.

To develop and maintain an on-line prisoner management information system to provide the Marshals Service with the capability to locate, track and monitor federal prisoner populations to provide economy and efficiency in transportation expenses and to produce prisoner reports required for financial management.

To accomplish all on-site jail inspections in order to measure contract facilities' level of compliance with State, local and national detention standards and to assist such facilities in designing and implementing projects to improve substandard conditions of confinement, thus reducing court orders and inmate litigation.

To successfully administer the Cooperative Agreement Program and Excess Property Program in order to obtain guaranteed detention space from qualified contract facilities in federal court cities.

Base Program Description: This program supports the federal judicial system through its responsibility for: (1) the receipt, administrative processing, and production for judicial proceedings of all prisoners in Marshals Service custody; (2) the transportation and movement of federal prisoners; (3) the NPTS; and (4) the supervision of unsentenced prisoners.

Receipt and Processing - Individuals arrested or detained for violation of federal statutes by any law enforcement officer are brought before a magistrate for one or more detention hearings. Upon completion of the initial detention hearing, the prisoner is remanded to the custody of the Marshals Service until such time as the charges are dismissed; the prisoner is released on bond or personal recognizance; or is tried, acquitted, or convicted and delivered to an institution for service of the sentence. Each individual arraigned is processed by the Marshals Service. Processing includes the assignment of a prisoner control number, fingerprinting and photographs, establishment of criminal and personal data records, property records, medical records and other data. Inquiries are made through the National Criminal Information Center (NCIC) to determine if there are other outstanding charges. Requests for name and fingerprint checks are forwarded to the Federal Bureau of Investigation. Each day, prisoners are moved to and from contract or federal detention facilities and district holding cells for production in accordance with court calendars, and for outpatient medical care and hospitalization as required.

Transportation and Movement - Federal prisoners are transported and moved within and between districts for study, observation and competency examinations; delivery to designated institutions for service of sentence; as well as for transfer between federal institutions. Such moves must be accomplished in accordance with court directives in a secure and cost-effective manner. The current modes of transporting federal prisoners include automobile, bus, van, and air. Short distance prisoner movements are routinely completed by district personnel in government vehicles. The long-distance movements are centrally controlled to ensure the maximum number of prisoners are moved in the most efficient and cost-effective manner possible.

NPTS - Long distance prisoner movements are accomplished through NPTS which is composed of airlift and supporting bus, van and small plane feeder systems. When NPTS cannot meet court imposed deadlines due to limitation of air routes and limited frequency of airlifts, alternative usage of regularly scheduled commercial air service and chartered aircraft must be made. The scheduling of prisoner movements is completed through coordination of data received from 94 judicial districts and 41 Federal Prison System institutions. Management information, including the number of trips performed and prisoners moved, travel, guard, and overtime obligations, and mode of travel utilized is collected. The Marshals Service also coordinates and schedules the majority of the sentenced prisoner transfers between Federal Prison System institutions.

Supervision of Unsentenced Prisoners - The supervision of unsentenced prisoners function has the responsibility for the acquisition of adequate and sufficient detention space for federal prisoners in custody in non-federal facilities located in or near federal court cities. This program also administers the Cooperative Agreement and Federal Excess Property programs which were specifically designed to improve the level of inmate services, halt the loss of jail space, and obtain guaranteed space for prisoners in federal court cities.

Detention space is obtained through the negotiation, award and administration of an estimated 825 interagency agreements and contracts with State and local governments which generate an annual requirement for approximately 1,100 on-site jail inspections. Jail inspections are designed to ascertain compliance with established national detention standards and to identify those conditions of confinement which are substandard and could result in prisoner legal actions against the jail and the Marshals Service

As a result of severe overcrowding, an ever increasing tide of prisoner litigation, and court orders on substandard conditions of confinement, the Marshals Service has experienced a serious decline in the number of local jails in metropolitan areas which are willing to continue to house federal prisoners. Since 1980, a total of 263 State and local facilities had terminated or severely restricted space for federal prisoners. The result was a significant increase in the number of unsentenced federal prisoners who had to be diverted to already overcrowded federal institutions or outlying rural jails. Since 1979, the number of prisoners housed in federal facilities has increased by 55 percent and federal institutions are, at present, approximately 47 percent over their rated capacity. It is interesting to note that the 13 Federal prison system facilities most frequently utilized by the Marshals Service are currently 62 percent over their rated capacity. Where federal detention space is unavailable, districts must produce much of their displaced prisoner load from outlying facilities, which in turn generates a drain on agency personnel and transportation resources. Such overcrowding also negates the recent gains of the Cooperative Agreement program, since this overflow population is housed in State and local facilities. The government's accelerated effort to apprehend drug traffickers will exacerbate the jail space problem. In order to produce prisoners for court, deputy U.S. marshals are required to travel several hours to these jails, often on overtime status, at the beginning of the day and repeat the process at the end of the court day. From 1979-1986, the number of operational workyears devoted to this essential function increased by 71 percent. The opportunity for prisoner escape, highway accidents, and deputy fatigue increases dramatically with the distances traveled.

The Comprehensive Crime Control Act of 1984, continues to have a significant impact on Marshals Service prisoner production and detention programs and related workload. From 1984 to 1986, the Marshals Service's average daily population increased 36 percent. From 1985 to 1986, prisoner productions increased six percent, contract jails days increased 14 percent, and the average stay per prisoner increased six percent. The bail reform provisions of the Act resulted in fewer prisoners being released on bond or self-recognizance and, in turn, increased the requirement for secure escort and prisoner production for judicial proceedings. The growth in Marshals Service prisoner loads and production requirements has also resulted in a significant increase in the level of operational resources required for this function. Overall, operational workhours increased 18 percent from 1985 to 1986.

Accomplishments and Workload: The workload of the Handling of Federal Prisoners program is presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Number of prisoners received and processed	82,390	89,558	92,300	97,000
Number of prisoners produced	244,098*	259,325	275,000	291,500
Number of prisoners moved	127,049	143,484	160,557	179,738
Number of prisoners moved via NPTS	64,345	74,828	85,374	97,412
Number of trips completed	27,408	29,288	31,847	34,635
Average receipt and process hours per prisoner	14.9	16.1	17.4	18.8
Jail inspections performed	294	429	550	600
Jail agreements written or modified	158	135	145	155
Jail agreements in force	815	820	825	830

*1985 Workload revised to delete prisoners handled for NPTS to correspond to new reporting system (USM 268).

In 1986, the Marshals Service received 90,000 individuals charged with violations of federal law. Of this total, 93 percent were detained in custody (56,000 in contract jails and 28,000 in federal institutions). On the average, each prisoner received was produced three times for appearances at detention hearings, trials, other court proceedings, medical care, or transfers between detention facilities to alleviate critical space shortages. The increase in the number of federal judges and magistrates and the loss of critically needed jail space close to the courts, has forced district personnel to expend 96 percent more workyears than in 1979 for within-district movement of prisoners.

During 1986, the Marshals Service conducted over 143,000 prisoner movements, of which 75,000 were by NPTS. The cost per prisoner moved via NPTS was $112 as compared to $699 if moved by commercial air. NPTS remains the safest, fastest and most economical way to move prisoners long distances and produce them within court-ordered deadlines.

The Marshals Service has acquired small single and multi-engine aircraft to reduce the number of commercial air charters used in certain locations. Use of Service-owned (SOAP) aircraft is necessary because of the increasing requirement to transport more dangerous criminals under the most secure means possible. The SOAP aircraft were acquired at no cost from seizures (forfeiture proceedings through the U.S. Courts) and surplus from the Federal Aviation Administration (FAA).

During 1987, over 160,000 prisoner movements are expected to be conducted, of which 85,000 will be via NPTS. A total of 30,500 prisoner movements should be completed by the NPTS airlift (35 percent of total NPTS movements).

The Marshals Service has continued to expand its highly successful Federal Excess Property (FEP) program for contract detention facilities. Since its implementation in 1982, the FEP program has provided approximately $8.2 million in personal property (the majority of which is consumable property such as clothing, linens, and supplies) to over 300 jails in 75 judicial districts.

During 1986, the Marshals Service developed a comprehensive handbook for the districts and all participating contract jails which clarified and streamlined policy and procedures. The first on-site inventory of jail accountable FEP property was conducted. The survey involved on-site inspections in approximately 175 jails with an estimated accountable property value of $2 million.

Through its jail inspection program, the Marshals Service has rapidly become the focal point for on-site technical assistance for State and local jails. Training materials on conditions of confinement by the American Correctional Association and the American Medical Association are mailed out routinely to district inspectors for use in regional training seminars, and provided to local jail administrative staff for use in upgrading detention policies and procedures. National Sheriff's Association slide presentations on jail operations have been developed and coordinated by Marshals Service headquarters and district inspectors for use in regional jail seminars as a part of a concerted effort to place increased emphasis on the jail inspection program, two classes to train approximately 90 criminal investigators on the Prisoner Support Program were held in September and October 1986. As a result of this new training program, the level of inspection activity for 1986 increased 46 percent over the 1985 level.

Program Changes: The Marshals Service is requesting an additional 18 positions and $5,153,000 in 1988. Of this, $4,047,000 and 10 positions support management improvements for the Marshals Service's National Prisoner Transportation System (NPTS). In 1988 the Service expects to perform over 97,000 movements via NPTS. Considering the government's accelerated drug efforts, that figure could easily reach 100,000 in that year. This represents almost a one-third increase above the 1986 level. The resources requested are for essential improvements including deployment of a second large aircraft, performance of major maintenance on existing aircraft, and introduction of efficiencies in ticketing and scheduling. Improvements such as these are necessary if the Service is to continue to meet the workload demands in this area and realize even greater efficiencies.

Another $1,106,000 and eight positions are required for additional responsibilities associated with the District of Columbia Superior Court. Relocation of U.S. Attorney and grand jury facilities to the new Judiciary Center building requires additional resources to ensure public safety and proper handling of prisoners to and from this facility and the D.C. District and Superior courts, and to construct a new cellblock for grand jury detainees at this site. Moreover, resources are requested to relocate Marshals Service personnel and equipment from the U.S. District Courthouse into D.C. Superior Court, thereby combining the administrative functions of Superior Court in one building and eliminating the need for the public to conduct business in two separate facilities.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Organized crime drug enforcement.....	13	13	$752	13	13	$912	13	13	$912	...	...	...

Long-Range Goal: To participate in the presidentially mandated enforcement and prosecutive effort of the Task Force operation.

Major Objectives:

To promote a coordinated drug enforcement effort in each OCDE Task Force region.

To make full use of financial investigative techniques and forfeiture actions, thereby enabling the government to seize assets and profits derived from organized crime and narcotics trafficking.

To provide an effective liaison between the Marshals Service and the OCDE Task Forces.

Base Program Description: This program provides the funding for the 13 positions and related resources assigned to the regional headquarters cities of the OCDE Task Forces. These cities are: Boston, Massachusetts; New York, New York; Baltimore, Maryland; Atlanta, Georgia; Detroit, Michigan; Chicago, Illinois; St. Louis, Missouri; Houston, Texas; Denver, Colorado; San Francisco, Los Angeles, and San Diego, California; and Miami, Florida. The focus of Marshals Service participation in the OCDE Task Force activity is on coordination of fugitive felon investigations, witness relocation and protection, prisoner transportation, and asset forfeiture in support of the program.

Accomplishments: The Marshals Service plays an essential role in the federal criminal justice system and continues to support the activities of the OCDE task forces through witness security, judicial security, fugitive investigations, international extraditions, seizure and management of forfeitable assets, process execution, and prisoner handling. No specific workload is available, because the witnesses, prisoners and warrants are not always identified with OCDE Task Force activity when the Marshals Service receives them. The Marshals Service is looking for ways to identify and track OCDE Task Force workload in the future.

The Marshals Service is closely associated with OCDE efforts. Thirteen criminal investigators on site at the Task Force locations provide liaison and coordination between the task force and the Marshals Service. They also devote much of their time as fully participating members of OCDE investigative teams. During 1986 all 13 OCDE coordinators attended regional conferences to their respective areas. A one week conference was held in New Orleans where the 13 coordinators were addressed by representatives from the various divisions within the Marshals Service.

Many of the cases brought to trial in 1986 were high risk, dangerous, and expensive. These trials often involve many defendants, thus increasing the chances for violence and disruption of the judicial process. The Marshals Service was able to prevent any serious disruptions such as jury tampering, assaults and threats on federal prosecutors, elaborate escape attempts or civil disruption in the courtroom. As a result of OCDE cases, 27 new witnesses entered the witness protection program.

The National Asset Seizure and Forfeiture program of the Marshals Service is providing increased support to OCDE pre- and post-seizure efforts. OCDE seizures--such as the seizure of the Shelburne Glebe Farm in Loudoun County, Virginia--tend to be more publicized and complicated.

As the most experienced federal law enforcement agency in the field of fugitive investigations, the Marshals Service has greatly assisted OCDE. This assistance is provided in fugitive matters where the Marshals Service shares jurisdiction, as well as in cases where the Service would not normally have investigative jurisdiction.

Other programs of the Marshals Service that are increasingly affected by the efforts of the OCDE Task Forces are the service of process, movement of prisoners, and the contract housing of those prisoners.

Program Changes: No program changes are requested.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Management and administration..	116	117	$7,962	116	117	$8,772	122	120	$10,912	6	3	$2,140

Long-Range Goal: To address the managerial and administrative requirements in the areas of planning, policy development and direction, budgeting and administrative services necessary to support the Marshals Service's diverse mission and diverse law enforcement responsibilities.

Major Objectives:

To provide executive leadership and policy guidance to operational and administrative staff in order to operate in an efficient and cost effective manner.

To ensure that the highest standards of integrity, loyalty, and conduct are maintained among all Marshals Service personnel.

To disseminate information about Marshals Service activities to public officials, agencies and the public.

To provide efficient and effective personnel management.

To assess personnel and financial resource needs by program, obtain adequate resources and manage them effectively.

To maintain an effective Equal Employment Opportunity program throughout the Marshals Service.

To procure and maintain equipment, and fully support district requirements.

Base Program Description: The various activities of the Management and Administration program reflect the diverse mission of the Marshals Service and are organized to provide effective managerial guidance and to ensure a high degree of consistency in the application of policies and procedures. This streamlining of staff management functions minimizes the time line managers in the 94 district offices must spend on administrative matters. The activities included in this program are: 1) Executive Direction and Control and 2) Administrative Services.

Through the Executive Direction and Control program area, essential direction and effective management of the Marshals Service is provided in order to facilitate the successful accomplishment of its operational mission. To achieve this objective, management must formulate policies which guide and assist field personnel and headquarters' divisions. Further, this program involves the oversight of such key management operations as: 1) responding to members of the Congress, officials of other government agencies, the news media, and the general public; 2) coordinating, reviewing, and making recommendations on legal issues and legislation which will or may have an effect on the Marshals Service's mission; 3) providing financial support and ensuring the prompt payment of debts and the collection and deposit of funds due the government by law or court order; 4) maintaining a high level of integrity and competence among Marshals Service personnel; 5) conducting management audits to ensure that district operations are both efficient and cost-effective; and 6) constantly monitoring and improving the Marshals Service's management information systems.

The Administrative Services program area provides the staff services necessary to support the operational divisions, thereby enabling them to accomplish their mission requirements with a high degree of safety, effectiveness, efficiency, and economy. Specifically, this area encompasses personnel management, employee development, Equal Employment opportunity, and the management of other administrative functions including space, transportation, communications, property, and procurement.

Accomplishments and Workload: The workload of the Management and Administration program is presented in the following table:

Item	1985	1986	Estimates 1987	1988
Public information/congressional responses	9,470	9,750	9,900	10,120
FOIA/Privacy Act responses	613	675	775	875
Administrative tort claims and legal proceedings against USMS processed	350	350	375	400
Misconduct allegations investigated by headquarters	115	135	145	165
District and program audits/management reviews completed	28	38	38	38
Preliminary background investigations conducted	...	300	300	300
Limited background investigations conducted	...	...	100	150
Background investigations conducted	...	...	250	275
Personnel actions processed	15,000	20,000	25,000	30,000
Employment applications reviewed	20,000	17,500	20,000	25,000
EEO complaints filed	16	19	20	20
Property and procurement actions completed	9,220	8,500	9,200	9,200
Printing actions	742	850	1,000	1,000
Major cellblock and office renovations completed	21	23	25	25
Major cellblock and office renovations in progress	96	117	125	130
Space actions processed	110	120	130	140
Architectural/Engineering reviews	580	585	590	595

During the past year, program managers continued to implement and expand upon a number of major initiatives designed to improve the Marshals Service's ability to perform its mission in a responsible and cost-effective manner.

The Office of Congressional and Public Affairs, a staff of five people, will be working with the Department and congressional committees to enact a major legislative package designed to modernize the statutory underpinnings of the Marshals Service. Legislative and oversight hearings before the Judiciary Committees of the Senate and House are expected during the year and will require continual interaction between the Marshals Service and Congress. Moreover, in preparation for the Marshals Service bicentennial, this office will be working closely with the media, other government organizations and interested parties to promote a clear sense of the history and purpose of the Marshals Service, and to instill a sense of pride among its employees. This activity will include the development and distribution of written material and direct communications with district personnel, news media representatives, and congressional offices.

During 1986, the Office of Legal Counsel provided defense for the Marshals Service in personnel matters and other cases directly affecting the operations of the Marshals Service. Legal defense was provided in liability suits for injunctive and affirmative relief and monetary claims in the millions of dollars. In 1986, the Legal Counsel staff responded to: 675 Freedom of Information and Privacy Act requests and appeals; 185 tort claims; 30 employee claims for property damage; 80 personnel actions in administrative proceedings and arbitrations; and issued 190 legal opinions.

In 1986, the Office of the Assistant Director for Inspections completed 135 criminal and administrative investigations on the conduct of Marshals Service personnel, which result in criminal and administrative sanctions or letters of clearance. This office also extends investigative guidance to management officials who conduct some 45 investigations involving less serious allegations. The audit program will continue to operate under the resource utilization/compliance/operational audit, which provides management with the information needed to evaluate field and program management effectiveness and distribution of resources. As a result of these audits, savings were realized through tighter controls on overtime, intermittent deputy hours, guard hires, government vehicles, storage of evidence and seized property, and the collection of past-due fees, earnings and reimbursable items. It is anticipated that approximately 35 district audits and three program audits will be completed in 1987. The Internal Inspections Program will be expanded to include conducting preliminary background investigations as well as providing policy and control over security clearances for all Marshals Service personnel. It is estimated that approximately 300 security clearances and 300 preliminary background investigations will be conducted. The Marshals Service is assuming this responsibility from the Office of Personnel Management (OPM) as a result of backlog at OPM and a critical need of the Marshals Service for expeditious handling of background investigations. These investigations are essential if the Marshals Service is to continue to employ the type of individual needed for the sensitive positions within the Marshals Service.

During 1986 the Resource Analysis Division collected more than 62,000 reports of time utilization from field offices, and significant workload indicators and time data were analyzed to produce an equitable allocation of FTP positions among 94 field offices. The Division also produced major reports of 1985 Marshals Service activities and performed an in-depth review of the impact of the Comprehensive Crime Control Act on the Marshals Service. Currently the Division is working with a group of program analysts and field office managers to review and make recommendations on reports management and automation.

In the area of Administrative Services, the personnel staff successfully developed and implemented four two-week basic management training seminars. These seminars are required training for all new chief and supervisory deputies. The merit promotion program for specialists was computerized, thus substantially shortening the application procedures for these positions. New recruits in 1984 achieved the highest level of academic scores at the Federal Law Enforcement Training Center of any deputies recruited since 1975. The Chief and Supervisory Deputy U.S. Marshals Examination was administered to candidates in cities nationwide. The Employee Development Division began developing an assessment center to supplement the current merit promotion process. Fifty-one applicants for witness security specialist, GS-1811-12 positions underwent a modified version of the assessment center. This assessment center consisted of an oral interview, written exercise, self assessment and fitness assessment. The Marshals Service will implement a full scale assessment center for Chiefs and Supervisory Deputy U.S. Marshals in 1987.

As a result of a substantial workload increase placed upon operating offices in recent years, the Marshals Service initiated a major recruiting drive in 1985. To accelerate the hiring process, the personnel staff trained over a dozen chief deputy U.S. marshals in interviewing techniques, so that interviews can be conducted nationwide as the needs develop. Because of its size, this recruiting effort will have a noticeable and long-term effect on the Marshals Service in the years to come. The Office of Personnel Management has turned over to the Marshals Service its responsibility for maintaining the register of eligible candidates resulting from the test for deputy U.S. marshal. Since the register contained several thousand names, this activity imposes a significant increase on the workload of the personnel staff. In 1986, the Marshals Service Exam was given to 8,600 people. As a result, 3,750 people were placed on a roster for future consideration. During 1986, the Marshals Service interviewed over 1,200 deputy U.S. Marshal applicants, which resulted in the hiring of 305 deputies.

In the area of Equal Employment Opportunity, the EEO Advisory Committee, a group within the U.S. Marshals Service, met with the Director regularly and, as a result, compiled a set of affirmative action objectives such as ensuring that managers within the Marshals Service receive EEO training; enhancing the representation of women in law enforcement positions, and eliminating underrepresentation of minorities and women in the Marshals Service, by establishing methods to maintain minority and women's representation in the Service. Also among the initiatives was the reestablishment of the cooperative education program as an additional means of recruiting qualified minorities for deputy U.S. marshal positions.

Formal complaint activity remains at a level well within manageable proportions, due in part to aggressive investigative efforts by the Service, an emphasis on resolving EEO concerns before they develop into formal complaints and ongoing management training. Nineteen newly appointed supervisory personnel and twenty-three chief deputy U.S. marshals were trained in their EEO responsibilities. Forty-one collateral duty EEO personnel in both complaints and affirmative action were given enhancement training in their program responsibilities and personnel policies and procedures. Another 35 students successfully completed the recently established ongoing Spanish language training program, designed to enable Marshals Service personnel to communicate more effectively with the public it serves and in turn to perform the Marshals Service's mission more efficiently.

Improvements were also realized in the General Services Support Program which has experienced workload increases in the areas of transportation, space management, renovations, and materials management. Program personnel managed over 1,300 vehicles and 367 facilities, monitored over 117 major GSA construction projects, funded 240 minor renovation projects, completed 8,500 procurement and accountable property transactions, filled approximately 13,000 individual requests for stock items, and handled 850 printing orders. The Marshals Service continued a program, begun in 1984, to utilize seized vehicles for official use.

Program Changes: The Marshals Service requests $1,540,000 for critically needed cellblock renovations and similar improvements. At times all federal prisoners, including the most dangerous needing maximum security, are detained in one of the Marshals Service 305 cellblocks. At least 63 of these facilities are known to need major renovation to ensure security, especially in light of the ever-increasing destructive measures taken by criminals. Upgrading of five substandard courthouse cellblocks will require $1,040,000. The violent nature of the prisoners requires holding cell facilities which provide security equal to that in penal institutions. Facility surveys demonstrate that many Marshals Service holding cells do not meet minimum federal standards and have many safety and security violations. Critical renovations of four other prisoner handling areas, at a cost of $460,000, are also needed to provide secure prisoner/attorney interview rooms allowing voice privacy and preventing the passing of contraband. A prisoner elevator project costing $40,000 is needed as well.

Another six positions and $600,000 are requested for enhanced management and administrative support. The resources requested provide the employee development, personnel management and administrative services needed to support the Service's growing operational responsibilities.

	1987 Appropriation Anticipated			1988 Base*			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Protection of witnesses.....	...	...	...	...	...	$17,618	...	...	$17,618	...	...	...

*The Protection of Witnesses program was part of the Fees and Expenses of Witnesses appropriation 1987.

Long-Range Goal: To increase the effectivensss of the Department's efforts to combat criminal activity in such areas as organized crime, drugs or narcotics, and murder or conspiracy to commit murder, by obtaining testimony from potentially endangered or threatened witnesses.

Major Objectives:

To obtain which can be used to prosecure persons accused of organized crime or other serious criminal activity.

To protect witnesses and their families when the testimony of the witnesses may jeopardize their personal security.

To compensate witnesses for subsistence costs such as housing, food, relocation, and incidental expenses as provided by the Witness Security Reform Act of 1984.

To provide orientation, documentation and family-oriented services, etc., to new entrants into the Witness Security program.

Base Program Description: The procedure for designating a person as a protected witness is set forth in Department of Justice OBD Order 2110.2 "Witness Protection and Maintenance Policy and Procedures." This order places within the U.S. Marshals Service the responsibility for the security of those witnesses and their families. This program provides for their financial maintenance including the following: subsistence expenses; housing; medical and dental expenses; travel; documentation expenses for identity changes; one-time relocation; costs for obtaining employment; and other miscellaneous expenses. Rates are authorized by the Assistant Attorney General for Administration. The U.S. Marshals Service will continue its development of strategically located safesite facilities to house protected witnesses before and during trials, and the operation of the Safesite and Orientation Center.

Accomplishments and Workload: This program cannot report workload and performance in statistical form. All data reflecting the activities of this program are incorporated in the Witness Security program. A recent General Accounting Office report entitled "Witness Security Program: Prosecutive Results and Participants Arrest Data" (GAO/GGD-84-87) found that upon reviewing 220 case summaries involving the testimony of protected witnesses, 78 percent of the defendants in those cases were found guilty. Eight-four percent of those found guilty were sent to prison for a median sentence of 4.4 years. These prosecutions resulted in significantly more severe sentences than those received for federal felony prosecutions in general.

This activity has also provided sufficient funding to ensure the protection of witnesses willing to testify for the government in all organized crime cases requiring such testimony.

Program Changes: No program changes are requested.

United States Marshals Service

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Work-years	Amount
Transfers to and from other accounts:		
1. Transfer of FASS group. This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.	...	$42
2. Transfer of Protection of Witnesses. This represents the transfer of Protection of Witnesses from the Fees and Expenses of Witness Appropriation to the Salaries and Expenses of United States Marshals Appropriation.	...	17,511
Total transfers	...	17,553
Uncontrollable increases:		
1. One additional compensable day. The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $315,000: 260 = $274,000 plus $41,000 for benefits.)	...	315
2. Annualization of 100 additional positions approved in 1987	14	800

	Approved 1987 Increase	Annualization Required
Annual salary rate of 100 approved positions	$2,596,000	
Less lapse	725,000	$725,000
Net compensation	1,871,000	
Associated employee benefits	308,000	75,000
Total costs subject to annualization	1,563,000	800,000

	Work-years	Amount
3. Annualization of Federal Employees' Retirement System Costs..... This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $800,000 of 1987 requirement was absorbed. Total annualization required is $8,086,000.	...	$8,086
4. Annualization of 1987 pay increase..... This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 68 paid days (October 1, 1986 through January 5, 1987) were not included in the pay raise amount of $1,275,000. Additionally, $407,000 of the 1987 pay requirement was absorbed. Total annualization required is $1,275,000. 68/261 x pay raise amount for 1987..... $868,000 1987 absorption of pay..... 407,000 Total annualization..... 1,275,000	...	1,275
5. Medicare Costs..... Beginning January 1, 1985, the base on which earnings for medicare computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 1.35 to 1.45 percent.	...	11
6. Locality based per diem..... Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $783,000 is required to meet the expected 9.5 percent increase to total travel funds.	...	783
7. Federal Employees' Compensation Act (FECA) - Workers' Compensation..... This increase reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $2,308,000 or $360,000 over the 1987 base.	...	360
8. GSA Rent..... In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $3,146,000 is required to meet our commitment to GSA.	...	3,146

	Work-years	Amount
9. GSA recurring reimbursable services..... Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $13,000 in fees for these services in 1988 over 1987 charges of $315,000.	...	$13
10. Federal Telecommunications System (FTS)..... The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $213,000 over the amended 1987 base of $2,173,000 is requested.	...	213
11. Telephone Service..... On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000.	...	5
12. GPO Printing Costs..... The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $233,347. An additional $8,000 will be required in 1988.	...	8
13. Employee data and payroll services..... Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting, are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.	...	118

	Work-years	Amount
An additional increase of $87,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.		
14. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.	...	$628
15. Subsistence rates for protected witnesses..... This increase involves the adjustment of subsistence rates for protected witnesses in the Witness Security program. An additional $107,000 over the 1987 transfer of $17,511,000 will be required in 1988.	...	107
Total uncontrollable increases.....	14	15,868
Decreases (Automatic non-policy):		
1. Reduction for change in hourly rate..... Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates to be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.	...	-174
2. Reduction in Health Benefits..... The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased due primarily to reduced carrier rates. The requested decrease includes -$206,000 for decreased rates over the 1984 budgeted base.	...	-206
Total decreases.....	...	-380
Total, adjustments to base.....	14	31,041

OPENING STATEMENT

Mr. DWYER. The committee is pleased to welcome back the director of the Marshals Service, Mr. Stanley E. Morris.

Mr. Morris, you may proceed with your statement at your own pace.

Mr. MORRIS. Thank you, Mr. Chairman. I have a full statement which I would request the committee submit for the record. I would like simply to highlight the key points of that for the committee's edification.

I am pleased to appear before you again in support of the 1988 appropriations request for the United States Marshals Service. First I would like to thank the committee for its prompt and favorable action on our 1987 supplemental request which, quite honestly, is desperately needed in order to keep pace with the many requirements being placed upon the Marshals Service.

In the next few years we will be challenged as never before. Recent anti-drug initiatives, combined with the Comprehensive Crime Control Act, the anticipated sentencing changes, and similar mandates are reshaping the administration of Federal justice. The resulting strains placed on the criminal justice system are enormous. The pressures on the system continue to grow.

Because of our overall responsibilities to the judicial process, we at the Marshals Service are directly affected by this activity. The increased demands for improved court security, efficient prisoner handling, and safe witness protection require our full attention. Proper attention also must be must be given to apprehending fugitives and the timely extradition of international criminals. And, we must deny criminals the fruits of their ill-gotten gains. This requires proper management of seized assets and the realization of maximum profits once the goods and property are sold.

The request before you, as you mentioned in your opening remarks, provides the resources essential to meet these responsibilities. For 1988, we are asking for 2,948 positions and $216.1 million for the Marshals Service appropriation, a net increase of 224 positions and $51.2 million above the 1987 appropriation anticipated. However, only about one-third of this amount, $18.2 million represents actual program increases. Uncontrollables, and a transfer between appropriations comprise the other two-thirds of the increase. Every addition results from factors over which we in the Marshals Service continue to have little, if any, control.

Let me highlight the major programs and resource requirements described in our 1988 budget:

JUDICIAL SECURITY

Maintaining the safety and integrity of the judicial process is the Marshals Service's highest priority. As the Government continues to move against drug traffickers and major criminals, the types of cases tried become increasingly dangerous and increasingly complex.

Los Macheteros, a Puerto Rican terrorist independence group, is accused of using anti-tank weapons to attack the U.S. Federal building in Hato Rey, Puerto Rico; firing at a U.S. Navy bus, killing military personnel in Sebana Seca, Puerto Rico; and destroying

military aircraft. Currently, 16 of its members await trial in Connecticut for a $7 million Wells Fargo robbery.

The United Freedom Front has allegedly conspired to overthrow the Government by force. Raymond Levasseur, Thomas Manning, and seven other members of this group await trial in Boston for numerous bombings, bank robberies, and murders. Last year, Levasseur and Manning were convicted in New York of similar charges.

Carlos Lehder-Rivas, a major figure in Colombia's Medellin drug cartel, is considered responsible for distributing over 80 percent of the world's cocaine—80 percent of the world's cocaine. Lehder-Rivas is believed to have murdered a number of high-ranking Government and judicial officials in Colombia, and is principally responsible for the attack on the Supreme Court in Bogota a little over a year ago. Threats have been made against United States judicial officials as well. We cannot afford to let him or his associates make good on any of those promises.

These trials and others present us with security requirements unheard-of just a few years ago. It is estimated that these three proceedings alone will run a combined total of nearly a year, involve over 100 deputy U.S. marshals, and cost over $2.5 million.

COURT SECURITY OFFICERS

Security problems arise not only before and during trials, some of the more serious actions take place well after proceedings have concluded. For example, in August of last year, a pipe bomb addressed to Federal Judge Paul Benson was sent to the Federal courthouse in Fargo, North Dakota. Judge Benson was not participating in any high-profile trial at the time, although he had handled a number of major trials in the past. One of the Court Security Officers recognized something suspicious in the materials that were being brought in by the law clerk, ran the package through the magnetometer recently put in place there in Fargo, and found the pipe bomb, the wires, and the like. Through his quick action, tragedy and perhaps loss of human life was avoided.

The CSOs, the Court Security Officers, around the country, funded out of the judiciary appropriation, and managed by the United States Marshals Service, have done an outstanding job in providing perimeter security for the Federal courts.

I would like to point out that that is not the first pipe bomb that we have grabbed and seized this year. Just a few months ago in Philadelphia we seized a pipe bomb on its way into the courthouse.

For 1987, the Administrative Office of the U.S. Courts has 1,114 court security officers authorized nationwide. They are requesting another 240 CSOs positions in 1988 for this vital function. I would point out that this is a level about the same size as the Capitol Hill police, and yet the CSO have responsibility for perimeter security for over 250 courthouses around the United States. I would make a pitch on behalf of the Marshals Service in support of the judiciary's request in that regard.

In another instance, Chief Judge Charles Brieant of New York's southern district was sent a box of poisoned valentine candy the day before Valentine's Day allegedly by a person convicted and

sentenced by Judge Brieant six years ago of manufacturing LSD. Regretfully, his wife consumed some of the Godiva chocolates, and when he came home, he found her in a comatose state. She was in intensive care for a while, and fortunately, she survived. With the quick assistance of the FBI, arrests in that case were made.

When placed in the context of more dangerous and longer court proceedings, a growing number of threats and violence—plus added responsibilities for the Tax Court and the Court of International Trade, added recently in new legislation enacted by the Congress—the Marshals Service judicial security needs are critical. For 1988, we request an additional 160 positions and $8,126,000 for enhanced judicial security, including 42 positions and $2,263,000 to meet new security requirements directly resulting from the government's accelerated efforts to capture major drug dealers and bring them to trial.

I would like, at the close of this hearing, to discuss some of these issues in a little more detail in a closed part of the session.

WITNESS SECURITY AND PROTECTION

In yesterday's New York Times, a major story on the front page concentrated on the fact that today's Mafia is divided and under seige. The reality is, as is pointed out in that article, and as confirmed by Director Webster of the FBI and Rudy Guiliani of the U.S. Attorney's office, none of those cases that have basically divided and put the Mafia under seige would have been possible without the effectiveness of the witness protection program. My people who work in that difficult area don't always receive the credit, I believe, that they deserve, but clearly, those who know, understand how critical that program is to the success of this Administration's efforts against organized crime.

We are requesting an additional 36 positions and $1,141,000 for witness security in 1988 to continue to meet the complex and costly needs of protected witnesses and to operate the new safe-site and assessment center in the suburban Washington, D.C., area. If the Government is to continue to rely on the valued testimony of these witnesses, then it must be willing to provide the safe atmosphere, maximum security, and quite honestly, the humane services necessary to protect these people both before and after testimony, and give them a fair opportunity to start new lives in new locations under newly assumed names.

Also, we are once again requesting that the Protection of Witnesses Program be transferred from the Fees and Expenses for Witnesses appropriation to the Marshals Service appropriation. Protection of Witnesses comprises a small portion of the Fees and Expenses of Witnesses and is distinctly different from the rest of the activity funded under that appropriation.

HANDLING OF FEDERAL PRISONERS

The demands placed on the Marshals Service for timely and efficient prisoner production continue to grow. We expect to conduct 180,000 prisoner movements in 1988, almost 100,000 of which will be via our National Prisoner Transportation System. This represents a one-third increase in NPTS moves in just two years.

Considering the safety afforded the public, our personnel, and the prisoners themselves, as well as comparative costs, the National Prisoner Transportation System, we believe, is the best way to move prisoners long distances and produce them within court-ordered deadlines. The cost of an average Marshals Service airlift is $112 per prisoner, more than six times less expensive than commercial air trips.

This system allows us to realize safety and economies of scale not obtainable on commercial air flights. On our NPTS flights we can transport 90 prisoners with seven deputies, on a commercial trip a single prisoner requires two deputies.

I would point out, too, that the Department, on several occasions, has used the initiative that we have undertaken in this area as one of its top productivity improvement initiatives.

As more and more major drug and organized crime figures are apprehended, greater reliance is going to be placed on the NPTS for secure and prompt prisoner movement. For 1988, the Marshals Service requests an additional 10 positions and $4,047,000 for enhancements in our prisoner transportation program.

FUGITIVE INVESTIGATIONS

The Marshals Service places special emphasis on the investigation and apprehension of those fugitives with histories of violence, organized crime, and narcotics activities. Last year, we cleared nearly 56,000 fugitive warrants and arrested over 14,000 felons, more than 20 percent of whom were wanted for drug-related offenses.

Finally, as the fugitive problem assumes international proportions, our extradition responsibilities grow increasingly important. By 1988, we expect to conduct 250 international extraditions, almost twice the level of 1986. The people we extradite are among the most dangerous in the world, and include Latin American drug dealers such as Jose Antonio Cabrera Sarmiento and Severo Escobar.

Requisite security, travel precautions, and coordination with other Federal agencies and foreign governments make this activity both dangerous and costly. We are requesting another $300,000 in 1988 to ensure adequate resources are available to meet both the additional extraditions and the rising costs of security precautions required for this function.

COURT ORDERS

Marshals Service responsibility for executing court orders remains essentially constant through 1988 and is projected to serve 300,000 pieces of process annually, about two-thirds in person. Over 200,000 pieces are served on behalf of other government agencies; much of it relating to the debt collection area. The remaining 30 percent is served on behalf of paupers and in response to specific court orders.

MANAGEMENT AND SUPPORT SERVICES

As our operational responsibilities increase, it becomes vitally important that proper management and support services be provid-

ed to augment this activity. In the past few years, we have done much to improve the quality of the administrative service and systems available to support our program mission.

For example, the law enforcement training provided by our Marshals Service Training Academy ranks among the best in the world. We are also becoming a leader in survival and anti-terrorist training in our special Operations Group Training Center in Louisiana.

Last year we successfully implemented a wide range of administrative improvements including enhancing recruitment and application techniques, establishing requirements for Equal Employment Opportunity training, and handling increased demands for transportation, space and materials management.

However, administrative support has not kept pace with operational demand. Program increases generated from the Comprehensive Crime Control Act and the most recent anti-drug initiatives have outstripped our ability in many cases to support them.

To begin to address this situation, in 1988 we are requesting 10 positions and $3,481,000 for badly needed management improvements. This includes four positions and $1,341,000 for automatic data processing enhancements for threat analysis, prisoner transportation, and district automation.

I would point out here that in past years this committee and the Congress have supported our ADP requests, but often we can't spend the money that the Congress gives us because the uncontrollable parts of our budget have eaten that away.

I would also point out that what we are talking about here in terms of ADP support is not big, huge computers that you hear from many other organizations. We are talking here, quite honestly, about, in many cases, IBM personal computer type machines in our local offices so that we can count the number of prisoners and locate where they are and keep accounts of our records. These are computers much like many families have at home, but which we have not had the resources really to provide in many of our field offices. One of the challenges we have in this agency is that we man some 350 different offices in parallel with the Federal courts, and that makes ADP system needs, I think, even more acute than they are for some other agencies.

Also, another six positions and $600,000 are requested for enhanced management and administrative support.

Finally, $1,540,000 is needed for cellblock and prisoner handling area renovations. In many cases, in the vast majority of the cities around the United States, we have the only Federal cell to hold prisoners pending trial and the like. In many cases, those cells have deteriorated and in many cases were not built to deal with the nature of the current Federally indicted individual who is coming into the Federal criminal justice system. Upwards of 20 percent of our cellblocks are in urgent need of renovation and this will provide funding for five of our most critical projects.

SUPPORT OF U.S. PRISONERS

Let me turn finally to the Support of the U.S. Prisoners appropriation. The Comprehensive Crime Control Act initiatives, par-

ticularly the Bail Reform provisions, have swollen our prisoner population to the point where we now house nearly 8,000 prisoners a day, 30 percent more than we did just two years ago. Two-thirds of these prisoners are in local jails, the average daily rates for which have nearly tripled in the last decade. By 1988, we expect to use 1.7 million contract jail days, 20 percent more than in 1986.

The drain on our resources, both personnel and funding, are enormous. To meet our immediate needs for prisoner support, we are requesting $76,914,000 in 1988 for care of U.S. prisoners, $7,284,000 above the 1987 appropriation anticipated. This increase is necessary to meet the over 108,000 day increase in contract jail days and the almost $2 increase in the jail day rate anticipated for next year, from $37 to $39. I would point out that when that rate goes up one dollar, it adds about $1.5 million to the Support of Prisoners account.

I would also point out that part of the reason for this problem that we in the Federal Government are facing is our heavy reliance on State and local facilities. Those State and local facilities are now crowded well beyond their capacity—in many cases because of all of the initiatives being made at the State and local level—and we are the first ones who get moved out when available jail space disappears.

Another $5 million is requested for the Cooperative Agreement Program for two major projects to provide an additional 250 guaranteed spaces for up to 15 years.

SEIZED ASSETS PROGRAM

The Comprehensive Crime Control Act that I mentioned earlier also expanded the basic authority to seize assets from drug traffickers. The U.S. Marshals Service's primary job here, is the management and disposal of these assets in a businesslike manner.

Real property, which accounts for 40 percent of the property seized, presents the Service with its greatest challenge in the management of assets. We have made significant accomplishments in this area, and we continue to learn.

Our recent success stories, however, are encouraging. The Shelburne Glebe estate in Loudoun County, Virginia, just down the road, worth an estimated $2 million, was targeted in a major drug investigation by the mid-Atlantic Organized Crime Drug Enforcement Task Force. This historically significant property was seized, managed, and eventually sold by the Marshals Service for more than $4 million, twice its appraised value.

In late 1986, the Marshals Service also moved to get out of the foundry business. Since its seizure in November of 1985, we oversaw the continued operation just outside of Milwaukee of the Accurate Brass and Aluminum Foundry, Inc. We kept it running, we met the payroll and we actually turned a profit. Now that the owner has been convicted, we hope soon to close the sale of the foundry and expect a net return of a million dollars. Before the legislation was passed and before this fund was created, what would have happened in that seizure was that we would have gone in, we would have padlocked the doors, and we would have closed the business down. What we would have sold would not have been an

operating business. What we would have sold was some machinery and a warehouse. I think what we did was a significant improvement, we managed it to the ultimate benefit of the taxpayer.

In January, we left the flower business when the business known as "Pardon My Garden", on Cape Cod, Massachusetts, was sold for nearly $600,000. The business was operated under the control of the Marshals Service since it was seized in September 1985. I would like to point out that during the time of Carolyn Kennedy's wedding we were doing so well that she bought half of her flowers from Pardon My Garden. [Laughter.]

Other recent sales of Florida properties in Fort Lauderdale, Miami, St. Augustine, Palm City, and Key West yielded over $7 million.

Seized cash sounds like an easy job, but we found it to be one of the most difficult challenges we faced because it accounts for 37 percent of all the property seized, and represents an area of concern. As a result of our efforts at improving the handling of seized and forfeited cash, we saved the United States an estimated $3 million through effective cash management.

What had been going on in the past was that various offices would either keep the money in a safe or they would look around and find a local CD that they thought was a good place to invest it. Instead, we have created a special account at the Treasury. We have over $73 million in that account to date, and by putting the funds directly into the Treasury it serves as an offset against borrowing needs, so we get basically whatever the Treasury bill rate is. And, of course, it has the total protection of the United States behind it. Next year we think we may be able to double the amount of savings through that effective cash management technique.

Another important aspect of this unique program is the ability to share benefits with assisting law enforcement agencies. In 1986, we disbursed a little over $17 million to assist State and local law enforcement agencies through this equitable sharing program, and we estimate sharing disbursements in 1987 to exceed $28 million.

As of December 1986, we had nearly 6,000 properties on hand worth $423 million, including $149 million in seized cash. By 1988, we expect the total value of seized assets to be in excess of $600 million. In both 1987 and 1988, total income to the fund is estimated to be $140 million. We returned, at the end of the last fiscal year, a net $51 million to the Treasury.

I am proud of the critical role the U.S. Marshals Service plays in the dispensation of justice in America. Almost exactly 198 years ago, legislation was being debated in this body to create a Federal court system and establish a marshal to serve it and to carry out its orders. There is no more fundamental role in a free society, and I assure you, Mr. Chairman, and members of this committee, we will carry out that historic obligation.

This concludes my prepared statement. I would be happy to answer any questions you and other members of the committee may have.

[The prepared statement of Mr. Morris and the biography of Mr. Hayes follow:]

DEPARTMENT OF JUSTICE
UNITED STATES MARSHALS SERVICE

STATEMENT OF THE DIRECTOR
STANLEY E. MORRIS
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you today in support of the 1988 appropriation request for the United States Marshals Service. As you know, the Marshals Service is involved in every facet of the judicial process. Our responsibilities for safeguarding the judiciary and endangered witnesses, executing warrants and court orders, managing seized assets and handling unsentenced prisoners are central to maintaining the timely and orderly administration of justice.

In the next few years, we will be challenged as never before. Recent anti-drug initiatives, combined with the Comprehensive Crime Control Act and similar mandates have reshaped the administration of justice. The resulting strains placed on the criminal justice system are enormous. Court calendars are now jammed with high-profile trials--taxing both federal judges and U.S. Attorneys--while jails are overcrowded with more prisoners awaiting trial. And, as efforts to investigate and capture major drug and organized crime figures accelerate, pressure on the system continues to grow.

Because of our overall responsibilities to the judicial process, we at the Marshals Service are directly affected by

this activity. When a person is put in our custody, he has already entered the system; we have no choice but to provide service. To do otherwise promotes inefficiencies in the system or, far worse, jeopardizes the safety of all involved. The increased demands for improved court security, efficient prisoner handling and safe witness protection require our full attention.

To be successful in the war against drugs and organized crime, proper attention also must be given to apprehending fugitives and the timely extradition of international criminals. And, we must deny criminals the fruits of their ill-gotten gains. This requires proper managing of seized assets and realizing maximum profits once the goods and property are sold.

If we are to meet these challenges, we must continue the efforts to upgrade the professionalism of our personnel. We can no longer rely on part-time staff and guard services to get the job done. Protection of the judicial process and continued response to a growing number of emergency situations requires nothing less than well-trained, full-time law enforcement professionals.

The request before you provides the resources essential to meet these responsibilities. For 1988, we are asking for 2,948 positions and $216.1 million for the Marshals Service appropriation, a net increase of 224 positions and $51.2 million above the 1987 appropriation anticipated. However, only about one-third of this amount, $18.2 million, represents actual program

increases. Every addition results from factors over which we continue to have little, if any, control.

Let me provide you with an overview of the major programs and resource requirements described in our 1988 budget.

Judicial Security

Maintaining the safety and integrity of the judicial process is the Marshals Service's highest priority. As the government continues to move against drug traffickers and major criminals, the types of cases tried become increasingly dangerous and complex. In the upcoming months, the Marshals Service will provide security at a number of high-profile proceedings. Three pending trials demonstrate this point.

Los Macheteros, a Puerto Rican Terrorist/Independence group, are accused of using anti-tank weapons to attack the U.S. Federal building in Hato Rey, Puerto Rico; firing at a U.S. Navy bus and killing military personnel in Sebana Seca, Puerto Rico; and destroying military aircraft. Currently, 16 of its members await trial in Connecticut for a $7 million Wells Fargo robbery.

The United Freedom Front has allegedly conspired to overthrow the government by force. Raymond Levasseur and seven other members of this group await trial in Massachusetts for numerous bombings, bank robberies and murder. Last year, Levasseur and Thomas Manning were convicted in New York of similar charges.

Carlos Lehder-Rivas is a major figure in Colombia's Medellin drug cartel, considered responsible for distributing over 80 percent of the world's cocaine. Lehder-Rivas is believed

to have murdered a number of high-ranking government and judicial officials in Colombia, and has threatened to murder federal judges if ever brought to trial in the United States. We cannot afford to let him make good on that promise. In anticipation of his upcoming trial, we are providing the most intense security ever given as a result of one criminal.

These trials and others present us with security requirements unheard-of just a few years ago. It is estimated these three proceedings alone will run a combined total of nearly a year, involve over 100 deputy marshals and cost about $2.5 million. This is on top of the nearly $1 million spent on earlier Macheteros arraignment and suppression hearings, and the nearly four hundred thousand dollars being spent on the trial of Gaetano Badalamenti and others involved in the "Pizza Connection"--which used pizza parlors as fronts for heroin distribution in major U.S. metropolitan areas--and the trial of New York crime boss John Gotti. Simply put, providing security at such proceedings is very expensive. However, anything less than full security only invites these groups to employ their terrorist tactics inside the courtroom.

These examples are symptomatic of a larger trend. Overall, time spent on criminal proceedings is expected to rise over 20 percent from 1986 to 1988.

Security provided during in-court proceedings is only part of the story, however. Protecting the 1,800 federal judges and magistrates and the 500 federal court facilities is not a 9 to 5 job; it requires constant attention. In 1988, it is

72-165 O—87——27

expected that 275 threats will be made against members of the judiciary--one-third more than were made in 1986--and that at least 75 protective service details will be required.

Threats not only occur before and during trials, some of the more serious actions take place well after proceedings have concluded. For example, last August a letter bomb addressed to Federal Judge Paul Benson was sent to the Federal Courthouse in Fargo, North Dakota. Judge Benson was not participating in any high-profile trial at the time, but had been involved in the previous trial of the neo-Nazi group, the Order. One of our Court Security Officers (CSO) recognized something suspicious and took immediate steps to isolate the package and protect the Judge. Only through the quick action of the CSO was tragedy averted.

The CSOs have done an outstanding job in providing perimeter security for federal courts. Not only do they keep dangerous elements from entering the courtroom, they allow us to focus our efforts on safeguarding judges and witnesses and maintaining the order of courtroom proceedings. We could not do our job without the assistance from the Administrative Office of the U.S. Courts, AOUSC.

For 1987, the AOUSC is authorized 1,114 CSO positions nationwide. They are requesting another 240 CSO positions in 1988 for this vital function. By comparison, there are 1,227 Capitol Hill Police currently authorized.

In another instance, Judge Charles Brieant in New York was sent a box of poisoned valentine candy early last month from a

person convicted six years ago of manufacturing LSD. And, a deranged mental patient was recently captured outside the courtroom of Senior Judge Ted Milburn of the sixth U.S. Circuit in Chattanooga, Tennessee. The individual had vowed to kill both the President and the Judge.

When placed in the context of more dangerous and longer court proceedings, a growing number of threats and violence--plus added responsibilities such as the Tax Court and the Court of International Trade--Marshals Service judicial security needs become critical. For 1988, we request an additional 160 positions and $8,126,000 for enhanced judicial security, including 42 positions and $2,263,000 to meet new security requirements directly resulting from the government's accelerated efforts to capture major drug dealers and bring them to trial.

The amounts requested for judicial security represent both the increased workload in the area and the true cost of conducting these operations. If we are to fully staff high security trials, protective details and the like, we must use out-of-district deputies. Not only does this help maintain ongoing district activity, it would be impossible to conduct proceedings for the Macheteros or Lehder-Rivas in the venues selected without outside help. No district can afford to assign 30 deputies--even if they had that many--for up to six months and hope to keep operating. They must receive support from other districts. The request reflects this reality.

Witness Security and Protection

To obtain convictions against major drug dealers and organized crime members requires testimony from people with the courage to testify against these elements. Since its inception, the Marshals Service's Witness Security program has been the government's most effective way to obtain such testimony and safeguard both witnesses and their families. In trials where protected witnesses testify, four out of five result in convictions.

The recent murder of drug informant Barry Seals demonstrates the measures criminal elements will take to prevent such testimony. Seals, who testified against the Medellin cartel, refused our offer of protection, and was murdered last year in New Orleans. Had Seals accepted our protection he would still be alive, and available to testify.

By 1988, it is expected that over 5,900 protected witnesses will be in the program, a 14 percent increase above the 1986 level. They will be counted on to provide crucial testimony at a number of major trials, including the aforementioned Macheteros, United Freedom Front and Lehder-Rivas proceedings.

We are requesting an additional 36 positions and $1,141,000 for witness security in 1988 to continue to meet the complex and costly needs of protected witnesses and to operate the new assessment center and safesite in the Washington, D.C. area. If the government is to continue to rely on the valued testimony of these witnesses, it must be willing to provide the safe

atmosphere, maximum security and humane services necessary to protect these people both before and after testimony.

Also, we are once again requesting that the Protection of Witnesses program be transferred from the Fees and Expenses of Witnesses appropriation to the Marshals Service appropriation. Protection of witnesses comprises a small portion of the Fees and Expenses of Witnesses and is distinctly different from the rest of the activity funded by that appropriation. About two-thirds of the expenses charged to Fees and Expenses are handled by U.S. Attorneys and involve obtaining fact and expert testimony in non-threatening situations. The remaining one-third of the funds are used by the Marshals Service to ensure endangered witnesses are protected and remain available to testify in major criminal cases. Witness protection costs, such as subsistence and travel for witness/family visits, and safesite construction, are directly related to the Marshals Service's Witness Security Program.

Placing this program in the Marshals Service appropriation corrects the historical anamoly of having two separate funds provide for like functions, and improves overall program management by having all activities associated with the safeguarding of endangered witnesses handled in a single appropriation. It makes sense, both programatically and administratively, to include the Protection of Witnesses program in the Marshals Service appropriation.

Handling of Federal Prisoners

The demands placed on the Marshals Service for timely and efficient prisoner production continue to grow. We now receive and process over 90,000 prisoners annually, with each prisoner being produced for court or similar proceedings an average of three or four times.

We also expect to conduct 180,000 prisoner movements in 1988, almost 100,000 of which will be via the National Prisoner Transportation System, NPTS. This represents a one-third increase in NPTS moves in just two years.

Considering the safety afforded the public, our personnel and the prisoners themselves, as well as comparative costs, NPTS is the best way to move prisoners long distances and produce them within court-ordered deadlines. The cost of an average Marshals Service airlift is $112 per prisoner, more than six times less expensive than commercial air trips.

NPTS allows us to realize safety and economies of scale not obtainable on commercial airflights. On NPTS flights we can transport 90 prisoners with seven deputies; on a commercial trip a single prisoner requires two deputies.

As more and more major drug and organized crime figures are apprehended, greater reliance must be placed on NPTS for secure and prompt prisoner movement. To ensure continued efficiencies in ticketing and scheduling, to perform aircraft maintenance and training, and to deploy a second large aircraft to meet the growing transportation needs, for 1988 the Marshals Service requests an additional 10 positions and $4,047,000.

In addition, the relocation of the District of Columbia U.S. Attorney and grand jury facilities and service needed in support of the District of Columbia Superior Court present us with unique requirements. Another eight positions and $1,106,000 are requested to ensure proper handling of prisoners to and from Judiciary Center and D.C. District and Superior Courts; to construct a cellblock for grand jury detainees at the Judiciary Center; and to relocate Marshals Service personnel and equipment from the District Courthouse to D.C. Superior Court.

Fugitive Investigations

The Marshals Service places special emphasis on the investigation and apprehension of those fugitives with histories of violence, organized crime and narcotics activity. Last year, the Service cleared nearly 56,000 warrants and arrested over 14,000 felons, more than 20 percent of whom were wanted for drug-related offenses. These arrests were made as a result of our own criminal investigations and on behalf of federal agencies lacking arrest power.

The Fugitive Investigative Strike Team concept, FIST, once again produced significant results. The 1986 FIST operation in the southwest United States and Mexico captured over 3,500 fugitive felons at a cost of only $495 per arrest. And mini-FIST operations in various cities yielded another 5,000 felons. Since this program began, almost 20,000 felons have been apprehended. By any measure, programmatic or economic, FIST is the safest, most cost-effective method yet devised to apprehend large numbers of fugitives.

Furthermore, our "15 Most Wanted" program is one of the most visible ways to maintain public awareness of the most dangerous fugitives and concentrate our investigative resources. In 1986, 10 individuals on the top 15 were apprehended, including bankrobbers/kidnappers William Dougherty and Terry Connor, and Eugene Gesuale, a member of the Genovese crime family responsible for operating a multi-million dollar narcotics operation. Since the Top 15 program began in 1983, 44 felons on this list have been apprehended.

Finally, as the fugitive problem assumes international proportions, our extradition responsibilities grow increasingly important. By 1988, we expect to conduct 250 international extraditions, almost twice the 1986 total. The people we extradite are among the most dangerous in the world, and include Latin American drug dealers such as Jose Antonio Cabrera-Sarmiento and Severo Escobar.

Requisite security, travel precautions and coordination with other federal agencies and foreign governments make this activity both dangerous and costly. We are requesting another $300,000 in 1988 to ensure adequate resources are available to meet both the additional extraditions and the rising costs and security precautions required for this function. For the War on Drugs to be successful, people like Sarmiento and Escobar must be extradited promptly and safely.

Court Orders

Marshals Service responsibility for executing court orders remains constant. Through 1988, we project to serve 300,000

pieces of process annually, about two-thirds in person. Over 200,000 pieces are served on behalf of other government agencies; much of it relates to debt collection matters. The remaining 30 percent is served on behalf of paupers and in response to court orders.

Section 39 of Public Law 99-646 allows the Marshals Service to collect fees related to the service of non-pauperous civil process, admiralty seizures and similar functions and to credit these fees to our Salaries and Expenses appropriation to offset costs incurred in providing these services. The Department's current legislative proposal seeks to expand this authority by allowing us to charge fees covering the full cost of serving private process.

Presently, we collect $3 for every piece of private process. However, the true cost is $18-$20, the difference being subsidized by the Nation's taxpayers through the Marshals Service appropriation. We propose charging the full cost for such process and using the proceeds to offset our expenses for providing this service. This is one way we can continue to meet demand while not overburdening our appropriation.

Organized Crime Drug Enforcement

The Marshals Service also plays an important role in support of Organized Crime Drug Enforcement Task Forces initiatives. In addition to providing witness protection, prisoner transportation and court security, Marshals Service personnel actively participate in drug, financial and other Task Force

investigations. Our commitment to Task Force efforts is reflected throughout our program areas, and will continue to grow as the government's efforts in this area intensify.

Management and Support Services

As our operational responsibilities increase, it becomes vitally important that proper management and support services be provided to augment this activity. In the past few years, we have done much to improve the quality of the administrative service and systems available to support our program mission.

For example, the law enforcement training provided at the Marshals Service Training Academy ranks among the best in the world. Overall, nearly 2,000 Marshals Service and other law enforcement personnel were trained at the Academy last year, including over 400 candidates who successfully completed basic deputy training.

We are also becoming a recognized leader in survival and anti-terrorist training at our Special Operations Group Training Center in Camp Beauregard, Louisiana. At the request of the Department of State, we have trained groups such as the Federal Judicial Police of Mexico, the Costa Rican Rural Guard, and similar organizations on a reimbursable basis. This training not only produces tangible benefits for foreign law enforcement, it improves cooperation and goodwill.

Last year we successfully implemented a wide range of administrative improvements including enhancing recruitment and application techniques, establishing requirements for EEO

training, and handling increased demands for transportation, space and materials management. Progress was also made in improving ADP and information systems for warrants, prisoner management, witness security and accounting.

However, administrative support has not kept pace with operational demand. Program increases generated from the Comprehensive Crime Control Act and the most recent anti-drug initiatives have outstripped our ability to support them. In a law enforcement agency that must respond to operational demands, management improvements, equipment purchases and the like must necessarily come after the provision of emergency services. But, we have been unable to keep pace with program needs to the point that our internal control reviews demonstrate deficiencies exist in areas such as ADP, information systems and building security.

To begin to redress this situation, in 1988 we are requesting 10 positions and $3,481,000 for badly needed management improvements. This includes four positions and $1,341,000 for ADP enhancements for threat analysis, prisoner transportation and district automation. Right now, less than one-third of the districts are fully automated. Full automation is necessary if we are to address the ever-increasing demands for more and better information in response to program needs.

Another six positions and $600,000 are requested for enhanced management and administrative support. This includes the employee development, personnel and administrative services necessary to support the Service's growing operational mission.

Finally, $1,540,000 is needed for cellblock and prisoner handling area renovations. Upwards of 20 percent of our cellblocks are in urgent need of renovation. This will provide funding for five of the most critical projects.

Support of U.S. Prisoners

Comprehensive Crime Control Act initiatives such as Bail Reform have swollen our prisoner population to the point where we now house nearly 8,000 prisoners a day, 30 percent more than we did two years ago. Two-thirds of these prisoners are in contract facilities, the average daily rates for which have almost tripled in the last decade. By 1988, we expect to use 1.7 million contract jail days, 20 percent more than in 1986.

Given these circumstances, it is not surprising we needed two supplementals in 1986 and have another pending in 1987 to meet our prisoner needs. However, statistics alone do not adequately portray the problem. They don't fully show how a court order in Puerto Rico results in housing up to 100 prisoners as far away as Miami and New York; how prisoners are sent 300 miles from Oregon to Boise, Idaho, for lack of closer jail space, or the results of sending prisoners from Rhode Island and Massachusetts to New Hampshire and elsewhere because of overcrowding. The drain on our resources, both personnel and funding, are enormous. To meet our immediate needs for prisoner support, we are requesting $71,914,000 in 1988 for care of U.S. prisoners, $7,284,000 above the 1987 appropriation anticipated. This increase is necessary to meet the over 108,000 day increase

in contract jail days and the almost $2 increase in average jail day rate anticipated for next year, from $37 to $39.

Another $5,000,000 is requested for the Cooperative Agreement Program, CAP, for two major agreements to provide an additional 250 guaranteed bedspaces for up to 15 years. This CAP increase will allow us to obtain detention space in critical shortage areas.

As the length of stay and number of prisoners continues to grow, both federal and local facilities are increasingly unable to meet these demands. Clearly, a comprehensive solution is required. Towards this end, we are working with the Bureau of Prisons, Immigration and Naturalization Service, other Department of Justice agencies, and state and local correctional experts to develop long-term recommendations about the care and housing of federal prisoners.

Seized Assets Program

In order to have any effective leverage against vast criminal enterprises, you must stop their illegal profits and turn them to positive advantage. The seized assets program provides just such a vehicle.

The Comprehensive Crime Control Act of 1984 supplied the basic authority to seize illegal assets. Moreover, recent amendments included in the Anti-Drug Abuse Act of 1986 significantly expand this authority by allowing law enforcement agencies to use these profits to fight crime and drug abuse. Now the Marshals Service and other Department of Justice

agencies can use these proceeds to equip vehicles and aircraft for drug law enforcement purposes.

These funds are also being used to improve assets management systems, which directly contributes to enhanced property value and increased return on sale. And, it does much to eliminate any management weaknesses previously identified with assets management.

Thus, we are able to achieve maximum return on the criminal's investment, deprive him of his source of income, and use his profit, all at no real monetary expense to the government. To maintain this progress requires we continue to improve our ability to manage and dispose of these assets in a business-like manner.

Real property, which accounts for 40 percent of the property seized, presents the Service with its greatest challenge in the management of assets. We have made significant accomplishments in this area, and we continue to learn.

Recent success stories are encouraging. The Shelburne Glebe estate in Loudoun County, Virginia, worth an estimated two million dollars, was targetted in a major drug investigation by the mid-Atlanta Organized Crime Drug Enforcement Task Force. This historically significant property was seized, managed, and eventually sold by the Marshals Service for more than four million dollars, twice the appraised value.

In late 1986, the Marshals Service also moved to get out of the foundry business. Since its seizure in November 1985, the United States Marshal for Eastern Wisconsin oversaw the

continued operation of the Accurate Brass and Aluminum Foundry, Inc. We kept it running, met the payroll and actually turned a profit. Now that the owner has been convicted, we hope soon to close the sale of this foundry, and expect a net return of $1,000,000.

In January, we left the flower business when the business known as "Pardon My Garden", on Cape Cod, Massachusetts, was sold for almost $600,000. The business was operated under the control of the Marshals Service since it was seized in September 1985. As in the case of the Foundry, we were able to maintain the value of the business, keep the employees working, avoid the costly process of shutting-down and wound up selling the business at a profit. Other recent sales of properties in Ft. Lauderdale, Miami, St. Augustine, Palm City and Key West yielded over $7,000,000.

Currently, we are in the process of selling many other properties, including a golf course in Michigan which, while it was under seizure by the Marshals Service, won a prestigious landscaping award. We are also marketing commercial properties in Dallas and Houston formerly known as the Cutter Bill Western Wear Stores, and hope to realize another $5,000,000 from the sale of these two properties.

Seized cash, which accounts for 37 percent of all property seized, also represents an area of concern for the Service. As a result of our efforts in improving the handling of seized and forfeited cash, we saved the United States an estimated $3

million through effective cash management in 1986 alone. These savings are expected to continue to grow.

Another important aspect of this unique program is the ability to share benefits with assisting law enforcement agencies. In 1986, we disbursed over $17 million to assisting State and local law enforcement agencies through the equitable sharing program. We estimate sharing disbursements in 1987 to be $28 million.

As of December 31, 1986, we had nearly 6,000 properties on hand worth over $423 million. This included $149 million in seized cash. By 1988, we expect the total value of seized assets to be in excess of $600 million. In both 1987 and 1988, total income to the fund is estimated to be $140 million.

The establishment of the Assets Forfeiture Fund has truely been a timely benefit to all involved in the war against drugs. By improving our mangement techniques and realizing maximum profit upon sale, we will ensure that the success of this program continues.

Conclusion

In summary, I must emphasize we face a crossroads in the administration of justice. The ultimate disposition of drug and organized crime elements must be through the force of law and the workings of the criminal justice system.

What distinguishes us from other nations is our sense of justice and fairness. If we are to preserve this system of justice, we must have the will to enact measures which protect

society and the firm resolve to enforce them. We at the Marshals Service are committed to this endeavor and, with the resources presented in this request, we are confident we can fulfill our obligation.

This concludes my prepared statement, Mr. Chairman. I shall be pleased to answer any questions the Subcommittee may have.

BIOGRAPHY OF ROBERT J. HAYES

Robert J. Hayes joined the United States Marshals Service in October, 1985, after holding various budget positions with ACTION, the Voice of America and the Department of Housing and Urban Development. Prior to working for the Federal Government, he worked for the City of Syracuse, New York as a research analyst, and later as Deputy Director for Program Evaluation.

Mr. Hayes was born in Brooklyn, on April 3, 1950. He received an A.B. degree from Syracuse University in 1972, and an M.P.A. from Syracuse's Maxwell School of Citizenship in 1973. He is married and has one child.

U.S. MARSHALS SERVICE ACT OF 1985

Mr. DWYER. Thank you, Mr. Morris.

Just prior to the conclusion of your statement you mentioned legislation. Are you planning to reintroduce the Marshals Service Act of 1985?

Mr. MORRIS. We have a revision that we have submitted to the Department of Justice for review, and it is our hope that following that review and clearance through the Office of Management and Budget, that we will introduce a revised version of that legislation in the near future.

Mr. DWYER. What are you trying to accomplish with this Act?

Mr. MORRIS. Well, we will see how it comes through the process. As I mentioned in my conclusion, the role of the United States Marshal was established in 1789, under the initial judicial act. Many of our basic statutes go back to 1789 and it is a hodge-podge of the various laws and the like. We want to clean that up. We want to establish in statute the position and the role of the United States Marshal and the Director, and we want to make a number of improvements in the law.

One area I would tell you, for example, we have historically—I mean historically going back to the days in which Wyatt Earp would call together a posse—hired guards to assist us. Now, with the various changes in personnel procedures and the like. We need to clarify authority to hire guards and other temporary services. It's those kinds of areas that we think need to be clarified and improved on.

Mr. DWYER. There has been, apparently, some reservation expressed by a number of judges over the last few years that the Service, through its fugitive activities and its sting operations, is getting away from their primary role of serving the court and is seeking to become a major law enforcement agency. Would you like to respond to that?

Mr. MORRIS. Well, I think we are a major law enforcement agency. A few judges—and they are a small minority—believe that the function of the Marshal should be as a bailiff in the court, providing various servile kinds of services. That is gradually fading out, but there is some unhappiness with that as a change.

There is also some unhappiness that the Marshals are required to operate under policies and procedures from its headquarters. That has caused, I think, some degree of concern on the part of a minority of the judiciary.

The reality, of course, is that all the functions that we do today are precisely the same functions that we did in 1789. What is going on with the Marshals Service is major changes that are going on in

the Federal criminal justice system itself, forcing major changes upon the Marshals Service.

In the days in which the FBI handled Dyer Act cases, car theft cases, and in the days in which civil proceedings were the primary focus of the Federal court, the Marshals could basically hang around the courthouse and get the water pitchers filled and wait around for a specific law enforcement mission. Those days are gone. The nature of the prisoners, the threats against the judiciary, the growing fugitive problem, the seizure of assets, the need to protect witnesses in organized crime and drug trafficking trials have changed the nature of what the Marshals Service does. But those changes have been directed both by the Congress and by the Attorney General and by the changes in the courts themselves.

JUDICIAL SECURITY

Mr. DWYER. Was judicial security a problem in 1789?

Mr. MORRIS. I think judicial security is probably a greater problem now than it ever has been in our history. But the answer is yes. I know that in many cases when judges rode the circuits through all the various areas, given the attitude of locals about the Federal Government, the Marshal was providing security to the judge who made such moves. Of course, in Pennsylvania, in the Whiskey Rebellion, if we take our history in 1793, that whole Whiskey Rebellion began when the people kidnapped the marshal who was trying to carry out an order of the judge, and George Washington had to call in the troops. So the threats and the anti-Washington feelings go back a long way.

Mr. DWYER. Do judicial security personnel fill the water pitchers, and demand that you test the water? [Laughter.]

Mr. MORRIS. I hope not.

Mr. DWYER. What do you do with—the case of the poisoned candy was interesting—what do you do now, just put out an order or suggest an order that judges not take any candy home?

Mr. MORRIS. Well, he didn't take it home. It was sent to his home. I would encourage all senior Federal officials who may have enemies not to consume packages of candy sent to them from sources they do not know. On the other hand, I told my daughter, when she was five, the same thing. [Laughter.]

thing. [Laughter.]

Mr. DWYER. For Halloween.

Mr. MORRIS. Yes.

Mr. DWYER. Who has the final say over a deputy marshal who is present at courtroom proceedings?

Mr. MORRIS. The judge.

Mr. DWYER. The judge. What percentage of courtroom proceedings occur without the Service security?

Mr. MORRIS. You mean without——

Mr. DWYER. Without a deputy marshal being in the courtroom.

Mr. MORRIS. Let me take a step back. Back in the beginning of the Administration in 1981 and 1982, it was agreed to by then-Attorney General Smith and Chief Justice Burger that a deputy would be present whenever there was a security need for his or her presence, but that there was no automatic requirement that when-

ever the judge was on the bench that there was to be a deputy marshal in the courtroom. We didn't have the resources to do that, nor did it provide really adequate security.

Let me give you an example. At a status hearing, a judge calls the two attorneys in and he is having a status hearing between two lawyers. Or let's take another case. We've had a long-running case on General Motors here, or an antitrust case. Sitting a trained law enforcement officer in the courtroom for the pendency of that trial is not providing security for the judge. The security the judge really needs in this instance is protection at the perimeter; that is, that nobody can enter the courthouse armed and we screen them at the beginning. That is what the court security program is intended to do, so that we can have trained Court Security Officers screen devices at the entrance.

The agreement with the judiciary was that we would not be required to be in court all the time, but that we would manage that Court Security Officer program so that the perimeter of the courthouse itself was secure, and then we would not have to waste a resource by simply having a deputy sit in the courthouse. Instead, he could be doing other jobs, serving processes, seizing assets, protecting witnesses or moving prisoners and the like.

Mr. DWYER. All right. In a particularly sensitive case, where the judge is at high risk, do you provide 24-hour service for that judge?

Mr. MORRIS. Yes. A little later on in the hearing, in the closed session, I would like to talk in more detail about that.

ISSUE OF VENUE

Mr. DWYER. One other question. Who determines the venue? You mentioned a couple of really sensational arrests and they are going to be very sensational trials, from everything I read about in the papers. Who determines the venue?

Mr. MORRIS. The court where the case is originally brought determines the venue—for example, Carlos Lehder, the first and primary case there in the extradition agreement that venue is the Middle District of Florida.

However, the court has the authority to change the venue, and as a matter of fact, I know an issue of some interest to Congressman Early, is this particular trial in Boston of alleged terrorists Levasseur and Manning, a very difficult case. This morning—as a matter of fact I think it has just happened—the judge in that case is going to rule on a change of venue motion and is going to move that case out of the First Circuit, I believe.

But the judge can make that determination unless there has been an extradition related to it which might bind the court.

Mr. DWYER. Well, I know that the judge is the one who makes the determination, but does your Service have some input there?

Mr. MORRIS. Yes, sir.

Mr. DWYER. It would seem to me that some of these trials might be better off in western Montana or somewhere.

Mr. MORRIS. Well, yes.

Mr. DWYER. Than in Miami.

Mr. MORRIS. As a matter of fact, in that particular case—let me measure my words here—the United States opposed the changing

of venue; that is, because of the nature of the case. On the other hand, we spent some time talking to the judge about security issues because in these cases we really have a primary responsibility to the judge and that may or may not be exactly parallel with the interest of the U.S. Attorney, which puts us sometimes in an awkward posture—if that makes any sense to you.

STATE AND LOCAL SHARE OF SEIZED ASSETS

Mr. DWYER. It does. You mentioned you have been able to share some of your profits from the arrests with the State and local authorities. Are they always satisfied with their pro rata share of the gains, or do you have a lot of debate and dialogue going on back and forth?

Mr. MORRIS. Well, nobody is ever satisfied in this. It depends a little bit on the nature of the case. The process, however, I think, is important to note. The initial determination is made by the investigative agency, the FBI or DEA or INS. Then they make a recommendation which is reviewed both in DEA and by the U.S. Attorney. Our role here is fairly modest. We simply write the check.

There are some concerns that the Attorney General is addressing that there have been delays in the processing of some of those sharing requests, particularly at DEA, and it is obvious the problem is that DEA employees thought they came into this job as being DEA agents arresting drug traffickers and they find themselves being grant managers. There are obviously some initial adjustment problems, but I think they will be worked out.

Mr. DWYER. Mr. Smith?

SEIZED ASSETS

Mr. SMITH. Have you gone into seized assets?

Mr. DWYER. Not yet.

Mr. SMITH. Tell us about seized assets. What has happened in the last year? Are there any more problems? How is it working?

Mr. MORRIS. Oh, I think it is working increasingly well. It is an odd job in some ways for a law enforcement agency to be doing, and I think we have learned and we have made some mistakes. We find ourselves dealing with issues that we never thought we would have to deal with.

One particular concern of ours, which I talked about with some degree of specificity recently in Tucson when all the United States Attorneys were meeting with the Attorney General, is our relationship with the U.S. Attorneys. Whereas the initial seizure order is an important step, there is an essential step even before that. That is, we make a strong case that the United States shouldn't be out seizing property of no value. One way to determine whether there is any value is to assess both value and liability. Obviously if you seized a bunch of crack houses in New York and they're all mortgaged to the hilt, they are of no worth. If we seized them, we would not be running a seized-asset program, we would be running a seized-liability program. I don't think that was the intention of Congress in passing the law. So there needs to be some care at the beginning of the program.

A year ago that was a problem. Today that is much less of a problem. We are building new relationships here because when an investigation is going down, usually the Marshal knows about it when the prisoners get brought to him and we book them and begin taking care of it. Now, suddenly we've got to be a part of the investigation at the front end because the seizures occur at the same time the arrests occur. So that is a new set of relationships. I think that is working better.

Another aspect that is perhaps more difficult is what happens after the seizure decision. The United States Attorneys have all kinds of different jobs and responsibilities, and they have a need to go off after they have made a case and handle the new cases. We then come along and say we need to have you now do the second order of the case; that is, we now need to try the property and get it forfeited because, just like General Motors and Ford, I don't like inventories.

We keep trying to get rid of the property as fast as possible—for a lot of reasons: one, although we think we're managing a lot of it well, if we were really good at managing this stuff, we'd probably be out making a lot of money managing condominiums and businesses and the like, rather than the jobs we're doing.

Secondly, we can't put the kind of capital into an ongoing business that is necessary in many cases to keep at it. So the longer we have an operating business, the more difficult it is to maintain its value.

The U.S. Attorney has a number of concerns and may not assign as high a priority to the disposal of the property, the ancillary hearings and the related issues as we do in trying to clear title. For example, we may have a property in seizure and if the fugitive is gone, title insurance companies don't know how to give a clear title transfer in that area. So we need a lot of legal help, and the U.S. attorneys have not always been available in the past to help us with that. As I say, we had quite a lengthy discussion of that, and I think it will, like the earlier problem, be resolved.

PROTECTING LEGITIMATE CLAIMS TO SEIZED PROPERTY

Mr. SMITH. How do you get around this problem? Let's take a simpler case now, of a house, for example, and the question inevitably arises as to whether the owner really knew it was being used for illegal purposes. How do you protect the rights of or do what's right with the owner in that case without endangering the raid?

Mr. MORRIS. Well, that is a difficult issue. That is why the preseizure part of this planning is so important. That is, right when the case is being developed, we want to be involved in what the various targeted properties are and we want to be able to go out and check the title on that property and we want to have some sense of whether or not that property has some relationship to illegal activity that the suspect has been involved in. We just do that as carefully as you can.

Then there is a series of protections in the process. That is, if we go and seize the property and we have made a mistake, we can pay through remission and mitigation for that mistake out of the fund. We have had to do that in a couple of places.

Or, in some cases, the property has been litigated and the courts have determined for one reason or another that it wasn't a part of the case or, a more serious instance actually that seizure had been pled away in a separate case in another jurisdiction.

It is a very complex area and one that I would not want to fool the committee does not have some difficulties. But I think in general, given the short period of time that we've been involved in the program that we're doing quite well, and in a number of cases I think we've got some really good success stories. And we did return over $50 million to the Treasury last year.

JUDICIAL SECURITY

Mr. DWYER. Mr. Mollohan?

Mr. MOLLOHAN. Thank you, Mr. Chairman.

Director Morris, I want to commend you. You must be doing something right in your property seizure and management program. We have had several foundries in my district in West Virginia go bankrupt during the period of time that you are representing; you are successfully running this one.

Mr. SMITH. You couldn't compete with them? [Laughter.]

Mr. MOLLOHAN. Yes, I was going to follow up on that a little bit. [Laughter.]

But that's not an easy period in which to be successful running a foundry.

Director Morris, during your discussion on the difficulties of maintaining judicial security, you mentioned that Carlos Lehder has threatened to murder Federal judges if ever brought to trial in the United States. Are those threats directed towards the judge who would be presiding over this trial, or directed at random judges throughout the country?

Mr. MORRIS. No. They are very general, and when we go into closed session, I would like to discuss that in detail.

REFUSAL TO ENTER WITNESS PROTECTION PROGRAM

Mr. MOLLOHAN. Okay. I will back off of that for the moment.

Why did Barry Seals refuse protection?

Mr. MORRIS. My understanding was that he did not want to follow the normal requirements of protection and felt reasonably secure in Baton Rouge. It was offered to him. We never got to the phase of actually sitting down and going through the memorandum of understanding process with him, but protection was offered both by the investigating agency, DEA, and the U.S. Attorney.

Mr. MOLLOHAN. Would that be a subject that would better be explored after we go off the record?

Mr. MORRIS. We can certainly try to do that in general terms. I don't know the detailed specifics on Mr. Seals's refusal, however.

DRUG-RELATED ARRESTS

Mr. MOLLOHAN. You mentioned that 20 percent of the felons arrested last year were wanted for drug-related charges. Would you expect that number to increase in the next few years, and if so, at what expense to investigations of other types of crimes?

Mr. MORRIS. Well, yes, I would expect it to increase. As one sees in the Federal prison system, the number of individuals serving time for drug offenses has increased dramatically over the last three or four years. I think the order of 35 percent.

Mr. ROPER. Up from 27 percent to 37.

Mr. MORRIS. That is fairly significant. Well, when those people complete their sentence, if they violate parole or probation or something, they become fugitives, or they may escape. Then in many cases at the front end of the system, there is bond jumping and the like. So I think that, given the thrust of the administration to deal with drug trafficking, drug fugitives will grow significantly. Currently, of the 20,000 Federal fugitives we are responsible for pursuing, we have evidence there are about 8,000 who were originally arrested for drug related offenses. That is really 40% of our caseload. I think that will continue to climb.

Mr. MOLLOHAN. Does that increase in drug-related investigations detract from your investigations in other areas?

Mr. MORRIS. Well, we believe that drug fugitives ought to be targeted more effectively, and we have had some discussions with both DEA and the FBI and the Department on doing that. We are probably going to concentrate more attention on that and less on the fugitive investigative strike team initiative, the sting kind of things we did in past years, because of the growing drug problem.

ADP INITIATIVE

Mr. MOLLOHAN. You asked for additional resources for your automated data processing requirements, and you indicated that you needed support in the IBM personal type computers and that you have over 300 different offices with some of them having this capacity and some of them not.

As you explore equipment and software programs to meet that need, do you lay down design criteria requirements or do you invite them to meet performance requirements with their own suggestions? Do you understand the distinction I am trying to draw there?

Mr. MORRIS. Yes, I do. I am not sure I understand as well as I perhaps should, the complexities of the procurement process. But we tend to set down our own design criteria and our needs down and we will let people compete against that. We are not, as I mentioned, talking about anything here from a computer standpoint that is terribly sophisticated.

What we are doing is trying to keep track of our basic activities. I make a joke, that until quite recently in some of our districts we kept track of prisoners on a chalkboard and kept track of process and payments in a ledger, not dissimilar, probably, from what the first Marshals did in 1789. So we are looking here at basically using the small computers—because of the incredible capacity that a lot of the PCs have to do a lot of things for us. But I think that we are basically laying out our design criteria and letting people compete against it. I used the IBM PC only as an example because I think we've got a series of different vendors that have indicated an interest in competing for this work.

Mr. MOLLOHAN. Do you find that laying down the design criteria tends to limit the number and variety of providers that are able to participate in the bidding process?

Mr. MORRIS. I don't think I am informed enough to answer that at this time, but let me try to have my people who know more about this than I do, provide a fuller and more accurate explanation for the record.

Mr. MOLLOHAN. If you would, I would appreciate it. Thank you.

[The information follows:]

PROCUREMENT OF ADP EQUIPMENT

In the Service's procurements of ADP equipment for our field offices, for both single user microcomputers and multi-user super microcomputer, the Service sets technical requirements based on the processing to be performed by the system. For single user micros, we have set our requirements as IBM PC-At compatible systems. There will be a procurement for this type of equipment in the near future. The number of bidders is expected to be quite large (a very open competition). In regard to multi-user super micros, the Service has set processing requirements and also requires that the equipment support the Unix operating system and the Unify data base management software. Unix and Unify are required because that is the environment under which our prisoner and accounting systems were developed. Any other environment would require a major program conversion effort. Nonetheless, these restrictions still allow for a large number of bidders to compete. We believe that a very full and open competition is possible and will occur as the Service goes forward with its procurement actions in this area.

ASSETS FORFEITURE

Mr. MOLLOHAN. Have you ever considered— following up on the chairman's line of questioning a little bit—have you ever considered establishing some sort of victims compensation fund with the proceeds of your seized assets?

Mr. MORRIS. There is a Victims Compensation Fund that comes out of criminal fees administered by the Department of Justice. There have been a number of inquiries about how to use what has been rumored to be hundreds of millions of dollars in the——

Mr. MOLLOHAN. And you wish it were true?

Mr. MORRIS. And I wish it were true. [Laughter.]

My own suggestion here, which has no endorsement beyond the person sitting at this table, I might add, is that I would like to see some of those resources go into the jail problem, because I have a very serious jail problem. But I am one of a long list of people who have ideas about how to spend this money.

Mr. MOLLOHAN. How much money is involved again? $50 million, was it?

Mr. MORRIS. Well, we returned $50 million to the Treasury last year. We are looking at receipts this year on the order of about $140 million.

Mr. MOLLOHAN. Wow. That's a tripling. Do you expect that to be a trend into the future and multiplying?

Mr. MORRIS. Well, at some point in time we expect that—I think when I was before the committee last year, I told it that I thought by the end of the fiscal year we're talking about that we would be approaching a half a billion dollars, and we are. And we are looking at about $600 million in terms of the value of assets.

I think as we get better at targeting them and as we use some of the funds more creatively, I think that we could be—I don't think I

will reach the billion-dollar phase any time soon, but I don't think it's unrealistic to think that we will have three-quarters of a billion dollars.

[CLERK'S NOTE.—The following information was submitted for the record subsequent to the hearing:]

ASSETS FORFEITURE FUND

Income to the Fund in 1986 totalled approximately $93 million. After expenses and other authorized payments, a balance of approximately $55 million remained. Of that, $50 million was transferred to the Treasury, and $5 million remained in the Fund.

In 1987, we anticipated income of $140 million, approximately 50% higher than 1986 income.

Income is derived from forfeited assets. Thus the value of seized property in our custody allows for some general idea of what potential income to the Fund will be in the future. It is not unrealistic to think that we will have an inventory worth three-quarters of a billion dollars, but since it is unlikely that the entire inventory will ultimately be forfeited, and because other factors will reduce the value of the inventory, income to the Fund will be considerably less.

OPERATION AND USE OF SEIZED ASSETS

Mr. MOLLOHAN. What kind of statutory or regulatory requirements do you operate under as you administer and dispose of this fund?

Mr. MORRIS. Well, this is relevant to my discussion Congressman Dwyer, at the beginning. One of the reasons that we need some changes in our legislation is because we are probably not following to the letter all the various procurement rules and requirements when we run a business, and we are not quite sure if we're going to need some exemptions and changes and adjustments. For example, in the area of getting somebody to do title searches, we obviously can't go out and say we're going to seize the following properties. Maybe we need somebody to come in and do title searches. So we need to have some of the same kinds of protections the Congress has given us in the Witness Protection Program. We will probably need to parallel that a little bit.

Obviously, we're still inside the law, but this is an area where there are so many different rules, regulations, and laws that impinge. For example, suddenly we are running a florist shop and putting money into expansion or hiring people or something—it is the United States taking this responsibility—and I am not sure it meets the normal standards of a Government agency doing business.

Mr. MOLLOHAN. Well, let me ask it this way. How do you spend the proceeds from your asset seizures? Would there be assets or the operational profits of it?

Mr. MORRIS. Well, we can use the fund to basically secure the property, pay for counsel, pay for enhancements of equipment. Then basically, when we get to a certain process, we pay for hiring somebody who handles the auction, handles the appraisals. All of that we contract out to various people.

Mr. MOLLOHAN. Assuming you have money left over after you spend money administering and operating the properties, what do you do with the profits?

Mr. MORRIS. Well, some of those funds can, under the new laws passed last fall, go to enhancements in ADP. Ninety percent is

seized assets, some to program management resources and some to retrofitting of vehicles from all the various law enforcement agencies.

Mr. MOLLOHAN. So you can spend those proceeds?

Mr. MORRIS. In very limited areas as identified within the statutes. The remainder of the money was returned to the Treasury at the end of the fiscal year except for $5 million which was carried over in the fund. So it was that $50 million that went to the Treasury last year.

Mr. MOLLOHAN. I see. You return monies back to the Treasury.

Mr. MORRIS. Yes.

[CLERK'S NOTE.—The following information was submitted for the record, subsequent to the hearing:]

CHANGE TO ASSETS FORFEITURE FUND

The Anti-Drug Abuse of 1986 amended the legislation which authorizes the Assets Forfeiture Fund. The requirement to transfer amounts in excess of $5 million at the end of each fiscal year was deleted. Thus, the law currently allows the Assets Forfeiture Fund to retain the entire balance.

PROBLEM OF HOUSING FEDERAL PRISONERS

Mr. MOLLOHAN. One more question, Mr. Chairman.

You mentioned a comprehensive solution to the growing problem of housing Federal prisoners. What is the status of that comprehensive solution?

Mr. MORRIS. Well, we have provided to the national drug enforcement coordinating group committee which was established to deal with this a five-year projection of what was happening in the handling of people who are in our custody.

As I mention in my testimony, that has more than doubled since the beginning of the administration. And we rely heavily on local facilities, and local facilities are overcrowded and there really is no give in the system. All the push to deal with drunk drivers and no-bond decisions and all the rest have caused the sheriffs around the United States to have very serious problems. So, when the Feds are in there—and our prisoners tend to be more of a problem in many cases; they know a little bit more about their rights, I guess, and they cause the sheriffs a lot of difficulties—we are the first ones to be thrown out. So, for example, for Portland, Oregon, we're using the jails in Boise, Idaho, and our Rhode Island prisoners were recently thrown out of the jails in New Hampshire. We had already been thrown out of the ones in Rhode Island and now we're using Otisville, New York.

Moving prisoners long distances like that, the security is——

Mr. MOLLOHAN. You're not taking all this personally, are you?

Mr. MORRIS. No. I blame it on the judges. [Laughter.]

BENEFITS OF COOPERATIVE AGREEMENT PROGRAM

But it has caused us a lot of problems, and really CAP, the Cooperative Agreement Program, has been of great help to us. It ended up guaranteeing us several thousand beds. But we really don't know. We have not put in place a plan to determine whether or not we need Federal jails—because we do have some Federal jails now, Metropolitan Correctional Centers, MCC, in New York, Chica-

go, Miami, San Diego soon to be Los Angeles. We should have a plan for smaller facilities and where we're going to have to rely on the locals.

That's going to cost us, because quite honestly, the U.S. Attorney is taking the position before the judge in which the judge realizes that the Marshal, if he were taking a position, would be recommending bond rather than no bond. If you've got no place to put them, a no-bond decision doesn't make a lot of sense. And then you're beginning to see public defenders and defense counsel complaining because their client is 300 miles away.

Mr. MOLLOHAN. Yes. Does the CAP program, which I am not thoroughly familiar with, involve in some part sharing construction costs with either State and local Government and therefore guaranteeing the Federal——

Mr. MORRIS. That's precisely what it is. It's basically a lease arrangement in which we, by putting some money up front during a construction project, get a guaranteed lease for a specified number of beds. Now, we continue to pay the daily rate, which averages about $37 a day but can go as high as $100 or as low as $15, but we then have a priority use of that facility.

Mr. MOLLOHAN. Is that for renovation and new construction both?

Mr. MORRIS. Right. Yes.

Mr. MOLLOHAN. Is that a program that experience would suggest has been successful and one that you look to expand in order to meet this growing need?

Mr. MORRIS. It has been very successful, and we have spent, I think, about $50 million over the last four years. We have guarantees for nearly 3,000 beds. That is a significantly cheaper option than prison construction. The problem is that——

Mr. MOLLOHAN. You mean cheaper than prison construction by the Federal Government?

Mr. MORRIS. Right. Yes. The problem is that we saturated the good buys in the beginning. To give $300,000 and get 25 beds for 20 years; those kinds of deals aren't there anymore. Now we find ourselves having money given back to us. That's what's happening in San Francisco. We had an arrangement there, gave them over a million and a half dollars; they're giving us the money back because they're throwing the Federal prisoners out effective April 1.

Mr. MOLLOHAN. You mean because they need the space?

Mr. MORRIS. Yes.

Mr. MOLLOHAN. Just one more question, Mr. Chairman.

Were you suggesting, or did I hear part of your suggestion for spending this asset money might be in the area of additional construction of confinement facilities?

Mr. MORRIS. Well, I prefaced that by saying that that was the view of the person sitting at this table.

Mr. MOLLOHAN. Okay.

Mr. MORRIS. It's not shared necessarily by others.

Mr. MOLLOHAN. You think that suggestion merits exploring.

Mr. MORRIS. Yes.

Mr. MOLLOHAN. Thank you, Mr. Chairman.

OPERATION OF SEIZED BUSINESSES

Mr. DWYER. Returning to the asset seizure for just a moment, you speak in your statement about some businesses that made a profit. Have you ever seized a business that didn't make a profit?

Mr. MORRIS. Oh, yes.

Mr. DWYER. What happens then?

Mr. MORRIS. Well, you end up taking a loss and moving on. What has happened in some cases is that we have seized property and we found out that the mortgage holders had 95 percent and the property had deteriorated so much that we actually ended up putting more money in the property than it was worth.

Mr. DWYER. What happens with seized property if you seize a particular type of property and there is no conviction, for whatever reasons? Do you return the property?

Mr. MORRIS. The property is returned.

Mr. DWYER. What has your exposure been on returned property?

Mr. MORRIS. It has happened only a few times. But probably the largest example of it was a major horse ranch in Denton, Texas, called the DKG Ranch. In this case the person went to jail, was convicted, but the Government couldn't make the case that this ranch should be forfeited. When we seized it it was worth about $7 million, and when we returned it to him it was worth about $11.5 million. So he didn't complain very much about the management of his property.

Mr. DWYER. Where did you get the $4.5 million?

Mr. MORRIS. This was just the appraisal. This was the equity—the appraised value. We did spend money, obviously, providing security and the like, and I think the Government has made a case to try to recoup that.

Mr. DWYER. So he got the fee back. But how about in the case of an ongoing business, have you had the experience in an ongoing business where you returned the business, when you took it it was making a profit, returned it, it was showing a loss?

Mr. MORRIS. I am not aware of any circumstance like that. I think probably it will occur, but in those cases we can pay out of the fund through remission and mitigation any losses that were incurred by the innocent party as determined by the court.

Mr. DWYER. How much money has been paid out of the fund for cases like this?

Mr. MORRIS. Through remission and mitigation? $214,000 last year.

Mr. DWYER. I beg your pardon?

Mr. MORRIS. $214,000 last year.

Mr. DWYER. Thank you. In the course of operating a business and it is making a profit every month, do you get to keep that profit, though?

Mr. MORRIS. Yes.

USE OF AIRCRAFT

Mr. DWYER. You are buying an airplane, and I think the justifications refer to a "large airplane." Can you tell us something about your aviation fleet?

Mr. MORRIS. Sure. We are not actually buying an airplane. We acquired through excess from the Federal Aviation Administration—FAA, a 727 jet about 18 months ago. My good friends at the FAA are telling me that they have another one that may be excessed, and we are standing first in line. That would give us two large-body aircraft acquired through excess from FAA, which would allow us to serve 33 cities on a regular basis and move all the prisoners around the United States that need to be moved around the United States.

Right now, given the nature of using a single airplane, whenever it's down, it's down, and all these prisoners tend to build up in all these holding areas. In the past they were moved mainly by bus. We still have long bus routes, from Seattle to Sacramento, for example, we move prisoners on a bus. What we want to do with the extra aircraft is service the Northeast, Northwest, and the like.

We have some smaller forfeited aircraft that serve shorter distances. We have one stationed in Atlanta and several in Oklahoma City, and we hope to get one up here in the Northeast that will help move some of the prisoners out of the Boston-Maine area down into the Federal Prison System.

What is being moved in this prisoner transportation system—and we operate this jointly with the Bureau of Prisons—are prisoners who have now been designated to institutions, prisoners who are being moved out for other trials, and the like, plus prisoners who may be arrested in Los Angeles and tried in Miami. We run the aircraft at about 80 percent of capacity. If Eastern Airlines had operated at 80 percent of capacity, it wouldn't be owned by Continental.

Mr. DWYER. What do you have to pay FAA for the plane?

Mr. MORRIS. Nothing.

Mr. DWYER. Nothing? How does the FAA—I don't expect you to have the answer, but the question in my mind is how do they dispose of that asset?

Mr. MORRIS. When an aircraft or property is excessed, before it is sold, it basically goes through a GSA process, and any other Federal agency that needs it——

Mr. DWYER. The same as a piece of land or other asset?

Mr. MORRIS. That's right.

Mr. DWYER. All right.

Well, thank you, sir. We have some other questions that we will give you and you supply the answers for the record.

Mr. MORRIS. I will do that.

[The questions and the answers thereto follow:]

QUESTIONS FROM MR. DWYER

U.S. Marshals Service

Management and Administration

Question:

Concerns have been expressed about the rising demands on the Marshals Service. Has the Department developed long-term goals and objectives for the Service to use in managing its workload? What plans has the Department formulated for accomplishing its long-term goals for the Marshals Service?

Answer:

In recognition of the central role which the Marshals Service plays in the criminal justice process, the Department has proposed legislation which would elevate the Service to bureau status. This would enable the Marshals Service to function as a full partner while working with other members of the criminal justice system in planning, scheduling, and performing its duties.

As the Comprehensive Crime Control Act, anti-drug legislation and similar mandates increase the workload on all elements of the system, it is essential that the Marshals Service continue to maintain a close working relationship with their clients, i.e., other DOJ agencies, the judiciary and the U.S. Attorneys. This relationship must be based on a mutual exchange of information and a recognition of the specific problems facing each partner. This should result in a comprehensive approach leading to higher levels of cooperation, efficiency and economy.

The increasing demands on the Marshals Service are largely uncontrollable. Once a prisoner is taken into Federal custody, the Marshals Service is required to provide a wide range of services. Obviously, major initiatives on the part of investigating agencies add to the Service's involvement in prisoner handling, witness protection, and assets seizures. The Service must find additional jail cells for unsentenced prisoners in spite of the national shortage of jail space. And, in connection with court proceedings, it must provide protection for the judiciary and all involved in the judicial process. None of these requirements is generated by the Marshals Service, yet it needs to take part in the planning of each step of the process. The Department's proposed legislation would create an atmosphere in which the Marshals Service participation will be most effective.

Question:

On page 35, you present a list of accomplishments and workloads. For the record, please provide a list in the same format, of actual workload to date in 1987 and any revised estimates for total 1987 and 1988 estimates and their impacts on your funding request for 1988.

Answer:

Item	1987 YTD	1987	1988
Public information/congressional responses	4,125	9,900	10,120
FOIA/Privacy Act responses	380	775	875
Administrative tort claims and legal proceedings against USMS processed.	200	375	400
Misconduct allegations investigated by headquarters	73	150*	165
District and program audits/management reviews completed	14	38	38
Preliminary background investigations conducted	188	300	300
Limited background investigations conducted	67	100	150
Background investigations conducted	117	250	275
Personnel actions processed	10,000	25,000	30,000
Employment applications reviewed	8,000	20,000	25,000
EEO complaints filed	11	20	20
Property and procurement actions completed	4,900	10,100*	10,100*
Printing actions	211	800*	800*
Major cellblock and office renovations completed	15	25	25
Major cellblock and office renovations in progress	119	125	130
Space actions processed	50	130	140
Architectural/Engineering reviews	221	590	595

*The minor revision of estimates for misconduct investigations in 1987, and property and procurement actions and printing actions in 1987 and 1988 do not change our funding request for 1988. The relatively modest increases proposed in the areas of employee development, personnel management and general administrative services are needed to support properly the Marshal Services' growing operational responsibilities.

Fugitive Felons

Question:

The number of unexecuted arrest warrants at year end in 1988 is expected to be 37 percent more than at the end of 1986. Why?

Answer:

The Marshals Service arrest or clear rate remains relatively constant and is consistent with the level of resources currently available. However, the number of unexecuted warrants continues to rise faster than the apprehension rate for fugitives. The Marshals Service faces increasing numbers of unexecuted warrants each year.

Question:

How much of the increase in unexecuted warrants involves fugitive felons?

Answer:

The increasing backlog of warrants includes 9,500 felony warrants at the end of 1986 for which the Marshals Service is primarily responsible. The number of warrants represents approximately the same number of fugitive felons, or wanted persons, remaining at large. In 1987, the number of fugitive felons at large will increase to approximately 10,900, and by the end of 1988 will reach 12,900.

Question:

You note that the fugitive strike teams involving Service, State, and local law enforcement officials is the safest, most cost-effective way to apprehend large numbers of fugitives. What percentage of the 20,000 fugitives apprehended through these operations were federal fugitives?

Answer:

The Marshals Service has conducted nine major Fugitive Investigation Strike Team (FIST) operations resulting in 14,770 felony arrests, 1,258 (or 9% of which were based on federal warrants or offenses). The regional FIST operations resulted in 5,000 arrests of which 7% were federal fugitives.

Question:

How much of the operations' costs to date were funded by the Service?

Answer:

The nine major FIST operations cost the Service $11,132,908 or $754 per felony arrest.

Judicial Security

Question:

You use contract guards called Court Security Officers (CSOs) to provide security at checkpoints in court facilities. Why use CSOs? Why not use GSA Federal Protective Service Officers or deputy marshals?

Answer:

From 1978 to 1980 the Department of Justice sought the Office of Management and Budget approval for the establishment of a Judicial Security Officer (JSO) program in the U.S. Marshals Service. The Department proposed to transfer sufficient funds from the

Administrative Office of the U.S. Courts (AOUSC), and positions and employment ceiling from the General Services Administration (GSA) to centralize the management and operation of a judicial security program in the USMS. The Department's proposal would have fulfilled the 1978 recommendation of the Interagency Study Group on Judicial System Security. However, the full-time employment ceiling for 1980 was insufficient to begin a JSO program, requiring the Marshals Service to continue to reimburse GSA for Federal Protection Services (FPS). In 1982, GSA began replacing FPS Officers with private guards. GSA contracted for these private guards who had limited law enforcement experience and could not be supervised directly. This action seriously concerned the U.S. Judiciary. Further, there were insufficient funds to satisfy demands by the judiciary for improved quality and increased quantity of security guards at judicial proceedings. In testimony before the House Appropriations Subcommittee in 1980, the Judicial Branch noted that it was not receiving the level of security it had envisioned.

Therefore, it was proposed that the Marshals Service and the Administrative Office of the U.S. Courts (AOUSC) work to create the CSO program and assume authority for contracting guard services and providing security to judicial personnel and proceedings in judicial facilities. Since then, CSOs have been assigned responsibility for securing the perimeter of court facilities while deputy marshals have provided in-court protection during proceedings involving risk.

Question:

If CSOs cost less, why not use them instead of deputy marshals to provide courtroom security?

Answer:

CSOs do not necessarily cost less; their average salaries are roughly equivalent to those paid to deputy marshals. However, cost is neither the only nor the most important consideration.

The Attorney General's Task Force Report of March 1982 defines the threat level of trials which require the use of Deputy U.S. Marshals. Deputies are the officers of the court who are required by statute to protect and maintain the integrity of the federal judicial system, ensure the personal safety of all federal judicial officers, and maintain an acceptable level of security at all federal judicial facilities. They are highly trained to perform these duties and are both mentally and physically prepared for making and acting on sound judgments in routine and emergency courtroom situations. CSOs are not trained for -- nor do they have statutory authority to handle -- proceedings where the threat level is high.

However, with the endorsement of the Judicial Conference, a Pilot Program using CSOs in courtrooms during low-risk proceedings was tested and deemed successful. As a result, districts are now authorized to assign CSOs to low-risk proceedings when such assignments will not compromise perimeter security.

Question:

You note that judicial security remains the Service's highest priority. As you know, however, many judges believe that too many courtroom proceedings are occurring without the presence of Service security. Do you agree? Please explain.

Answer:

Most decisions to provide security are made jointly between the local marshal and the judge. In 1982, the Attorney General's Task Force Report on Court Security was published indicating the proceedings which require attendance by deputies. The Marshals Service has an excellent track record and enjoys a good relationship with the judiciary. However, limitations on available resources make it difficult to respond in the manner each judge would like, especially in the case of lower-risk proceedings.

Question:

You request a 40-percent increase in positions for judicial security in 1988, from 396 to 556. Considering the increased threat, especially due to the prosecution of violent drug dealers, do you believe the growth will meet the needs of the judiciary?

Answer:

Based on current 1987 workloads, we feel that the increase of Deputy Marshals from 396 to 556 in 1988 would give us the resources needed to handle the increased threat of major violent drug cases, and provide the federal judiciary with the required manpower needed to maintain an acceptable level of security. We will be in a better position to assess this situation later in the year, once a major portion of the 1988 court calendar has been developed.

Question:

Do you plan to request additional positions in 1989?

Answer:

The Marshals Service is in the process of developing workload projections for 1989, and careful attention will again be given to meeting the continuing needs of the judiciary.

Transportation of Federal Prisoners

Question:

You plan to expand the National Prisoner Transportation System to, among other things, increase the transportation services provided to other agencies. What other agencies transport prisoners?

Answer:

In addition to the Marshals Service, the Bureau of Prisons and the Immigration and Naturalization Service are also involved in the movement of federal prisoners. We plan to begin providing limited service to the military early in the summer.

Question:

What services do you now provide to these agencies and what additional services are planned?

Answer:

The National Prisoner Transportation System (NPTS) controls and schedules most movement requirements of the Bureau of Prisons. These services have been made available to the Immigration and Naturalization Service and on occasion NPTS has assisted them by transporting detainees aboard the airlift and on other dedicated modes of transportation.

Combined with the projected increases in prisoner movements (averaging 14 percent per year) and the construction of new federal institutions, expansion of NPTS is necessary to maintain basic services. Operation of a second large aircraft coupled with the establishment of additional small aircraft locations will satisfy this basic need to provide the opportunity to assist INS in meeting some of their transportation needs.

Question:

Are there any strong arguments for combining, or at least coordinating, all prisoner movements in one agency? Is there potential for some dollar savings here?

Answer:

There is a potential for significant savings by centralizing the control and scheduling of all prisoner movements. Using NPTS as an example, in 1979, 274 workyears were expended for the movement of 31,407 prisoners. In 1986 there were 74,824 prisoner movements completed using 119 workyears. If the workyear to prisoner movement ratio of 1979 had remained constant the movement of 74,824 prisoners in 1986 would have required 653 workyears to accomplish. This is only one example of many possibilities for savings when the scheduling of prisoners is controlled by one agency.

Question:

Do you transport State and local prisoners who are being extradited from one jurisdiction to another?

Answer:

Under terms of a Cooperative Prisoner Transportation Agreement the Service is assisting, on a space available basis, with the movement of State and local extradition cases via NPTS.

Question:

Do you believe that many State and local fugitives (as some claim) go unpursued because the States can't or won't pay the extradition cost? If so, would it be feasible, given that your system is much less costly than commercial means, to transport those fugitives on a reimbursable basis back to the State requesting extradition? Would that result in more fugitives being apprehended and would you need additional resources?

Answer:

On a space-available basis, NPTS does extradite State and local prisoners that otherwise would not be moved because of the high transportation costs involved, especially if they are being transported long distances. The Marshals Service is reimbursed for all costs incurred, including transportation and staff time. The average cost ranges from $400 to $500 per prisoner, a fraction of what it would cost commercially. For 1987, we estimate moving some 600 State and local prisoners, which is about the maximum we can achieve given current NPTS capacity.

Question:

What percentage of federal prisoners are allowed to transport themselves and voluntarily surrender at the federal prison in which they are to be incarcerated? How much does the Service save on transportation costs of individuals allowed to surrender voluntarily to the designated federal prison?

Answer:

The USMS Headquarters has not collected this data from our District offices in past years. Starting with 1988, the Service will collect data on the number of individuals who surrender themselves to institutions at government expense.

We can not readily provide any information this fiscal year on the estimated cost to the government if all self-surrenders were transported by the Marshals Service.

Question:

Is there potential for greater use of voluntary surrender? If so, what are the "road blocks"?

Answer:

Many judicial districts are making good use of personal recognizance or pretrial service release of persons awaiting trial, while other districts are very conservative in the use of any release or self-surrender program. There are some indications that the use of pre-trial release and self-surrender could be expanded without the loss (escape) of prisoners.

Question:

You are asking for 10 additional positions and $4,047,000 to support management improvements of the prisoner transportation system. These improvements include deploying a second large aircraft, performing major maintenance on existing aircraft, and introducing more efficient ticketing and scheduling. Would you please provide a breakout of what this $4,047,000 is required for?

Answer:

The following table provide is a breakout of the requested $4,047,000 increase:

Personnel compensation and benefits.....	$451,000
Travel.....	426,000
Transportation of things.....	[illegible]3,000
Space, communications and utilities.....	30,000
Training of pilots, Inspections and maintenance of aircraft.....	1,931,000
Fuel and other supplies for aircraft operation	1,143,000
Small aircraft engines.....	63,000
Total.....	4,047,000

Question:

Was a study conducted to determine the need for an additional large aircraft, the proposed routes, and the associated costs of acquiring and operating such an aircraft?

Answer:

The need for a second large aircraft was based on an on-going assessment of current and future prisoner transportation requirements. The system must be expanded to meet the projected growth in prisoner movements and to avoid an increased reliance on commercial airlines, which is both more costly and less secure. By 1988, we anticipate nearly 100,000 NPTS moves, about one-third above the 1986 level. The cost per prisoner moved via NPTS airlift is $112, more than six times less expensive than commercial flights.

The present operation of one large jet aircraft is simply not capable of meeting the projected increases in prisoner movements. The Marshals Service 727 jet is currently operating at almost 80 percent

capacity, approximately 14 percent above the industry standard for this type aircraft.

Route schedules for a second large aircraft have been proposed and the associated costs of operation have been established based on prior experience in operating the present 727 jet. These funds are included in our 1988 request for NPTS.

Question:

What exactly are the improvements in ticketing and scheduling you are planning to introduce? What are their costs?

Answer:

Improvements in aircraft operations include limiting the ground time of our planes by revising the scheduling of maintenance; enhancing service to our districts and Federal correctional institutions through development and implementation of an improved four-day dedicated air route; maintaining movements by commercial air at less than 2.5 percent of the total prisoner movements; and reducing dependence on the bus routes.

To achieve these efficiencies, a computer system will be developed to automate all aspects of prisoner movements. Currently, these functions are done manually. This is very time consuming because as every request is made, a coordinator must manually arrange the move point-by-point. Not only does this require increasing amounts of time, but it also presents the possibility of human error. The automation of prisoner scheduling permits a more timely and coordinated nation-wide system, and ensures maximum use of available conveyances.

For 1988, $407,000 and one position are requested in the ADP and Telecommunications program to develop this necessary ADP system. Moreover, a small portion of the increase in the Handling of Federal Prisoners program for NPTS will provide for support staff time to operate this system once it is implemented.

Organized Crime Drug Enforcement

Question:

Considering the ever increasing involvement of all federal agencies in drug enforcement, why are you not requesting any increases for your organized crime drug enforcement (OCDE) program?

Answer:

About 39 percent of the Marshals Service workload is drug related. Although funds were not specifically requested in the OCDE program, judicial security, witness protection, extraditions, and prisoner handling activities reflect this drug activity including those cases generated through OCDE Task Force efforts.

Question:

What is the Marshals Service primary role in OCDE?

Answer:

The Marshals Service has an investigator assigned in each of the 13 task force locations to assist in criminal investigations and to coordinate the requirements of the task forces with the Service. In addition, the Service fulfills a very valuable role in ensuring the integrity of the criminal justice system through: 1) the protection of judges and witnesses who have become vulnerable due to the potential for violence during drug trials; 2) the preservation and conversion of millions of dollars worth of assets from the drug trade; and 3) investigations to apprehend persons who flee the jurisdiction of the court by becoming fugitives.

Assets Forfeiture Fund

Question:

What is being done to address the problem of the U.S. Marshals Service not conducting regular audits of its seized asset activities?

Answer:

The Marshals Service does not believe there is a problem in conducting regular audits of its seized asset activities. The Office of Internal Inspections, within the Marshals Service, conducts operational and fiscal audits of the ninety-three district offices on a regular basis based upon an annual audit plan. Incorporated into these routine audits is a review of the U.S. Marshals seized property activities and accompanying records for each federal judicial district. A report of the audit is provided to the district and to Marshals Service management staff for review and follow-up.

Question:

What is being done to establish accountability for seized and forfeited assets within the Department's accounting system?

Answer:

Prior to 1984, the Marshals Service had a manual recordkeeping system to account for seized and forfeited assets. An automated inventory and management information system was implemented in 1984 to improve accountability for seized and forfeited assets by making information about the number and value of forfeited assets available to Marshals Service decisionmakers. In 1987, we plan to award a contract to further enhance this inventory and management information system, mainly in terms of making information more timely and useful to the Marshals Service, the Department of Justice, and other decisionmaking entities.

In 1987, we have also provided for improvements in financial accounting in connection with the automation of district accounting. Transactions involving the Justice Assets Forfeiture Fund--recording income as well as charges against the Fund--will require an identification of the purpose (i.e., by subobject classification code) as well as the case. Thus, we will not only be better able to monitor and audit transactions involving the Assets Forfeiture Fund, but will have more useful and detailed information to manage the program. The detailed transaction-level forfeiture accounting information will be available to both the USMS and the Justice Management Division through the Department's official accounting system.

Question:

You estimate that you will collect $140,000,000 in asset forfeitures in 1987, with expenses associated with the program amounting to $112,000,000. How much will go to State and local law enforcement agencies?

Answer:

The amount to be shared with State and local law enforcement agencies in any fiscal year is proportional to the amount forfeited to the Department of Justice and the level of participation by State and local agencies that led to those forfeitures. During 1986, 18 percent of all income to the Assets Forfeiture Fund was shared with participating State and local law enforcement agencies. For 1987 we are estimating that approximately $28,000,000 in cash will be shared with State and local law enforcement agencies. Additionally, forfeited property--other than cash--is also "shared" with State and local agencies based upon their participation in a seizure. Thus, sharing with State and local law enforcement agencies is beneficial not only in terms of cash, but also in terms of property which would otherwise have been purchased using State and local tax dollars.

Question:

Why do you assume expense will go up in 1988, but not collections?

Answer:

Our assumptions regarding both the income and expenditure projections are surrounded by the uncertainty inherent in the overall asset forfeiture process. We cannot predict the number of assets that will be forfeited in any given timeframe, much less the total number and value of valid liens involved, and the amount of net proceeds that we can expect after disposal of the assets.

Generally, while receipts to the Fund may not increase substantially, the costs associated with the management of those assets do increase. The skills required in managing, and maintaining, the diverse inventory of seized assets which fall under Marshals Service control require more specialized management services in order to achieve the

maximum return for the Government. Further, any delays in the processing of a forfeiture action not only increases management costs but reduces the net return to the Government.

This factor, combined with the changes recently authorized by the Anti-Drug Abuse Act of 1986, account for the increased expenditures from the Fund. Examples of newly authorized asset-specific and program-related expenditures include expenditures for computer equipment and services, training, printing of program-related materials, case-related travel, storage and destruction of controlled substances, and contract services related to the processing of and accounting for asset seizures.

Question:

Does the Department have any proposals on what to do with the ever increasing amount of unobligated balances in the Fund?

Answer:

There have been no final decisions made by the Department for the use of any future unobligated balances in the Fund. Two generally expressed viewpoints are that the first priority of the Fund is to provide funding for new and continuing forfeiture cases, and that the Fund should not be used for any program which would require a source of fixed or continuous income. An immediate and continuing interest on our part will be proper implementation and oversight of the newly-authorized purposes and activities which may be financed by the Fund's revenue. To the extent that there may be funds surplused to the above-stated forfeiture program needs, they should be returned unencumbered to the Treasury.

EXECUTIVE SESSION

Mr. DWYER. At this time we will go into executive session. I would ask that those people who are not cleared to remain in the room please leave.

THURSDAY, MARCH 12, 1987.

COMMUNITY RELATIONS SERVICE

WITNESSES

WALLACE WARFIELD, ACTING DIRECTOR
BERTRAM LEVINE, ASSOCIATE DIRECTOR
H. DALE MEEKS, ASSOCIATE DIRECTOR FOR ADMINISTRATION
RICHARD GUTIERREZ, COORDINATOR, IMMIGRATION AND REFUGEE AFFAIRS
MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

INTRODUCTION

Mr. SMITH. Next we will hear testimony on the fiscal year 1988 request of the Community Relations Service. Mr. Wallace Warfield is the Acting Director of the Community Relations Service.

[The justification material in support of this request will be inserted in the record at this point.]

THE COMMUNITY RELATIONS SERVICE

Approved: William French Smith Date: 2/15/84
William French Smith
Attorney General

Legal Activities

Salaries and expenses, Community Relations Service

Summary Statement

Fiscal Year 1988

The Community Relations Service (CRS) is requesting for 1988, a total of $29,123,000; 118 permanent positions, and 113 workyears. This request represents a net decrease from the 1987 appropriation anticipated of two workyears and $704,000.

CRS' budget contains two budget activities: Prevention and conciliation of community disputes; and, Reception, processing, and care of Cubans and Haitians. These activities include five programs: Technical Assistance; Program Operations; Executive Direction and Control; Administrative Services; . . Reception, Processing and Care of Cubans and Haitians.

Prevention and Conciliation of Community Disputes

This activity is responsible for providing assistance to communities in preventing and resolving conflicts involving racial and ethnic minorities. By bringing disputes to the negotiating table before they are acted out in street violence or in litigation, CRS forestalls the eventuality of more drastic federal intervention in the form of investigation, prosecution or use of marshals or the military to preserve or restore the peace. CRS thus makes an essential contribution to the federal responsibility to fulfill the Constitutional mandate of ensuring the domestic tranquility.

The Technical Assistance program is an integral part of this process. It makes possible improved program performance by enabling the field staff to more efficiently and successfully resolve disputes by providing technical information and the assistance of program specialists and outside experts. A slight decrease is requested in resources for this program which is to be achieved through administrative support decreases.

The Program Operations program consists principally of the Agency's 10-region field staff of conciliators and mediators--the Service's primary mechanism for resolving the many racial and ethnic conflicts which disrupt harmonious relationships and threaten the peace of the community. Problem areas include, but are not limited to, law enforcement, immigration, corrections, educational disputes, employment, housing, community development, Indian rights and economic development programs. CRS' intervention in such disputes as a third-party expert capable of enabling antagonists to work out voluntary solutions helps to avoid the prolongation and escalation of social conflict, racial violence, economic loss, and community estrangement. A decrease in resources is requested amounting to two workyears and $364,000, which are to be achieved through a reduction in the use of other-than-permanent employees and a reduction in administrative support areas; i.e., travel, equipment, other services, etc.

The Executive Direction and Control program embraces those principal areas of activity by which the Director establishes, transmits, and monitors the planning and execution of policies and programs. A slight decrease in administrative support resources is requested.

The Administrative Services program is responsible for supporting all the activities and programs with administrative, budget and personnel services. A slight decrease in resources is requested based on the overall program decrease.

Reception, Processing and Care of Cubans and Haitians

This activity is responsible for the care and processing of Cuban and Haitian entrants as authorized by Title V of the Refugee Education Assistance Act of 1980, Public Law 96-422, and by Executive Order 12341 of January 21, 1982, transferring these functions to the Department of Justice. Through this activity, CRS provides outplacement, resettlement, and medical and mental health care services to Cuban and Haitian entrants paroled by the Immigration and Naturalization Service (INS) from INS detention facilities, the Atlanta Federal Penitentiary, and the Oakdale Federal Detention Center. These services are provided through grants with voluntary and private agencies and through an interagency agreement with the Public Health Service (PHS). These outplacement programs provide the Department of Justice with a safe and cost-effective alternative to prolonged detention of Cubans and Haitians whom the INS determines are not likely to pose a threat to the public.

A new initiative in 1986 will permit a program decrease of $1,795,000, in the mental health program through the consolidation and reduction of in-patient capacity at St. Elizabeth's Hospital. A second initiative would reduce by $46,000 the cost of long-term care for physically and mentally disabled Mariel Cubans who will never be capable of independent living.

Legal Activities

Salaries and expenses, Community Relations Service

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses, Community Relations Service

For necessary expenses of the Community Relations Service, established by title X of the Civil Rights Act of 1964, [$29,637,000], of which	$29,123,000
[$23,266,000] shall remain available until expended to make payments in advance for grants, contracts and reimbursable agreements and other expenses necessary under section 501(c) of the Refugee Education Act of	$21,740,000
1980 (Public Law 96-422; 94 Stat. 1809) for the processing, care, maintenance, security, transportation and reception and placement in the United States of Cuban and Haitian entrants: Provided, That notwithstanding section 501(e)(2)(B) of the Refugee Education Assistance Act of 1980 (Public law 96-422; 94 Stat. 1810), funds may be expended for assistance with respect to Cuban and Haitian entrar as authorized under section 501(c) of such Act.	Assistance

(Reorganization Plan No. 1 of 1966; Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

Explanation of changes:

No substantive changes proposed. However, supplemental appropriation language is requested relating to a computational error in the amount earmarked for reception and placement of Cuban and Haitian entrants. In addition, the Congress should correct the reference to the Refugee Education Act to include the word "Assistance" at the proper point.

Congressional Appropriation Actions

The Congress reduced the activity, "Prevention and Conciliation of Community Disputes" by $809,000 and the activity,"Reception, Processing and Care of Cubans and Haitians" by $1,563,000 from the 1987 request level. The Congressional allowance was derived by using the sequestration level of $28,614,000. Added to this was $541,000 for uncontrollable increases and a program increase of $500,000 for the outplacement and care of Cuban entrants. This was offset in part by $18,000 in Federal Telecommunications System savings.

Supplementals Requested

The supplemental request for $190,000, provides for increased costs associated with the Federal Employees Retirement System of $85,000; increased costs associated with Federal Telecommunications Service (FTS) increases of $41,000; and, $64,000 for the increased pay costs. In addition, the 1987 Appropriation Act provided the Community Relations Service $541,000 of the $590,000 requested for uncontrollable increases. Of this amount, $36,000 was inadvertently allocated for the activity, Prevention and Conciliation of Community Disputes and $505,000 for the activity, Reception, Processing and Care of Cubans and Haitians. The distribution between these two activities appear to be in error since the Prevention and Conciliation of Community Disputes activity had requested $560,000, and the latter activity had only requested $30,000. The 1987 supplemental request corrects the distribution.

This budget activity includes resources for the primary mission of the Community Relations Service. Funds requested for this activity are used to provide assistance to communities in resolving disputes, disagreements and difficulties arising from discriminatory practices based on race, color or national origin which impair the rights of citizens and threaten to disrupt peaceful relations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Technical Assistance	6	6	$395	6	6	$447	6	6	$419	...	...	-$28

Long-Range Goal: To enhance the delivery of expert conflict resolution services to state and local officials and community leaders.

Major Objectives:

To assist administration of justice agencies to overcome problems that cause conflict and confrontation, and to implement policies, procedures, and programs that reduce friction with the local community.

To help school systems to reduce interracial and interethnic conflict manifest in classroom violence, youth gangs, disproportionate discipline and performance and community confrontations, and to reduce the impact of those problems on educational achievement.

To provide conciliation staff with technical resources and expertise to improve the effective achievement of casework objectives.

To maintain a resource center of technical periodicals, articles, and materials pertaining to issues affecting the work of the Community Relations Service.

Base Program Description: This program function is an integral part of the conciliation and mediation process. It improves program performance by providing field staff with essential background and technical information to more efficiently and effectively resolve disputes. Community Relations Service' conciliators and mediators are trained and experienced in the skills of community conflict management. Often their role is that of a catalyst, enabling resources within the community to combine in a new pattern in order to resolve a specific problem. Frequently, however, local resources need bolstering from the outside. Such assistance is provided by and through the Office of Technical Assistance and Support (OTAS).

Various categories of cases are given support by OTAS through staff program specialists, whose role is to: 1) provide expert assistance on-site; 2) identify and arrange for the services of other experts, as needed; 3)update the background and skills of field staff through training and the provision of materials; 4) coordinate the inter-regional transfer of experience and technology; 5) identify and distribute models of programs used successfully in other communities; 6) conduct special research to meet the needs of specific cases; and, 7) develop new program tools to respond to new types of problems. Program specialists also maintain liaison with private sector institutions and public agencies to exchange information, provide technical support, encourage collaborative programs and co-sponsor seminar conferences and other national programs. Such activity often stimulates the use of private sector resources in lieu of Federal programs. Because community conflicts relating to law enforcement and education are the source of the most frequent and complex types of cases, OTAS dedicates two technical assistance positions exclusively to these areas.

Accomplishments and Workload: Accomplishments of the Technical Assistance Program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Case consulations	576	604	604	554
Items of technical information provided	2,534	2,567	2,567	2,067
Technical publications produced	2	2	2	2
Training models distributed	34	36	36	36
Status Reports on case activity	5	4	4	4

In 1986, OTAS provided 2,567 items of technical materials or service packages to CRS staff in education, the administration of justice, and other agency program areas. It also conducted 604 consultations with regional staff on various cases.

A major area of CRS involvement continued to be conflicts arising from police use of deadly or excessive force. OTAS has been active in coordinating national resources that address the issue, and providing police departments and training academies with strategies and program models for dealing with excessive force. The Office has focused on stimulating and disseminating information about innovative and cooperative efforts between police agencies and coalitions of minority groups. Finally, OTAS has been instrumental in sensitizing local police departments to the issues of civil liability.

Program Changes: A decrease of $28,000 is requested in 1988 for the Technical Assistance program. This decrease will be achieved through a reduction in administrative support areas.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Program Operations.....	63	67	$5,145	63	67	$5,799	63	65	$5,435	...	-2	-$364

Long-Range Goal: To assist in reducing racial community conflict and violence through such voluntary means as: conciliating or mediating specific conflicts; preventing or reducing violence; establishing mechanisms for better communication and dispute resolution; providing an alternative to litigation; and helping communities to peacefully address underlying problems.

Major Objectives:

To help resolve approximately 1,100 racial-ethnic community disputes and conflicts.

To identify and provide special assistance to vulnerable communities to reduce the risk of racial violence.

Base Program Description: Community confrontations and disruptions related to disputes based on race, color or national origin occur throughout the United States, in many areas of human endeavor, and involve all of the larger and many of the smaller minority populations. Efforts to redress inequities, and resistance to such efforts, create many thousands of conflicts which disrupt harmonious relationships and threaten the peace of the community. Problem areas include law enforcement, immigration, corrections, education, employment, housing, community development, Indian rights, and economic development, among others. In 1986, increases were

evidenced in interracial, physical violence against and between minority groups. CRS intervention in such disputes as a third-party expert capable of enabling antagonists to work out voluntary solutions helps to avoid the prolongation and escalation of social conflict, racial violence, economic loss and community estrangement.

Community conflict related to racial inequities in education is prevalent throughout the nation. Problems proliferate as more and more school districts seek to educate an increasing number of minority students in a school environment inadequately prepared for change. There is a growing schism along racial lines on such issues as school closings, bilingual education, unequal discipline standards, resegregation of once-desegregated schools, displacement of minority school teachers, and the choice of new programs which seek educational excellence in ways that serve the needs of minorities as well as whites. With minority school populations growing steadily in all areas of the country, conflicts over these issues will present a growing demand for CRS intervention in 1988.

Demographic changes also contribute to the volatility of minority relations. Seven hundred thousand Indochinese refugees who have settled in American communities in recent years have begun to visibly assert their claims to social and economic equity. Other Asian-American groups (such as the Chinese and Japanese) also report increasing incidents and tension levels with other racial groups. The Hispanic population, native and immigrant, as well as undocumented persons, is growing rapidly and moving to non-traditional areas of settlement; and no effective solution has yet been found to steady the influx of undocumented people. Recent changes in immigration law--particularly provisions for legalization of undocumented persons, guest workers and tighter border patrols--are likely, at the outset, to be accompanied by community tension along racial and ethnic lines.

Accomplishments and Workload: Accomplishments of the Program Operations program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Alerts received	2,060	2,056	2,200	2,200
Assessments processed	1,528	1,487	1,500	1,500
Conciliation cases conducted	1,069	1,031	1,100	1,100
Conciliation cases closed	1,069	766	800	800
Mediation cases conducted	28	30	36	36
Mediation cases closed	16	22	24	24
Community Tension Appraisals conducted	60	60	125	150

While the CRS mandate requires the agency to resolve conflicts in individual communities, the net effect is to help assure the domestic tranquility of the entire nation. There were approximately 766 conflicts resolved in 1986. If unresolved, these conflicts would have either: a) escalated into violence; b) required stringent and costly measures of law enforcement; c) lead to

costly and embittering litigation; or d) added to the smoldering pile of unresolved grievances which already burden the minority consciousness. The CRS annual assessment of racial tension gives evidence that the resolution of conflict by CRS in a manner which reduces the minority perception of inequity and which demonstrates the responsiveness of established institutions, significantly reduces the risk of violent confrontations.

Local law enforcement agencies continue to seek CRS' assistance in improving police-community relations as more jurisdictions become sensitive to their vulnerability to heavy costs of liability suits alleging police misconduct. In most instances, such requests have led to revised programs, policies or training with respect to police use of force.

CRS efforts throughout the country have assisted state and local law enforcement agencies to develop a non-federal response to minimize the destructive effects of hate group activity.

For more than a dozen years, CRS has provided special assistance to police agencies and community groups in an effort to reduce the loss of life by police officers and civilians which too frequently accompanies police encounters. A recent nationwide study of 57 cities has shown a steady and startling decline in the number of police officers killed during that period as well as significant reductions in the number of minority individuals killed by police... . CRS mediation in 1986 of a federal court case on bilingual education in Center, Colorado, building on earlier successes in Lynn and Worcester, Massachusetts, is being hailed by some as a landmark settlement which may serve as an example for the resolution of similar thorny conflicts throughout the country... . A CRS-sponsored consultation involving the police agencies of 15 Gulf Coast communities and leadership of the Southeast Asian population groups which have settled there, resulted in new cooperative approaches to overcome burgeoning community relations problems. CRS will assist and study these new programs in order to extract models for use in other parts of the country.

Program Changes: A decrease of two workyears and $364,000 is requested in 1988 for the Program Operations program. This decrease will be achieved through a reduction in the use of other-than-permanent employees and a reduction in administrative support areas; i.e., travel, equipment, other services, etc.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control....	13	13	$1,124	13	13	$1,262	13	13	$1,186	...	...	-$76

Long-Range Goal: To implement those principal areas of activity by which the Director establishes, transmits and monitors the planning and execution of policy and program.

Major Objectives:

To develop and implement agency policy and provide management and supervision that assures maximum agency service delivery.

To conduct and coordinate pertinent communications with the public, other Departments, Federal agencies, and the Congress.
To provide legal review and analysis to headquarters and field personnel.

To prepare the annual budget and determine how appropriated resources shall be allocated.

To coordinate program planning, related at all levels to operational analysis and evaluation.

To evaluate and to assure the quality of CRS services.

Base Program Description: The program of Executive Direction and Control embraces those principal areas of activity by which the Director establishes, transmits, and monitors the planning and implementation of policies and programs. Efficient utilization of agency personnel and funds is made possible through the Operational Planning System, a cyclical process involving the planning of programs in response to guidance provided; the reporting, monitoring and evaluation of program implementation; the study of program and policy issues; the Quality Assurance System; and development of the budget and subsequent supervision of the achievement of its objectives.

The functions of executive direction and control are performed directly within the Office of the Director and within the Office of Policy Development. Responsibility for the interpretation of the Agency, for legal counsel, and for legal technical assistance to the regions are all lodged in the Office of the Director. Media and Congressional relations are conducted by the Director and his personal staff.

Accomplishments and Workload: Accomplishments of the Executive Direction and Control program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Office Plans reviewed and approved	15	15	15	15
Budget Submissions and supportive testimony and briefings	3	3	3	3
Reports on Statistical Evaluation and Analysis of Operations	4	4	4	4
Quarterly Statistical Reports to Regional Directors	40	40	40	40
Issue papers prepared	4	4	4	4
Analysis of Regional Trends	2	1	1	1
Responses to Public/Congressional inquiries	50	50	50	50
Responses to FOIA/PA inquiries	39	45	45	45
Responses to Requests for Legal Assistance from Regional Offices	650	650	650	624
Proposed Legislation studied	5	5	5	5
Periodic reports to the Attorney General or Deputy Attorney General	36	36	36	36
Judicial and Legislative items for review	750	750	750	700

Program Changes: A decrease of $76,000 is requested in 1988 in the Executive Direction and Control program. This slight decrease in resources is requested based on planned administrative support decreases.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services.....	6	6	$326	6	6	$380	6	6	$343	...	...	-$37

Long-Range Goal: To provide support for all the activities and programs with administrative, budget and personnel services.

Major Objectives:

To provide timely fiscal control and effective position management over resources flowing to or from the Service.

To provide for the timely processing of all administrative related requests for space, security, procurement, travel, financial reimbursement and all other administrative requests.

To provide direct financial and administrative control over the grants aspects of the Cuban and Haitian Entrant Program.

To provide for other required services such as timely and efficient mail and messenger service, security, equal employment opportunity and centralized records management.

Base Program Description: Necessary administrative services are currently provided primarily through a liaison process with the Justice Management Division (JMD). The Administrative Services Program provides direct input of vouchers, personnel requests, requests for goods and services, obligating documents, inventory control, etc., to the JMD accountability systems through a centralized administrative office located in the CRS headquarters. In addition, security and equal opportunity systems are provided directly by personnel assigned to the unit. Beginning with the transfer of the Cuban and Haitian Entrant Program, this office assumed additional responsibility in the direct monitoring of grants.

068

Accomplishments and Workload: Accomplishments of the Administrative Services Program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Personnel actions reviewed and processed	236	225	225	215
Procurement actions reviewed and processed	761	700	700	650
Budgets prepared	3	3	3	3
Space adjustments processed	4	4	4	4
Financial records created	4,126	4,100	4,100	4,000
Invoices processed	1,568	1,600	1,600	1,500
Management analyses performed	11	11	11	11
CMS directives published	6	6	6	6
Special reports prepared	80	80	80	80
Special projects conducted	24	24	24	24

Most major objectives contained within this program are ongoing in nature, and are not completed except for planning stages of new systems.

Program Changes: A decrease of $37,000 is requested in 1988 for the Administrative Services program. This slight decrease in resources will be achieved through planned decreases in the administrative support area.

Activity: Reception, Processing and Care of Cubans and Haitians

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Reception, Processing and Care of Cubans and Haitians	30	23	$22,837	30	23	$23,535	30	23	$21,740	...	...	-$1,795

Long-Range Goal: To administer the orderly placement and resettlement of Cuban and Haitian entrants in such a manner as to avoid community conflict and minimize the impact on public assistance and public safety.

Major Objectives:

To provide cost effective resettlement services to Cuban and Haitian entrants released by the Immigration and Naturalization Service (INS) through the use of various voluntary and private agencies, and to monitor these resettlements.

To provide shelter care and child welfare services to Cuban/Haitian entrant minors and to arrange eventual sponsorships and placements for these minors.

To provide secondary resettlement assistance for Haitian entrants in South Florida who have not attained economic self-sufficiency.

To provide follow-up care and services to Cuban entrants approved for release from Public Health Service mental health care outplacement projects.

Base Program Description: This activity addresses the needs of Cuban and Haitian entrants who continue to need reception, processing, resettlement, placement and other services from the Federal government. The primary populations served include certain Cubans who arrived in this country during the Mariel boatlift of 1980 and those Haitians who arrived in 1980 and each year thereafter and who have subsequently been detained by the INS for their undocumented entry into the United States.

CRS' outplacement and resettlement services to Cuban and Haitian entrants are structured around four program areas:

1. Outplacement from the Atlanta Federal Penitentiary, the Oakdale Federal Detention Center, and INS detention facilities of Mariel Cubans who are reparoled by the INS District Director after screening by both the INS and CRS to ensure that they do not present a danger to the community.
2. Outplacement from the INS/Krome Special Processing Center of Cuban and Haitian detainees, including unaccompanied minors, who are paroled by the INS District Director for humanitarian reasons.
3. Secondary resettlement assistance for Cuban and Haitian entrants living in South Florida whose initial resettlements did not lead to their achievement of economic self-sufficiency.
4. Follow-up care for mentally ill entrants who have completed psychiatric treatment programs provided by PHS and who are ready to make the transition to semi-independent living.

In addition, through an interagency agreement with the U.S. Public Health Service, medical care is provided to Mariel Cubans and Haitians at the INS/Krome Special Processing Center medical facility. Specialized medical care is provided to five Cuban patients at the Hansen's Disease Center in Carville, Louisiana. Mental health care is provided at St. Elizabeth's Hospital and community-based treatment programs. Mental health evaluations are performed on Mariel Cubans being considered for reparole by the INS.

Accomplishments and Workload: Accomplishments of the Reception, Processing, and Care of Cuban and Haitian Entrant Program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Entrant Population:				
Cuban/Haitian Entrants in INS/Krome at beginning of year	394	345	345	345

The Community Relations Service was selected to administer the Cuban and Haitian Entrant Program in 1983, and received direct administrative control on March 6, 1983. During 1986, the following accomplishments were realized in each program area:

1. Outplacement from the Atlanta Federal Penitentiary. This outplacement activity had been suspended during 1985 while the repatriation agreement with the Government of Cuba was in effect. Renewed outplacement in 1986 was necessitated by the suspension of that agreement and by the resulting shortage of secure detention space for the 80-100 Mariel Cubans being returned to federal custody from state and local detention facilities each month. A major recent development in the Mariel Cuban detention and outplacement program during the first quarter of 1987 has been the initiation of the consolidation of Mariel Cubans in detention at the Oakdale Federal Detention Center in Oakdale, Louisiana. In addition to the 203 Mariel Cubans from the Atlanta Federal Penitentiary that CRS placed in structured halfway house programs during 1986, CRS used its carryover resources to fund the outplacement of an additional 30 Mariel Cubans from INS detention facilities other than the Atlanta Federal Penitentiary.

2. Outplacement from INS/Krome Service Processing Center. Although the number of Haitians arriving in South Florida has declined as a result of the Coast Guard interdiction program, the decreased number of Haitians released under humanitarian paroles and the increased number of Mariel Cubans being transferred to the INS/Krome SPC have caused the population at the INS/Krome SPC to remain relatively constant. The reduction in the number of CRS outplacements from 333 in 1985 to 109 in 1986 has had a negligible impact on CRS resource needs because of the low per capita cost of this type of outplacement service. The number of unaccompanied Haitian minors requiring shelter care and family placement services increased to 47 in 1986.

3. Secondary Resettlement from South Florida. In 1986, CRS provided secondary resettlement assistance to 278 Cuban and Haitian entrants. Reduced funding in 1986 caused the suspension of the Planned Secondary Resettlement Program, which would have provided comprehensive and highly structured resettlement services to 125 entrant families willing to move to specific cities outside Florida where prospects for upward mobility existed.

72-165 O—87—29

4. Aftercare for Mentally Ill Entrants. During 1986, this aftercare capacity was expanded to accommodate 64 entrants. The additional capacity will permit an increased flow of clients out of the community-based treatment programs, thereby freeing up space for mentally ill Mariel Cubans still in the Atlanta Federal Penitentiary.

In addition, CRS funds the provision of health and mental health care services to Mariel Cubans and Haitians who are detained at the Atlanta Federal Penitentiary or other INS detention facilities, primarily the INS/Krome Service Processing Center, through an interagency agreement with the Public Health Service.

1. Medical Care. Medical screening, examinations, and medical care are provided to Cuban and Haitian entrants at the INS/Krome Service Processing Center medical facility, operated by PHS, and by community hospitals and other health care providers in the Miami area under contract to PHS. Specialized medical care is also provided to five Cuban patients at the Gillis W. Long Hansen's Disease Center in Carville, Louisiana. Management and operational cost savings implemented at these facilities during 1986 included the renegotiation of health care cost rates, increased use of on-site versus off-site services, increased monitoring of hospital billings, and increased use of office automation.

2. Mental Health Care. 1986 represented the first full year of operation of the expanded 155 bed PHS/INS evaluation and treatment facility at St. Elizabeth's Hospital. This secured facility provides services for the seriously mentally ill and mentally retarded entrants in need of intensive psychiatric care. The expansion was intended to remove from the Atlanta Federal Penitentiary the acute mentally ill entrants. About 20-30 mentally ill Mariel Cubans are returned to the Atlanta Federal Penitentiary from state and local jails each month.

   The community-based treatment programs provide comprehensive treatment and rehabilitation services following the Cuban's release from St. Elizabeth's Hospital. Budget reductions in 1986 caused a decrease in the number of outplacement beds from 318 to 291. This level of capacity was achieved only through the use of a 9-month budget period for six grants and the application of unexpended balances to completely fund two other grants. Cost savings were achieved at St. Elizabeth's Hospital by reducing the staffing costs of the health care contractor. Management actions were also taken with regard to the community-based treatment projects to reduce average per diem rates, centralize all travel accounts to obtain discount fares, limit use of express mail, apply a term admission policy, and discontinue personal allowances for Cuban clients.

3. Mental Health Evaluations. PHS screens entrants in the Atlanta Federal Penitentiary and other sites to determine their mental health status and to make placement recommendations.

Program Changes: A decrease of $1,795,000 is requested in 1988 for this activity. This decrease is possible as a result of the consolidation and reduction of in-patient capacity at St. Elizabeth's Hospital into one building.

Salaries and expenses, Community Relations Service

Justification of Adjustments to Base
(Dollars in thousands)

	Amount
Savings resulting due to management initiatives:	
Long-term care cases.....	-$46
Savings of $46,000 will be generated by the reduction in the per diem rates for Mariel Cubans at the community-based mental health programs administered by the Public Health Service.	
Transfers to and from other accounts:	
Transfer of Financial and Administrative Systems Support group.....	11
This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.	
Uncontrollable increases:	
1. One additional compensable day.....	22
The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $5,195,000: 260 = $20,000 plus $2,000 for benefits)	
2. Annualization of Federal Employees' Retirement System Costs.....	251
This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula.	
3. Annualization of 1987 pay increase.....	109
This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which were not included in the pay raise amount of $46,000. Additionally, $63,000 of the 1987 pay requirement was absorbed. Total annualization required is $109,000.	

68/261 x pay raise amount for 1987 .....$46,000
1987 absorption of pay.....63,000
Total annualization.....109,000

900

		Amount
4.	Within-grade increases This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $42,000 and benefits $4,000 = $46,000).	$46
5.	Retirement contributions - revised Federal plan Beginning January 1, 1987, employees hired after January 1, 1984, may elect to contribute up to 10 percent of their salaries to special tax-deferred accounts and the Government will match up to 5 percent of the employee's contribution. It is estimated that approximately 2.5 percent will take advantage of this option.	17
6.	Locality based per diem Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $19,000 is required to meet the expected 2.9 percent increase to total travel funds.	19
7.	GSA Rent In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $202,000 is required to meet our commitment to GSA.	202
8.	GSA recurring reimbursable services Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $13,000 in fees for these services in 1988 over 1987 charges of $299,000.	13
9.	Federal Telecommunication System (FTS) The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $20,000 over the 1987 base of $125,000 is requested.	20
10.	GPO printing costs The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $20,000. An additional $1,000 will be required in 1988.	1

	Amount
11. Employee data and payroll services..... Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service. An additional increase has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.	$6
12. Audio visual and media services..... This increase reflects proposed rate increases for various types of audiovisual services that range from seven to 240 percent higher than present rates. An estimated 16.5% overall increase will be assigned to each affected organization for 1988.	1
13. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.	931
Total uncontrollable increases.....	1,638
Decreases (Automatic non-policy):	
Reduction in Health Benefits..... The Federal Employee's Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased due primarily to reduced carrier rates. The requested decrease includes $7,000 for decreased rates below the 1987 budgeted base.	-7
Total, adjustments to base.....	1,596

Special Studies and Analysis	...	...	...
Total	18	18	16

Consultants' services are used by the Community Relations Service only for those assignments which cannot be performed in-house. Consultants in various specialized areas of education and the administration of justice assist field staff in helping to resolve disputes and working with community groups and major institutional leaders. Examples are police departments, school superintendent and school staff as well as community organizations which generally are led by business persons, as well as, civil rights organizations. A slight decrease is requested for 1988.

Mr. SMITH. Mr. Warfield, do you have a statement?

Mr. WARFIELD. I do, Mr. Chairman. If I might, I would like to touch on just the highlights of the statement I have submitted.

Mr. SMITH. All right. That will be acceptable.

[The prepared statement and biography of Mr. Warfield follow:]

DEPARTMENT OF JUSTICE

COMMUNITY RELATIONS SERVICE

STATEMENT OF THE ACTING DIRECTOR
WALLACE P. WARFIELD
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE
ON THE DEPARTMENTS OF COMMERCE, JUSTICE,
AND STATE, THE JUDICIARY, AND RELATED AGENCIES

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I AM PLEASED TO APPEAR IN SUPPORT OF THE 1988 APPROPRIATIONS REQUEST OF THE COMMUNITY RELATIONS SERVICE.

THE REQUEST IS FOR $29,123,000, 118 PERMANENT POSITIONS, AND 113 WORKYEARS. THIS REPRESENTS AN INCREASE OF $1,596,000 FOR ADJUSTMENTS TO BASE ITEMS AND PROGRAM DECREASES OF $2,300,000. THIS DECREASE IS DRAWN FROM TWO SOURCES:

$505,000 REPRESENTS SAVINGS IN ADMINISTRATIVE SUPPORT AND OTHER-THAN-PERMANENT EMPLOYEE CATEGORIES. WE ARE IN THE PROCESS OF MODIFYING OUR PROGRAM PLANNING EFFORTS TO MORE EFFECTIVELY TARGET RESOURCE ALLOCATION TO CASE ACTIVITY. THE CRS CONFLICT RESOLUTION PROGRAM WILL CONTINUE AT THE SAME LEVEL.

$1,795,000 REPRESENTS PROPOSED SAVINGS IN THE PROCESSING AND CARE OF CUBAN AND HAITIAN ENTRANTS DUE TO REDUCED PER DIEM RATES FOR THE CARE OF MENTALLY ILL MARIEL CUBANS AND REDUCED OPERATING COSTS AT ST. ELIZABETH'S HOSPITAL.

MUCH HAS BEEN WRITTEN AND SAID LATELY ABOUT RACIAL HATE INCIDENTS AND THE STATE OF RACE RELATIONS IN THE UNITED STATES. IN ITS MORE THAN 20-YEAR HISTORY OF RESPONDING TO RACIAL TENSIONS AND CONFLICT, WE IN CRS HAVE LEARNED THAT IF WE ARE GOING TO BE INSTRUMENTAL IN HELPING TO RESOLVE RACIAL CONFLICT AND TENSION, THEN IT IS CRUCIAL WE UNDERSTAND THE CONTEXT IN WHICH IT TAKES PLACE.

WE FIRST BEGAN TO CATALOGUE INCIDENTS OF RACIAL VIOLENCE IN 1978 WHEN SOME EIGHT INCIDENTS CAME TO OUR ATTENTION--ALL LOCATED IN THE SOUTH AND ALL INVOLVING THE KU KLUX KLAN IN SOME FASHION. IN 1979, THE NUMBER OF SUCH INCIDENTS RECORDED BY CRS, STILL INVOLVING THE KLAN OR SOME KNOWN ANTI-MINORITY ORGANIZATION, INCREASED TO 44 AND INVOLVED LOCATIONS IN OTHER PARTS OF THE COUNTRY AS WELL. THE NEXT YEAR, CRS NOTED 30 INCIDENTS INVOLVING THE KLAN AND SIMILAR HATE GROUPS. WE ALSO BEGAN IN 1980 TO RECORD OTHER RACE-RELATED INCIDENTS THAT WERE BROUGHT TO OUR ATTENTION INVOLVING SUCH ACTS AS CROSS BURNINGS, FIREBOMBINGS, DESECRATION OF RELIGIOUS INSTITUTIONS AND OTHER SUCH ACTS WHERE THE IDENTITY OF THE PERPETRATOR OR PEPETRATORS WAS UNKNOWN OR DID NOT BELONG TO A FORMAL HATE ORGANIZATION. THERE WERE 69 SUCH INCIDENTS THAT CAME TO OUR ATTENTION IN 1980.

THE NUMBER OF CRS ALERTS INVOLVING KLAN OR KLAN-RELATED ACTIVITY PEAKED AT 69 IN 1982 AND APPEARS TO HAVE DECLINED TO AN AVERAGE OF ABOUT 45 FOR THE PAST FOUR FISCAL YEARS. AT THE SAME TIME, IN PART DUE TO INCREASED PUBLIC AWARENESS, AND IMPROVED REPORTING PROCEDURES, WE HAVE SEEN THE NUMBER OF ANONYMOUS COMPLAINTS RISE STEADILY. A PORTION OF THIS INCREASE CAN BE ATTRIBUTED TO A THIRD CATEGORY OF INCIDENT REPORTS: COMMUNITY-BASED RESISTANCE BY PREDOMINANTLY ONE ETHNIC GROUP TO THE MOVE-IN OR PRESENCE OF ANOTHER ETHNIC GROUP. AN INCREASING PERCENTAGE ALSO INVOLVES INDIGENOUS MINORITIES WHO ARE RESISTING THE SETTLING IN OF OTHER, MOSTLY ASIAN, MINORITIES.

IT IS NOT MY BELIEF THAT ENCLAVES SUCH AS HOWARD BEACH, NY. OR FORSYTH COUNTY, GA. ARE A REFLECTION OF A RISING TIDE OF RACISM IN THE UNITED STATES. AS DISTURBING AS THESE INCIDENTS ARE, IT CANNOT BE OVERLOOKED THAT SOCIAL INTEGRATION IN THIS COMPLEX MOSAIC OF A COUNTRY IS MOVING AHEAD AT A DETERMINED PACE. IF ANYTHING, THESE INCIDENTS MAY BE AN ACKNOWLEDGEMENT OF THIS TREND. A RECENT STUDY BY THE URBAN INSTITUTE, BASED ON 1980 CENSUS DATA, INDICATES THAT BLACKS AND WHITES ACROSS THE NATION HAVE BEGUN LIVING IN MORE INTEGRATED SETTINGS DURING THE 1970's. INDEED, AN UNDENIABLE REFLECTION OF THIS PHENOMENON WAS THE 20,000 FRIENDS, NEIGHBORS AND FELLOW AMERICANS WHO MARCHED IN CUMMING, GA. ON JANUARY 24, 1987.

NONETHELESS, WHILE THESE INCIDENTS ARE COMPARATIVELY FEW IN NUMBER MEASURED AGAINST THE BACKDROP OF EVERYDAY POSITIVE RACIAL RELATIONS, WE IN CRS CANNOT AFFORD TO BE SANGUINE ABOUT POTENTIAL IMPLICATIONS. FOR IF LEFT UNATTENDED, THESE INCIDENTS COULD SPREAD LIKE A CANCER. ORGANIZATIONS ACROSS THE COUNTRY ARE CONVENING HEARINGS ON HATE VIOLENCE. GOVERNORS' OFFICES, POLICE DEPARTMENTS, AND COMMUNITY GROUPS FROM RHODE ISLAND TO IDAHO TO CALIFORNIA ARE REQUESTING CRS ASSISTANCE IN DEVISING EFFECTIVE RESPONSES TO HATE CRIMES. WE HAVE NOTED A FEW INSTANCES OF HATE VIOLENCE AND INTIMIDATION TAKING PLACE IN PUBLIC HOUSING. TO THIS END, WE BEGAN EXPLORATORY DISCUSSIONS WITH HUD'S FAIR HOUSING STAFF AND WE ANTICIPATE A CLOSER WORKING RELATIONSHIP IN FY 1988.

CRS CASEWORK IN THE AREA OF ADMINISTRATION OF LAW ENFORCEMENT SERVICES HISTORICALLY HAS BEEN HELPING TO REDUCE THE CONFLICT AND TENSIONS THAT FLOW FROM ALLEGATIONS OF EXCESSIVE USE OF FORCE, AND STRAINED POLICE-MINORITY RELATIONS. THE MARKED IMPROVEMENT WHICH WE HAVE NOTED IN THIS AREA HAS BEEN CONFIRMED BY A RECENT NATIONAL STUDY WHICH INDICATES THAT THERE HAS BEEN MORE THAN A 50 PERCENT REDUCTION IN POLICE AND CIVILIAN FATALITIES RESULTING FROM POLICE ENCOUNTERS OVER THE PAST 15 YEARS IN THE 50 LARGEST CITIES IN THE NATION. WE LIKE TO THINK THE WORK OF CRS HAS SOMETHING TO DO WITH THIS REDUCTION. WE ARE DISTURBED NONETHELESS, BY A PERSISTENCE IN POLICE-MINORITY INCIDENTS THAT CONTINUE TO MAR THE POTENTIAL FOR EFFECTIVE PARTNERSHIPS IN THE

FIGHT AGAINST CRIME. IN THIS REGARD, WE WERE PLEASED TO SEE OVER 200 POLICE EXECUTIVES ATTEND OUR FORUM ON POLICE-COMMUNITY RELATIONS AT THE INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE CONFERENCE THIS PAST FALL. OTHER ORGANIZATIONS SUCH AS THE FLORIDA STATE ASSOCIATION OF CRIME PREVENTION OFFICERS, AND THE BEAUMONT, TEXAS POLICE DEPARTMENT ARE SOLICITING CRS ASSISTANCE TO BETTER REACH AND SERVE MINORITY COMMUNITIES. IT HAS BEEN GRATIFYING TO WITNESS THE PUSH FOR POLICE PROFESSIONALISM AND WE APPRECIATE THE SUPPORT OF THIS COMMITTEE IN OUR EFFORTS TO ASSIST THIS MOVEMENT. THERE IS, HOWEVER, MUCH STILL TO BE DONE.

OPENING THE CHANNELS OF COMMUNICATION BETWEEN POLICE AND MINORITIES HAS BEEN MADE MORE DIFFICULT IN RECENT YEARS WITH THE CONTINUED IN-MIGRATION OF NEW ETHNIC GROUPS. INTERFACE BETWEEN MANY SOUTHEAST ASIAN REFUGEES AND GOVERNMENT AND AGENCY INSTITUTIONS HAS BEEN IMPEDED BY LANGUAGE AND CULTURAL DIFFERENCES. THE SAME PROBLEMS HAVE HAD A DOUBLE EDGE, REFLECTED IN THE VICTIMIZATION OF ASIANS WHO MAY BE SEEN AS EASY TARGETS OF CRIME. TOO LITTLE INTERACTION BETWEEN ASIANS AND POLICE OFFICERS IN THESE INSTANCES EXACERBATES THE PROBLEMS OF PROVIDING EQUITABLE LAW ENFORCEMENT SERVICES. IN AN EFFORT TO ADDRESS THIS DILEMMA, THIS PAST YEAR WE CONVENED A CONSULTATION FOR 15 GULF COAST CITIES, FROM TEXAS THROUGH FLORIDA, TO IMPROVE THE PROVISION OF POLICE SERVICES TO REFUGEE COMMUNITIES AND OTHERS IN THAT AREA.

ANOTHER MAJOR DEMOGRAPHIC CHANGE WILL BE GENERATED BY THE RECENTLY ENACTED IMMIGRATION REFORM AND CONTROL ACT. CRS IS PREPARED TO ASSIST THE IMMIGRATION AND NATURALIZATION SERVICE TO ACHIEVE ITS GOAL OF FAIR AND EFFECTIVE ENFORCEMENT BY PREVENTING OR RESOLVING COMMUNITY-RELATED PROBLEMS THAT COULD ARISE DURING THE IMPLEMENTATION PROCESS. ETHNIC AND RACIAL TENSIONS COULD OTHERWISE INCREASE THE COSTS, DELAYS, AND TURMOIL ASSOCIATED WITH THE IMPLEMENTATION OF THE NEW LAW. TOWARD THIS END, WE HAVE ALREADY BEGUN TO ESTABLISH COMMUNITY TASK FORCES TO WORK WITH THE IMMIGRATION SERVICE TO HEAD OFF POTENTIAL CONFLICT.

WITH REFERENCE TO OUR RESPONSIBILITIES UNDER TITLE V OF THE REFUGEE EDUCATION ASSISTANCE ACT OF 1980, WE EXPECT TO OUTPLACE THE SAME NUMBER OF MARIEL CUBANS FROM FEDERAL DETENTION AS THIS YEAR, 353. MOST OF THESE ENTRANTS WILL BE RESETTLED THROUGH OUR HALFWAY HOUSE PROGRAM. A SELECT FEW WILL BE PLACED WITH CAREFULLY SUPERVISED FAMILY SPONSORS. AN INCREASE IN RESETTLEMENT CAPACITY FROM LAST YEAR TO THIS YEAR WAS MADE POSSIBLE THROUGH THE REDUCTION OF THE RESIDENTIAL PHASE OF THE HALFWAY HOUSE PROGRAM FROM SIX TO FOUR MONTHS.

WE ALSO EXPECT TO CONTINUE OUR SHELTER/CARE PROGRAM FOR CUBAN AND HAITIAN CHILDREN WHO ARE DETAINED BY THE IMMIGRATION SERVICE. THIS PROGRAM ENSURES THAT CUBAN AND HAITIAN CHILDREN IN FEDERAL CUSTODY ARE NOT HELD IN ADULT DETENTION FACILITIES AND ARE PROVIDED APPROPRIATE CARE AND SERVICES.

IN SUMMARY, WE SEE SOME TROUBLING EVENTS THAT COUNSEL OUR CONTINUING VIGILANCE: VIGILANCE TO ASSURE THAT HATE GROUPS ARE NOT PERMITTED TO DEPRIVE CITIZENS OF THEIR CIVIL RIGHTS; VIGILANCE TO ASSURE THAT PREJUDICE, ETHNIC RESENTMENT, AND THE FEAR OF ECONOMIC COMPETITION FROM MINORITY AND IMMIGRANT GROUP MEMBERS ARE NOT PERMITTED TO DEPRIVE CITIZENS OF THEIR CIVIL RIGHTS. THE BASIC CHARACTER AND DECENCY OF THE AMERICAN PEOPLE, HOWEVER, WERE REFLECTED IN THE TURNOUT OF SOME 20,000 MARCHERS IN FORSYTH COUNTY, NOT IN THE RELATIVE HANDFUL OF HECKLERS AND BOTTLE THROWERS.

THERE IS A NEED TO MAINTAIN A BALANCE SO THAT THE NEGATIVE FORCES DO NOT OVERWHELM THE PROGRESS THE COUNTRY HAS MADE THUS FAR. WITH YOUR SUPPORT, WE INTEND THAT THE COMMUNITY RELATIONS SERVICE CONTINUE ITS WORK IN THAT EFFORT.

THANK YOU. I WOULD BE PLEASED TO RESPOND TO ANY QUESTIONS THAT YOU MIGHT HAVE.

BIOGRAPHICAL INFORMATION—WALLACE WARFIELD, COMMUNITY RELATIONS SERVICE, U.S. DEPARTMENT OF JUSTICE

Wallace Warfield is currently the Acting Director for the Community Relations Service, Department of Justice. Mr. Warfield joined the agency in 1968 and served in several capacities including conciliator, mediator, Deputy Regional Director, Acting Regional Director in the New York Office and Associate Director for Field Coordination before assuming his present position.

Before joining the Community Relations Service, Mr. Warfield worked at the Lower West Side Community Corporation in New York as Deputy Director. Prior to this, he worked with the New York City Youth Board as a Street Gang Worker.

Mr. Warfield was born in New York city. He received a B.A. degree from Howard University and his Masters in Public Administration from the University of Southern California extension in Washington, D.C.

OPENING STATEMENT

Mr. WARFIELD. My colleagues and I are pleased to appear in support of the 1988 appropriation request of the Community Relations Service. The request is for $29,123,000, 118 permanent positions and 113 workyears. This represents an increase of $1,596,000 for adjustments to base items and program decreases of $2,300,000. The decrease is drawn from two sources: $505,000 represents savings in administrative support and other than permanent employee categories; and we are in the process of modifying our program planning efforts to more effectively target resource allocation to case activity.

$1,795,000 represents proposed savings in the processing and care of Cuban and Haitian entrants due to reduced per diem rates for the care of mentally ill Mariel Cubans and reduced operating costs for the program at St. Elizabeth's Hospital.

We come before this committee in an atmosphere of renewed concern about racial tensions and race relations in the United States. When we came before this subcommittee to testify on fiscal year 1987 appropriations request, we noted the rise in racial hate incidents. We began to catalogue incidents of racial violence in 1978. While the number of incidents pertaining to the Ku Klux Klan, or formal hate organizations, has declined to an average of about 45 from 1983 to 1986, the number of anonymous incidents has risen steadily since 1980.

Despite the persistence of these incidents in enclaves such as Howard Beach or Forsythe County, it does not hold that America therefore is a racist country. Integration is moving ahead at a determined pace and, if anything, these incidents may be an acknowledgement of this trend.

Nonetheless, while these incidents are comparatively few in number, we in CRS cannot afford to be sanguine about their potential implications where, if left unattended, these incidents could spread like a cancer. Governors' offices, police departments, and community groups from around the country are requesting CRS assistance in devising effective responses to hate crimes, and we anticipate continued activity in this area in 1988.

CRS case work in the area of administration of law enforcement services historically has been helping to reduce the conflict and tensions that flow from allegations of excessive use of force which strain police-minority relations. Some studies have suggested a marked decrease in police and civilian fatalities over the last sever-

al years, and we believe that CRS has had a role in this reduction. But this only tells part of the story. We are disturbed by the persistence of police-minority incidents, short of deadly force, that continue to mar the potential for effective partnerships in the fight against crime. We continue to receive large numbers of requests for assistance from members of the police community as well as civilian organizations.

With respect to the Immigration Reform and Control Act, CRS is prepared to assist the Immigration and Naturalization Service to achieve its goal of fair and effective enforcement by preventing or resolving community-based problems that could arise during the implementation process. Toward this end we have already begun to establish community task forces to work with the Immigration Service to head off potential conflict.

With reference to our responsibilities under Title V of the Refugee Education and Assistance Act of 1980, we expect to outplace the same number of Mariel Cubans from Federal detention as this year, 353. Most of these entrants will be resettled through our halfway house program. A select few will be placed with carefully supervised family sponsors. An increase in resettlement capacity from last year to this year was made possible through the reduction of the residential phase of the halfway house program from six to four months.

We also expect to continue our shelter care program for Cuban and Haitian children who are detained by the Immigration Service. This program ensures that Cuban and Haitian children in Federal custody are not held in adult detention facilities and are provided appropriate care and services.

I might note that 1989 will be CRS' silver anniversary, and I came across a bit of legislative history that I thought would be of interest. Senator Lyndon B. Johnson said in his introduction of a bill for the Civil Rights Act of 1959 that "Civil rights involves the idea of human understanding and of human dignity. The outward manifestations of tolerance can be enforced by guns, clubs, and bayonets, but understanding does not exist until the people themselves will it to exist." I believe that CRS is a very important mechanism in helping the country move to that level of understanding.

I would be happy to answer any questions that you have, Mr. Chairman.

ORIGINAL FY 1988 REQUEST

Mr. SMITH. Has your budget been amended or changed since you originally proposed it back in September?

Mr. WARFIELD. Yes. We asked the Department for a budget of $37,857,000, and 126 positions. What went into the Office of Management and Budget was for $28,614,000 and 118 positions, and the congressional request is for $29,123,000 and 118 positions.

Mr. SMITH. Why did OMB add the $500,000 back? What was that for?

Mr. WARFIELD. Well, if I may ask Dale Meeks to respond?

Mr. MEEKS. It was primarily the difference in the base on which it was all calculated. The base that we went to originally this fall was based on anticipated congressional levels from last year and

did not take into account the Gramm-Rudman-Hollings reductions or the recent pay and retirement increases.

Mr. SMITH. There was an agreement, then, on the strength level?

Mr. MEEKS. Yes.

INCIDENT OCCURRENCE

Mr. SMITH. The incidents you spoke of in your statement occurred after that time. Do you view them as isolated incidents, which don't change your budget requirements?

Mr. WARFIELD. Well, sir, I don't know if I would consider them isolated as such. An analogy that I like to use is the Vietnamese or the refugee program that was taking place after the fall of Saigon, from 1978 to 1983 or so. At one point 14,000 refugees were coming in from Southeast Asia per month. Now, we in the Community Relations Service at that time experienced a number of conflicts related to that, but I think you would have to say that we witnessed a successful integration of these people into communities around the country, virtually without incident.

So I am saying that I think that these race-related incidents are very serious. There are enclaves. I would not want to indict whole States or jurisdictions on the basis of this, but, yes, I think we need to be very concerned about them.

CHANGES IN ETHNIC GROUP CONFLICTS

Mr. SMITH. Are your needs changing between ethnic groups?

Mr. WARFIELD. Somewhat, sir. I think that we're noticing more conflict now of an inter-ethnic nature. That is, even within the area of hate activity, although the basic aspects of this deals with white-against-black move-ins, if you will, increasingly we see activities occurring of interracial conflict between blacks and Southeast Asians who are moving into their communities, and between Hispanics of varying groups with each other. So I think the conflict now is becoming much more interracial, less blacks against the establishment than it was when we first began many years ago. I think that is increasing, and that is something we are going to have to be paying increasing attention to.

Mr. SMITH. You are the Acting Director?

Mr. WARFIELD. That's correct.

Mr. SMITH. Has a Director been named or is one going to be named?

Mr. WARFIELD. No, sir, not yet. I have no idea as to what the timing is on that.

Mr. SMITH. How long have you been acting?

Mr. WARFIELD. About ten-and-a-half months.

Mr. SMITH. OK. Thank you.

The subcommittee is adjourned until 9:00 tomorrow.

[The questions for the record, and the answers submitted thereto, follow:]

QUESTION FROM MR. NEAL SMITH

COMMUNITY RELATIONS SERVICE

Prevention and Conciliation of Community Disputes

Question:

On pages 9 and 11, you display workload tables to justify your reduction. Based on your actual 1987 experience to date, do you still believe your total 1987 and 1988 estimates are accurate? For the record, for each item provide the actual workload to date for 1987 and the similar workload through the same date in 1986.

Answer:

On the basis of estimated workload data for the first half of 1987, projections for 1987 and 1988 still appear to be valid. The exception is the stability shown in the number of alerts, which could conceivably justify a downward adjustment of our projection from 2,200 to 2,100, a figure closer to the 2,056 experienced in 1986.

The actual workload to date for 1987 and comparable data for 1986 are presented below:

	1987 6 Months Estimate	1986 6 Months	Percent Difference
Alerts Received.....	1,076	1,077	-0.1%
Assessments Processed.....	712	742	-4.0%
Conciliation Cases Conducted.	703	670	4.9%
Conciliation Cases Closed....	296	285	3.9%
Mediation Cases Conducted....	20	24	-16.7%
Mediation Cases Closed.....	9	11	-18.2%
Community Tension Appraisals Conducted.....	*	60	*

*Annual Appraisals of Racial Tension have not yet been completed for 1987.

Partial-year figures for Technical Assistance workload data, found on page 9, are not presently available. The $28,000 reduction proposed for this decision unit is directed at administrative support activities and is not expected to have any impact on casework productivity.

Reception, Processing and Care of Cubans and Haitians

Question:

What is the basis for your program reduction of $1,795,000 for the Reception, Processing and Care of Cubans and Haitians?

Answer:

The decrease of $1,795,000 will be absorbed through reduced per diem rates for the care of mentally ill Mariel Cubans and reduced operating costs at St. Elizabeth's Hospital. Reduced operating costs will be possible as a result of a reduction in bed capacity at St. Elizabeth's Hospital from 125 to 80 and the consolidation of the program into one building.

To accommodate this reduction in bed capacity, the Public Health Service will be able to transfer some of its long-term patients from St. Elizabeth's Hospital to the new 300-bed health unit at the Oakdale Federal Detention Center in Louisiana.

Question:

In 1986, you actually obligated over $4 million more than was appropriated. Why?

Answer:

The appropriation for the Reception, Processing and Care of Cubans and Haitians is without fiscal year limitation. In 1986, therefore, this budget activity was able to draw from its annual appropriation of $22,265,000 as well as from unobligated balances from prior years.

Because of the repatriation agreement with the Government of Cuba in December 1984, which led to the temporary phase-down of the CRS halfway house program, CRS did not obligate all of its 1985 appropriation. A significant portion of the unobligated balances were able to be used in 1986 to fund an additional halfway house program, provide funding to the Public Health Service for the care of mentally ill Mariel Cubans, and fund two interagency agreements with the Immigration and Naturalization Service for the Cuban Adjustment-of-Status Program and guard service at St. Elizabeth's Hospital.

Question:

Based on obligations to date, do you anticipate that 1987 appropriated amounts will be sufficient?

Answer:

The Reception, Processing and Care budget activity will be able to meet all of its programmatic needs and budget obligations through its annual appropriation, the pending 1987 supplemental request and unexpended balances from prior years.

Question:

Again, based on actual 1987 obligations, are you still confident in the accuracy of your 1988 request?

Answer:

The 1988 request reflects an accurate projection of Reception, Processing and Care program needs for that year. The request generally represents a continuation of this year's level of obligations and services for Cuban and Haitian entrants in federal custody.

FRIDAY, MARCH 13, 1987.

THOMAS J. STANTON, DIRECTOR AND COUNSEL, EXECUTIVE OFFICE FOR UNITED STATES TRUSTEES

ROBERT N. FORD, COMPTROLLER

MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

U.S. TRUSTEE JUSTIFICATION

Mr. EARLY. Next we are going to hear from the United States Trustee System. Continuing with our review of the Department of Justice, we will now hear testimony concerning the United States Trustee System Fund.

The Fund requests $53,525,000 for Fiscal Year 1988. This is an increase of 90 percent over the Fiscal Year 1987 amount.

We will insert in the record at this point the Fund's Fiscal Year 1988 Budget Justification.

[The justifications follow:]

Summary Statement

Fiscal Year 1988

The 1988 budget request for the oversight of bankruptcy cases is 893 positions, 713 full-time equivalent (FTE) workyears and $53,525,000. In addition to transfers and uncontrollable increases of $15,713,000, and non-policy decreases of $4,549,000 the request includes a net program increase of 339 positions, 174 FTE workyears and $14,182,000. The proposed personnel increases represent the second year of a three year phase in to a nationwide U.S. Trustee program pursuant to the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986, Pub. L. 99-554, ("the 1986 Act"). By the end of FY 1988, at least the initial staff will have been hired in each of approximately 78 field offices needed to administer bankruptcy cases in all federal judicial districts.

Administration of Cases

The Administration of Cases program involves the oversight of bankruptcy cases filed in federal judicial districts specified by the 1986 Act. By the end of 1988, the districts will be served by 21 U.S. Trustees and at least 78 field office or sub-office locations. According to the phase in schedule in the 1986 Act, during 1987 there will be a total of 11 U.S. Trustee regions operating by August 24, 1987, encompassing a total of 52 federal judicial districts. The remaining 10 regions encompass 36 districts and will phase in during 1988 (no later than October 27, 1988).

The U.S. Trustees will continue to place major emphasis on performing the Congressional mandate to "serve as bankruptcy watchdogs to prevent fraud, dishonesty, and overreaching in the bankruptcy arena" (See H.R. Rept. No. 595, 1977, page 88). In addition to aggressive monitoring of fees charged by bankruptcy practicioners, the U.S. Trustees will maintain their highly effective procedures for referring criminal matters to the U.S. Attorneys and providing them with information needed for effective case prosecution. Referrals are made to the U.S. Attorneys or to state and local law enforcement or regulatory agencies as appropriate.

Another major program focus will be to guard against tax losses during bankruptcy proceedings. In 1988, the U.S. Trustees will continue to work closely with the Internal Revenue Service (IRS) to monitor debtor's prompt payments of withholding, social security and unemployment taxes to the U.S. Treasury. Financially strapped businesses often use taxes withheld from employees for their own working capital needs, rather than remit them to the IRS when due. This represents a significant loss of revenue to the federal government. The U.S. Trustees vigorously monitor financial reports and tax payment receipts to ensure that such accumulation of new tax liabilities does not occur.

Management and Administration

The Management and Administration program concerns the centralized legal, policy and administrative support for the bankruptcy case administration program. The major focus in 1988 will be to obtain the personnel, space, equipment, furniture, ADP systems and other resources needed to implement the program expansion.

Appropriation Structure Change

The 1986 Act established a new and separate appropriation, the United States Trustee System Fund, to pay for the necessary expenses of the U.S. Trustees. In 1987, the U.S. Trustees are funded from the appropriation, "Salaries and expenses, Oversight of Bankruptcy Cases" for part of their resources ($11,743,000) and from the United States Trustee System Fund for another part ($16,835,000). All program resources will be provided by the fund beginning in 1988. The 1986 Act established a number of new fees and charges in bankruptcy cases which are to be deposited to the Fund. Once expansion of the program is completed, the fund is expected to be self-sustaining; future U.S. Trustee resources will come from the receipts to the fund.

United States Trustee System Fund

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

United States Trustee System Fund

For the necessary expenses of the United States Trustees program, $53,525,000 for activities authorized by Sec. 115 of the "Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986," (Pub. L. 99-554): Provided, That deposits to the fund are available in such amounts as may be necessary to pay refunds due depositors.

[Salaries and Expenses, Oversight of Bankruptcy Cases]

[For necessary expenses of the bankruptcy trustees, $11,500,000. Effective immediately before November 10, 1986, section 408(c) of the Act of November 6, 1978 (Public Law 95-598, 92 Stat. 2687), is amended by striking out "November 10, 1986" and inserting in lieu thereof "September 30, 1987".]

Explanation of Change

Public Law 99-554, the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986, amended title 28 of the United States Code to establish a United States Trustee System fund. This special fund, authorized without fiscal year limitation, provided that fees should be available for certain expenses as may be specified in appropriation Acts.

Congressional Appropriation Actions on 1987 Request

Congress reduced the appropriation amount requested by $163,000.

1987 Supplementals Requested. A program supplemental of $16,436,000 is requested to fund the first year of expansion to a nationwide program. A pay supplemental of $93,000 is requested to meet increased pay requirements pursuant to P.L. 99-500 and $150,000 is requested to cover costs associated with implementation of the new Federal Employees Retirement System (FERS).

This budget activity includes all of the resources for the United States Trustee program. Funds requested for this activity support the U.S. Trustee program personnel involved at headquarters and in the field offices in the supervision of bankruptcy case administration in a total of 88 federal judicial districts.

	1987 Appropriation Enacted			1988 Base			1988 Estimate			Increase/Decrease

Long-Range Goal: To assure the effective administration of bankruptcy cases, with the maximum confidence of creditors, debtors and the courts. Also, to permit judges to focus on legal matters in the cases before them, by removing judges from case administration.

Major Objectives: In creating the U.S. Trustee system, the Congress cited the necessity for separating administrative and adjudicative functions "to afford bankruptcy litigants the fair and impartial justice to which all other litigants in the federal courts are entitled." 1/ Within this broad responsibility the objectives of the U.S. Trustees are:

To supervise the performance of Chapter 11 debtors-in-possession (or trustees and examiners) to preserve the going-concern value of the business, prevent administrative insolvencies and guard against tax losses to the Treasury.

To maximize assets of estates and distributions to creditors.

To monitor the costs of estate administration (primarily fees).

To recruit, select, train and maintain panels of qualified individuals to serve as private trustees in Chapter 7 cases.

To supervise the administration of Chapter 12 and 13 cases by standing trustees and, if possible, to reduce the costs thereof.

To encourage creditor participation in bankruptcy cases.

To ensure that parties in a bankruptcy case act in conformance with the law, and that fraud, dishonesty, and overreaching in the bankruptcy arena are prevented.

To assign cases to panel members on a fair and impartial basis and supervise their performance.

1/ H.R. Rep. No. 595, 95th Cong., 1st Sess. 91 (1977)

Base Program Description. The Bankruptcy Reform Act of 1978 established the U.S. Trustee pilot program in 18 federal judicial districts to address the problem of administering bankruptcy cases. Based on the successful test of this pilot program, the Congress passed the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986, extending the U.S. Trustee pilot program concept to 88 federal judicial districts by October 27, 1988. The expanded program will phase-in over the 1987 to 1989 period. The major thrust of bankruptcy reform is to separate the adjudicative and administrative functions in cases. Prior to the Bankruptcy Reform Act of 1978, judges performed both functions. They adjudicated legal issues and also supervised the trustees and other professionals they appointed to administer the cases. The judges often developed close relationships with members of the bankruptcy bar, who would appear before the judges in court. The appearance of conflicts of interest and perceptions of lack of judicial propriety arose out of the judges' dual role in handling cases. The U.S. Trustees' role, then, is to supervise the administrative aspect of cases while leaving to the bankruptcy judges the more traditional role of adjudicating the legal issues which arise in cases.

The "Administration of Cases" program consists of persons located in field offices headed by U.S. Trustees and a smaller number of sub-offices. These offices are responsible for supervising the administration of cases filed under Chapters 7, 11, 12 and 13 of Title I of the Act. During 1987, U.S. Trustee offices will be located in Boston; New York City; Newark, New Jersey; Alexandria, Virginia; Tampa, Florida; Dallas; Chicago; Minneapolis; Los Angeles; Denver; and Wichita.

Chapter 7 liquidation cases are actually administered by private trustees. The appointments to individual cases are made by the U.S. Trustees from a panel of qualified trustees. Under Chapter 7, the trustee liquidates the nonexempt assets of the debtor and distributes the proceeds to creditors. The individual debtor then receives from the court a discharge of his or her unsecured debts and a financial "fresh start."

Under Chapter 11 business reorganization cases, the debtor usually continues to operate the business. However, the court may order appointment of a trustee where a need exists for an outsider to run the business. During this time, efforts are made to develop a reorganization plan, which may totally restructure the debtor's balance sheet. If a plan is confirmed by the court, Chapter 11 provides a framework for the eventual rehabilitation of the business.

One of the most significant accomplishments of the pilot program has been the U.S. Trustees' substantive monitoring of the financial condition of debtors-in-possession during the pendency of Chapter 11 proceedings. This close scrutiny often reveals mismanagement or dishonesty by the principals of an ongoing business concern, which, in turn, causes the U.S. Trustee to seek the appointment of an examiner or a trustee in the case. If the company cannot operate profitably, and there is little likelihood of a turnaround, action is taken to convert the case to a Chapter 7 liquidation proceeding.

Chapter 12 and 13 cases are administered by standing trustees appointed to serve in a particular geographical area. Under Chapter 12, certain family farmers can restructure their debts and repay them through a chapter 12 standing trusttee, avoiding the loss of the family farm. Under Chapter 13, individual debtors with a regular source of income can propose to pay all or some part of their debts over a period of time through a court-approved repayment plan. Under either chapter, the standing trustee collects the funds and disburses them to creditors. The principal role of the U.S. Trustees in these cases is to appoint and supervise the standing trustees, ensuring that there are adequate managerial and financial controls over their operations. Policy guidance is also provided on overall case administration.

The U.S. Trustees have always put major emphasis on performing their congressional mandate to "serve as bankruptcy watchdogs to prevent fraud, dishonesty, and overreaching in the bankruptcy arena." In addition to aggressive monitoring of fees charged by bankruptcy practitioners, the U.S. Trustees will continue their highly effective procedures for referring criminal matters to the U.S. Attorneys and providing them with information needed for effective case prosecution. The U.S. Trustees will also continue to work closely with other government agencies such as the Internal Revenue Service to assist in the realization of post-petition tax payments, and with state and local regulatory agencies on matters such as consumer fraud.

Principal statutory authority for the U.S. Trustees is contained in 28 U.S.C. § 581 - 589. The substantive bankruptcy provisions are in Title 1 of the Bankruptcy Reform Act of 1978, Public Law No. 95-598, 92 Stat. 2549, codified as Title 11 United States Code. Specific duties and responsibilities of the U.S. Trustees are found throughout Title 11 United States Code. With enactment of the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986, Public Law No. 99-554, 100 Stat. 338, the U.S. Trustees' program became permanent within the Department of Justice.

Accomplishments and Workload: The table below summarizes the bankruptcy cases under chapter 7, 11, and 13 of the Bankruptcy Code administered by the U.S. Trustees in pilot districts.

	1985	1986	1987	1988
1. Cases Administered under Chapter 7:				
a. Active, start of year	66,054	74,765	99,888	137,660
b. Filed	72,780	100,123	127,772	141,500
c. Inactivated	64,069	75,000	90,000	100,000
d. Active, end-of-year	74,765	99,888	137,660	179,160
2. Cases Administered under Chapter 11:				
a. Active, start of year	9,306	10,756	11,971	13,036
b. Filed	6,615	6,715	7,565	7,565
c. Inactivated	5,165	5,500	6,500	7,000
d. Active, end-of-year	10,756	11,971	13,036	13,601
3. Cases Filed under Chapter 13:	30,339	35,367	39,788	44,271

The data presented above show the steady increases in Chapter 7, and 13 bankruptcy cases filed and the substantial increase in the backlog of all active caseloads handled by U.S. Trustee pilot districts. The active caseloads are considered to be the best measure of the work handled by each office, because work is performed on the cases in an active status. If supplemental 1987 funding and increased 1988 funding are approved, the program's caseload will increase to reflect the addition of new judicial districts and new U.S. Trustee offices. These jurisdictions and offices are specified in Sec. 302 of the 1986 Act. In 1986, the total number of cases filed in the judicial districts to be added during 1987 was 120,157. Those districts to be added in 1988 had total 1986 bankruptcy case filings of 245,183.

Chapter 11 business reorganization cases are the most complex and time consuming in the program and use the greatest percentage of staff resources. Since most of the Chapter 11 work requires legal or financial analysis skills, staff resources devoted to Chapter 11 cases are primarily professional rather than clerical. The professional staff role in Chapter 7 cases is less time consuming and involves primarily the supervision of the appointed panel trustees and the monitoring of attorney fees and other costs of estate administration. The routine administrative aspects of Chapter 7 cases are handled by paralegals.

Abt Associates of Cambridge, Massachusetts, a private research firm, performed a 15-month evaluation of the U.S. Trustee program for the Department of Justice, which was reported in April 1983 and updated in August 1985. Both studies compared case administration in the U.S. Trustee pilot districts with that in the non-pilot districts. In both the original study and the update, evaluators found that case administration was significantly more effective in the pilot districts. They concluded that the program has been successful in achieving the goals set for it by Congress.

The differences between pilot and non-pilot districts were particularly pronounced with respect to Chapter 11 business cases -- the most important cases in terms of size and complexity and impact on jobs, taxes and the economy. The evaluators found that the pilot districts had almost double the percentage of confirmed reorganization plans as the non-pilot districts. This is a measure of how successful the rehabilitation efforts were in ensuring that economically viable business enterprises "get back on their feet." The evaluators also found that the non-pilot districts had about two and one-half times the percent of Chapter 11 cases where no action was taken, compared with the U.S. Trustees pilot districts. This indicates how closely the cases were being monitored. The Abt Associates evaluators also found that U.S. Trustees were more diligent about meeting with debtors immediately after the Chapter 11 filing to gather facts about the cases and to take action where needed. U.S. Trustees were more successful in securing the timely appointment of creditor committees. In 1985, they appointed over 2,100 committees, a result of having made 4,800 phone calls and sending over 72,000 letters soliciting membership. Abt Associates also reported that U.S. Trustees were successfully filling the void in those cases which had no active creditor committees, were more aggressive in pursuing and reviewing debtor financial reports and operating statements and were making motions before the courts for remedial action when necessary. U.S. Trustees were found to be reviewing disclosure statements thoroughly and that disclosure statements fulfilled their role of fully informing creditors on the provisions of the Chapter 11 plan. In most non-pilot districts, there is no substantive review of disclosure statements by the clerks' offices.

In the Chapter 7 area, the Abt Associates evaluators found that more training, guidance and support to panel trustees was given in U.S. Trustee pilot districts than in the non-pilot districts. U.S. Trustees were also more aggressive in monitoring fees of professionals and challenging inappropriate requests for compensation. In 1985, the U.S. Trustees issued directives to the Chapter 7 panel trustees to institute new recordkeeping and reporting systems. These systems standardize the U.S. Trustees' monitoring of estate funds administered in Chapter 7 cases, assure that panel trustee records are auditable, and strengthen internal controls over the handling of estate funds. For the first time, the assets being administered by Chapter 7 panel trustees will be quantified with respect to pilot districts. Additionally, at the request of the Director and the U.S. Trustees, the Audit Staff, Justice Management Division, conducts a series of financial audits involving pilot district panel trustees.

Although U.S. Trustees commit a low percentage of their staff resources to the Chapter 13 area (most case matters are handled by standing trustees), the evaluators indicated the pilot program offered a better support system for the standing trustees by providing policy guidance and assistance as needed. The primary impact of the pilot program was on fiscal control of the standing trustee operations. A national audit program provides standardized audits emphasizing internal controls and managerial efficiency. Standardized budget submissions and procedures for fixing compensation and percentage fee levels were implemented as new Chapter 13 initiatives for 1985. Standing trustees finance their compensation and office expenses by investing idle funds and imposing percentage fees on payments made under approved Chapter 13 plans. If funds from these sources are greater than those needed for approved compensation and expenses, the surpluses are due to the U.S. Treasury pursuant to 28 U.S.C. § 586(e). Through aggressive monitoring of budgets, annual financial reports and audit reports, the U.S. Trustees have forwarded deposits to the U.S. Treasury totalling $1,856,000 for surplus funds generated in Chapter 13 cases over the period including 1984 through 1986.

Program Changes: The 1988 request includes a program increase of 339 positions, 172 workyears and $14,182,000.

The increase will provide the resources for the second year of expansion to a nationwide U.S. Trustee program. Section 302 of the 1986 Act specifies the judicial districts for which the program assumes its case supervision responsibilities as of October 24, 1988. The increased resources in this request would permit the Attorney General to certify all of these regions by September 24, 1988. Approximately 36 offices will be opened to supervise the cases in the judicial districts covered by the 1988 portion of program expansion. The regions and their groups of judicial districts are as follows:

UST Region	Judicial District(s)	UST Region	Judicial District(s)	UST Region	Judicial District(s)
5	N.D. MS	9	E.D. MI	14	D. AZ
	S.D. MS		W.D. MI		
	E.D. LA		S.D. OH	15	D. GUAM
	M.D. LA		N.D. OH		S.D. CA
	W.D. LA				D. HI
		10	C.D. IL		
7	S.D. TX		S.D. IL	17	E.D. CA
	W.D. TX		N.D. IN		N.D. CA
			S.D. IN		D. NV
8	E.D. TN				
	M.D. TN	13	D. NE	18	E.D. WA
	W.D. TN		W.D. AR		W.D. WA
	E.D. KY		E.D. AR		D. MT
	W.D. KY		W.D. MO		D. AK
			E.D. MO		D. OR
					D. ID

Resource levels to supervise cases in the new regions are justified by the number of judges assigned to each judicial district in each region, the expected caseload to be handled, the geographic area, and automated data processing needs. Staffing ratios were used to estimate the personnel requirements for the expanded program. Professional positions include the U.S. Trustees, Assistant U.S. Trustees, attorneys, bankruptcy analysts and case management specialists. The 10 U.S. Trustees in the 1988 request and the regions for which they will be appointed are noted above. At least one Assistant U.S. Trustee is assigned to each region, with more if the caseload or geographic dispersion so indicate. The need for attorneys and bankruptcy analysts was estimated on the basis of expected caseload. The attorneys perform all senior legal functions including appearing before bankruptcy courts to argue motions, negotiations with creditors' committees or debtors, and monitoring cases for substantive compliance with bankruptcy laws. The bankruptcy analysts monitor the financial health of chapter 11 debtors and provide financial and accounting assistance to investigative agencies in pursuit of bankruptcy frauds, embezzlements, misappropriations and other bankruptcy related crimes. Case management specialists (one per U.S. Trustee region) are included in the request to operate the automated case management system.

Support personnel include staff assistants, legal data technicians, paralegal specialists, legal clerks and secretaries. One staff assistant position and one secretarial position were estimated for each U.S. Trustee region; the staff assistants will perform office administrative duties and be responsible for fee collection. The paralegal, legal clerk and legal data technician positions were estimated on the basis of caseload and the projected numbers of professional positions each would support in the regions.

The audit function will be performed on a contract basis, either by reimbursement to the Justice Management Division's Audit Staff, or by a private sector concern, or both. During the operation of the pilot program, audits of the books and records of private trustees have uncovered financial irregularities and led to successful prosecutions. More successful prosecutions are expected as the program ventures into areas previously supervised by the bankruptcy courts. In the non-pilot districts, it is unlikely that auditable records have ever been maintained by private trustees, and serious problems are expected.

A strengthened corps of bankruptcy analysts is included in the estimate to provide financial and accounting assistance on bankruptcy matters subsequent to referral to appropriate law enforcement authorities. Experience with the pilot program shows that prosecutors are willing to proceed with cases only when they are adequately documented. Existing investigatory resources and the prosecutors' offices often lack the accounting and bankruptcy expertise to develop cases. Also, the new priority assigned to bankruptcy related prosecutions will still compete with higher priority matters. Where audits or financial reports required to be filed with the U.S. Trustee office indicate the possibility of criminal behavior, these analysts will be proficient in reconstructing bankruptcy case records to determine whether crimes have been committed and whether appropriate investigative or prosecutory agencies should be involved.

Installation of an automated case management system will be a priority project during expansion of the program. Congress included a requirement for a demonstration automated system in the 1986 Act. The pilot case management system in the original U.S. Trustee program has been operating successfully in two offices for two years. The system monitors the status of open cases, generates correspondence, drafts legal pleadings according to the case status, and assists with chapter 11 financial analysis and scheduling of meetings of creditors.

High lapse rates were used because most offices opening in 1988 will not be ready in time to allow for the ordinary 25 percent rate to apply. New permanent positions in the 1988 request are lapsed at a 46 percent rate, and other lapse rates were applied to non-personnel object classes to reflect expected funding needs during FY 1988. After reduction for non-recurring decreases associated with the new positions, net annualization costs in FY 1989 are estimated to involve 170 workyears and $4,634,000.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amt.	Perm. Pos.	WY	Amt.	Perm. Pos.	WY	Amt.	Perm. Pos.	WY	Amt.
Management and administration.....	54	36	$3,667	54	52	$5,271	54	52	$5,271	...	...	...

Long Range Goal. To furnish U.S. Trustees with effective and efficient management, policy direction, legal advice, administrative support and coordination.

Major Objectives.

To develop policies which foster efficient implementation of the program created by the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986," (Pub. L. 99-554), including assuring that actions taken in bankruptcy cases are consistent with the law.

To develop program priorities.

To implement the nationwide expansion of the U.S. Trustee program.

To review the management operations of field offices and recommend systems and procedures for improving the operational efficiency and effectiveness of these offices.

To provide a full range of administrative support services to the field offices, including personnel, procurement, and space management.

To provide legal and paralegal research and support services to field offices.

To determine ADP and word processing requirements of field offices and provide for the necessary procurement, installation and maintenance of suitable systems.

To perform audits of private trustee performance.

To develop and maintain administrative, substantive and law enforcement, operating manuals for guidance of U.S. Trustees.

To allocate field office staff and other resources and control the expenditure of funds in a manner which permits program accomplishments within appropriated levels and consistent with OMB Circular A-123.
